A study of costs of 1,000 students attending the State University of Iowa was made by a legislative research team sponsored by Congressman FRED SCHWENGEL of the First District of Iowa. William O'Connell, Arthur Kudart, and Rodney Miller, all students at the university, conducted the study and compiled the results. It is to be remembered that the costs at a State institution are generally lower than at a private school. Congressman SCHWENGEL's study found that the average cost to keep a child in school for 1 year was between $1,475 and $1,500 per year. The study also showed that the average parent had more than one child in college. The study further revealed that the income of the student's parents varied from $15,000 annually for doctors to $4,100 for farmers. For parents in the top-income brackets college costs constitute a felt financial drain. For those in the lower brackets these costs were a definite burden.

For many parents, already faced with the expenses of maintaining a family, the prospect of providing college expense money of several thousand dollars per child is anything but bright. Parents viewing this future are reluctant to counsel their children to contemplate college against these seemingly impossible odds.

Thus it is evident why a considerable number of talented young people do not elect to continue their education beyond high school. Weighing the rosy employment prospects of the present time against the prospect of constituting a drain on his family's financial resources, 1 out of 2 qualified high-school graduates makes the decision not to attend college.

This decision affects the national interest in many ways. However three effects stand out.

First. The strength of our Nation in today's technical and scientific age is directly proportionate to the number and quality of persons trained by colleges and universities for work in these fields.

While we are well aware of the importance of the scientist in the current arms and missile race, this importance is analogous to the visible position of an iceberg. The unseen problem is our urgent and continuing need to insure an adequate supply of teachers and researchers who will give us the scientists and science of the future. The crew-cut young physicist preparing the innards of the ICBM at Cape Canaveral traces his talent back to the unassuming mathematics instructors who guided his training in high school and college.

Second. Protecting our democracy is important and is dependent upon an enlightened people to guide its course.

While some may argue that plain horsesense was sufficient to guide our forefathers it must be recognized that horsesense today requires greater refinement. For citizens of our age to make intelligent decisions requires that more and more of them be trained to understand the interrelationships of modern innovations and worthwhile traditions. In short, today and tomorrow's citizen must sufficiently comprehend his world to be able to distinguish between modern innovation and irrational new paths.

Third. The well-educated citizen is an economically productive citizen.

The average high-school graduate earns nearly twice the annual income of his eighth grade trained contemporary; and the college trained man earns, on the average, twice what a high-school graduate makes. In the plain dollars and cents of our present income tax it is an undisputable fact that persons with higher incomes pay a greater share of the cost of our Government.

The ability of the college graduate to earn—and contribute—more suggests a means by which our National Government can encourage more able young people to go on to college. The means would not call for the appointment of a National Commissioner, the creation of an additional bureau or the hiring of a single employee. The solution would neither subsidize nor pamper prospective college students. It would offer an encouraging helping hand to those who wish to make the sacrifice to work for a higher education.

This means would consist of amending the Internal Revenue Code to provide for the deduction of certain college expenses in the computation of adjusted gross income of the student or his parent.

The plan would allow income-tax deductions for these essential items of college expense: tuition, books, and a reasonable allowance for the cost of living away from home.

1. Tuition: This item with the added laboratory fees makes up from 15 to 35 percent of the average college student's expenses.

2. Books: In highly specialized fields of study the limited area of circulation of texts makes this an important cost item.

3. Living allowance: This item would cover only those necessaries which result from a student maintaining a home away from home. Thus dormitory fees and the like could be compensated for with a blanket allowance. This allowance would be set at $400, slightly over $10 per week for the school year.

In this fashion the Federal Government could demonstrate its intention to join with those parents and young people who are facing the prospects of heavy college expenses. The dollar saving for each student does not appear large when viewed alone but when added to the college-strained budget of a student and his parents it is a major sum. This investment in our Nation's intellectual future can be likened to the Government's program of allowing income-tax deductions to farmers for expenditures made in the conservation of our soil resources.

The expenses occasioned in obtaining a college education are as surely "ordinary and necessary" in the production of the graduate's income as are the multitude of far-flung conventions which now qualify as legimate income-tax deductions. This plan would involve the loss of revenue in the short run. In the long run this tax advantage would be repaid by the graduate through his higher taxes and his valuable services to the entire Nation. At the same time it would provide direct financial aid to the parent faced with the costs of education of one or more children beyond high school.

That this problem is real and that the need for relief is great is best indicated by the answer on a questionnaire returned during Congressman SCHWENGEL's survey. When asked whether he favored a plan to provide this income-tax relief one parent replied, "Yes. The plan would not help me. My last son graduates this year but I know how much help is needed."

The Case of the Free Rider

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. GWINN. Mr. Speaker, I desire to insert in the RECORD an article in the magazine of labor and management called Partners, for August 1957, by Maurice R. Franks.

The article follows:

THE CASE OF THE FREE RIDER

(By Maurice R. Franks)

The main argument advanced by the labor leaders in their fight to have compulsory unionism made universal revolves about the so-called free rider—the worker who stands back and declines to join the union. With anger they point to the fact that he reaps all the advantages secured through the union's negotiations with management because the law requires that a labor-management contract cover all employees within the bargaining unit. Tearfully the labor leaders point to the free rider as the enemy of union security, whose continued employment in business and industry can cause the collapse of the entire labor movement. In the labor leader's book of foul names the free rider is all kinds of a slacker, slob, and heel—the lowest type of cheapskate and the most vicious type of ingrate—an individual unworthy to ride on the bandwagon of unionism beside those who have paid their fare. Rending their garments and tearing their hair, the labor leaders have lumped all free riders together in a single repulsive category and have demanded that no right-to-work law shall appear on any statute book to block the advance of compulsory unionism.

These emotional pleas have tugged at the heartstrings of many a lawmaker in State and Nation and stirred the fancy of judges sitting on some pretty high benches in these United States of ours. The result has been that in an alarming number of cases the free rider has come out second best in his struggle against organized labor's effort to license all employment. This means that what may or may not have been a serious inequity in the first place has resulted in one that now most definitely is.

It therefore seems imperative to me that, while there is still time to do so, all of us who still have a voice in the march of American affairs should carefully reexamine the case of the free rider and determine if we can the direction in which true justice lies. Because, although every free rider still remains a prospect for voluntary union membership, from universal compulsory unionism there can be no retreat. We'll be stuck with it and with all the un-American things it stands for.

NO STANDARD BRAND

The first thing that should strike us as we look into the facts of the case is that there is no standard brand of free rider and that the unions make a dangerous mistake when they lump them all together in one category.

For example, the fellow who lays back his ears and refuses to the bitter end to join the union that has successfully appealed to a majority of his shop mates and may indeed be a heel, a cheapskate, and all kinds of a despicable character. Or he could be a working fool or a screwball. He could be the very heart and soul and body of human repulsiveness, so that the wonder really should be how any self-respecting union man could ever desire to call him brother.

Such a worm cannot possibly be a discredit to the union—and for the simple reason that he doesn't belong to it. If anything, he emphasizes its character and dignity and adds to its stature and prestige so long as he remains a conspicuous holdout. Being who and what he is, he injures the union only on the day when he comes crawling to it for a card and the union, in a moment of weakness, takes his buck and cuddles him into its arms.

So long as a union is an organization of self-respecting workers and not a mechanical license bureau serving the shakedown enterprises or social herding of a dangerous leadership, you'd think it would make a point of giving the widest possible berth to all who might in any way give it an unsavory reputation. But, however the case may be, and however the leaders of unions may feel about it, even such low characters as pictured here still are Americans and still are as inherently entitled as the next man to have their basic American heritage of freedom preserved, not abrogated, by the laws of State and Nation. Freedom of thought and conviction, voluntary association of individuals, undictated choice in all issues affecting their organization—these are matters of fundamental American principle which no union and no law and no court should be privileged to take away from any person—even the least of our number.

Next, let's take a look at the free rider who is not a heel or a slob or a cheapskate, who is not an ingrate—for he knows that he has nothing to be grateful for.

There is the free rider, for example, who has taken a good long look at the kind of union offered him and doesn't like at all what he sees. He may have found its leaders to be a bunch of petty crooks or big-league criminals, a nest of dangerous radicals, or a huddle of equally dangerous nincompoops. Maybe he can see, even with one eye closed, that the spirit of brotherhood isn't present in the union and could never prick the skin of the hard-boiled gangsters who have organized, or are out to organize, his shop.

There is the free rider who by personal deed and circumstance has enjoyed a long and mutually faithful relationship with his employer and who would not care to prejudice that relationship by joining a union offering him fewer and shallower advantages.

There is also the free rider who is ideologically opposed to unionism because he believes it to be the sworn enemy of incentive and personal initiative. There is also the free rider who is as openminded as he is hesitant and wants only to be shown. He may be only a temporary holdout, a worker who is a better man because he is no pushover for high-pressure salesmanship—who is no superficial joiner but who, when he does join up, will want to play a conscientious part and work hard for the organization he has sworn his allegiance to.

BUILDERS OF UNIONISM

And just as a heel can be good for a union by staying out of it, so can a first-class character help a union to attain acceptability or even excellence by refusing to join it until it shows signs of improvement. A first-class character, so long as he is and is left to remain a first-class citizen, provides the union with a first-class target to shoot at—a continuing incentive to operate respectably, honestly, and efficiently so as to attract such members as will build it into a true brotherhood of creative effort.

The high type of holdout or so-called free rider—and the unions know very well how many of this type there are—is no enemy of decent unionism. He is the enemy of only the type that is unworthy to police his employment, that is unworthy to tamper with the economy of the Nation, that in fact can be its ruination through the indulgence of its leadership in crime, political subversion, and incompetent social planning. Considering the low estate to which all too many unions have sunk through the unseemly or grossly incompetent operations of their leaders, the high type of free-rider holdout can in fact be a builder of better unionism by refusing to be a pushover and publicly stating the reasons.

RIDING CAN BE EXPENSIVE

Though told that only the union leaders can possibly know or decide what is good for labor, many a free rider knows and, from what he sees, can tell the world that this just isn't so. Refusing to have any wool pulled over his eyes, he can count the cost of riding on certain union bandwagons—when the elaborate show planned by the leaders fizzles into a dismal flop. And he can also figure that such a ride could end in a bad economic smashup for him.

There was, for example, the Westinghouse strike of 1955—a strike the IUE leaders cooked up quite without regard for what the company could or could not do for them without jeopardizing its competitive position, its workers' employment, and, in the final analysis, even their union's security. Formulas were so complex that for the better part of 155 days negotiations were either topsy-turvy or stalemated. For over 5 months, picket lines held down production at the Pittsburgh and other plants of the Westinghouse Corp., and the blind but faithful union toll payers were left sitting at home and counting up the pay they were losing.

And what did the blind and the faithful gain for their long standstill ordered by their union? A well-nigh incomprehensible technicality or two in certain instances. But meanwhile, their losses were large and tangible. According to the union's figures, the average pay per worker lost during the strike was $1,850—and setting this off against reckonable monetary gains, it will take the more fortunate workers a full 50 years to pay up their deficit, and the least fortunate a total of 124 years to make up theirs.

Many a free rider throughout the land figured the cost of that ride on the bandwagon of unionism and also figured, "No, thanks, not for me." And many another free rider is reaching the same conclusion today when he eyes the Kohler strike in Wisconsin. Out there, the bandwagon of UAW unionism has been rolling for about 3 years—not forward toward bigger and better employment, but downward on the skids. Thus far, the blind and faithful unionists of Kohler have lost over $10,000 apiece through no wages, and the strike isn't settled yet and probably never will be.

"And," asks many an observant free rider, "just how unimpressive can union representation be?"

UNIONISM ITSELF A FREE RIDER

There is, finally, the free rider who is keen and observant enough to catch his would-be destroyers in a gross inconsistency. He catches them—in the very propaganda they discharge—boosting unionism itself aboard a big bandwagon for the nerviest free ride in all history. He hears them telling workers everywhere that they owe everything they have gained through their employment to unionism alone—there well-equipped homes, their cars, their entire high standard of living—that without unionism and the bigtime bargaining of its leaders, the workers of this Nation would still be living in abject poverty.

Well, this just isn't true, of course. And many a free rider in possession of the brains

the good Lord endowed him with knows very well that it isn't. Labor has come into its present lucrative estate mainly because of the progressive accomplishments of business and industry operating in a free economy. The American worker is better off because of the investments unlimited of American stockholders, of the know-how unlimited of American management, and because of the marketing and selling unlimited of American commercial interests. Our standard of living is what it is, not because of union intervention, but because of technology and engineering as it has been made by investment capital to blossom in every corner of our land. The unions came later and added their mite to an expanding human mechanism, but they were mainly a byproduct rather than a great power source of the economic development of our country.

Now that is the truer picture of what lies behind today's lucrative employment and effective worker purchasing power—and the union leader who publicly claims a larger spot in it than the facts accord him is the cheapest sort of free rider.

But no one need hate him or excommunicate him or legislate him out of business for that—if such is the extent of his effort to puff himself up. Where the labor leader really becomes dangerous—both socially and economically—is in his relentless campaign to change the face of this Nation, through economic and political pressure, through pulling wool over the eyes of the American people and denying them the opportunity to see and to judge organized labor for what it really is—a phenomenon, both good and bad in itself—and who would compel all workers everywhere to pay a toll for the right to earn a living. The union leader becomes a peril in our midst when he subverts the basic freedoms of people by publicly distorting the case of the free rider.

Unico Immigration Policy

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include at this time a resolution on the projection of our current immigration policy adopted and passed by the Worcester chapter of Unico National on July 25, 1957.

The resolution follows:

Whereas Worcester chapter, Unico National, has been a leader in advocating legislation to relieve the immigration of worthy people to our shores; and

Whereas H. R. 7904, sponsored by Congressman KENNETH KEATING, Republican, of New York, and S. 2222, sponsored by Senator JOHN KENNEDY, Democrat, of Massachusetts, are humane in scope and in the right direction of obtaining justice, democratic and fair dealing in objectives which seeks the reunion of families, wives, and minor children of persons admitted to our country under the provisions of the Refugee Act of 1953 and the admission of the "pipeline" cases—those persons whose application visas were screened, processed, and verified under the RRA but were cut off when the full quota was reached: Now, therefore, be it

Resolved, That Worcester chapter, Unico National, at its regular board meeting held in Worcester, Mass., on July 25, 1957, unanimously endorses the adoption of H. R. 7904 and S. 2222; and be it further

Resolved, That the members of the House subcommittee be notified to report H. R. 7904 out of committee, and that the members of the Senate subcommittee be notified to report S. 2222, out of committee, and that a copy of this resolution be sent to the newspapers in this area, and that a copy of same be sent to each Unico chapter in the chain; and be it further

Resolved, That a copy of this resolution be sent to Senators SALTONSTALL and KENNEDY of Massachusetts and Congressman DONOHUE of the Fourth Congressional District.

A Great Kid

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Bob Considine which appeared in the New York Journal-American August 25, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GREAT KID

(By Bob Considine)

WILLIAMSPORT, PA., August 24.—This is as nice a town as a fellow would want to be in, but there was an hour or two Friday night when it would have been better to be in, let's say, Old Monterrey, Nuevo Leon, Mexico. The Little League team of that city had just won what amounts to the World Series, cameo sized, which was played here.

Twenty-five years is a long time to be associated actively with sportcasting, and the thrills (if that isn't too juvenile a word) have been ample. But I swear I've had not many that surpassed the spectacle of a 12-year-old boy named Angel Macias pitching a perfect game while the infant-sized members of his team defeated a good, healthy, vitamin-brimming team from La Mesa, Calif., 4–0. Old Monterrey got a play-by-play from I. N. S. The church bells there are still ringing. The tequila is flowing like, well, Niagara.

The Mexican kid and his teammates cut the big kids down to size in a way that at times became intolerably dramatic. Occasionally, there is criticism of the Little League that its tournament competition places too much value on victory, tenses up children who psychologically might be better off sharpening switchblades or playing dominoes. I say rot. These miniature big leaguers conduct themselves generally better than their elders, show no psychiatric scars, live cleaner, talk nicer, sign their autographs in nice block letters a fellow can read.

PUT 'EM IN THE POLO GROUNDS

As for the brand of baseball they play, put them in the Polo Grounds next year, and they'll bring baseball back to New York.

The Monterrey squad of 14 is 100-percent churchgoing Catholic. Renouncing a traditional siesta on the day of the big games, they went in a body to a local church and made ready to kneel in front of it to await the blessing of a priest. Turned out that the dear father was already at the ball park, trying to get a seat. The Mexican boys, distressed beyond words, went in silence to the neat little stadium where 10,000 had gathered. The priest was summoned from his seat in the sun. The boys knelt in the miniature dugout and took his blessing, crossing themselves as he gave it.

Then they went out and won it in a manner that had the North American mob rooting for them like Latin Americans.

They are a remarkable lot of children. Only one or two had ever strayed beyond the confines of Monterrey. Products of a region that has had a pitiless drought for years, they still can't believe the extravagance of a United States shower bath. They would have preferred to play barefooted, but the rules call for rubber spikes. They shyly objected to stripping for a physical exam. Half of them are shoeshine boys, including the almost incredible Macias, who has the poise of a fine matador and pitched like Don Larsen himself. Twelve-year-old Francisco Aguilar, who scored the winning run as a pinch-runner, helps support his family by working in a foundry at 6 cents an hour. So does the infant-sized catcher, Roberto Villarreal, who saved Macias' perfect game with a simply brilliant scoop up and throw out on a wicked little bunt in the fifth.

LEFT OR RIGHT, IT'S ALL THE SAME

A fine young member of the team was discovered, by its coach, living off the meager garbage pails of the Mexican town. Another had to be nursed out of a severe case of malnutrition.

Nobody hit the ball out of the infield on Macias, as cool a player as you ever saw. He alternated a high hard one with a plunging low curve that rendered the other side useless. It was a much better game than he had pitched in his four previous appearances in Little League competition. On those 4 occasions he pitched 1-hitters. He is ambidextrous in the purest sense. When he goes to warm up before a game it's practically a question of flipping a coin, to decide which arm he'll use that day. He plays a nifty shortstop, as a right-hander, and a fine first base as a left-hander. His rooters at Williamsport hoped he'd switch from right to left during his pitching chore in the final game, so completely was he the master of the situation. His coach later explained why this was not feasible.

"His left arm wasn't warmed up," the coach said.

The Mexican boys were so tiny that Little League officials couldn't find uniforms small enough to fit them, and thus they played in their Monterrey suits, bought for them by the United Metals Co., of that region.

The exotic North American food has been the biggest thrill to the Mexican boys, aside from winning the title. Some of them apparently had never tasted cow's milk. All are confounded and delighted by a rare dish called "hammonddaigs." Pancakes awash in molasses are sufficient for several of them as a main course for breakfast, lunch and dinner. They met up with fried chicken while playing their way up through the South, and will remember it along with the Statue of Liberty and Radio City Music Hall, and talking over the radio to their people back home.

Here, indeed, were little hands across the border, and they were grasped warmly, gratefully.

Statement by Senator Thurmond

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR STROM THURMOND

In view of remarks made on the floor of the Senate today, and later amended to appear in the CONGRESSIONAL RECORD, by Senator LONG, of Louisiana, I feel that it is necessary for me to issue a statement.

I want to review briefly the course of events which led to my extended speech in the Senate on Wednesday and Thursday.

At the final caucus of the southern Senators on Saturday, August 24, it was generally agreed that an organized extended debate would not be held. However, it was also agreed that each Senator was on his own to oppose the bill as best he could. From the beginning, I made up my mind that it was my duty to oppose the bill strongly. Last weekend I prepared an address from the material I had been assembling for a long time, although I still had not decided how long I would speak.

After further consideration of the so-called civil-rights bill and the compromise proposed by the House, I came to the conclusion that I should make a long speech against the bill. Also, I came to the conclusion that further consideration should be given to the question of whether organized extended debate should be conducted by the southern Senators.

When I arrived at this latter conclusion on Wednesday, I went to Senator RUSSELL's office and told him that I planned to make a long speech and suggested that he call the southern Senators into session again to consider the advisability of an organized effort. Senator RUSSELL stated that if a majority of the southern Senators requested him to do so, he would call them back for another caucus, but, that in lieu of such requests, he would not call another caucus in view of the previous understanding on Saturday that each Senator would follow his own course.

The International Geophysical Year

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. HARRIS. Mr. Speaker, July 1 of this year marked the formal beginning of an 18-month, worldwide scientific program that is without parallel in history—the International Geophysical Year. This program will make contributions of inestimable value to our store of basic knowledge in the geophysical sciences and related disciplines through the harmonious collaboration of the 64 participating nations.

The United States participation in the International Geophysical Year is sponsored by the National Academy of Sciences, which has created a National Committee for the IGY and his designated the National Science Foundation to coordinate the interests of the Government and to administer Government funds in carrying out the program.

In order that the Members may have a brief summary of just what the IGY is and what it proposes to produce in the way of ultimate benefits to mankind, I am including the following remarks made recently by Dr. J. Wallace Joyce, Head, Office for the IGY, National Science Foundation:

THE INTERNATIONAL GEOPHYSICAL YEAR

Ladies and gentlemen, I appreciate very much having the opportunity this evening of telling you something about a cooperative program in science without parallel in history—the International Geophysical Year, or IGY, as we call it. I know that this description may sound a bit enthusiastic but I am sure I can demonstrate to you that the IGY fully warrants such superlatives.

I want to tell you very briefly what the IGY is, what it will include, why it was suggested, how it is being planned, and what it may produce in the way of ultimate benefits to the human race.

What is the IGY? It's a period of worldwide observations and studies of the sun, and of the earth and its physical environment, including its atmosphere and the space through which it travels. The IGY actually lasts for 18 months, starting the 1st of July 1957 and ending the 31st of December 1958. At present scientists from 57 countries are participating, and the total cost to these countries has been unofficially estimated in excess of $225 million.

These observations and studies which will be undertaken during the IGY are urgently needed to describe and to help explain the physical phenomena which make up man's physical environment. The sciences involved are classed under the general term of geophysics, and include such fields as aurora and airglow, cosmic rays, geomagnetism, glaciology, gravity, ionospheric physics, latitude and longitude, meteorology, oceanography, seismology, and solar activity.

You may well ask, "Why a worldwide program with the many problems the planning of such an operation entails?" Basically, the geophysicist faces a situation that the chemist or the physicist does not encounter. In working out their problems experimentally the latter can set up many of their experiments in laboratories where conditions can be carefully controlled and where the number of variables with which they must deal can be kept at a minimum. The geophysicist, however, must deal with experiments which are performed by nature with the whole world as its laboratory. He must observe the pattern of behavior of the various phenomena he is studying over the entire earth if he is to understand what is happening. Variable factors are not controllable. They may be numerous and can cause great difficulty in performing the analyses which lead to conclusions as to basic causes of the various phenomena which are observed. The interpretation of these results, therefore, requires the geophysicist to exert a great deal of ingenuity if he is to come up with the correct answers. These steps are necessary prerequisites to an understanding of the underlying causes of geophysical phenomena, the ingredients of our physical environment. Understanding, on the other hand, is often a prelude to adaptation or in some cases to possible control.

HISTORICAL BACKGROUND

Very early geophysicists recognized the inherent advantages of measuring physical quantities over large areas during relatively short intervals of time. The first practical application of this principle occurred during the period 1882–83 when 10 nations undertook cooperative observations in the Arctic region, primarily in the fields of meteorology, aurora, and geomagnetism. The period was called the first polar year. The clarifications it produced in our concepts of the various physical phenomena studied thoroughly justified this method of approach.

Fifty years after the first polar year, during the period 1932–33, a second polar year was planned and carried through despite the fact that the world was in the midst of a major economic depression. This time more than 30 nations participated, and again emphasis was placed on Arctic regions. In addition to the subjects which had been studied during the first polar year, the ionosphere came in for a great deal of attention. The increased understanding of the nature and behavior of the ionosphere which we obtained as a result of the second polar year has been of inestimable value to us since the early 1940's in both the fields of radar and radio communications.

One of the significant observations made during this period was a recognition of the correlation between radio blackouts and periods of great geomagnetic and earth current disturbances.

Another outstanding contribution of the second polar year was the initiation of meteorological observations taken from instruments carried aloft by balloons. These readings, which are now transmitted back to the earth's surface by a radio link, have greatly increased the capabilities of the meteorologist to make accurate weather forecasts, for they add a third dimension, so to speak, to his knowledge of the behavior of the atmosphere.

The circumstances that led to the International Geophysical Year were touched off in a most casual and unexpected way. One evening in April 1950 a group of scientists met informally at the home of one of them in Silver Spring, Md., to greet Prof. Sydney Chapman, one of the world's great geophysicists, who was passing through Washington. Our discussions soon centered on the current status of geophysics. In particular, we wondered what the future of geophysical research should be, now that the war was over and geophysics could again be pursued on a worldwide scale. Dr. Lloyd V. Berkner, whom many of you know, called attention to the tremendous advances in instrumentation that had taken place during the 1940's. He said that he thought it would be a shame, in view of the new instruments and techniques that were available, to wait out the whole 50 years before a Third Polar Year was held. He suggested that consideration be given to holding a Third Polar Year 25 years after the Second, which would place it in 1957–58, a time that was close to 1 of the periodic intervals of intense solar activity. The suggestion was received with enthusiasm.

In later discussions scientists recognized the great benefits of extending the planned program to encompass the entire earth. Accordingly, the event was renamed the International Geophysical Year to reflect the increased scope in coverage.

INTERNATIONAL ORGANIZATION FOR THE IGY

How was the IGY planned? During the 18 months following the initial proposal, it was considered and supported by a number of international scientific groups, most of them members of the International Council of Scientific Unions. The Mixed Commission on the Ionosphere endorsed it as did, also, in rapid succession, the International Scientific Radio Union, the International Astronomical Union, the International Union of Geodesy and Geophysics, and finally the International Council of Scientific Unions itself.

In late 1951 and early 1952 nations adhering to ICSU were invited to establish special national committees to take part in the planning and guidance of the IGY. At the same time ICSU established a special committee for the International Geophysical Year, called CSAGI, from the initials of the French name of the committee. The CSAGI was to be the guiding body, responsible to ICSU, for preparing a coordinated and agreed-to scientific program for the IGY, within the time schedule necessary to permit the start of observations in all areas on July 1, 1957.

The CSAGI was composed of representatives of the various scientific unions involved, including astronomy, geodesy and geophysics, scientific radio, pure and applied physics, geography, and biological sciences. Representatives were also designated from the World Meteorological Organization (WMO), whose cooperation had been early sought and enthusiastically given, and, later, from the International Consultative Committee for Radio Communications (CCIR). Finally, ICSU appointed a Bureau of CSAGI, consisting of Prof. Sydney Chapman, president; Dr. Lloyd V. Berkner, vice president; and Prof. M. Nicolet, general secretary.

From among its members, including the Bureau, CSAGI designated a number of reporters, one for each of the disciplines to be covered, namely, meteorology, geomagnetism, aurora and airglow, ionosphere, solar activity, cosmic rays, longitude and latitude, glaciology, oceanography, seismology, gravity. Reporters were also designated for world days and rockets and satellites.

The reporters were to act as focal points or conveners for the development and coordination of worldwide programs suitable to the IGY in their respective fields of interest.

In order to coordinate the various scientific related activities in certain geographically plausible subdivisions of the earth, adjoint secretaries were appointed for the Antarctic, the Arctic, Eastern Europe, southern Africa, and the Western Hemisphere.

In describing the duties of the reporters, I have used the term "programs suitable to the IGY." The need to establish criteria against which to judge the suitability of suggested programs for inclusion in the worldwide program of the IGY was clearly recognized by the CSAGI. The following, in their relative order of importance, were laid down soon after planning started:

1. Geophysical problems requiring for their solution concurrent synoptic observations at many places on the globe, involving coordinated efforts by many nations.

2. Geophysical problems, the solution of which will be aided by the availability of the results of synoptic or other concentrated geophysical work undertaken during the IGY.

3. Observations of other major geophysical phenomena where the main program involves the occupation of stations in regions of the earth to which comparatively little geophysical effort has been devoted in the past, but which will, as a result of the IGY, be areas of accelerated interest. The Antarctic and certain equatorial regions are examples.

4. Observations of slowly varying geophysical phenomena, for comparison with similar future observations at later epochs.

With the expanded concepts of the IGY came invitations to all countries of the world to join in the enterprise. To date, 57, as I have already indicated, have organized national committees for the IGY and are taking some active part in the venture.

In general, the various countries provide the funds, equipment, and personnel for IGY activities that they undertake within their continental limits, possessions, or in areas where they have traditionally had an interest. Thus the magnitude of the IGY program depends on the degree to which each nation supports its own program. Bilateral arrangements may be made between individual countries to cooperate in common projects, but such arrangements are outside CSAGI channels. Naturally, however, CSAGI welcomes any arrangements that contribute to the scope and success of the enterprise.

The IGY is a nongovernmental undertaking. The projects are planned and carried out by the world's scientists at the grassroots level, and therein lies much of the strength and enthusiasm which are so evident in the IGY.

THE UNITED STATES NATIONAL COMMITTEE FOR THE IGY

The National Academy of Sciences-National Research Council adheres, as you know, to the International Council of Scientific Unions on behalf of American scientists. The United States National Committee for the IGY was therefore established by the National Academy of Sciences in February 1953, under the chairmanship of Dr. Joseph Kaplan, a well-known physicist from the University of California at Los Angeles. The committee membership provides appropriate representation from the various scientific disciplines and institutions throughout the country, both governmental and private.

The Academy-Council recognized the importance of Government cooperation and support to the success of the United States portion of the IGY program. In the fall of 1953, the Academy-Council invited the National Science Foundation to coordinate the interests of the United States Government and to obtain and administer Government funds required to carry out the United States IGY program. This procedure also provided for a full consideration of the Government's interests in planning and carrying out the United States portions of the IGY program.

The National Science Foundation accepted the invitation and established an office for the IGY. With the effective help and cooperation of the United States National Committee, the foundation went to the Congress for funds for the scientific program and received a total of $39 million.

Reviewing for a moment some of the points I have just made, we see that CSAGI has the responsibility for planning a coordinated worldwide scientific program appropriate to the IGY. This program is synthesized from various proposals submitted by individual countries, modified through periodic meetings of CSAGI and national representatives. Four such planning meetings have been held: in Brussels in 1953; in Rome in 1954; in Brussels in 1955; and in Barcelona in 1956.

Individual countries are responsible for organizing and supporting their own portions of the IGY program. In order to provide national viewpoints in the deliberations of CSAGI, an advisory council for the IGY was established to consist of the chairman of each national committee for the IGY or his accredited representative. By this means, country capabilities are taken into account by CSAGI in deciding an overall IGY programs. So much for organization.

EVOLUTION OF THE PROGRAM

Let's now take a brief look at the steps a project proposal goes through before it becomes an approved part of the IGY program. I shall refer to the procedures adopted by the United States National Committee for the IGY as typical of actions at national levels. Professor X proposes a study of certain types of radio frequency radiations originating in the sun. His proposal is considered by a small group of experts constituting a technical panel highly qualified to deal with the problems of solar activity. If his proposal is accepted by the panel, it goes forward to the national committee, and again, if concurred in, passes to CSAGI. CSAGI, through a series of planning meetings, attended by national delegations made up of qualified scientists, considers Professor X's proposal as a part of the United States program. If it is considered to be an appropriate IGY project, and particularly if it can be supported by similar studies in other parts of the world, it will in all probability be approved.

In this way the world program in each broad field of geophysics is built up. Obviously, where national programs do not mesh, adjustments become necessary, either by persuading other national committees to include suitable complementary projects, or, if this cannot be done, by abandoning the isolated projects.

SCIENTIFIC PROGRAMS

Now, you must be wondering about the kinds of experiments that are being undertaken during the International Geophysical Year. Avoiding details, I shall tell you about some of the broader aspects of the scientific programs.

Let me start by saying that the term "empty" as applied to the space our planet earth is passing through is gross misnomer. This space is filled with all sorts of radiant energy from radio waves to X-rays, as well as atomic debris or particles, and solid objects of varying sizes from micrometeors to an occasional large meteorite. The effect of these on the earth's atmospheric mantle produces many of the phenomena we plan to study.

The sun is the source of most of the radiant energy that the earth receives. This energy in its various forms has a profound effect on the various portions of the gaseous mantle or atmosphere which surrounds the earth. For example, as solar ultra-violet rays encounter the first tenuous portion of this mantle, they cause ionization of the atoms present thus producing the electrified regions known generally as the ionosphere.

One of the most spectacular manifestations of solar effects on the upper atmosphere is the aurora. Caused by bombardment of the very rarefied regions of the upper atmosphere by charged particles from the sun, the aurora appears generally only at high latitudes. In fact, the two zones of maximum auroral occurrences are centered about the earth's two geomagnetic poles. This distribution of aurora is known to be associated with the geomagnetic field which deflects the incoming charged particles toward these two poles.

Networks of stations in both north and south polar and subpolar regions will detect, record, analyze, and map auroral occurrences. All-sky cameras and visual-observer programs will keep track of the sky during periods of darkness. During daylight, or when clouds obscure the sky, radar equipments will serve as electronic eyes. Radionoise measurements and radio-astronomical observations will add their share to the vast amount of data that will be collected. From studies of these data we hope to answer many questions and to obtain a better and clearer understanding of the basic processes that produce ionization and other quantities.

Until the mid-1940's man's probing of the high atmosphere had been accomplished primarily with the aid of balloons and a few high-flying aircraft. We knew from our observations taken at the ground and at these moderate altitudes that many things such as cosmic rays, solar particles, and radiation of various types either failed completely to penetrate the atmosphere and to reach the earth's surface or were considerably modified in the course of the transit. The air in general serves as a shield against most radiation and particles. There are "windows," as we call them, in certain regions of the spectrum, including, for example, the visible parts, the infrared and radio frequency regions. When powerful rockets became available at the end of the war, the upper-atmosphere physicists were quick to take advantage of this opportunity to get instruments out beyond the bulk of the atmosphere. A whole series of projects and experiments have resulted in what today is an effective upper-atmosphere rocket research program. One rocket has gone as high as 250 miles, while others have frequently penetrated well beyond the 100-mile mark. We are now planning a series of Aerobee shots during the International Geophysical Year which we hope will reach 150 miles or better.

The rocket experimenters soon recognized that although a rocket is an effective tool for measuring a vertical section of the atmosphere it does not provide continuous observations above the bulk of the atmosphere. These could be achieved by an artificial satellite which circles the globe for a suitable period of time. Thus the idea of the scientific earth satellite was born. You have already heard much of this device. I want to stress that in the minds of upper-atmosphere research people the satellite is a research instrument—a natural evolution of the high-altitude-sounding rocket, despite the somewhat sensational publicity the satellite has received.

Time does not permit a detailed account of the satellite and of the many experiments that have been proposed for this unique vehicle. I shall therefore limit my remarks to a brief review of the principal physical features of the device and of its launching vehicle, and mention a few of the experiments that we hope to include in satellite flights.

The satellite will be a metallic sphere some 20 inches in diameter and its total weight will be 21.5 pounds. It will be placed on orbit by means of a three-stage rocket vehicle, the first two stages using liquid fuels, and the third page a solid propellant. The total height of the launching vehicle will be 72 feet, and the maximum diameter 45 inches. Its weight, fully fueled, will be approximately 11 tons. The first stage, developing a thrust of some 27,000 pounds, will start the system upward. Starting vertically, the nose will be gradually tipped over in the direction of the desired orbit. By the time the first-stage fuel is expended and the empty structure is jettisoned, the vehicle will be approximately 36 miles high. The empty first-stage case will land some 230 miles down range from the launching site. At this point, reached about 2 minutes after take-off, the speed will be from 3,000 to 4,000 miles per hour.

The second-stage rocket will then take over, driving the vehicle to a velocity of about 11,000 miles per hour at an altitude of 130 miles when the fuel is used up. The nose cone will have been jettisoned early in this second stage of the flight. At this point the vehicle, still including the second and third stages and the satellite itself, will coast upward, inclining more and more toward the horizontal, until at approximately 300 miles altitude it will be tangent to a spherical surface concentric with the earth's surface and traveling at about half the orbit velocity. At this point the second-stage case will drop off and the third-stage rocket will fire, driving the satellite to its orbit speed of about 18,000 miles per hour.

Once the satellite is in orbit it will be tracked both optically and by radio signals. We shall be able to measure directly a number of quantities which at the present time we have only obtained by indirect observations. One of these will be the density of matter along the orbit of the satellite. Ideally, this orbit should be circular, but inaccuracies in launching speed and altitude which cannot be avoided will probably result in an elliptical path. We are hoping that this path will not come closer than 200 miles nor go farther than 1,500 miles from the earth's surface. By observing closely the path which the satellite follows as it circles the earth, we can also get a better measure of the oblateness of the earth. This is the equatorial bulge resulting from the centrifugal force of the earth's rotation. We shall also be able to locate the relative positions of continents and other land masses on the earth's surface more accurately and thus improve our maps.

The satellite will carry certain limited internal instrumentation, the observations from which will be transmitted by a radio link back to the earth. The satellite itself cannot be recovered, but will be destroyed when it eventually spirals back into the earth's lower atmosphere; hence the need for a radio telemetering system. The internal instrumentation will observe the temperature of the satellite shell. It will detect contact with micrometeorites, very small particles that may erode the satellite skin or in a few cases actually penetrate it. It will measure solar ultraviolet light, primary cosmic-ray intensities, the magnetic field of the earth along the orbit, and possibly determine the thermal balance of the earth; that is, the difference between the incoming solar energy and the outgoing energy which the earth and its atmosphere reradiate into space. This latter is of prime importance to the geophysicists, particularly the meteorologist, for, as we shall see, solar energy absorbed in the atmosphere is a primary influence on the weather.

Let us return now to the atmosphere and see what happens as the incoming solar radiation penetrates deeper into the gaseous mantle. The principal effect is to heat the various atmospheric gases. This heating in turn sets up motions in the atmosphere which are the principal cause of all weather phenomena which we observe. Actually, the region from the equator north and south to about 38 degrees latitude absorbs an excess of heat over that reradiated. On the other hand, regions north and south of the 38 degrees latitude radiate more heat than they receive. If it were not for the moderating effect of a turbulent atmosphere which transmits the excess heat from equatorial regions to the poles, we would find that both equatorial and polar regions would be uninhabitable.

Obviously, the more we can learn of the behavior of air masses and the various factors which cause them to move, the better will become our long-range weather predictions.

One phase of meteorology of interest to every man is the forecasting of weather. From the casual picnicker to the farmer whose economy depends on his crops, advance knowledge of weather conditions—and the more advanced the better—is essential. Now the accuracy of weather forecasts depends on how much of the total atmosphere we can keep under constant observation. Weather is to a large extent a dynamic affair. Hot or cold fronts move across the country. Hurricanes and monsoons travel along certain paths, which depend on patterns of high- and low-pressure areas.

The man who can observe the weather only in his immediate vicinity can tell very little what is coming. As he begins to get reports from increasingly greater distances, particularly in the prevailing directions of weather, his ability to forecast future events improves. The more complete and accurate these reports, the better off our forecaster is.

There exists a fairly effective network of weather stations over some part of the world, although today there is still an immense part of the atmosphere where data are lacking. It has been estimated that only about one-fifth of the total atmospheric mass is adequately probed each day. If all of this great mass could be evenly divided among the world's population, each person would have about 2 million tons of air to watch. There is still much to be desired in long-range weather forecasting, but this will improve as we learn about worldwide behavior of air masses. The IGY is planned to give us such information.

Several special meridional chains of stations will be established during the IGY to measure various geophysical quantities, among which are air mass movements. The chain extending from the North Pole to the South Pole along the 75° to 80° meridional zone is of particular interest to scientists in the Western Hemisphere.

I have mentioned the effects of solar energy on weather. Conditions on the earth's surface have a profound effect. With roughly three-fourths of the earth's surface covered by water, the oceans are important factors in determining weather. Large ice masses, such as those covering the Antarctic and Greenland, also have their effects. Surface topography sets up complicated motions at the base of the atmospheric mantle. All contribute to weather formation. Thus, we are led into the fields of oceanography and glaciology. Both will receive worldwide attention during the IGY. The interrelationships existing among these as well as other fields will form the basis for important and, we expect, productive studies.

Let me mention just one of the problems facing the oceanographer—that of measuring and mapping the deep currents in the oceans. His knowledge of these currents is almost nonexistent and yet they are prime factors in the turning over process in the oceans, a process vital to the ability of the sea to support life. With the oceans a prime source of food to many peoples, you can see how important this factor becomes. They also contribute to weather, and finally, if we can determine for certain that the deep waters do not rise to the surface in less than decades or even hundreds of years, these depths might provide a partial solution to the problem of the disposal of the radioactive wastes that accumulate from atomic reactors used for power and other peaceful purposes.

Many other fields of geophysics are included in the IGY program. We have listed them earlier, but time does not permit even a brief review of them.

I should, however, like to mention two subjects in which you will be interested. The first is the Antarctic, and the second, the plan for exchange of IGY data.

The Antarctic is, geophysically speaking, a region of intense scientific interest. This vast continent, almost the size of the United States and Canada combined, will by comparison with earlier years be a veritable beehive of scientific activity. Twelve nations are operating over 60 stations on the continent and in adjacent subantarctic islands. Some 40 of these stations are on the continent itself. The United States will operate five stations (Little America, Byrd, Weddell Sea, South Pole, Knox Coast), and will share the operation of a sixth with New Zealand (Cape Adare). The United States will maintain an air operating facility at McMurdo Sound in the Ross Sea area as a base for the support of the United States program.

For the first time in history, there will be enough stations in the Antarctic, properly distributed over that great land mass, to make possible the preparation of daily weather maps for that continent. The United States, at the invitation of CSAGI, will operate the weather central that will provide these maps. They will be of inestimable value for Antarctic flight and trail operations during the IGY.

Actual operations began with an exploratory cruise of the Navy icebreaker, the U. S. S. *Atka*, during the 1954–55 season. During the 1955–56 season, Operation Deep Freeze I built the main base at Little America and the McMurdo facility. It also brought in construction materials for the Byrd and South Pole stations and much of the supplies and a part of the scientific equipment. Wintering-over parties of construction personnel were ready to tackle the Byrd and South Pole stations as soon as the Antarctic spring permitted.

Operation Deep Freeze II, this year, has transported the group of scientists for the first year's operation, about 75 to winter-over and some 15 who will stay only through the present Antarctic summer. The materials

for the Knox Coast and Wedell stations were also delivered this year, along with the balance of the scientific equipment.

WORLD DATA CENTERS

The harvest from all this scientific effort during the International Geophysical Year will be great masses of data in all the various fields of geophysics. The ultimate benefits that mankind will realize will depend on the rapidity and extent to which the research scientist has access to the results of these worldwide observations and can begin to make effective use of them.

In order to assure ready availability of all data, the CSAGI has recommended the establishment of three world data centers. One of these centers will be in the United States, one in the U. S. S. R., and the third divided between Western Europe and Japan.

The following principles will govern the operation of these centers:

1. Each world center will receive original copies of IGY data from countries that elect to use that particular center as the archives for their data. In general, it is anticipated that countries in the area of a given center will send their data to that center, although there may be exceptions. The important point is that all original IGY data will go to one or the other of the three centers now planned.

2. Each center will immediately make copies for the other world centers of the original data it receives and will supply these copies free of charge.

3. Any institution or individual may request from a world center copies of data, which will be supplied at the cost of reproduction. Every effort will be made to keep such costs low.

Thus three complete sets of IGY data are planned, conveniently located to supply requests from scientists throughout the world.

Plans for the United States world data center are now being formulated. In all likelihood there will be a series of primary archives in the various disciplines, located at appropriate institutions and agencies, with a central coordination office for handling requests.

CONCLUSION

I hope I have convinced you of the tremendous scope and effort involved in the IGY. You will, I believe, agree that this greatest of all scientific collaborative efforts should make contributions of inestimable value to our store of basic knowledge in the geophysical sciences and in related disciplines. No man can predict all of the practical benefits that may eventually stem from such increases, but our experiences with the two earlier periods of coordinated observations give us high hopes.

But the greatest benefit to be derived from the IGY may be the completely intangible but far-reaching implications of a great experience in international cooperation. When 57 nations collaborate harmoniously in the accomplishment of a common objective, there is surely a lesson to be learned from how this was achieved.

Disarmament Program

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very interesting article appearing in the August 3, 1957, issue of America, containing pertinent comments about our current disarmament policy and the complexities involved. I recommend its reading.

The article follows:

DISARMAMENT PROGRAM

Secretary Dulles began his televised report on disarmament on July 22 by noting that while the subject is very complex, it is of such importance for all of us that we cannot leave it to the experts. He demonstrated in the remarks that followed just how involved the negotiations are which are now underway. He also provided material for the average American to study as he tries to comprehend the uncertainties and the risks that accompany our current desperate search for a way out of the fateful armaments race. Our spokesmen are making broad promises in our name. It is vital for the general public to grasp the price we must pay for solid progress toward a world free from atomic terror.

Disarmament discussions have been going on in London for several months. They are under the auspices of the United Nations, which, in 1954, created a five-power subcommittee on disarmament. The so-called "atomic powers," including Canada, are represented thereon, with Presidential Assistant Harold E. Stassen voicing the policies of the White House. Up to quite recently these negotiations were getting nowhere. The present revival of interest arises from a feeling in Allied circles that the Soviets are now sincerely concerned about the problem. Kremlin representatives have been talking more realistically and with less propaganda. Hence the current hope in Washington that now something can really be achieved.

According to Mr. Dulles, the United States plan embraces four principal points:

1. A system of inspection, by air and on the ground, which would provide safeguards against large-scale surprise attacks. This implies our willingness to have the Soviets inspect our territory, if a like concession is granted us by the Soviet Union.

2. A halt in the production of fissionable materials for nuclear weapons, if the control system is agreed upon. We also propose the gradual transfer of nuclear-weapons stockpiles to peaceful uses, perhaps under the supervision of an international atomic-energy commission. There would also be a temporary suspension of testing for a 10-month trial period.

3. A start to be made in reducing and regulating conventional armaments and forces.

4. An arrangement to coordinate the development of outer-space missiles for peaceful and scientific purposes.

A reading of this synthesis of the United States proposals at London must leave the reader with a sense of uneasiness. Even in the supposition that all these proposals are carried out to the letter, we still have here no absolute guaranty of security and peace. On the contrary, many Americans may feel that we are, by such offers, giving too much away in return for shadowy and illusory promises. These doubts gain strength when one contemplates the basically unsteady world political situation. How is mutual disarmament possible when the key political issues of the cold war remain unsettled?

It would be vain to pretend that these worries are not legitimate and well founded. Yet we feel that Secretary Dulles was right in stressing the need to take at least one step now, in the hope that a second step may become possible later. As he put it, the risks of moving forward are not greater than the risks of being frightened into immobility.

Capitol Cloakroom

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast:

CAPITOL CLOAKROOM, AS BROADCAST OVER THE CBS RADIO NETWORK

Mr. BANCROFT. Congressman McCORMACK, why is President Eisenhower disappointed in Congress?

Mr. CHURCH. Is legislation needed to help labor clean house, sir?

Mr. DOWNS. Representative McCORMACK, does the Wisconsin election mean a Democrat in the White House in 1960?

Mr. BANCROFT. Well, Congressman McCORMACK, welcome to Capitol Cloakroom. A veteran of 20 years in the House, you are the Democratic leader on the floor and therefore in a good position to appraise the session of Congress which has just ended.

Now, President Eisenhower told us at a news conference that he was disappointed in the record of Congress.

Why do you think he was?

Mr. McCORMACK. Well, when President Eisenhower made that statement he was talking, in my opinion, as a Republican politician and not as the President, or one objectively evaluating what this session of Congress has done.

I think the President was—is somewhat peeved at the fact that his own party in Congress has deserted him. On many of the rollcalls on bills that the President recommended, we find from 50 to 70 percent of his own party in the House of Representatives voting against him. And, of course, some of the President's close advisers who pretty much keep themselves on the job to advise the President, probably realize that they had to have some diversionary statement because the record of this Congress clearly contradicts what the President said.

Mr. BANCROFT. Well, you think this has been a good, productive Congress?

Mr. McCORMACK. It has been an outstanding Congress, a most fruitful Congress; and, furthermore, since President Eisenhower made that statement, there has been a large number of important bills which have passed both branches of Congress.

Mr. CHURCH. Pinpoint a couple of the reasons why you think this was an extraordinarily successful session.

Mr. McCORMACK. Well, the volume of work done by the Congress is far greater than was done in the 83d Congress, which is a fair comparison, because the 83d Congress was a Republican-controlled Congress.

The importance of the legislation that we have passed through this Congress during this session: For example, we started out with the Mideast doctrine of President Eisenhower's which would have been unnecessary if he had given the right kind of leadership at the time of the Suez trouble when it first started, but, nevertheless, due to his uncertain and confused leadership, we had to step in and fill the vacuum in the Middle East to create an influence that had been destroyed when Britain and France influence in that wide area and that important area of the world was destroyed, mainly, in part, by actions on the part of President Eisenhower and the present administration. And we had to step in to assert an influence there of the Western World. We are the only

country who could do it; and if the right kind of leadership was given to the country and to the free world at the outset of the Suez Canal problem and controversy and difficulty, there would have been no necessity for that; but the Democratic Congress rose to the heights and recognized that water had gone over the dam that was unnecessary; we passed the resolution.

Mr. BANCROFT. Well, Senator——

Mr. MCCORMACK. Now, only a few days ago we passed another historic bill known as the civil-rights bill, which is really the right-to-vote bill, and might be termed the right to register, because you can't vote until you register, and this is to remove difficulties and obstacles, unnecessary obstacles, against all Americans, without regard to race, color, or creed, registering, but with particular emphasis at that time upon our Americans of the colored race.

Mr. BANCROFT. I wanted to ask before we left foreign aid—I mean foreign policy: You say that Democratic-controlled Congress did approve the Mideast doctrine, but were you supporting the President's Congress when you knocked a billion dollars off his foreign-aid request?

Mr. MCCORMACK. Oh, when you talk about knocking a billion dollars, as a matter of fact, it is more than a billion dollars, Mr. Bancroft.

He recommended about $4.9 billion and what went through is about three-billion-seven-hundred-and-some-odd-million dollars, but there is about $600 million more which was reappropriated from previous years' appropriations.

Mr. BANCROFT. Well, my question still stands. Is that supporting his foreign policy?

Mr. MCCORMACK. Certainly it—we gave him plenty of money in which to carry on.

Mr. BANCROFT. Well, let me put it another way——

Mr. MCCORMACK. Last year when he made a recommendation, you will remember, there was a billion-dollar cut and the President complained, and yet when the fiscal year was over, there was still $500 million that was not used, so we appropriated $500 million more than was necessary.

Mr. DOWNS. Well, MCCORMACK, it seems to me that what is involved here in the—in these postpolitical sessions and assessment is that the Democratic Congress and the administration are both going to be contesting who did what for whom.

Now, you say that the Eisenhower doctrine, which was unnecessary because of, or arose because of lack of leadership, yet it is called the Eisenhower doctrine and was passed by the Democratic Congress which then takes or is attempting to take credit for it.

That is paradox, isn't it?

Mr. MCCORMACK. Well, Mr. Downs, I think that my statement is clearly consistent.

If, when the Suez Canal trouble started, when Nasser stepped in there and took it over in violation of an international agreement, this administration had devised the sound and affirmative policies that it was capable of, and if when the British and French moved in, in Suez, we had not pulled the rug out from under them and cooperated with the Soviet Union and the United Nations in doing so, thereby destroying the influence of Britain and France in the Middle East, and it was a great influence, there would have been no necessity for the Eisenhower doctrine, which took place, which we passed 4 months later, but the influence being destroyed, we had to step in there.

Mr. CHURCH. Even so, even so, what happened to the unanimity? There was unanimity in the House when you voted on the doctrine, and that unanimity seems to have gone out the window. It went out the window very shortly thereafter, as witness the cuts in the foreign-aid structure.

Mr. MCCORMACK. Well, no, the cuts——

Mr. CHURCH. What happened?

Mr. MCCORMACK. The cuts in the foreign aid have absolutely nothing to do with the—with the Eisenhower Mideast doctrine. The reductions in the foreign aid are the best judgment of congressional committees as to what amount of money would be—we would be justified in appropriating during the present fiscal year, in connection with foreign aid or mutual assistance. It amounts, in direct appropriations and indirect appropriations, to about $3,400,000,000. It is the feeling of Congress that that is adequate, and if it is not adequate the President can meet that situation next January by submitting to Congress a supplemental budget.

Now what we Democrats, and I am speaking for myself, would like to see the President do, is to be more consistent in his leadership, to be more firm in his leadership, not to be vacillating.

I don't like to pick up the paper, and I am sure other Americans do not, and see Zorayin browbeating us, the United States, using scornful language toward us and then the President of the United States making a conciliatory statement.

Mr. CHURCH. What would you do about it, sir?

Mr. MCCORMACK. I would use firm language. I would let them know that the United States is a powerful nation. I would let them know that the United States is not—is not going to permit country after country to be internally subverted and taken over by Communist forces and become subject to the Communist satellite. I would have, in the case of Hungary, taken affirmative action at the right time.

Mr. CHURCH. Action, did you say, or words?

Mr. MCCORMACK. Exactly. We could have taken plenty of action there before the Nagy regime was overthrown by the Kremlin stepping in and putting Kadar and his gang again in control of Hungary.

Mr. BANCROFT. Well, Congressman MCCORMACK, do you think that just words, no matter how sharp, would have stopped all that; or would you be in favor of sending troops in to do it? How far would you go in order to stop this thing?

Mr. MCCORMACK. We don't have to send troops there. There is plenty of things we can do in order to—because the only language that the Communists appreciate and understand is the language of strength. Above all, we should keep our Armed Forces maintained at the highest level necessary, consistent with world conditions.

We have seen a hundred thousand reduction in manpower in the Army, already; we see another hundred thousand going, being underway. We see the reductions in our Air Force. We see the reductions in our Navy. The world sees that.

We are having disarmament talks in London, and we have had for months, and we are trying to have the Soviet Union agree to reduce their armed forces and—why should they, because we are reducing ours unilaterally? We are eliminating the, what you might call the negotiable fat, by reducing our own Armed Forces, instead of trying to use that as a trading point for the purpose of having the Soviet Union reduce its armed forces.

Mr. DOWNS. But, Mr. MCCORMACK, the Democratic Party, to get back to the whole outlook on foreign aid, and which is part of our mutual-security system, the Democratic Party in the past has been the one that has been for the large appropriations to beef up the armed forces of our allies. Now comes a Republican administration, the Democrats are on the other side of the fence talking about reducing it, and you did reduce the foreign-aid bills, which is part of the mutual-defense system.

Mr. MCCORMACK. No; I don't think—I don't think the evidence justifies that statement.

Take the vote today on the passage, on the agreeing to the conference report on the mutual-assistance appropriation bill. The vote was 107 Democrats for, 70 against; 87 Republicans for, 52 against.

That means there were 52 Republicans who voted among those who voted today against one penny being appropriated for foreign aid.

Mr. BANCROFT. And 70 Democrats.

Mr. MCCORMACK. Exactly. But there were 107 Democrats, still, who voted for the passage of the bill, and there were only 87 members of the President's own party, and he is in control, he is in the White House.

So I think—now when, back several years ago, the necessity for larger appropriations were greater than they are today because most of the countries of Europe, from an economic angle, were in very bad condition and it was necessary to help rebuild them economically in order to rebuild them from—from the angle of moral, from the moral angle—and from the angle of defense.

Now, that has been pretty well taken care of so that so far as Europe is concerned, there is no necessity of appropriations for economic aid. The economic aid now goes in certain countries of southeast Asia, the Philippines, South Korea, and Formosa, the principal amount being military aid.

Mr. BANCROFT. Well, Congressman MCCORMACK, I wonder if we can get back to Congress here, and the day-to-day problems.

You are a leader of the majority party in the House. You have just completed a session, the first session in our history in which the President in the White House is forbidden by law to run for reelection. Do you think that has had any effect and if so, what effect, on the workings between——

Mr. MCCORMACK. No question——

Mr. BANCROFT. Between the White House and the Congress?

Mr. MCCORMACK. No question about it in my mind, Mr. Bancroft. It is commonsense that when a man is starting his second term, and it is known that he cannot succeed himself because of the constitutional restriction, that immediately within his own party processes get underway in connection with controlling the next convention, within the Democratic Party and within the Republican Party there are different groupings, some affiliated with one another, some who are not, and there is the fight for control and power.

I opposed that amendment and one of the main reasons I opposed it was, it is the first, it is the only provision in the Constitution which is a limitation on the right of the individual American citizen.

Every other prohibition in the Constitution is against Government to protect the individual.

Furthermore, I opposed it because I felt it would be dangerous to put a 2-year—two-term restriction into our Constitution because, suppose 3 years, suppose sometime in the future our country is at war, and the President of the United States is finishing his second term. Is there anyone who thinks that a campaign would be for the best interests of our country, if we are fighting for our very preservation, and we had a man in the White House who was probably doing a wonderful job?

Mr. BANCROFT. Are you going to try to repeal it now?

Mr. MCCORMACK. I shall vote for its repeal, if it comes up.

I regret the day that the amendment was put on, and it was a slap at Franklin D. Roosevelt while he was buried at Hyde Park—that is what put all that over.

Mr. DOWNS. Well, Mr. MCCORMACK,, you talked about the achievements of this Congress; what about the things that——

Mr. McCORMACK. And might I say they didn't dare do it while he was alive.

Mr. DOWNS. Well, what——

Mr. BANCROFT. Well, the Republicans weren't in control while he was alive, were they?

Mr. McCORMACK. Well, it wasn't purely or wholly Republican vote that did it, Mr. Bancroft. There were quite a few Democratic votes, too.

Mr. DOWNS. What about the things that Congress did not do, such as school aid and the rest of it, and what political effect is that going to have?

Mr. McCORMACK. Well, the school aid, Mr. Downs, as you know, the Republicans overwhelmingly voted against the bill, to strike out the enacting clause which killed the bill. The Democratic vote was overwhelmingly in favor of keeping the bill alive.

The vote was 208 to 203. Two of the Republican leaders in the House voted to kill the bill. If only 3, a shift of only 3 votes, the bill would have been saved and we would have gone back to the Committee of the Whole.

The President was not even kept informed as to what the legislative situation was at the time, even if they could have gotten in touch with the President. I don't know whether they could or not. I don't know where he was at the time, whether in the White House or elsewhere.

But the Republican leadership had plenty of time to call the President. They didn't do it, and if they did and went back among their Members, they could have easily shifted 3 or 4 more votes and saved the bill.

So, while both Democrats and Republicans voted to kill the bill, the Republicans overwhelmingly voted to kill it; the Democrats overwhelmingly voted to save the bill, but unfortunately the combination of the large Republican vote to kill the bill, and the Democratic vote that voted that way, was enough to kill the bill by five votes.

Mr. BANCROFT. Well, Mr. McCORMACK, are you not—the Democrats are in control of this Congress. Are you not trying to take the credit for the Democrats for the good things in that Congress and yet blame it on the Republicans who don't control Congress for what you regard as the bad things about this Congress?

Mr. McCORMACK. No, Mr. Bancroft. Each and every individual Member of Congress, elected by the people of his district, whether Republican or Democrat, and they've got to take their own responsibility for their own vote, and there are two political parties and both parties must take their responsibility, but when the President of the United States makes a recommendation, or says he is satisfied with the bill, as he did in the case of school construction, and a majority, a clear majority of his own party votes against him, I think it's fair to comment upon it, particularly when a clear majority of the Democrats vote for the bill.

Mr. CHURCH. Well just for the record, was there anything, Mr. McCORMACK, that was wrong in this 1st session of the 85th Congress that was the fault of the Democratic Party?

Mr. McCORMACK. Well, we had a lot of difficulties.

A few weeks ago we didn't think we were going to get a bill to meet the Jencks decision; well, we knew we were.

A few weeks ago they didn't think we would get an immigration bill through, it's not as far I would like to see it go, but it's going to do an awful lot of good. We got it through.

A few weeks ago they didn't think we were going to get through the right-to-vote bill, known as the civil-rights bill, but it's through, and it will be law.

There are some things that we haven't done that I would like to see done, but there's another session of this Congress, Mr. Church, and you and I know, from your experience in Washington, and my experience, that the President's recommendations are not put through, all put through the first session of a Congress, it's a Congress.

Furthermore, every recommendation made by the President is not correct. We have done a lot in stopping some of his recommendations going through that would be harmful, to the best interests of the people of our country.

Mr. BANCROFT. Well, Mr. McCORMACK, this is Labor Day as you know, and I believe the platform of your party, for quite a few years now, has promised some changes in the Taft-Hartley Act.

When is that, what could you tell us on this Labor Day about the chances of that?

Mr. McCORMACK. I would think that in the next session of Congress, that there is an excellent chance of some amendments being put through that will remove several of the inequitable provisions of the existing law.

Mr. CHURCH. What about—what about the business of, as you hear today, labor cleaning house? Do you think there is any legislation necessary there, Mr. McCORMACK? I know that's a subject pretty close to your heart.

Mr. McCORMACK. The great majority of labor, and I'm talking about the leaders of labor, are just like the great majority of businessmen, the great majority of bankers, financiers, or any other field of activity—good, honorable men.

But, unfortunately, there is a small percentage of them, like there in past years, and there are probably today in other walks of activity who are unscrupulous. I think, directly addressing myself to it, that the McClellan committee has done a very fine job in exposing the violations of trust that have taken place by some, but we should not indict all leaders of labor for that small percentage.

However, the evidence clearly shows that something must be done to protect those trust funds an' I favor legislation that will do that. But I do not, I will not favor legislation that will be punitive in nature and repressive against labor, because as you know there are certain forces in this country who are antilabor and they will try to capitalize the present situation to put through, not legislation to meet the problem of—of the—proper protection of these trust funds, but who would try to put through legislation that would be detrimental to labor, in other words, antilabor.

Mr. BANCROFT. So this is——

Mr. McCORMACK. So, answering your question first, something should be done in connection with the trust funds. I can confine my answer to that. I don't think anyone, any honorable person wants directly antilabor legislation.

Mr. BANCROFT. Well, you think this will be done in the session starting in January——

Mr. McCORMACK. I have every confidence that proper legislation will be passed. The one thing we have got to watch is that certain powerful elements in this country do not use the hysteria to put through antilabor legislation.

Mr. BANCROFT. Well, you have quite a few things here left for the session starting in January——

Mr. McCORMACK. Oh, yes.

Mr. BANCROFT. And that will be an election year, as you know.

Mr. McCORMACK. Yes.

Mr. BANCROFT. Do you think Congress will be able to deal with things in an election year——

Mr. McCORMACK. Oh, yes——

Mr. BANCROFT. Which it was unable to deal with in this nonelection year?

Mr. McCORMACK. Oh, yes, we Democrats have a habit of doing things.

Mr. BANCROFT. You think you can legislate better when you are under the voters' guns than when you are not?

Mr. McCORMACK. No, no. I wouldn't say that, Mr. Bancroft, although, as you know, this is big league politics down here.

Mr. BANCROFT. Well, you have been in it a long time.

Mr. DOWNS. Well, speaking of elections, there was an election out in Wisconsin the other day they made you Democrats very happy. What do you think this portends toward 1960 in the presidential election?

Mr. McCORMACK. I would say, Mr. Downs, that if anyone was to say that that was not an important election and the results very important, would be far reaching, would be one who has closed his eyes to the facts.

It was an amazing election, the first, for the Democrat to win is amazing; second, to win by the votes he did. It's fair to assume that Wisconsin, geographically located where it is, that that feeling of the people of Wisconsin as evidenced by the election results, must exist in adjoining States to Wisconsin.

To me it's a clear indication of repudiation of the leadership of President Eisenhower. I think foreign affairs entered into it, his uncertain, vascillating leadership. The feeling of fear in the minds of the American people that we are on the defensive throughout the world, and that it's due to lack of affirmative policy and consistent policy and action on the part of President Eisenhower and the present Republican administration.

And we must remember that under our Constitution the President is the sole repository in the field of foreign affairs.

Mr. CHURCH. Well, Mr. McCORMACK, how do you——

Mr. McCORMACK. Second, might I say, not to talk longer, Mr. Church, I think the domestic questions, the farm questions, I think inflation, I think related to inflation, the economic aspect was the high interest rate, all of those played an important part, also.

Mr. CHURCH. I just wondered how you accounted for the fact that Mr. PROXMIRE was defeated three times in a gubernatorial race in Wisconsin by the same man that lost to him in this senatorial race.

Wouldn't it seem to you that it was because of a completely split-up Republican Party in the State, rather than what you suggest?

Mr. McCORMACK. No, I don't—in a State like Wisconsin, it would be impossible for it to be for that cause alone. There must have been—what were the factors that caused the split party? What were the factors that caused people who ordinarily voted Republican and who did in the past, not on this year, on this occasion? I don't think it was any intraparty split that could account for that. It might account for some votes, and that exists in every election where there are—some disgruntled Republicans against a Republican candidate and some disgruntled Democrats against a Democratic candidate.

Mr. BANCROFT. Well, Mr.——

Mr. McCORMACK. But they are usually not enough to affect an election, and certainly in Wisconsin that wouldn't bring about that tremendous result.

Mr. BANCROFT. Well, Mr. McCORMACK, let's see if we can project this Wisconsin thing a little bit.

Now, there is an election coming up in New Jersey this fall, and if Governor Meyner wins there, do you think this is all adding up to a big Democratic trend that will be reflected in the congressional elections in 1958?

Mr. McCORMACK. Mr. Bancroft, I have seen a big Democratic trend for the last 2 years.

To begin with, in 1956 the Democratic trend was there. It was true that President Eisenhower won by over 9,500,000 votes, but was a personal victory, because when we got to the political level between the 2 politi-

cal parties, the Democrats—Democratic candidates for Congress—got more votes than the Republicans.

If the people, in voting for President Eisenhower for reelection, had meant that that was a manifestation against the Democratic Party, we wouldn't have had more than 160 Democrats in the House of Representatives. Instead, there was 234, I think, elected to the House, and a Democratic Senate.

So that in 1956 it was there, the trend was there. Mr. Eisenhower's personal popularity was able to save the situation for himself.

Furthermore——

Mr. BANCROFT. And yet you would be in favor of repealing the law that forbids him from running again?

Mr. MCCORMACK. I would vote for it, it isn't a question of forbidding Mr. Eisenhower, I was against, and I am still against the two-term prohibition for the reasons which I previously stated.

Mr. BANCROFT. Yes; I know.

Mr. MCCORMACK. First, it's an invasion on the right of the American citizen. The only limitation in the Constitution against the right of an American, an individual American; and second, the potential danger to our country that it could constitute.

Mr. BANCROFT. Well, Mr. MCCORMACK——

Mr. DOWNS. Mr. MCCORMACK, speaking of individual rights and the rest of it and splits in the Republican Party, what has happened since the Thurmond filibuster, the civil-rights passage of this right-to-vote bill, what has happened to the split in the Democratic Party?

Mr. MCCORMACK. Mr. Downs, despite the split in the Democratic Party, it's the first time in the history of the country that a bill was reported out of a committee, was last year, it was a Democratic-controlled committee and it passed the House but it didn't get through the Senate.

The second time legislation of this kind ever came out of a committee was in the 85th Congress, this Congress, a Democratic-controlled committee. It was passed by Democratic-controlled Congresses.

Now, I think as a result of the passage of the bill, the tensions within the Democratic Party will subside. You mark my words, gentlemen, I have been chairman of the platform committee on 3 out of the last 4 occasions. I think I know something about it. I have lived it, preserving unity in the Democratic Party in the different conventions when each time, in 1944, 1952, and 1956 when I was chairman, there were threatened walkouts. I think I know from actual experience what the situation is, and we are not—the tension is not going to be there, there will be no more threatened walkouts in Democratic conventions.

Mr. BANCROFT. Well, I wonder if I could——

Mr. MCCORMACK. And as the result of the tension subsiding, Mr. Bancroft, and Mr. Downs, and Mr. Church, unity becomes stronger and in the House we are not going to have this constant threat of a small group from the South compelled to make coalition with the great majority of the Republicans.

Mr. BANCROFT. I would like to ask just one very simple question: Do you think a Democrat is going to win the presidency in 1960, and if so which one?

Mr. MCCORMACK. First, my first answer is "Yes"; the second one, there are, we have a dozen good candidates.

Mr. BANCROFT. Well, I guess that's the best way——

Mr. MCCORMACK. Might I say JOHN KENNEDY, of Massachusetts is one of the outstanding ones.

Mr. BANCROFT. Thanks, thank you very, very much, Congressman MCCORMACK.

Sensible Reaction to Russian Psychology

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, in view of the recent Russian announcement about their possession of an intercontinental missile, I am pleased to include a most pertinent editorial, appearing in the Christian Science Monitor issue of August 28, last, sensibly pointing out the reaction attitude we should adopt in the face of this obvious attempt to inspire psychological panic.

The editorial follows:

MISSILES IN PERSPECTIVE

The physical force of the Soviet's announced intercontinental missile cannot possibly equal its psychological impact. Therefore, the chief immediate aim of the free world should be to keep its mental shirt on while surveying the situation.

The Moscow statement, even taken at face value, does not forthwith upset the world balance of power. For years can intervene between a successful test of a weapon and its operational availability in numbers sufficient to be decisive in war. And there is good reason to believe that the United States is within months of successful testing.

Washington dispatches disclose diverse views about how much weight to give the Russian report. Senator JACKSON termed it ballistic blackmail, and some sources saw it as timed to influence events in the Middle East or the disarmament negotiations. The West is so accustomed to mendacity in Moscow and to all things being bent to the uses of propaganda that it could easily conclude this is more of the same.

The Soviet announcement was notably linked with reports of new hydrogen-bomb tests and accompanied by blasts at the American position on disarmament. And words in the statement such as "successful," "unprecedented altitude," "intercontinental," and "target area" are open to interpretation. So is the claim that the results "show it is possible to direct rockets into any part of the world." Such claims could be made about a missile which hardly surpassed the 3,000-mile flight obtained already in American tests.

But it would be hazardous to build complacency on assumptions that Moscow is exaggerating. Whatever its unreliability in other fields, its claims about weapons have usually proved true. But the diplomatic effects depend greatly on how the free world responds. If it is not frightened, uncommitted nations will take note and guide their own policies accordingly.

It is worth pointing out also that though intercontinental ballistic missiles may become the ultimate weapon, they do not hold that position today. Moscow is careful to point out that rockets are not vulnerable to up-to-date antiaircraft defense. But we should not be hasty to assume that missiles fired across the oceans can attain the accuracy required even for atomic warheads. Defense against missiles is difficult, but those working on it are not hopeless. Meanwhile, airplanes carrying H-bombs—and provided with many forward bases—remain the greatest military force in being. In this field the anti-Communist powers are still well ahead and able to exercise a decisive deterrent.

Yet every step in the race to build more destructive weapons sounds a warning to all who recognize the necessity for greater progress in peacemaking. This should be the most emphasized meaning of Moscow's announcement.

The Archbishop Speaks Forth to the Critics of His Country

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith correspondence with the Archbishop of the Dominican Republic.

The churches of the world have always given people those things which even democracy does not always produce—truth, peace, faith, and hope.

When free people finally win the war against a Godless communism, the victory will belong to those religious faiths which defied communism to the end in the name of Christianity and humanity.

During the inflammatory criticism of the Dominican Republic in this first session, it was charged General Trujillo had encouraged communism at one time. It was inconceivable to me that a country estimated at more than 98 percent Roman Catholic could be guilty of this.

I wrote a letter to His Excellency, the Archbishop of the Dominican Republic, and I have had an answer which I am submitting for the information of the House. There is not one word of truth in the charge. Since I have never known an archbishop who feared either the truth or any layman of any type, I am satisfied His Excellency speaks without restraint, independently, and in absolute truth as only he would know it from a long and intimate association which would not be possible for any of us to experience.

The matter-of-fact tone and reporting of His Excellency is proof enough for me that the charges against the Dominican Republic are not supportable, but most certainly prejudicial and made without regard to the governmental concepts of the Latin Americas. I think His Excellency puts it well when he says the propaganda going on in the United States stems from those who are in disagreement with the Dominican regime on law and order.

I have long felt we cannot make the world over in the image of America and Americans. We have expended over $60 billion in American taxes on our efforts something along this line, and we are worse off in the world today for it.

The fault lies not only in our money, but perhaps more in ourselves. We expect praise for our generosity, but we

give none; we want credit, but we will not pay credit to those who aline themselves with us; we expect homage and eternal alliance, but we will not stand firm and long.

Some of these days we are going to have to pay tribute to the Catholic churches and the stronger governments for our victory over communism. Conditions today are such that it is more profitable, more safe, and decidedly more expedient and easy to be a neutral power than to be an open and avowed enemy of communism. Those rulers and nations who played the appeasement and neutral roles with Hitler are dead and dying. I cannot repeat too often my own strong conviction that we should credit and encourage those strong chiefs of state who risk their lives, their fortunes, their family futures, and their own place in history, on the side of Christianity and democracy.

The Congress can get more headlines, more mail, and more admiring glances out of the mirror, with investigation of labor racketeers and others than we can get in a solid piece of positive legislation such as social security and a humanitarian viewpoint for the older people or the workingman. There are no headlines in the cost of living rises, or in high taxes. It is the prosecutions which get the headlines. It has remained for the defense to preserve and assure a sense of balance regardless of the pressures at the time.

Therefore, if I have come to the defense of a friend of the United States without qualification, perhaps in the end the jury of people will find I have contributed a small part to our stronger union against communism. The exchange of correspondence follows:

AUGUST 20, 1957.

Your Excellency the Archbishop RICARDO PITTINI,
Ciudad Trujillo, Dominican Republic.

YOUR EXCELLENCY: I am requesting your opinion and comment on a matter which is of considerable consequence here in the United States and which pertains to a subject on which you would be most qualified to speak.

In your opinion:

1. Is the Government and those in authority in the Dominican Republic anti-Communist and has it ever encouraged communism?

2. Would you classify the Government as different from that of other Latin American countries? It has been charged that the Government is a dictatorship.

3. Are the people oppressed by the Government? Would your opinion be that the peoples of the Dominican Republic enjoy substantially the same freedoms which are had by people in other Latin American countries?

The Dominican Republic is under severe criticism in the United States by political exiles, and by one Member of Congress, along with some segments of the press. I have serious doubts about these charges and therefore seek Your Excellency's opinion. I am sure it will be very helpful to us.

Would it be asking too much to have a reply at your very earliest convenience?

Sincerely,

GARDNER R. WITHROW,
Member of Congress, United States of America.

[Translation (Spanish)]

CIUDAD TRUJILLO DOMINICAN REPUBLIC,
August 30, 1957.

Hon. GARDNER R. WITHROW,
Member of the House of Representatives of the United States of America, Washington.

DEAR MR. WITHROW: It gives me pleasure to reply to your kind letter of this August 20, in which you ask my opinion about the stand of this country's Government on communism and about the differences which possibly exist between the Dominican Government and those of the other countries of Latin America in matters concerning the exercise of individual liberties.

Because of my duties as head of the Catholic Church in the Dominican Republic, I can tell you in regard to the first question that the Government and authorities of this country are absolutely anti-Communist, and they enforce, in the strictest possible manner, the stipulations of the law of the National Congress of October 20, 1936, which authorizes a prison term of 3 months to 2 years and a fine of $50 (Dominican currency) to $500 for every Communist or anarchist activity and every doctrine contrary to public morality, such as is practiced traditionally in all civilized nations.

The anti-Communist activity of the Dominican Government is very sincere and definite, manifested not only by the repressing of activities of that nature on Dominican territory, but also by giving wide and definite protection to whatever tends to strengthen the population of this country, the traditional norms of life and the principles of Christian morality. With this goal, Dominican authorities have given to the Catholic Church resolute protection without, of course, diminishing the constitutional principles of religious liberty which constitutes one of the essential norms of Dominican life.

In matters concerning the democratic or dictatorial character of the Dominican Government, compared with the other governments of Latin America, I can tell you with absolute frankness that the Dominican Republic is one country where the citizen enjoys complete liberty with the sole obligation of obeying laws scrupulously and of abstaining from all activity illegally directed against the security of the state. All legal activities can be exercised with as much freedom as in the United States, the citizen develops his spirit of initiative without fear of the slightest coercion on the part of the authorities. The Government is based upon the firm belief in authority, and order is jealously kept, a fact which has permitted the country to progress enormously without the menace of civil disturbances and without the typical disquiet of any kind of social anarchy.

I do not believe that any difference exists between the Dominican Government, from the point of view of the exercise of the principle of authority and the more liberal governments of Latin America, except that laws in the Dominican Republic are strictly obeyed and public order reaches a higher level of solidarity than in any other Latin American country in the hemisphere.

The propaganda being directed against the Dominican Republic abroad evidently is biased and emanates from elements disaffected with the regime of order, peace, and strict enforcement of the laws which exist in this country and which can be justly judged as one of the most disciplined and progressive in the world.

My best regards to you.

RICARDO PITTINI,
Archbishop of Santo Domingo.

Jeanne Parent: Great Patriot and Heroine

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. RODINO. Mr. Speaker, a few days ago I learned of the death of a woman whose heroic acts during World War II earned her the United States Medal of Freedom and many other decorations.

This gallant and heroic lady who braved danger and withstood torture to save American lives was my neighbor, Jeanne Parent.

Though I did not have the privilege and honor of knowing her well—I had heard of her great deeds and was proud to number her among my constituents.

Mr. Speaker, Mrs. Jeanne Parent may have passed from the American scene, but her story of exemplary courage, her great love for freedom, will always serve to inspire others and will live on as part of the story of America.

Mr. Alfred Robbins, writing for the Newark Star Ledger, tells her story eloquently—a story we will all remember:

JEANNE PARENT: GREAT PATRIOT AND HEROINE

(By Alfred Robbins)

When Mrs. Jeanne Parent applied for her United States citizenship papers she was asked only one question: "If we get into another war will you do the same thing over again?" Mrs. Parent smiled and said simply: "Yes."

Yes, she would hide allied aviators shot down in Belgium during World War II from the Germans.

ENDURED BRUTALITY

Yes, she would go without food and endure brutal beatings rather than divulge the names of fellow underground workers.

Yes, she would spend 2 months in a German political prison and face execution without a tear.

And so Mrs. Parent, who had not set foot on American soil until 1946, officially became a citizen. But in her heart she had been an American since that November day in 1942 when United States troops stormed ashore in North Africa.

MATE INTERNED

"She went underground in Belgium because she wanted to help those boys," John Parent, her husband, said yesterday.

And though he didn't mention it, Mrs. Parent must also have felt she was helping her husband. Parent, an American citizen had been interned by the Nazis as an enemy alien immediately after the African invasion.

Since he wasn't there, Parent's story of his wife's work was sketchy. "She didn't talk much about it," Parent said.

HELPED 150 YANKS

"But I know she helped about 150 American boys," he said. Mrs. Parent not only hid the boys but also helped them obtain fake credentials, disguises and transportation to Switzerland.

All went well until 1944. The allies had landed in Normandy and were starting to push toward Belgium. But in July of that year the Gestapo broke into the Parent home

and found a young aviator from Texas hiding there.

"Jeanne was then named a member of the 'Aviation Club' by the Germans," Parent said. "Members were those of the underground who helped allied fliers escape."

INITIATION: DEATH

"When someone in the club was caught," Parent continued, "he or she was sentenced to be executed."

Mrs. Parent was thrown into a political prison in Liege, Belgium, to await transfer to the notorious Buchenwald death camp. She languished there 2 months.

"My wife received very little food during her imprisonment," Parent said. "And she was continually beaten because they wanted her to talk and she would not."

SPURNED REWARD

If his wife had talked, Parent was asked, would she have been freed.

"Not only would they have let her go," he answered, "but I too would have been freed and Jeanne would have received 25,000 francs."

"But if she had spoken, many in the underground would have been killed," he added. "They made her suffer for silence."

NICK OF TIME

Before the Germans could find a vehicle to transport Mrs. Parent to Buchenwald, American troops liberated the town in September and set Mrs. Parent free.

"After Jeanne was freed, our home became kind of a social club for American soldiers," Parent said. "They would stop by for a meal and because my wife could speak English, it was a taste of home."

"Many of those boys were gloomy and homesick and a talk would help them," he said.

CAME TO UNITED STATES

Parent was released in 1945. He, his wife, and two daughters, now Mrs. Julie Snyder, of Newark, and Mrs. Jacqueline Blunt, of Bloomfield, came to Newark the following year.

Mrs. Parent was awarded the United States Medal of Freedom and a citation from then-General Eisenhower for her gallant services in the Allied cause. She also received the Commemorative War Medal, the Political Prisoners Cross, and other decorations from her native land.

Parent was asked what kind of a woman his wife was to have performed such heroic deeds.

MET IN BELGIUM

His face registered surprise. "Why, she was a housewife when I first met her in Belgium," he said. "My folks were from Belgium and they wanted to go back. I went with them, planning to stay only 6 months, but I met Jeanne and stayed longer."

They were married in 1924. Parent worked as a representative for an American business firm. "We were just an ordinary, happy family," Parent said.

FAST INVASION

When the Nazis invaded Poland in 1939 the Parents decided to remain in Belgium because they thought the Germans would honor a treaty between the two countries.

"Once the Germans invaded the Lowlands," Parent said, "it was too late for me to leave; it happened so fast."

After her arrival in the United States, Mrs. Parent visited some of the boys she helped.

RETICENT

"I remember one," Parent said. "His name was Ben St. John from Olean, N. Y. He refused to discuss his war experiences with anyone except my wife."

But, for the most part, Mrs. Parent went back to being a housewife in Newark.

"People would ask us why we didn't write a book," Parent said. "But it was all over and we just wanted to be left in peace."

Mrs. Parent died Thursday in the peace and quiet of her home at 235 Montclair Avenue, at the age of 53.

National Manufactory Born in Paterson

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. CANFIELD. Mr. Speaker, my home city of Paterson, N. J., which was founded and named by Alexander Hamilton, is prominent in this year's centennial observance of Hamilton's birthday. Recently County Government, a New Jersey publication, carried the following most interesting article on Paterson:

NATIONAL MANUFACTORY BORN IN PATERSON

(By Dr. Stanton Hammond, Passaic educator-historian)

County Passaic's Paterson was the brainchild of a colossal figure in Colonial America, Alexander Hamilton. Nestled in the valley of an Indian river at the foot of a bold cliff, it is a city of an incredible history; both county capital and economic heart.

On rainy Tuesday, March 5, 1680, two Dutch missionaries visited the thundering waterfall we call Passaic Falls. Their diary bespoke an awe of its enormous waterpower. But the falls thundered for another century untouched by the hand of man. When the grasping British King, George III, drove his finest subjects in America to arms in defense of their rights, a graceful Hamilton, fired with plans and ambition, emerged as a builder after the Battle of Monmouth in 1778.

On Friday afternoon, the 10th of July 1778, General Washington and his aides tarried for lunch at the brink of the Passaic Falls. Hamilton was a member of that company, headed by an experienced surveyor, a relaxed general of the armies. Did the conversations of the hour or a leisurely walk along the waterfall produce a suggestion, by Washington to Hamilton, that the vast waterpower of the Passaic Falls, might be harnessed to make things for days when peace would reign in the new land?

I firmly believe that he did—for on becoming President of the new nation, Washington named Hamilton as the first Secretary of the Treasury. In a very short time, the latter sent to the Congress his famous Report on Manufactures. In it he pointed out that the United States could never really be free of Europe's domination until it made most of its own products. Furthermore, he proposed a corporation should be formed to run this business. While he favored a strong centralized government, he evidently did not want this government to get into business in competition with its citizens.

By 1791 Hamilton's busy mind had a plan to free America from European capital and manufacture. He set about getting support from investors, keeping Passaic Falls in mind. On Tuesday, November 22, he wisely secured a charter from the New Jersey Legislature to set up such a corporation. This was the Society for Establishing Useful Manufactures which was to build and operate the National Manufactory.

In honor of the governor who helped steer the project to success and get New Jersey to subscribe $10,000 toward a million in stock, Hamilton named the new city for William Paterson. Passaic Falls was in competition with several southern locations, the Delaware and Raritan Rivers, but Hamilton finally steered the "sum" to this magnificent location.

The Indians called this falls Totowa, "the place where the water falls between" the rocks. The new project did not have smooth sailing, because men like Budinot, Pintard, and Lord Stirling's son-in-law, Duer, turned out to be poor businessmen. The engineer hired to lay out the works, Maj. Charles Pierre L'Enfant proposed such gradiose schemes that he was dismissed July 4, 1792, 16 years to the day of our Declaration of Independence. Altho his talents were never used in Paterson, they were utilized later by President Washington to lay out the grandest city in the Western World, our Nation's Capital, Washington, D. C.

The directors of the sum found a practical superintendent in Peter Colt, who put Paterson on the map by dint of skill and great ingenuity. However, the load was too great for his experience, and the sum closed down within a few years, never to resume manufacturing. Still a start had been made, and within a few years the town of Paterson began to brim with industry. The Colt family returned at the time of the War of 1812 and managed the city's development for nearly three-quarters of a century.

The first manufacturing at Paterson was of cotton goods. One reads with amazement in Dr. Fisher's 1832 census that 3,360,372 pounds of raw cotton was made into cloth and duck sail. In another decade silk, locomotives, and other heavy machinery, nails and hard supplies were in the lead of things made around Paterson and for a period of 60 years. Hamilton's plans to free America from dictation of European manufactures actually began at Paterson in successive economic waves. First, cotton, that spread to other parts of the infant Nation; then locomotives and other rail machinery started in Paterson, to go on to Philadelphia and elsewhere.

Next came the manufacture of silk—the star industry in Paterson long called the Lyons of America, and the Silk City. John P. Holland tested his first successful submarine above the Passaic Falls. Only today can the atomic-powered *Nautilus* dive and maneuver to the tune of Holland's advanced theories of underwater navigation. His original sub rests in the Peterson city museum.

Wright airplane engines poured out of Paterson's mills to help win World War I—the first worldwide justification of Hamilton's faith in the power of the falls. For 163 years, firsts have made a serial story of success in the life of Paterson, Passaic County's stalwart son. And the city that rose by the falls of the Passaic has had its share of vicissitudes. In 1902 it rose like a phoenix from the ashes of a great fire. Later it experienced floods, the epidemic of cholera, strikes, the taint of sensationalism spawned by yellow journalism—all to become a stronger city better able to fulfill the founder's dream—so much more than Alexander Hamilton could have imagined that Independence Day in 1792.

Today Paterson pilots Passaic County to an even greater commercial destiny in the pursuit of useful manufactures.

Report to the People

EXTENSION OF REMARKS
OF
HON. GRACIE PFOST
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. PFOST. Mr. Speaker, once more at the close of a session, I am making a report to the people of the First Congressional District of Idaho.

In my opinion, the Democratic-controlled 85th Congress has proved itself responsible, temperate, and in tune with the times. By every means of communication at their command, the people let the Congress know they wanted present levels of Government spending cut. That is what the Congress did. The President's budget requests were slashed by more than $5 billion. I hope this forecasts a tax cut for the people next session.

Aside from its economy record, the 1st session of the 85th Congress will be known for two solid achievements—it passed the first civil-rights bill since the Civil War, and it enacted legislation providing for full United States participation in the International Atomic Energy Agency, which will put the atoms-for-peace program into operation.

THE BATTLE OF THE BUDGET

The civil rights and budget battles overshadowed all else. The budget fireworks began when the President submitted the largest peacetime spending program in history. There followed a sensation-packed drama in which the President first embraced, and then denied, again rejected, and then supported the budget which bore his name, only to virtually repudiate it in the end. It was a tragic example of what happens when Executive leadership is lacking.

FOR THE PEOPLE'S BENEFIT

The controversy surrounding civil rights held up legislative action on many other proposals. An important bill that got through will lower downpayments on FHA-insured loans, but because the administration's hard-money policy contues to increase interest rates, little improvement has yet been felt in the ailing housing market, or in the allied western lumber industry.

Immigration restrictions were eased so that many fine Idaho families may now have an opportunity to adopt orphans from abroad and bring them into their homes. Consumers got a break through the passage of a poultry inspection bill which will put fresher and better products on the market.

THE FORGOTTEN FARMER

This year's output of farm legislation was the smallest since the depression. Bills were passed extending the soil bank for 1 year, and allowing farmers to produce up to 30 acres of wheat for feed without penalty. Funds were also increased for swapping surplus commodities for foreign currencies.

Little was done to keep America's family-sized farms in operation. In spite of Secretary Benson's predictions that farmers would make more under this administration's farm policies, net farm income has dropped 27 percent during the past 5 years, and farm mortgage debt is at its highest point since 1921. The administration steeled itself against any attempts to enact a new farm program.

THE MINING INDUSTRY

Accomplishments for the mining industry are also disappointing. The industry did not like the administration's lead-zinc bill, and the administration did not like the industry's bill, and the House Ways and Means Committee did not like either. Then the President pulled the rug out from under the Congress by implying at a press conference that he had been misled in sending the peril-point lead-zinc program to Congress, and suggested that the proper and preferable route was for the lead-zinc industry to file an application with the Tariff Commission for relief under the escape clause. This procedure has been there all of the time. Why did not the administration recommend using it 6 months ago, instead of allowing the lead-zinc situation to deteriorate while the Congress struggled with a bill the White House did not really believe in

LEGISLATION FOR THE WEST

Several bills of special interest to the West were considered this session. A bill prohibiting the military services from withdrawing more than 5,000 acres of public-domain land without congressional approval passed both the House and the Senate, and is ready for final approval next session. A measure I sponsored to prohibit futures trading in onions, which has almost unanimous support of the onion industry, is pending on the House Calendar. Hearings were held on bills providing for an overall study by a special commission on how to make best use of the Nation's great outdoor recreation resources.

HELLS CANYON NOT DEAD

The Hells Canyon bill passed the Senate, but White House pressure and private power company lobbying kept it from being reported out of the House Interior and Insular Affairs Committee. There will be further consideration of the Senate-passed bill on February 1, 1958.

Full and proper development of the Middle Snake is now a critical issue. A group of western Congressmen and Senators have asked the Federal Power Commission to withhold granting licenses to the Pacific Northwest Power Co. to build low dams at Pleasant Valley and Mountain Sheep until studies on the proper development of the Middle Snake are completed. If the people of Idaho and the Pacific Northwest are to receive full benefits from the rushing waters of the Snake River, there must be adequate storage in the Middle Snake area.

FOR CIVIL-SERVICE RETIREES

As chairman of the House Retirement Subcommittee, I put in many long hours working on a measure which would require no appropriated funds but would increase pensions for retired civil-service employees. They are having a hard time paying today's prices on yesterday's pensions. This bill passed both my subcommittee and the full Post Office and Civil Service Committee, and is ready for further action as soon as the new session convenes.

The wheels were set in motion to find out why the cost of living has continued to rise each month under this administration. At least three congressional committees have begun studies of the hard-money policy and other inflationary pressures in our economy. Out of these hearings may come recommendations for legislation which will help the American family stretch its budget.

President Eisenhower has indicated he is disappointed with the performance of the 1st session of the 85th Congress. In reply I can only say—the Democrats in Congress are disappointed that the President did not put up a bigger fight for programs he said he wanted. In many cases, a statement of support from the White House at the right time would have pushed a bill through.

This Congress worked long and hard and despite the fact that the White House remained aloof on most controversial measures, the record written is a good and substantial one.

Greater Economy With Increased Efficiency

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very timely editorial commenting upon the projection of the so-called Cordiner plan into our military preparedness program, appearing in the Christian Science Monitor issue of August 26, 1957.

The editorial follows:

THE CORDINER PLAN BREAKS THROUGH

Someone apparently has convinced the Bureau of the Budget that a price of even $300 million a year for 2 years is not too great if it will be saving the Treasury $5 billion a year by 1962. At any rate, the Defense Department plans to introduce a bill embodying recommendations of the Cordiner report and with the Budget Bureau's blessing.

This news evidently heralds a withdrawal of the administration's opposition to recommendations of the Defense Department's own Advisory Committee, headed by General Electric Co.'s president, Ralph J. Cordiner. This group urged, it will be recalled, that the principle of pay for technical knowledge and skills as well as for seniority and what might be termed purely military proficiency be introduced into the armed services.

This, it is believed, would enable the services to compete effectively enough with the pay scales and opportunities of private industry to cut down the enormous turnover among men whom the Government has spent as high as $150,000 each to train. It would increase combat efficiency by building up the core of skills and experience. The dollar savings would come from reducing the cost of having continually to train new men.

Full hearings on this and other similar bills will have to wait until after the first of the year.

Meanwhile the Air Force has taken a step which promises results in line with those of the Cordiner recommendations. Pilots, obviously, require the most intensive and expensive training. Henceforth pilot trainees must sign up for 5 years instead of, as heretofore, for 3. Those who do not wish to will be trained for ground duties. The Air Force admits half those now starting pilot training may drop out. But it believes these losses will be well offset by the gains.

More and more it becomes evident that large savings are possible in today's Defense Establishment by building up and conserving professional knowledge, experience, and skills.

Francis Bellamy's Authorship of the Pledge of Allegiance Settled by Library of Congress

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. KEATING. Mr. Speaker, the Legislative Reference Service of the Library of Congress recently completed a study of the authorship of the Pledge of Allegiance to the Flag, which was undertaken pursuant to my request. The findings of the Library team, headed by John T. Rodgers, of the History and Government Division, are clearly and completely set out in 148 authoritative and careful pages. Mr. Rodgers deserves high praise for his presentation of the whole problem.

I am delighted to report that this study bears out the contention that Francis Bellamy was the true author of the vital words which make up our Pledge of Allegiance. It is certainly to be hoped that this definitive report will end once and for all any dispute as to the pledge's authorship.

Now that the report is in, tribute should be paid to David Bellamy, of Rochester, N. Y., son of the author, who has been most diligent in seeing to it that this question was finally settled, and to Dr. John R. Russell, librarian of the University of Rochester, who made available much of the material on which the study was based.

Under leave to extend my remarks, I include at this point in the RECORD the summary and conclusion portion of the Library of Congress study, which was entitled "Authorship of the Pledge of Allegiance to the Flag: A Report":

SUMMARY AND CONCLUSION

As the preparation of this report drew to a close, the Legislative Reference Service, for the sake of general clarification, invited the 2 able protagonists in this dispute, Miss [Margarette S.] Miller [of the Bellamy Memorial Foundation] and Mr. [Archie B.] Birtwell [of the Malden, Mass. Evening News] to sum up their respective arguments under 6 principal heads. Both agreed to do so, and each submitted a summary to this Service without seeing that of the other side. We felt this procedure would be helpful to the reader, as well as to ourselves, for in so intricate a case as this has proved to be it is not always easy to keep a proper perspective—one is apt to lose sight of the forest because of the trees. Since Mr. Birtwell, for the present purpose, may be regarded as the prosecution against a long-established claim, we present his summary first:

"Point 1: The Youth's Companion itself attributed its own pledge to James Bailey Upham.

"Point 2: Francis Bellamy waited until 5 years after Upham's death to first ask credit, and then waited 12 years more until after the death of Seth Mendell to try again, this time publicly, and this was 6 years after the Companion attribution.

"Point 3: Former Companion officeworkers testified 9 to 1 that they had never heard of anyone except Upham mentioned as the author. (All other testimonies from outsiders.)

"Point 4: Francis Bellamy deliberately violated the Companion policy of anonymity in 1894, yet his supporters claim he waited 31 years because of his respect for this policy.

"Point 5: The 1939 decision for Bellamy in Washington, on which his claim has thrived for 17 years, was the result of a 7-hour review, and not the result of an investigation. Americana, Britannica, and World Almanac have all now expressed a lack of confidence in that finding and in the claim itself. One of the trio of now-noted professors (Dr. West) declined to defend the finding. Dr. Tansill refused to answer my polite inquiries at all. (I refer you again to my detailed analysis of this decision.)

"Point 6: Respecting the Companion policy of anonymity, Mr. Upham never claimed credit for the pledge, nor did he ever claim credit for any of his contributions, including the many patriotic ideas which he originated and carried out, including the 'flag before every schoolhouse' campaign and the Columbian celebration itself. Mr. Bellamy also did not voice his claim during Upham's lifetime, nor has any personal correspondence of his been introduced or claimed to show that he did so during that period.

"Point 6 (A): A 1923 letter from the Youth's Companion, signed Perry, Mason & Co., to Francis Bellamy, said: 'You see our dilemma * * *.' The dilemma was that the writer was generations removed from the Companion of 1892 and had no knowledge or right to grant Bellamy's request. He could only refer to what the Companion had said years before.

"Conclusion: Francis Bellamy accumulated a chain of his own assertions, circumstantial evidences, which, together with assumptions and generalities, pointed to his authorship. Nowhere in this chain is there one item which would be admissible as proof positive of his authorship. In all fairness, it is easy to see why some persons might be instilled with the feeling that he was the author, especially in light of his self-created role of underdog. But, in view of the Upham evidences, one could never say that he had proved his point in his personal dispute with the Youth's Companion. He said a crime was committed, but no motive was ever found."

Miss Miller's summary follows:

"Point 1: Previous complete studies show Bellamy author:

"(a) Twenty years' personal research into three major claims.

"(b) Nonpartisan examination by three eminent historians favoring Bellamy.

"Point 2: Prima facie evidence supporting Bellamy:

"(a) Patriotic pamphlets, magazines, proceedings, textbooks.

"(b) Bellamy affidavits-statements contemporary to pledge writing.

"Point 3: Three men directly intimately concerned with 1892 program credit Bellamy:

"(a) James B. Upham, part owner of the Youth's Companion.

"(b) Francis Bellamy, himself, chairman of 1892 school celebration.

"(c) Harold Roberts, 1892 official press representative.

"Point 4: No credit given James B. Upham during his lifetime:

"(a) Upham never claimed credit for himself.

"(b) Upham not connected with the writing until 1917, 12 years after his death.

"(c) No mention of authorship in numerous Upham obituaries which dealt in extreme to patriotic activities.

"Point 5: Gradual growth of Companion point of view favoring Upham:

"(a) 1910—Companion president made no claim for Upham.

"(b) 1917—Companion editorial: Salute collaboration by editors.

"(c) 1923—Companion leaflet: 'A form of pledge was written by Upham and hammered into shape by others.'

"(d) 1956—Upham spokesman: Sole pledge responsibility for Upham.

"Point 6: Consistent effort of Bellamy to get recognition for authorship:

"(a) Genuinely sincere-heartfelt letters written by Bellamy to Companion in 1923 begging for interview and hearing.

"(b) Companion refusal to grant interview.

"Conclusion: Companion erred in initial statement. Editors deny paper could ever make mistake."

To which we add our own:

1. No question as to authorship, by the one party or the other, arose during Upham's lifetime.

2. Upham himself never claimed authorship of the pledge.

3. Upham, according to sworn testimony of one and the assertion of a second witness, freely admitted Bellamy to be the author—the sole author—of the Pledge of Allegiance.

4. The affidavits in support of the Upham claim are vague and inconclusive.

5. The Bellamy affidavits, on the other hand, are very specific, entering into the minutest detail.

6. The two copies of the pledge, in the handwriting of Francis Bellamy, written on the backs of contemporaneous Youth's Companion office forms and containing, respectively, a queried word and the final insertion of that word, exactly as related by Bellamy in articles and subsequent affidavits, offer powerful circumstantial evidence.

In reaching our own conclusion on what has, frankly, been a most difficult and delicate matter, we have been guided, in the last analysis, by what we may call the law of inherent probability, as at once the safest, sanest, and fairest rule which could be applied. Nevertheless, the way of the arbitrator is hard: it is a thorny path, beset with many dangers and vexations. He knows he cannot possibly please both sides: he may end by pleasing nobody, including himself. Certainly he will win no plaudits by taking refuge in good Sir Roger De Coverley's famous pronouncement, when that worthy old gentleman was called upon to pass judgment, that "much might be said on both sides." So there was nothing for it but to plunge in medias res, clinging to the above-mentioned rule in the hope that it would bring him safely through all pitfalls and entanglements that lie in wait for all investigators of such problems as these.

We are of the opinion, then, that, all factors taken into consideration, the Bellamy claim to authorship rests upon the more solid ground. As we read the mass of testimony introduced by the Bellamy side, including the three long, greatly detailed, and specific affidavits made by Bellamy, we became, and remain, convinced that Bellamy's testimony and his sworn statements are those of an honest man—a man convinced of the rightness of his cause and by no means at a

loss for words and arguments to defend it. The mere mass of specific detail which Bellamy offered was not the least impressive part of his case. Unless one is prepared to believe that Francis Bellamy was a deliberate and conscienceless lair, the mass of his testimony is overwhelmingly in his favor. We, for our part, do not believe Francis Bellamy did lie: we are persuaded that he told the absolute, literal truth as he saw it, and we are, therefore, constrained to pronounce in his favor. In ascribing the authorship to Bellamy on the basis of the greatly preponderant evidence, we recognize that there are still certain gaps. We believe that there still may be persons living or items in existence which would shed additional light on this important question. We would, therefore, appeal to any of our readers who know of such additional evidence to bring it to our attention.

It should never be forgotten that, to the day of his death, Mr. Upham apparently never made a formal assertion, verbal or otherwise, as to his own claim to authorship, nor does anyone quoted in the Birtwell testimony claim that he did—on the contrary. Had he done so, surely some of the members of the old Companion staff who knew him so well and remembered what they did profess to remember so clearly and whose affidavits and letters Mr. Birtwell submitted to us and which we have reproduced in this report—surely at least one of these intimates would have head Mr. Upham say that he had written that pledge, or would, at the very least, have been able, of the witness' own positive knowledge, to swear that he knew Upham had written that pledge instead of taking refuge in such generalities as "it was generally understood," "everyone believed," "nobody doubted," etc. The only person (and she was not a member of the Companion staff) who does make a positive assertion, as from her own knowledge, is Upham's sister-in-law, who testified that she had seen Upham write and rewrite the pledge many times at her breakfast table. Without in any way casting aspersion upon the lady's perfect good faith, we cannot permit this lean bit of testimony, otherwise unsupported, to stand against the detailed depositions by Bellamy. A possible explanation is found in the remark attributed to Upham by Bellamy to the effect that the former had "tried to write a salute but has not got anything."

The only direct statement that we have, and probably shall ever have, by Upham concerning the authorship of the pledge of allegiance are those contained in the Wadsworth and Scott testimony, in the affidavit made by Mrs. Lue Stuart Wadsworth, reproduced above. According to her testimony Upham admitted that Bellamy had written it. Mr. Birtwell, via a Mr. Anderson, of the Companion staff, endeavors to dismiss this sworn assertion as the confused memory of an old lady, but we cannot for a moment allow this to stand. How did Mr. Anderson, and hence Mr. Birtwell, know that Mrs. Wadsworth's memory was unreliable? There is also the testimony of Mrs. Scott and her account of the New Jersey flag raising in which Upham again gave credit to Bellamy.

A man is presumed innocent until proved guilty. For at least 32 years the claim of Francis Bellamy to the authorship of the Pledge of Allegiance to the Flag has been universally recognized.

No adequate proof, in our judgment, has been adduced to overthrow this claim.

In its report of May 23, 1939, the Committee of the United States Flag Association stated:

"In view of this strong contemporary evidence it is the opinion of the members of this committee that the author of the Pledge of Allegiance to the American Flag was Francis Bellamy, of Rome, N. Y., and not James B. Upham, of Malden, Mass."

In the language of the courts, "Judgment affirmed."

Federal Assistance to Small Business Is a Vital Necessity for Their Preservation

EXTENSION OF REMARKS
OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. DONOHUE. Mr. Speaker, I would like to call to the attention of my colleagues the very pertinent remarks by Dr. John W. Dargavel, bureau chairman of the National Association of Retail Druggists, contained in the August 1957 issue of the Fair Trade Newsletter on the unhappy economic situation of small business and unfortunate legislative inaction in reasonably assisting them during this session.

Let us hope that our combined leadership, with encouragement of the Chief Executive, will deal with this desperate problem of threatening catastrophe to small business in the very early days of the next session.

Dr. Dargavel's remarks follow:

SMALL BUSINESS NOT EXPENDABLE, DARGAVEL WARNS

Commenting that every bill introduced to help small business is being left to die in the 85th Congress, Dr. John W. Dargavel, bureau chairman and executive secretary of the National Association of Retail Druggists, warned of the consequences of treating small-business men as though they were expendable, in a special message in the NARD Journal last month. Said Dr. Dargavel:

"Republican and Democratic candidates alike in the national election campaigns of 1956 shouted long and loud about the desperate plight of small-business firms, and they made ironclad promises to leave nothing undone to help insure the survival of independent enterprise in America. Then after the political oratory ceased and the votes were counted, the majority of the victorious candidates seemed to make haste to forget the pledges they made to strive in behalf of independent enterprise. One of the examples in sharp focus is the evasive tactics used to dodge action on relief from the overload of taxes levied on small-business firms.

"The independent druggists must join in a drive to make it clear to the politicians that the owners of small-business firms refuse to be shunted to a corner as though they are expendable. Moreover, the Members of Congress must be made to understand that they will be held to the promises they voiced in support of independent enterprise in the campaigns of 1956."

THE LITTLE MAN WHO IS THERE

In an article published in a recent issue of Credit Executive magazine, Dr. Dargavel pointed out that "America's small-business man is very much the little man who is there. He's a key figure in our economy. The country's 4 million small-business concerns add up to 95 percent of all the businesses operating in the United States today. Yet he's facing a growing crisis. If it is not checked, America's small-business man will become the little man who isn't there."

Study findings, Dr. Dargavel reports, show that "the small-business man with his independent stores, factories, and enterprises of all sorts, provides the livelihood for 1 out of every 3 people in America. This demonstrates that America needs the little and medium-sized businessman as well as the giant."

However, small business, in the midst of record-breaking prosperity, is in trouble, Dr. Dargavel finds. "Bankruptcies and failures are mounting. To date there have been more failures among small-business men this year than in any year since 1939. Cautious estimates by Dun & Bradstreet indicate that in 1957, over 13,000 small businesses will be wiped out—unless the present trend reverses itself.

"The failures are concentrated in retailing, small manufacturing, and home building. This has been going on for some time. The United States Senate Small Business Committe, for example, reports that in 1956, small-business failures totaled 12,686. This represents a 16-percent increase over 1955 and a post-World War II high. Retailers ranked second highest in business failures last year. Figures from the Small Business Administration show that 6,341 stores closed their doors in 1956. This is 19.8 percent higher than retail failures in 1955." Another grim note is a 26-percent decrease since 1950 in the number of new businesses opening each year.

SQUEEZE OF CUTTHROAT COMPETITION

"Why is small business confronted with the growing threat of failure in the midst of a boom?" Dr. Dargavel asks. He cites some answers of the United States Senate Small Business Committee: "One is the constantly rising costs of labor and materials. Another is the heavy tax burden which never allows the small-business man to get off the hook. A third is the tight-money situation which makes it harder and harder for the little man to get bank loans, even at high interest rates. Then there is the growing trend toward mergers of little companies with big ones.

"And of vital importance, there is the squeeze of cutthroat competition—such as price wars on the popular brands which constitute the independent retailer's bread and butter.

"To prevent this destructive competition from creating chaos in the market place, rules of fair competition are needed," the bureau chairman points out.

"In the interest of the good society, the freedom of the individual to do as he pleases in the market place—as in any other area of life—must be limited by the commonsense restraints which society itself imposes.

"The fair-trade laws are rules of fair competition and fair play over the counter. Enacted by 45 State legislatures, these laws have been supported by Congress and upheld by the United States Supreme Court and 16 high State courts. But, today, in 11 States, courts have knocked out fair trade and new legislation is needed to give small business an opportunity to compete on fair terms with big business. As the Senate Small Business Committee says: 'Independent businessmen simply are not equipped to survive the low blows of unfair competition.'"

THE CITIZEN'S STAKE IN SMALL BUSINESS

Dr. Dargavel raises this question: "What is the average citizen's stake in keeping the small-business man from becoming a vanishing American? What would America be like without small business? For one thing, it would be a collection of supergiant businesses so big and so tough that they would inevitably invite control by a superbig and supertough government. This is not the road to democracy. That the threat of a monopoly by bigness is not an idle one is indicated by the recent statement of a big industrialist who said:

"'I think that, if our economic system is to continue, we must have smaller businesses developing, otherwise competition will be eliminated in the next 5 to 10 years, and we will end up with 1, or possibly 2, large companies in each of the major fields.'

"How will our communities be affected if small business disappears? The burden of the taxes now paid by small-business men will be shifted to others, including all consumers. Who will take over the financial support and participation which small business now contributes to civic activities and organizations, such as hospitals, churches, community chests, the Boy Scouts, and all the other efforts to improve our communities? The exit of small business will leave a serious vacuum in towns and cities all over the Nation—a vacuum which cannot be filled by absentee business owners.

AN AMERICAN DREAM

"Finally, there is that precious American dream of working for yourself," Dr. Dargavel points out. "If this dream is to be a reality and not a myth, small-business men must have conditions of fair competition so that they can prosper if they have what it takes. If people can see no possibility of success in their own business, America must inevitably become a nation of many working for the few. Freedom of opportunity will come to mean less and less in America.

"The American people have it within their power to save small business by supporting legislation to preserve this vital part of our economy and by letting their representatives in State legislatures and in the Congress know they want action before it is too late. Only adequate laws to assure fair competition can prevent dollar power alone from dominating the economy."

Record of 85th Congress, 1st Session

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. PRICE. Mr. Speaker, the 1st session of the 85th Congress has ended with a record that contains many disappointments but out of which I think most Members can feel some sense of achievement.

The 85th Democratic-controlled Congress was an economy-minded Congress. Its principal achievement was the reduction of President Eisenhower's requests and the Bureau of the Budget estimate for appropriations for fiscal year 1958 by $5,048,378,979. I supported this reduction recommended by the Appropriations Committee and adopted by the Congress. I opposed all meat-ax attempts to go beyond committee action in reducing requests for appropriations. Many of the most important programs of the Government would have suffered by such meat-ax approaches.

The House Appropriations Committee gave thorough study to each item in the budget and accomplished a record for economy, seldom equaled in our legislative process. The House committee actually reduced budget requests by $5,515,773,184, but some restorations in the Senate resulted in adjustments in conference, with the House position in the main being preserved, so that the final cut by the Congress in President Eisenhower's funds request was $5,048,378,979. This figure I supported.

This was one of the longest sessions of a peacetime Congress, opening on January 3 and closing its work August 30. There were more rollcalls and quorum calls—220 of them—than in any other Congress since the start of the Korean war. I did not miss a single quorum call or rollcall during the session.

During the session, I secured passage of 5 public bills, including 2 which were regarded as part of the President's legislative program, and 3 private bills.

It has been—for the third straight year—a Democratic Congress serving with President Eisenhower, a Republican. Once again it is fair to point out, I think, that the result has not been the "political cold war" the President once predicted from such a division of party power.

In the House of Representatives, on the contrary, the point can be made that most Democrats cooperated wholeheartedly with the President to advance legislation that he said he wanted. For example, the civil-rights bill we passed was taken, lock, stock, and barrel, from the administration proposals. It fell into trouble in the Senate, but this trouble was not partisan trouble but rather sectional.

In the House again, in an effort to save the Federal-aid-to-schools bill, we Democrats agreed on the floor to abandon our own beliefs and convictions on the proper distribution of Federal school funds and accept the Eisenhower proposals. Our offer failed, and the bill was killed; but 57 percent of Democrats voted to save the program and only 41 percent of the President's own Republicans voted with us.

There is no evidence of "political cold war" in that record.

Neither was there "political cold war" in the scrutiny of foreign policy. I myself sponsored the bill authorizing our country to participate in the "atoms for peace" international plan that President Eisenhower recommended. It was not strange for Democrats to support this type of program, for the late Senator Brien McMahon, Democrat, of Connecticut, and I cosponsored the original resolution many years ago that called on the executive department for leadership in the field. The point is that we did not desert our principles merely because they were adopted and recommended by a Republican President whose party might claim the credit.

When the President presented the Eisenhower doctrine for the Middle East, with what seemed to be a demand for authorization for war in the Mediterranean at his choice at some future time, many of us were disturbed, but we supported the President to present a united front to the world.

Nevertheless, although some changes were made in the resolution, the Democratic Congress gave bipartisan and nonpartisan support to the Eisenhower doctrine.

There were some factors that made responsible action by the Congress this year very difficult. One was the violence and persistence of the so-called economy drive. A second, I think we Democrats may fairly say, was what seemed to be extraordinary vacillation in the White House.

The vacillation was noticeable even in regard to the President's $71.8 billion budget. Before this budget was submitted to the Congress, it had been sharply attacked by Secretary of the Treasury, Humphrey, in a background briefing for reporters.

A tremendous wave of letters poured into the Congress that seemed to reflect some grassroots protests against spending. Many of these letters were inspired by organizations, but they were properly heeded by Members of the House who have a responsibility to their own constituents. And the White House never seemed able to make up its mind. The President demanded restoration of Defense Department and foreign aid money cut by the House, but then dropped his requests after the Senate had fought hard to support him—led, I may say, by Senate Democrats. At a crucial moment the President's own Budget Director undercut work in Congress by seeming to endorse attacks on the President's budget proposals.

My own attitude toward the budget was to support all Appropriations Committee efforts at economy—to trim fat and waste and to postpone projects that could be postponed—but to refuse to adopt the meat-ax approach of simply slashing at random. And I see no virtue in trying to deceive the voters by making cuts that are really spurious—eliminating funds for services already obligated, for example, when everyone in the House knows that next year the money will have to be restored in deficiency and supplemental appropriation bills.

Our country has very large obligations for the defense and preservation of freedom in a dangerous world, and the price tag is not cheap. We have subcommittees on appropriations that very carefully study the requests of the various departments and are experienced and skillful at proposing the elimination of waste. These subcommittees are the ones that suggest wise money cuts, and the reports of the subcommittees I supported. The meat-ax approach is not wise and I could not accept it.

There are other examples of what seemed White House vacillation, entirely apart from the budget, that made it difficult for the first session of the 85th Congress to function effectively. One was on the school-aid bill, mentioned above. So far as I can tell, no Republican leader took the trouble to tell the President at the decisive moment that we Democrats had accepted in toto his bill. At least, he did not himself take the trouble to make a few telephone calls to fellow Republicans and tell them that he wanted action. The bill failed by a mere 3 votes on the first rollcall; a shift of 2 votes would have changed the result, and it is inconceivable that the President could not personally have won 2 votes from among the 59 percent of the Republicans who, in the absence of such an appeal, voted against him.

The civil-rights bill revealed a comparable absence of effective Presidential leadership. In the House we gave him exactly the bill he said he wanted. But when it reached the Senate, President Eisenhower seem to begin debating with

himself in public. He said in a news conference he was "surprised" to find certain things in the bill that he "did not understand." The result was that he yielded the initiative on the measure to its enemies, and all the waverers began to jump down on the "compromise" side. The President's performance very seriously damaged what his administration originally insisted it wanted.

The record of 5 years suggests that the President is never really very effective when he announces that he is for something. He may say he is for it, but he seldom carries through. But when he is against something, such as river-valley development or a program to help our still distressed farmers, then the White House is tremendously effective. It fights as one man, and the Republicans respond. But when Mr. Eisenhower says he is for something, he seldom if ever makes the fight necessary to persuade the Republicans he means it.

My own work this session has been divided, as usual, between the legislation all members must consider for the welfare of the country and the particular interests of the district and people I have the honor to represent.

On January 5, 1957—the opening day of the session—I was elected as chairman of the Democratic caucus for the 85th Congress. In that capacity I nominated the gentleman from Texas, SAM RAYBURN, for his eighth term as Speaker of the House; announced the selection of the gentleman from Massachusetts, Representative JOHN MCCORMACK, as majority leader; and I was appointed, along with MCCORMACK and the gentleman from Massachusetts, Minority Leader JOSEPH MARTIN, to notify the President that the House was organized and ready to do business.

Most people know that much of the work of the Congress is done through committees. I serve on both the Committee on Armed Services, which has jurisdiction over our defense system, and the Joint Congressional Committee on Atomic Energy, which was created as a congressional supervisor of the Atomic Energy Commission.

There has not been a day during the session, except for brief recesses, when I have not attended at least 1—and sometimes 2—meetings of subcommittees or committees working in the atomic energy and armed services fields.

For example, many people became interested in our Status of Forces Agreement regarding trials of our servicemen abroad, and the full Armed Services Committee held extensive hearings which I attended.

From the Atomic Energy Subcommittee on Agreements on Cooperation, of which I am a member, we reported out the bill authorizing American participation in the "atoms for peace" International Atomic Energy Agency. This bill permits the United States to furnish fissionable material for nuclear power reactors in other countries and was necessary to give effect to Senate ratification of the treaty creating the IAEA.

I am equally as interested in fostering the speedy development of nuclear powerplants in our country; indeed, it is vital that the United States shall not be outstripped by other major nations in developing this new source of electric power. Presidential hostility has made it impossible to pass the Gore-Holifield bill, instructing the Atomic Energy Commission to build experimental reactors so that the general public may have the benefit of their enormous $17 billion investment in the atom. But there is a program of private investment, and this can be encouraged by proper Government action. So I sponsored a bill, passed by both Houses, providing that the Government will assume liability over and above private insurance coverage for reactor hazards.

In the absence of such Government assurances, private industry and insurance were reluctant to move swiftly. This bill encourages private industry to go ahead, offers protection to the public financially and also writes in certain reactor safety standards that must be accepted.

I must report frankly that I am still concerned about our slowness in pushing for nuclear power. The pressurized water reactor at Shippingport, Pa., largely financed by the Government and based on development work by a team headed by Adm. Hyman Rickover, will soon be in operation. There will be great publicity next January when nuclear power actually moves into the electricity lines of the Pittsburgh area.

But we need to work on other kinds of reactors—particularly a gas-cooled type that uses natural instead of enriched uranium. Forty percent of all TVA electricity is now being used to enrich uranium, and the development of a gas-cooled natural-uranium reactor would be a great step forward toward production of nuclear power at an economic level.

The Atomic Energy Committee, of course, is also concerned with national defense. The Subcommittee on Research and Development has been given credit—correctly, I think—for saving a program of experimental work toward nuclear propulsion of aircraft.

There were unmistakable signs, many months ago, that the administration was lengthening its target dates in an economy move. I had no objection to a cutback in production plans for an airframe for nuclear craft, but there was serious danger that the whole project would suffer from the reduction of Air Force funds for research and development. The subcommittee's providing produced reassurances from Donald A. Quarles, then Secretary of the Air Force, that every effort would be made to pursue the program vigorously.

The joint committee also created a special subcommittee, of which I was a member, to conduct full-scale hearings on the problems of radioactive fallout from nuclear weapons tests.

We heard scores of experts in the field of fallout, the spread of radioactive particles in the atmosphere and on the earth, and the potential effects on human beings, animals, and vegetation. What we had previously was a welter of uncoordinated information, and the subcommittee report—released just a short time ago—sought to summarize the available facts in a coherent and comprehensive form. We did not get the final answers, of course, but the report should prove very useful to intelligent discussion of the problems by the public.

In another field, one other major public bill was passed in which I have long been interested—the bill establishing Federal inspection and Federal health standards in the marketing of poultry.

I introduced the first resolution in the House calling for an investigation of slaughterhouse and processing plants in the poultry industry after I became aware that very sick chickens were being foisted on the public and that the Government possessed no power to protect the public. Now we have a new system providing for Federal inspection, prohibiting the movement in interstate commerce of poultry or poultry products from diseased, unwholesome or adulterated chickens and turkeys. We have had compulsory meat inspection, for the protection of the public health, for many years. Now we have protection of the public health through inspection of poultry.

I sponsored again, in this session, a bill to grant Federal assistance to areas of chronic and persistent unemployment. Despite the general levels of prosperity, the country is pockmarked with numerous areas where worked-out mines or other troubles have given rise to low incomes, lack of economic opportunity, and genuine depression. There should be Federal aid for these areas, to help them through loans, grants, and counsel, to get back on their feet. I am sorry that administration opposition has made enactment of the bill I sponsored, comparable to the bill sponsored in the Senate by our own Senator PAUL H. DOUGLAS, Democrat, of Illinois, impossible.

Naturally I voted for the pay raise for postal workers—and I helped force the bill to the floor, against administration opposition, by petition discharging the committee that had bottled up the measure. I do not consider it right that Uncle Sam should be a bad employer, that he should deny postal workers and civil-service workers the pay increases needed to keep them from suffering from rising living costs. In its best days, the Government has taken the viewpoint that it has a special example to be a good employer, to set an example to private industry, and that is what it should be today.

I regret the failure of the school-aid bill, regret the troubles surrounding the civil-rights bill in the Senate, and can merely repeat that stronger Presidential leadership would have produced better results.

I opposed the natural-gas bill, which would both raise prices to our users of gas and damage the southern Illinois coal industry by allowing a high-profit group of giant oil companies to charge all the traffic will bear. There was sufficient opposition among House Members to keep this bill from being considered in the first session of the Congress.

I sponsored one other bill that is, I think, of more than strictly local interest. This is a measure to incorporate a new veterans' organization, called Veterans of World War I of the United States of America.

This organization, sought by veterans who served from April 5, 1917, and July 2, 1921, would allow perpetuation of the comradeship of those who fought in a war more than a generation past. They have interests in common because of age and memories, and they have a proper concern for celebrating the splendid battle names that ring in their history.

The Defense Department—it informed me in May—has plans well advanced for the return to this country of unknown servicemen of the Korean war and of World War II. Their remains will be ceremonially interred in Arlington National Cemetery.

This is pursuant to two bills that I sponsored in previous sessions of Congress. The remains will be placed in crypts near the sarcophagus of the Unknown Soldier of World War I, in ground already a place of sanctity for Americans, but there will be no change in the present sarcophagus or in its famous inscription, "Here rests in honored glory an American soldier known but to God."

One of the major interests of southern Illinois and of St. Clair and Madison Counties in particular is the question of flood control.

The House this year approved several projects: $97,000 for planning a flood wall at Alton, $550,000 for work on the Wood River levees, and $800,000 for additional levee work in the East Side Levee and Sanitary District.

The House Public Works Committee authorized $40,000 for a small-boat harbor at Alton.

I am sponsor of three bills or resolutions that, in the long run, I hope, will get Federal flood protection that our people seriously need.

One is the bill, which I have sponsored in other sessions also, to get the basic Mississippi River flood-control program modified so as to allow the Kaskaskia project at New Athens, Ill., to be included.

Another is a bill to modify the existing Mississippi River project so as to allow construction of a dam at Chain of Rocks.

The third is a resolution calling for a thorough review of earlier flood-control projects in regard to southern Illinois.

I do not believe that these earlier projects are adequate to meet the needs of our people. The situation has changed sharply since the 75th Congress, 10 years ago, when the comprehensive plan for the Ohio and lower Mississippi Rivers was published. I have asked for new review and survey from the Board of Engineers for Rivers and Harbors, covering both the 75th Congress document and all other applicable reports.

Specifically, I requested the House Committee on Public Works to ask the engineers for a review of all programs with "particular reference to all streams in St. Clair and Madison Counties" that flow into the Kaskaskia and Mississippi "with a view to providing improvements."

The Committee on Public Works promptly sent this resolution to the Army Corps of Engineers for a preliminary report on the feasibility of such a survey and review. The Corps of Engineers has agreed that it is feasible and that the survey should be made, and the committee has approved my resolution. This is the first essential step to getting a better flood-control program worked out along comprehensive lines.

Taking account of the feeling of many of our people that they suffer from remoteness in the processes and availability of Federal court, I also introduced a bill to redefine the area under the jurisdiction of the United States District Court for Southern Illinois. Under my bill the southern district would cover 23 of the southern Illinois counties, including Madison County, and court would be held in Alton, Quincy, and Springfield.

Tito's Yugoslavia

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. HYDE. Mr. Speaker, I would like to include in the CONGRESSIONAL RECORD an important book review by my friend, Dr. Joseph F. Thorning, professor of international relations in the Catholic University of Chile. The volume reviewed by my friend is entitled "Tito's Yugoslavia," by Mr. Eric L. Pridinoff, a one-time Foreign Service officer who served our country with distinction in the United States Embassy, Belgrade. The book was published in Washington, D. C., by the Public Affairs Press, one of the most reputable publishing firms in America. The review by Dr. Thorning was featured in the autumn 1956 issue of World Affairs, a magazine which is edited by some of the most respected scholars of the United States. The review follows:

TITO'S YUGOSLAVIA, BY ERIC L. PRIDONOFF (WASHINGTON, D. C., PUBLIC AFFAIRS PRESS, 1955; PP. VII–243)

(Review by Joseph F. Thorning, professor in the Catholic University of Chile)

This is a valuable personal report which comes to the public at an opportune moment. The author, who served as a Foreign Service officer in the United States Embassy, Belgrade, relates the essential facts about the origin and development of Tito's totalitarian government. "During my experience in Yugoslavia," declares Mr. Eric L. Pridonoff, "I found that the Yugoslav rulers carried out their promises by exterminating any opposition to the letter and no child of a parent who was considered politically unreliable received food or clothing under any circumstances." Ration cards are needed for everything from a loaf of bread to a bucket of coal. Unlimited economic and police authority is vested in street committees assisted by an army of public prosecutors. No human being in Tito's Yugoslavia can exist without a document signed by such functionaries. This is called a karakteristika, "a kind of civic report card" which indicates exactly where its holder stands in relation to the Communist regime. No one can get a job or a ration card without it. The system originated in the Soviet Union. It is described by Titoists as the new democracy.

It is Mr. Pridonoff's contention that American and British diplomats have been "ill-advised, badly misinformed and incredibly gullible." Public opinion was misled, he claims, either by Marxist stooges such as Louis Adamic and Stojan Pribichevich or by carefully screened newspaper people unfamiliar with the languages and history of the country who were taken on prearranged itineraries and briefed by Tito's interpreters. Other writers, some of them United States citizens of Yugoslav birth, were provided with food, lodging and transportation.

The most revealing chapter of this study is entitled "UNRRA Fiasco." Many Yugoslavs, to this day, do not know that United States aid was contributed entirely without charge. Charitable gifts were sold to the sick and the starving at exorbitant prices. The sale of UNRRA sugar alone, the author points out, brought Tito a profit of $200 million. "The proof is overwhelming," Mr. Pridonoff concludes, "that without UNRRA it would have been impossible for Tito to have consolidated his power over the people of Yugoslavia." This may help to explain why the Yugoslav dictator is presently demanding that all technical aid be channeled through the United Nations. The recent rapprochement between Tito and the Soviet hierarchy underlines the importance of this book.

So-Called Right-to-Work Laws Are Anti-Union-Security Laws

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. PRICE. Mr. Speaker, there are now 17 States which have, under the authority of section 14 (b) of the Taft-Hartley Act, so-called State right-to-work laws. President Eisenhower's Secretary of Labor, Mr. Mitchell, has repeatedly said that these State laws are wrong in principle, but I call your attention to the fact that he has never asked us to repeal the Federal law that tolerates them. Secretary Mitchell talks a good line about what he suggests are the pro-labor policies of this administration. He is never able to deliver the goods; he can't count on support either from his President or the leadership of his party in Congress.

The right-to-work label on these State laws is a complete misnomer. They guarantee to no one the right to work. They guarantee no single human being a job. Accurately described, they are simply anti-union-security laws. They are designed to make union organization more difficult and to jeopardize the security of established unions by saying that no kind of collective bargaining contract can contain a union-shop or maintenance-of-membership clause.

They are, therefore, antiunion laws. They are intended to block and frustrate union operations.

As a member of the Democratic Party, it is a source of satisfaction to me to observe that the only State which in recent years has repealed a mislabeled "right to work" law was the Democratic State of Louisiana. Louisiana repealed its statute this year. But in 1955, Utah, under a Republican State administration, adopted one of these outmoded statutes and the Republican Governor, the Honorable Bracken Lee, signed it. In Kansas in 1955, a Republican legislature passed such a law, and when the Republican Governor vetoed it he was sharply attacked by his party.

Mr. Speaker, I suggest that we look at the economic facts of our industrial society. Labor organization has been a positive good to us. The process of collective bargaining may once have been a rather simple one. Today it involves expert studies of productivity—the output per man-hour, the value of new machinery, and the profits to be shared from new technological processes—as well as discussions of equity and simple justice.

The economists who serve the labor unions are as well trained, technically, and as honest—if not so well paid—as those who serve great industry. They know how to talk in terms of the value of purchasing power—mass purchasing power by millions of worker consumers—in undergirding our economy.

Collective bargaining and unions have helped build our mass purchasing power. They furnish the market that lets steel executives plan enormous expansions of capacity. The consumer market is among the most significant factors that Government fiscal agencies must consider in their mysterious manipulations of credit and fiscal policy. Union wages, to a considerable degree, form a bulwark of purchasing power.

The so-called right-to-work laws of the States do not embody any concept of State responsibility for economic prosperity, for the right of hard-working people, in general, to have a decent place in the scheme of things.

The Federal Government has a very specific obligation to maintain what we call prosperity. When here in Congress we adopted the Employment Act of 1946, we said that employment or unemployment were issues for the Federal Government to consider. We said, in fact, that the maintenance of maximum employment was a direct concern of the Federal Government.

The 17 States that continue right-to-work laws, so-called, have made no comparable acknowledgement of their own. They have not said they will use Government processes to see that willing workers have decently paying jobs. They have not said they recognize a responsibility for prosperity in their own Commonwealths.

The States could not say such things, of course. Our economic system is interstate and national, and only the National Government can really do anything about trying to promote conditions under which people have a right to work—that is, prosperity and jobs.

What the 17 States have done, in their mislabeled right-to-work laws, is to pretend they were interested in jobs, but to adopt, in fact, an antiunion attitude.

It is significant, Mr. Speaker, that here in Congress we have never passed any law saying that unions could not negotiate, through the normal processes of collective bargaining, a union-shop clause in contracts.

Why have we not done so? The simple fact is that it would be contrary to our consciences, to what we know of practical industrial relations and the value of free, strong unions. It was a shabby thing that we did in 1947—to say that we would not pass an anti-union-security law ourselves, but that we would, through section 14 (b) of the Taft-Hartley Act, give the more antiunion States a Federal license to pass such laws on their own.

I consider it significant that no State in which industrial relations between management and strong unions has an established tradition has ever considered seriously a so-called right-to-work law.

The States which have passed these laws are those in which industry and industrialized society are relatively new.

My suggestion is that they would benefit greatly—that they would avoid many of the mistakes made decades ago by others of us—if they would heed the voices of experience.

In an industrialized society—a capitalism that is also democratic—strong, free trade unions are inevitable and an affirmative good.

Pass a law to restrict unions and you achieve nothing except an intensified drive on the part of unions to overturn the law. Give the unions respect and good standing, and the American citizens who are members will take care of their own self-discipline. Never in American history has an antiunion law, or an antiunion decision of the Supreme Court, stood the test of time. But in times of genuine crisis the leaders of unions have shown that they recognize their responsibility as citizens of our whole democracy.

The best way to cure the evil of the so-called right-to-work laws in the remaining 17 States is for us to repeal section 14 (b) of the Taft-Hartley Act that makes them legally tolerable.

Mr. Speaker, Secretary Mitchell has not asked us to repeal this section. President Eisenhower has not asked us to repeal the section. President Eisenhower, in fact, has refused to back up his subordinate, Mitchell, in saying that the States should repeal the laws on their own.

The record shows that the laws are wrong, that they go contrary to American experience. The record also shows we in the Congress have had no help—not little help, but no help—either from the President or his Labor Secretary in moving toward overriding the State laws as apparently they need to be overridden.

The Public Doesn't Want Tax Reductions

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HRUSKA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Charles H. Andrews, member, board of supervisors, county of Ventura, Calif.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the County Officer for July-August 1957]

THE PUBLIC DOESN'T WANT TAX REDUCTIONS

(By Charles H. Andrews, member, board of supervisors, county of Ventura, Calif.)

After 5 years of public service as an elected county official, I am convinced that John Q. Public does not really want tax reductions. He just makes noises in that direction.

Donned in the armor plate which my term of office has grown over a once-thin skin, I venture this observation only because I know what I am talking about. For me, as a former listless taxpayer, the shoe is on the other foot. I am now 1 of 5 men who spend roughly 16 million a year of John Q's money each year. We are a county board of supervisors, or commissioners; whatever the term may be in various sections of the country.

County government is the basic government of our land, the grassroots thing that pollsters and sentimentalists often refer to. This is government wherein you are called by your first name, telephoned with no regard for dinner time, Sunday worship, Christmas, or the sacred hours of sleep. If you have the audacity to not answer the phone, constituents will appear at your door and demand service.

And this is the government, bless its frail human heart, that demands new schools, sewer plants, road and special services in one breath and takes up the banner for tax cuts in the next breath.

The plain fact is that most people don't know what they are talking about when they discuss taxes. Sit on the sidelines with me while I interview some people in my office.

George and Mary are in their early seventies, getting welfare aid. Their combined income from county and State is $178 a month. Their home is paid for; they have a fairly good car. He is getting medical attention from the county hospital, feels he should have a better pair of glasses but argues violently that they shouldn't be deducted from his check.

"I paid taxes in this county for 40 years," he says, "and I'm entitled to my rights."

I check the assessor's office, find the man had paid taxes for 40 years. Also I discovered he had been a pensioner for 8 years and had gotten his original "investment" back in 10 months. At the risk of seeming unsympathetic to oldsters, I told him he didn't have much cause for complaint.

"But I voted for you," he said, falling back on the classic statement that must be the No. 1 aggravation to people in public office.

My next visitors are a delegation of civic leaders from a small unincorporated town. This area receives fire and flood protection, sheriff's coverage, road and other maintenance work in regularly budgeted planned projects. Before long this could qualify as a small city, yet it is still unincorporated and

possibly receiving more direct benefits per dollar of tax paid than the outlying areas.

"We need to have our main street widened," says the leader of this group. "The traffic is getting unbearable, and our businessmen are suffering. We could use a park, too. The people have to drive 4 miles to a county park."

After considerable research on this request, I informed these people that a special taxing district would have to be set up to provide anything more than the normal road maintenance and construction, to build a park, set up street lighting, or build sewers. Special projects are not a fair charge against general tax money. Needless to say, this was an unpopular decision on my part, and the delegation let it be known.

Next in my office is a 40-year-old man who has a good job. His wife also works; they have no children. He has received a notice from our district attorney that he is a responsible relative, financially liable for a portion of the support of his aged father. The father left home when the son was 2, returned when he was 10. California law states that absence for more than 6 years when children are under 18 absolves children from later responsibility of the parent.

"Why should I take care of him, even 5 bucks a week?" the man asks me. "He never did nothing for me."

And the father becomes a public charge because of a son's vengeance. At times like this, even the strong constitution of a politician, if such we must be called, becomes nauseated. The old days when people loved and cherished their families seem to be fading. And the welfare state is upon us.

The popular officeholder, the fellow who never says no, who presses for liberal legislation, gets that way because of an overwhelming onslaught of people who continually ask for something with no regard for who is going to pay the bill.

For glaring examples, witness several new California bills introduced into the legislature this year, providing that old-age pensioners may own a power lawnmower, color TV, a home valued at $20,000, a car—and still be eligible for aid.

These and similar laws are being enacted all through the United States because there is little or no opposition. It is the popular thing to do.

In my particular little district there are 190 miles of county roads. Each week on my desk are new petitions asking the county to build special new roads or accept old ones. Our laws call for a 50-percent matching of private funds; no one wants to match at $30,000 a mile.

In our county is a school district which spends more per capita than any other in the State. Its board of trustees historically went first class for years, stressing a plush plant rather than adequate teacher remuneration and top personnel. Yet at school-board meetings in which lavish expenditures were authorized, never a citizen put his head in the door to protest. It took a grand jury to bring about some semblance of reform. Meanwhile some $10 million went down the drain where $5 million would have done the job. (This is your money we are talking about, John Q.)

Legislators all the way from city councilmen to State senators are aware of these disturbances and this waste at the grassroots. Witness the Field Act of 1948, in California, which says any school building not conforming to the structural requirements of the act (susceptibility to earthquake) shall be torn down and replaced.

In the city of Ventura a contractor labored with heavy equipment for 2 months to knock down an old school, declared unfit by interpretation of the Field Act, a well-meaning but grossly mishandled piece of legislation. It cost almost as much to tear down the old school as it did to build the new one.

Legislators I have talked with admit the fallacy of such goings-on.

"But how can we stop it?" they ask. "If we speak up, then parents will say we're against education."

And I say nothing could be further from the truth. An educational plant and an architectural monument are two different things. Once again the choice could rest with taxpayers if they took the trouble to show up at school board meetings.

All phases of government are subject to bungling and waste through ignorance and lack of experience on the part of elected and appointed public officials. But actual expenditures affecting people in their own communities can be controlled through their zealous interest. There is more to a courthouse than a marriage license bureau and a courtroom. Here is where demands for service come in faster than the money can be raised to pay for them. Something has to give, and it is here that these choices and decisions are made. Usually it is the squeaking wheel that gets the grease. Only by attending board meetings can John Q. learn what goes on.

I have faith that an enlightened public could become a less demanding one. The man who wants everyone zoned but himself may benefit from visiting the courthouse, studying on a wall map the trends of his area, the land values affected by lack of planning and zoning.

The man who is too busy or not sufficiently informed to understand the workings of his local government is missing a good opportunity to acquire an understanding of government at all levels. A grand jury member told me, "I've learned more about government in 2 months than I learned all through high school and college." If there is apathy in Washington, in Sacramento, in the county courthouse, it is merely an extension of the apathy back home. Unless you have a representative dedicated to his cause, he may conclude that no one cares, so why bother to face the firing line for an ideal?

In California this year there were more than 7,000 bills introduced into the legislature.

"I haven't seen half of them," one assemblyman told me, "much less understand them. How can we be expected to analyze all that and digest it intelligently?"

Yet he and I know that some ringers will slip by and become law, despite the best efforts of all interested people and associations. Each bill represents thinking, good or bad, and each has a motive to create something new or change the status quo. A good 80 percent will wind up costing the taxpayer more money.

Figures compiled by the County Supervisors Association of California show that had Governor Knight signed every bill passed by the 1957 legislature, the State would be $225 million in debt. This is 1 State out of 43. And there are 58 counties in this 1 State. Small wonder that there is need for an increasing vigilance. This association has successfully fought off a lot of giveaway legislation but it needs every bit of help it can obtain.

Our land can be visualized as being divided into two sections, one paying the bills, the other tax free. Paying are the homes, farms, industries. The rest is nontaxable. Some of this is justifiable such as parks, roads, public domains and possessions, churches. Some of it is hardly justifiable and actually strains the letter of the law, still it squeaks by under pseudo-religious guises and various manipulation of freeloading mumbo-jumbo. There is plenty of room for housecleaning here but it will take plenty of public support and brave men to pick up the brooms. An acreage limitation for quasi-religious cities would be a good one to start on, for example.

Every time a freeway is built an average of 10 acres per mile goes off the taxroll. The percentage of cost to be shared among remaining taxpayers around the freeway goes up. We enjoy a new service, but we pay for it and our children will pay for it, and possibly theirs.

When a public dam is built, the land under that water is taken out of production and off the taxrolls. Each new public service voted in by legislators or by a citizen may be exactly what he has been wanting. But he cannot expect it to be free.

As a public servant I see these things happening every day, every week. I think ahead to an ever-expanding population striving, as we strive, to better its way of life. In this picture will be super airports, road systems deluxe, molecule-type apartment houses for doubled and tripled populations. The land will become infinitely more valuable and vast irrigation, fire protection, land management and flood-control projects will become mandatory to secure the highest possible use of this precious remaining agricultural earth.

Still in this streamlining and superefficiency of man's earthly functions there must parallel an even greater efficiency in the functions of government to insure economic survival. We cannot continue to allow the mushrooming of the many appendages of basic government until it grows into a monstrous octopus which we are no longer able to feed.

There is an urgent need for people who will work on committees to study various phases of government and press for reforms, who will sacrifice personal comforts to help safeguard a future from economic strangulation.

The citizen who pays lipservice to dropping the tax rate, who has not armed himself with specific recommendations, who agitates on street corners and through incoherent letters to editors, is an alarmist and the worst kind of politician; worse than most of the Johnnie-come-latelies he puts into office by virtue of their campaign promises.

This is the man who approaches his ballot like a popularity contest and then compliments himself for having exercised his privilege of free choice. Only until he substitutes a philosophy of cause rather than effect can he hope to cast an intelligent vote. Only until he insists before his local school board that his children be given more emphatic and interesting rudiments of government as it relates to them personally, can he perform a service to the next generation.

John Public is responsible for the pork-barrel politicians who seek to satisfy his impossible and unrealistic demands. If he understood basic government and followed its trends, he would then press for a public service managed by highly skilled and intelligent men with the same precise efficiency as a private enterprise battling against competition.

People who care a whit for their mounting tax burden must let it be known instead of taking an absent-owner attitude that lets the store tend to itself. It is only fair to warn them that unless they begin taking a more active part in the affairs of our land and soon, as we will have reached a stage where the world may owe us a living, according to these doctrines, but will be unable to provide it.

Work of the Committee on Foreign Affairs

EXTENSION OF REMARKS
OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. GORDON. Mr. Speaker, during the 1st session of the 85th Congress, the Committee on Foreign Affairs made significant contributions to the international relations of the United States. As a result of the critical political situation which exists in the world, the committee devoted much time to a searching review and examination of the foreign-policy problems which face this Nation today. Constant attention and a thorough consideration was given to all matters which have come before us in this session.

The security of our country has been enhanced by the coordination of defense measures, which has contributed materially toward the defense of the American Continent by the promotion of close collaboration with the military forces of the American Republics. In other areas of the free world, our mutual allies have acted affirmatively in deterring the progress of international communism.

As chairman of the Committee on Foreign Affairs, I wish to express my sincere appreciation to all members on the committee for their wholehearted cooperation and assistance. The committee, operating on a bipartisan basis, has contributed to the strength and unity which represents the United States to the governments of the world.

Measures of international and national importance were given thorough consideration and were enacted in this session. The committee acted responsibly, courageously, and constructively on all matters pertaining to our foreign-policy problems.

It is very gratifying that our Nation is making such a sincere effort to help solve the economic and political problems which confront the peoples of Spain, Poland, and Latin America. Strong democratic governments will emerge with the improvement in the economic standards in these countries.

Our extension of aid to Poland during these trying days under a new regime is a step in the right direction for the Polish Government to pursue its own independent course. The $48 million worth of goods that we will ship to Polish ports, plus the $46 million more in surplus agricultural commodities, may loosen the Kremlin's hold on Poland to such a degree that the Communist empire will be seriously weakened. The renewal of trade with Poland will certainly give us a clearer understanding of Poland's unfortunate current position and the hope of her eventual freedom with our reasonable assistance.

Spain today is an important link in our mutual-defense system. Spain's present defense agreements with the United States provide assurance for continued military and naval operations in Western Europe and the Mediterranean area. Consequently, the adequate defense of Spain assures the protection of our vital bases located there which are of importance to United States security interests. We are fortunate in having Spain a mutual partner in the fight against international communism. It is conceivable that Spain has much to offer to the international organizations that are dedicated to the free people of the world. Every effort should be made to invite Spain for membership in the United Nations and the North Atlantic Treaty Organization.

Our Nation applauds the efforts that are being made in the American Republics to deal with the menace of communism. The peoples of Latin America have recognized the dangers of communism and have successfully combated this scourge by preserving democratic governments. In the uncertain and troubled world of today the future security of the United States may well depend upon maintaining a solid front in the defense of the American Continent. It is, therefore, important that we should continue to exert every effort in the direction of our foreign policy toward Latin America to promote cordial relations with the Republics of this hemisphere, not only by military leadership in our fight against international communism but in economic and cultural activities as well.

A summary of the legislative measures on which the committee completed its action during this session follows:

Statistical record, Committee on Foreign Affairs, 85th Cong., 1st sess.

Number of consultative committees	8
Number of ad hoc subcommittees	2
Number of conference committees	2
Number of meetings of conference committees	4
Number of bills and joint resolutions referred to the committee (Of this number 61 are duplicates.)	126
Number of simple and concurrent resolutions referred to committee (Of this number 103 are duplicates.)	146
Number of bills and joint resolutions considered by the committee	33
Number of bills and joint resolutions reported favorably	12
Number of bills and joint resolutions favorably reported by committee and passed by House	10
Number of bills and joint resolutions enacted into law	10
Number of simple and concurrent resolutions considered by committee	18
Number of simple and concurrent resolutions reported and acted upon by the House	7
Number of hearings (open and executive)	161
Number of pages of printed hearings	3,176
Number of pages of reports	796
Number of witnesses	338
Number of witnesses appearances before committee	399
Number of meetings with Rules Committee	6
Number of committee reports:	
Reports on legislation	14
Minority reports on legislation	2
Conference reports	2
Special reports	7
Total	25

Statistical record, Committee on Foreign Affairs, 85th Cong., 1st sess.—Con.

Number of messages from the President and executive communications referred to the committee	19
Number of House documents referred to the committee	17
Number of memorials and petitions referred to the committee	65
Number of reports requested from Government departments and agencies on legislation referred to the committee	61
Approximate number of pages in CONGRESSIONAL RECORD of House consideration on bills and resolutions reported by committee	458
Number of Members sponsoring measures referred to the committee	151

Time spent in sessions: By committee: Executive, 86 hours, 46 minutes; open, 49 hours, 34 minutes. By subcommittees: Executive, 63 hours, 52 minutes; open, 57 hours, 14 minutes. Total, 256 hours, 46 minutes.

Approximate total authorization in measures considered by committee and passed by House and enacted into law, $3,367,083,000.

(By way of comparison, the money involved in public bills before the committee during the 73d Cong. was $102,000.)

MEASURES ENACTED INTO LAW

MUTUAL SECURITY ACT OF 1957

This act extended the mutual security program for another year, authorizing a total of $3,367,083,000 as a result of the conference on the disagreeing votes of the two Houses. The above figure represents a reduction of $250,250,000 from the Senate figure of $3,617,333,000 and an increase of $250,250,000 above the House authorization of $3,116,833,000. In reporting this bill the committee was aware that the United States is confronted with serious problems in the field of foreign affairs and that satisfactory solutions to many of these problems have not yet been found; approved August 14, 1957, Public Law 85-141.

MIDDLE EAST DOCTRINE

The purpose of the resolution is to authorize the President to undertake economic and military cooperation with nations in the general area of the Middle East in order to assist in the strengthening and defense of their independence.

Three primary objectives are accomplished by the resolution:

First, it puts the Soviet Union on notice that the United States intends to use its Armed Forces if necessary to secure and protect any nation or group of nations of the Middle East requesting such aid against overt armed aggression from any nation controlled by international communism.

Second, the resolution by its scope and spirit, as well as by its language, is intended to make clear to the governments and the people of the Middle East the attitude and the policy of the United States toward them. The policy of the United States toward the area and its readiness to provide assistance contemplates no infringement of the sovereignty of any nation.

Third, the resolution removes certain restrictions on the use of mutual security funds by the President which are contained in existing law. A sum not to exceed $200 million may be used for the purpose of furnishing economic and mili-

tary assistance pursuant to the provisions of section 401 (a) of the Mutual Security Act of 1954, as amended, and without regard to section 105 of the Mutual Security Appropriation Act, 1957.

The maintenance of international peace and security, insofar as the foreign policy of the United States is concerned, has involved all three objectives. To utilize one is not to exclude the others. This is the impulse behind the language contained in section 2 of the resolution respecting employment by the President of the United States of the Armed Forces of the United States in the general area of the Middle East consonant with the treaty obligations of the United States and with the Constitution of the United States; approved March 9, 1957, Public Law 85–7.

AMENDMENT OF ANGLO-AMERICAN FINANCIAL AGREEMENT

The bill amends the Anglo-American Financial Agreement and provides that the United Kingdom will give up all rights to claim a waiver of interest under the original agreement. In return the United States agrees that the United Kingdom may postpone a maximum of seven payments of interest and principal beginning with the interest payment due on December 31, 1956.

This resolution does not involve a determination by the Congress as to whether or not the United States should waive or postpone its collection of any current or future interest payments on the British loan of 1946. The decision of the Congress on this basic issue was made in 1946 when it ratified the Anglo-American financial agreement of December 6, 1945.

This resolution is necessitated by the fact that the complex formula for determining whether or not the borrower is entitled to a waiver of interest does not work satisfactorily because of changes which have occurred during the last 12 years. It would defeat the purpose of the waiver clause if long negotiations accompanied by a certain amount of controversy became necessary whenever the United Kingdom is confronted by a financial crisis; approved May 31, 1957, Public Law 85–21.

CONVEYANCE OF CERTAIN LAND IN TEXAS

The bill authorizes the Secretary of State to take the necessary action to make possible an exchange of land now held by two school districts in Texas for other land more suitable for school purposes; approved May 31, 1957, Public Law 85–42.

SURRENDER TREE SITE, SANTIAGO, CUBA

This bill provides for the transfer of responsibility for the care and maintenance of the Surrender Tree site in Santiago, Cuba, from the Department of the Army to the American Battle Monuments Commission. This memorial marks the spot at which the preliminary surrender of the Spaniards occurred on July 17, 1898; approved August 13, 1957, Public Law 85–125.

CORREGIDOR-BATAAN MEMORIAL COMMISSION

The bill enables the Corregidor-Bataan Memorial Commission to waive certain legislative restrictions so as to permit the employment of an individual, retired military person, to serve as an Executive Director of the Commission. Similarly, it will permit the employment of a small number of clerical workers without regard to the provisions of the Classification Act of 1949; approved August 28, 1957, Public Law 85–179.

DISPOSAL OF CERTAIN LANDS TO ALIENS

The bill amends the act of August 27, 1935, as amended, by deleting the present restriction that the Secretary of State may only lease or dispose of certain lands to citizens of the United States. The bill permits the disposal of lands and interests in lands by the Secretary of State to aliens; approved August 28, 1957, Public Law 85–201.

BUFFALO AND FORT ERIE PUBLIC BRIDGE AUTHORITY

The resolution provides for the continuation of the Buffalo and Fort Erie Public Bridge Authority with power to maintain and operate the highway bridge over the Niagara River between Buffalo, N. Y., and Fort Erie, Ontario, Canada. Similarly, this resolution repeals the resolution approved July 27, 1956 (Public Law 824, 84th Cong.), which granted the State of New York authority to negotiate and enter into an agreement or compact with the Government of Canada for the establishment of the Niagara Frontier Port Authority to take over the operation, control, and maintenance of the bridge and provided for the termination of the corporate existence of the Buffalo and Fort Erie Public Bridge Authority; approved August 14, 1957, Public Law 85–145.

SECOND WORLD METALLURGICAL CONGRESS

The resolution provides for an official welcome by the Congress to the overseas metal scientists who will attend the World Metallurgical Congress sponsored by the American Society for Metals to be held in Chicago, Ill., on November 2 to 8, 1957; approved August 31, 1957, Public Law 85–247.

ST. LAWRENCE SEAWAY CELEBRATION

The resolution authorizes the President to invite the States of the Union and foreign countries to participate in the St. Lawrence seaway celebration to be held in Chicago, Ill., from January 1, 1959, to December 31, 1959.

The year 1959 will mark the opening of the St. Lawrence seaway to deep-draft vessels, thereby permitting the uninterrupted shipment of goods from all ports in the world to all ports along the Great Lakes; approved August 30, 1957, Public Law 85–228.

CONCURRENT AND HOUSE RESOLUTIONS ADOPTED

MEMBERSHIP OF SPAIN IN NORTH ATLANTIC TREATY ORGANIZATION, HOUSE CONCURRENT RESOLUTION 115

The resolution expresses the sense of Congress that the President take all proper and necessary steps to bring about an invitation to Spain to become a party to the North Atlantic Treaty and a member of the North Atlantic Treaty Organization.

Passed House March 20, 1957, unanimous-consent proceedings; passed Senate April 12, 1957.

URGING AFFIRMATIVE ACTION BY THE UNITED NATIONS ON THE PROBLEM OF HUNGARY, HOUSE CONCURRENT RESOLUTION 204

The purpose of this resolution is to request the immediate reconvening of the General Assembly of the United Nations to consider the report of the United Nations Special Committee on the Problem of Hungary on the brutal action of the Soviet Union in Hungary. The text of the resolution is expanded to deal with other captive nations in Eastern Europe so that the Hungarian tragedy shall not be repeated elsewhere in the world.

Passed House, June 26, 1957, unanimous-consent proceedings; passed Senate, amended, June 26, 1957; conference report adopted in Senate and in House, August 6, 1957.

EXTENDING GREETINGS TO GHANA, HOUSE RESOLUTION 185

The resolution conveys the greetings of Congress to the Legislative Assembly of Ghana on the occasion of the independence of that state, March 6, 1957. Further, it reaffirms the friendship of the United States for the people of Ghana.

Passed House March 6, 1957, unanimous-consent proceedings, without reference to committee.

CONDOLENCES ON THE DEATH OF PRESIDENT RAMÓN MAGSAYSAY, OF THE REPUBLIC OF THE PHILIPPINES, HOUSE RESOLUTION 201

The resolution expresses the condolences of Congress to the people of the Republic of the Philippines in the loss of their beloved President, His Excellency Ramón Magsaysay.

Passed House March 18, 1957, unanimous-consent proceedings, without reference to committee.

PAN-AMERICAN DAY CELEBRATION, HOUSE RESOLUTION 203

The resolution designates Monday, April 15, 1957, for the celebration of Pan-American Day, at which time it is the custom of the legislative bodies of the various Republics to exchange greetings and expressions of cordial friendship.

Passed House March 18, 1957, unanimous-consent proceedings, without reference to committee.

UNACCOUNTED AMERICAN PRISONERS OF WAR TAKEN BY THE COMMUNISTS, HOUSE RESOLUTION 292

The resolution urges the President to continue his efforts for the return of, or a satisfactory accounting for, the 450 American prisoners of war taken by the Communists during the Korean conflict.

Passed House July 9, 1957, unanimous-consent proceedings.

CONDOLENCES ON THE DEATH OF PRESIDENT CARLOS CASTILLO ARMAS OF THE REPUBLIC OF GUATEMALA, HOUSE RESOLUTION 379

The resolution expresses the condolences of Congress to the Government of the Republic of Guatemala in the loss of their President, Carlos Castillo Armas.

Passed House July 29, 1957, unanimous-consent proceedings, without reference to committee.

MEASURES PASSED BY HOUSE BUT NOT FINALLY ACTED UPON IN SENATE

AUTHORIZING AMBASSADOR HENRY CABOT LODGE AND CERTAIN MEMBERS OF THE HOUSE OF REPRESENTATIVES TO ACCEPT AWARD TENDERED BY THE GOVERNMENT OF THE REPUBLIC OF ITALY, H. R. 8592

This bill authorizes Ambassador Henry Cabot Lodge, Hon. William A. Barrett,

Representative from the State of Pennsylvania, and Hon. James G. Fulton, Representative from the State of Pennsylvania, to accept and wear the award of the Order Al Merito della Repubblica Italiana, tendered by the Government of the Republic of Italy.

Passed House, July 12, 1957, unanimous-consent proceedings, without committee action.

AUTHORIZING HON. VICTOR L. ANFUSO, MEMBER OF THE HOUSE OF REPRESENTATIVES, TO ACCEPT AWARDS TENDERED BY THE REPUBLICS OF ITALY AND CUBA, H. R. 8734

This bill authorizes Hon. VICTOR L. ANFUSO, Representative from the State of New York, to accept and wear the awards of commander of the Order of Merit of the Italian Republic, and commander of the National Order of Merit "Carlos Manuel de Cespedes," Cuba, tendered by the Republics of Italy and Cuba.

Passed House, July 16, 1957, unanimous-consent proceedings, without reference to committee.

MEASURES REPORTED BUT NOT FAVORABLY ACTED UPON IN THE HOUSE

PAYMENT TO THE GOVERNMENT OF DENMARK, S. 2448

This bill authorizes an appropriation of $5,296,302 to the $35,432,350 already paid to the Danish shipowners for the 40 Danish ships that were requisitioned by the United States in 1941.

The additional payment is necessitated by the fact that the procedures followed when the ships were first requisitioned established a legal situation under which the owners of the vessels could not receive full compensation in the terms of the original understanding between the Danish Ambassador and the Department of State.

Reported to House, July 30, 1957.

STATUS OF FORCES AGREEMENTS, HOUSE JOINT RESOLUTION 16

This resolution provides for the revision of the Status of Forces Agreement and certain other treaties and international agreements, or the withdrawal of the United States from such treaties and agreements, so that foreign countries will not have criminal jurisdiction over American Armed Forces personnel stationed within their boundaries.

Reported to House, July 1, 1957; hearing by Rules Committee on request for rule, July 2 and 10, 1957.

The Role of United States Agriculture in World Affairs

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. CARLSON. Mr. President, Dr. Walter W. Wilcox, senior specialist in agriculture of the Legislative Reference Service, Library of Congress, addressed the annual meeting of the American Farm Economic Association at Junaluska, N. C., August 30, 1957, on the topic The Role of United States Agriculture in World Affairs.

This address sets forth agriculture's truly great contributions in a comprehensive manner which should be of interest to all Members of Congress dealing with agricultural problems.

The last half of this address is of especial interest because of Dr. Wilcox's analysis of the contribution of current price-support programs to net farm income in recent years and the estimated effect of lowering price supports to levels which would encourage the movement of all current production into consumption through commercial markets in the next year or two.

THE ROLE OF UNITED STATES AGRICULTURE IN WORLD AFFAIRS

(By Walter W. Wilcox, Library of Congress)

I am delighted to be able to address my fellow agricultural economists on this particular topic. As you all know, American agriculture has exercised an important role in world affairs from earliest colonial times. To begin with, there is little doubt that Great Britain and Western Europe enjoyed more peace and tranquillity in the field of religious beliefs in the 17th, 18th, and early 19th centuries as a result of the emigration of the nonconformists to the American colonies—largely to American agriculture.

Hundreds of thousands—nonconformists in religious and social customs—left their mother countries in these three centuries to find a new life and carve out an estate for their families on this continent. American agriculture began as something of a safety valve both for the population problem and for the religious and social-reform groups in Western Europe.

CONTRIBUTION TO INDUSTRIAL DEVELOPMENT IN EUROPE

As soon as the colonies were established, they stimulated increased economic activity in the mother countries and American agriculture began its historic exports of tobacco, food, and fiber. Exports of tobacco from the Virginia and Carolina colonies were more important than the exports of food and fiber in those early years.

There is little evidence that imports of food from the United States were an important factor in the industrial revolution in England in the early 19th century. After the adoption of the factory system, however, it was the availability of export surpluses from the United States which provided the food and fiber base for the industrialization of Western Europe.

When the half-dozen most important influences of American agriculture on world affairs are listed, its contribution to the industrial development of Western Europe will rank high on the list. Who can say what the course of history would have been if American agriculture had not produced an export surplus in the 19th century?

The period of American agriculture's major contribution to industrial development in Western Europe began in the last half of the 19th century and continued until the outbreak of the World War I, in 1914. During this long period imports of cotton, wheat, pork, lard, and other farm products from the United States permitted a rapid rise in living standards in Western Europe at the same time that population growth and industrial development were unprecedented.

AMERICAN AGRICULTURE BETWEEN WORLD WARS I AND II

Everyone in this audience is more or less familiar with the role of American food in bringing relief to the famine-stricken millions immediately after World War I. Again, who can accurately assess the role of this food which saved millions of lives and contributed immeasurably to the restoration of political stability in the postwar years?

The period between World War I and II was tragic for American agriculture, American business, American diplomacy, and equally tragic for world economic and political affairs. The experiences of that period have been invaluable in guiding our progress in recent years. But we paid a high price for our experience.

Perhaps one should not pass the period of the 1920's and the 1930's without giving some attention to the impact of American agriculture on world events and vice versa. There is little doubt that during this period the impact was mostly vice versa.

The sharp decline in the price of United States farm products after World War I and the failure of agriculture to share in the industrial prosperity in the 1920's led to misguided increases in protective tariffs. First came the Emergency Tariff of 1921, then the Fordney-McCumber Act of 1922, and after 8 years of continued ailment, really strong medicine was administered in the form of the Hawley-Smoot Act of 1930.[1] Import duties were increased on livestock products, grains, sugar, vegetable oils, and many other products. The Hawley-Smoot tariff increases were prescribed, however, by nonfarm statesmen, in lieu of the farm-bloc-supported McNary-Haugen bills which twice passed Congress only to be vetoed each time. Actually, the tariff increases intensified rather than helped solve the farmers' economic problems.

Although the economic troubles of agriculture contributed to the worldwide depression of the 1930's in other ways in addition to furnishing an excuse for raising import duties, its role in causing the downward spiral in economic activity at that time, was probably overstated in the literature of the 1930's.

The great depression of the 1930's in the United States did have a decisive influence on American agriculture, however, and on its place in world commerce. The programs adopted to combat depression set the stage for the withdrawal of the major agricultural exports from the freely competitive world markets—a situation which has continued until our current program of disposing of agricultural surpluses in foreign countries was adopted.

In the preparation of this paper several interesting hours were spent in reviewing the professional papers of that period dealing with the conflict between domestic farm programs and the goals of freer international trade. There is no doubt that a real conflict existed even though the conflict was less intense than at present.

It is difficult, however, to attach any great importance to the interferences with free-world trade which resulted from the domestic farm programs prior to World War II. World traders found it more difficult to conduct their business, trying to anticipate the actions of the United States Government as well as the usual market influences on supply, demand, and prices. On the other hand, subsidized exports were seldom pushed to the extent that they exceeded previous free-market exports.

Domestic production adjustment, price stabilization, and diversion programs had a net effect of reducing United States exports and increasing world prices at a time when world prices for agricultural products were depressed. These influences, together with some assistance from American capital, including United States technical know-how contributed to the continued growth of production in other exporting countries. Hence, one concludes that in an overall sense,

---

Footnotes at end of speech.

United States partial withdrawal from world export markets in the 1930's had a buoyant effect on world prices and a modest stimulating effect on economic development in the other agricultural exporting countries.

The synthetic fiber industries in importing countries also received some stimulation. Since world supplies of food and fiber tended to be burdensome during this period it is difficult to isolate any significant adverse effects on the traditional importing countries resulting from United States farm programs.

AGRICULTURE'S CONTRIBUTION TO WORLD WAR II

The advent of World War II brought a challenge to American agriculture that was met so successfully that one could write a book about it. The United States began contributing foods to our allies through lend-lease arrangements before we became involved militarily. Food products from American farms became a part of the rations of every Allied military force in action, including the Russian forces. And when the Allied military forces were successful, shipments of food produced on American farms made a great contribution toward averting famine and anarchy in the defeated countries.

Farmers in North America enjoyed relatively favorable weather and a minimum of dislocations caused by the hostilities. Farm production in the United States and Canada increased 35 percent between 1935–39 and 1946–47, an increase not approached in any other area of the world except Great Britain.

United States food supplies during these war years were augmented by accumulated stocks of farm products above ground and additional productivity in the soil resulting from prewar acreage restrictions. There also is little doubt that management and sharing of food supplies during the war years was enhanced by the administrative experience gained by the Commodity Credit Corporation and other agricultural agencies in the prewar years.

AGRICULTURE'S GREATEST CONTRIBUTION

It would be logical to turn now to agriculture's role in world affairs in recent years. Yet agriculture's greatest contribution to the shaping of world affairs might be overlooked if special attention is not called to it. American agriculture's contribution to the fabulous development of American industry and business enterprise overshadows any other role it may have played in world affairs. This has been an interdependent development with American industry producing the improved machines, chemicals, and other supplies essential for ever-increasing efficiency in agriculture.

My philosopher friend John Brewster ascribes much of the distinctive, dynamic thrust of American business and technology to the spirit of enterprise inherited from our Puritan forefathers and democratic principles formulated in colonial times. American agriculture operating in this cultural environment sought and obtained the assistance of Federal-State-supported research and educational institutions now called the land-grant college system.

With the help of these land-grant institutions and American industry, United States farmers soon became the most efficient agricultural producers in the world. Without the cheap food produced by American farmers and the progressive release of more and more workers from the fields and farmyards, industrial development in the United States could not have made the progress it has. And there can be no argument that it is the high level of industrial development which gives the United States its current position of leadership in world affairs.

To some this may sound like agricultural fundamentalism: The position that since food is basic to life, food production is more important than other economic activities in modern society. No such extreme claim is intended. Current American industrial development is not primarily based on the tremendous productivity of American agriculture. Yet there is little doubt that industrial development would have been slowed down greatly if half or more of our people had been required in food and fiber production and if food prices in the United States had been based on the cost of imports from other parts of the world. Actually the percentage of the total labor force employed in agriculture has declined from 31 percent in 1910 to 10 percent in 1955.

Parenthetically, the current problems of agriculture grow directly out of these particular developments which permitted it to make such a great contribution to national industrial progress.

IMPORTANCE OF FAMILY FARMING AND IMPROVED TECHNOLOGY

It seems appropriate at this point to mention other aspects of American agriculture's role in world affairs which are often overlooked. Two immediately come to mind. The first is the social and economic success of the family farm in the American cultural environment. This aspect of American agriculture has played a dominant role in guiding land reform activities in most of the underdeveloped countries of the world in the past 10 years. Land-reform programs in Korea, Japan, the Philippines, Italy, and Egypt in particular have utilized the successful American family-farm experience. Here one senses a danger that because of its success in the United States and Western European environment, the family-farm approach may be prescribed in cultural and economic situations where it is not adapted.

The second contribution which might be overlooked is the export of agricultural technology. United States agricultural technicians are playing a leading role in the worldwide technical-assistance programs of both the United States and the United Nations. Social and economic progress in the underdeveloped countries of the world is as much dependent on technical progress in agriculture as on industrial development. Indeed, there are some indications that a more productive agriculture must come first.

Technical progress in agriculture and industrialization are interdependent in underdeveloped countries as well as in the United States. Workers must be freed to man the machines of industry and industry must provide jobs for the workers freed by technical progress in agriculture. Also, without increased food production in most of these countries workers will not have the health and vigor necessary for rapid economic development.

In the century ahead the export of American agricultural technology and technologists may prove to be agriculture's greatest role in world affairs. Certainly it is likely to be more important than the exports of American farm products.

This is merely a personal estimate and it is not based on an assumed decline in farm exports. Rather, it is based on the evident and assumed great opportunity for world betterment through the adoption of improved agricultural technology.

AGRICULTURE'S CONTRIBUTION TO FREER TRADE

Before turning our attention to American agriculture's role in world affairs in recent years, its changing role in formulating broad foreign-trade policy in the Halls of Congress is worthy of note. Historically the congressional delegations from the South have been for freer trade and lower tariff policies. In terms of numbers of Congressmen and Senators for freer trade interests from the cotton and tobacco South have had greater representation than the protectionist interests of the Midwest and West. It was the industrial oriented legislators in combination with midwestern agriculture's representatives which were responsible for the Hawley-Smoot Tariff Act of 1930. But this is past history. In recent years United States trade policies have tended toward more restrictions and the southern agricultural interest no longer exercise their strong opposition.[3] Industry has become important in the South. Southern Congressmen are increasingly influenced by the restrictionist interests of these new industries as well as by the restrictions required by domestic farm price-support measures. No longer can one say that the solid South consistently favors freer trade policies.

EFFECTS OF CURRENT AGRICULTURAL POLICIES

Now that the many important but noncontroversial aspects of American agriculture's role in world affairs have been briefly sketched, attention can be centered on the more controversial aspects of the current scene. Trade reports and news items indicate there is much concern on the part of other countries about current agricultural policies in the United States specially as they influence exports.

Perhaps if they were more fully aware of the magnitude of the productive capacity of American agriculture and the sharp price discounts required to move excessive supplies into use they would be even more apprehensive. Surely United States policies to date have reflected a substantial concern for the interests of agricultural producers in other exporting countries and in the importing countries. And there is little doubt that this concern for the legitimate interest of others will continue.

But the nature and the intensity of the agricultural supply and income problem in the United States is such that it will continue to create international trade problems for some time. In spite of a 16-percent reduction in estimated labor used, returns to all labor and management in agricultural production fell from 89 cents in 1947–49 to 70 cents an hour in 1956.[4] The fact that farm output increased 13 percent during this period is not unrelated. In contrast to the decline in hourly earnings of farm labor from 89 to 70 cents an hour, workers in manufacturing increased their earnings during this period from $1.33 in 1947–49 to $1.98 an hour.

The above facts tell only a part of the story. Net farm income would have fallen at least 20 to 25 percent lower except for extensive Government price-support operations. In each of the last 4 fiscal years net Government purchases and nonrecourse loans have accounted for $2 to $3 billion of the income received by farmers. In view of the inelastic demand for wheat, cotton, and a number of other price-supported products gross and net farm income under actual production levels would have been at least $2 to $3 billion lower except for the price supports.

Returns to all labor and management in agriculture has varied from 65 to 80 cents an hour in the past 4 years. Except for the removal of $2 to $3 billion of farm products from commercial markets each year by price-support activities, it is estimated that returns would have varied from 46 to 59 cents an hour. Even more discouraging are the implications of the latest analyses of farm price specialists. They indicate to me that in spite of efforts to expand markets and adjust production, in the next year or two if price supports are lowered to levels that would permit all current production to move through commercial markets, net farm income, and returns per hour of farm labor will decline 20 to 25 percent from current levels. Some farm organizations and farm leaders, perhaps believing the decline would be less, favor such a reduction in farm price support levels and related activities. Other groups, perhaps believing the decline would

---

Footnotes at end of speech.

be even greater, resist any changes in existing price support policies until more satisfactory intermediate programs or compromises can be achieved.

Basically the people in the underdeveloped countries of the world are short of food and fiber while production in commercial exporting countries is excessive for commercial market outlets at reasonably stable prices.

No attempt was made to price United States exports of basic price-supported crops competitively or to bridge the gap between need and commercial market demand in 1952 and 1953 when stocks began to accumulate in the United States. In 1954 Public Law 480 was passed which permitted the sale of United States farm surpluses for local currencies, and authorized expanded barter programs and grants of food in emergencies. It was late 1955 and 1956 before shipments were made under this program in volume. The Government also adopted a competitive pricing policy on cotton in 1956 which is still in force.

Everything of importance to date, however, has been either emergency legislation, or temporary administrative policy. No agreement has been reached on new long-run policies adapted to the current situation. There is general agreement that the flexible price-support policies adopted in 1954 are not adequate. The production-control features of the soil bank are losing support. There is agreement among economists, politicians, farm organizations, and farmers that the old price-support programs are inadequate. Agreement does not go beyond this, however.

We have the technical ability, to build hydrogen bonds and intercontinental missiles. It is frustrating to have to observe that as yet we do not have the political and economic ability to develop farm programs which give farm products a substantial part of the price stability and bargaining power enjoyed by other products in our economy.

The outlook for an improvement in this situation is not good. Techniques of price support are available which could be applied only to that portion of the total production utilized in domestic markets without having significant adverse effects on production, prices, and commercial movements of supplies for the export market. These may be tried within the next few years, although they now are opposed by important farm groups. The other alternatives appear to be either an indefinite continuation of current marketing quotas on cotton, wheat, tobacco, rice, and peanuts or a general disintegration of farm price support activities which also would have substantial international trade repercussions.

FUTURE PROBLEMS

Without attempting here to plot the course for moving out of the current muddle, let us shift our attention to the future. There is little doubt that American agricultural exports will play a larger role in world affairs in the next 2 decades than in the 2 decades prior to World War II. Cotton, wheat, fats and oils, and tobacco will continue to be the leading exports.

Relatively large supplies of these exports products are expected to continue even though livestock production is increased substantially in the United States. Projections of farm production trends in the United States indicate that both domestic and foreign markets for farm products will be under pressure from abundant supplies for a considerable period ahead.

In view of these expectations, social scientists and the food and agricultural statesmen of the world have an unusual opportunity. Can they develop the means by which a part of American agriculture's excessive output will be effectively channeled into productive use outside of regular commercial channels? On the one hand additional food is needed in the underdeveloped countries of the world as they attempt rapid economic development. On the other hand, unless new types of credit are developed, although supplies are burdensome in relation to commercial market outlets, only a part of the need can be filled through these markets.

Obviously, American agriculture will play a much more important role in world affairs in the decade ahead if bilateral or multilateral programs of distribution are developed to supplement the international food markets serving underdeveloped countries. One approach might be a continuation of a greatly restricted program of sales for local currencies under Public Law 480.

There is danger that Public Law 480 will be discredited along with existing domestic farm price-support programs. The adverse effects on normal commercial trade of current sales under section I of Public Law 480 are antagonizing our competitors in world markets. A rebellion against the high cost of the current program is also brewing. However, if and when domestic price-support programs are sharply revised, a modest sale of American farm products for local currencies may be desirable. It could assist greatly in balancing supplies of farm products with market outlets. It also would assist in promoting economic development in the underdeveloped countries of the world.

CONCLUSION

In conclusion it should be emphasized that the outstanding characteristic of American agriculture in the past 100 years has been its high productivity and its inability to contract production when market outlets were inadequate.

American agriculture was developed by pioneering people, first from the mother countries and later from the Eastern Colonies and States. In spite of much emphasis in the literature on farming as a way of life, at least half the farm families consider it a business in the best tradition of American businessmen. As a result of their business management they have adopted technological innovations parallel to those adopted in other industries. If our current export of agricultural technology could be supplemented with authoritative information on the cultural factors which led to its rapid adoption in the United States, the role of American agriculture in future world affairs might be great indeed.

United States and United Nations technical-assistance programs will achieve greatly increased results when a larger part of the total effort is devoted to educational and training efforts centering on the social, economic, and other cultural factors which have facilitated the rapid adoption of technological improvements in the United States. If this is done there is little doubt that American agriculture's greatest role in the future of world affairs will be its contribution of cultural experience and technical know-how.

This does not infer that exports will be unimportant. The future development of commercial agriculture in the United States, including long run export policies, or lack of them, is in a more critical position today than many people realize.

Problems associated with assuring agriculture reasonable rewards for over-abundant production which it cannot change quickly and finding ways and means of effectively utilizing this overabundance are among the more important problems in urgent need of attention by social scientists. The latter problem is especially challenging since the overabundance is only in relation to market outlets. There is no overabundance in relation to physical need.

The role which American agricultural production plays in world affairs in the future will be greatly influenced by social scientists contribution to the solution to these two problems. What changes in business practices and regulations will assure farm businessmen reasonable rewards for their high level productivity in a economic society dominated to an important extent by the interests of large corporations and large labor unions?

And, what arrangements will assure that the over-abundant market supplies of food and fiber produced in United States and other western countries will make a maximum contribution to the economic development of the free world?

Tributes to Kelley Loe, Labor Leader, of Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD two fine editorials in tribute to an outstanding and courageous leader of Oregon labor, Kelley Loe, who died in Portland, Oreg.

These editorials are A Real Labor Leader, from the Oregonian, and Kelley Loe, a Credit to Labor, which appeared in the Oregon Daily Journal. Both these daily newspapers are published in my home city of Portland.

At a time when a willful minority of labor leaders have been shown to be tainted by underworld affiliations, it is well to include in the pages of the CONGRESSIONAL RECORD tribute to a labor leader whose character was unimpeachable and whose integrity and sincerity were of the stanchest and purest quality. I valued Mr. Loe's friendship, and his counsel was always on the side of the right and courageous course.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Oregonian]

A REAL LABOR LEADER

Modest, retiring Kelley Loe, quietly puffing his pipe as he explained to you the background of some public issue, was a familiar figure among leaders of Oregon industry and labor. A resident of Portland since 1918, Mr. Loe was among the best known and best liked of Oregon's labor leaders through the years.

He never would admit that he was a labor leader. "Put me down," he once told an Oregonian interviewer, "as just one of the rank and file." You could laugh that off. In union labor circles he was widely recognized as the man who did much of the best

thinking and writing on questions affecting the workingman. He was articulate and effective in promoting the principles to which he devoted his career.

Mr. Loe was a lobbyist in the best sense, and many legislators have been grateful to him for information needed to help them get a grasp of facts needed on a legislative problem. Though 4 years retired from his post as assistant secretary of the Oregon Federation of Labor, he was still available for help when needed. Loved for his personal friendliness, he is remembered as a fellow who liked to sit down and just talk things over. Those who'll miss him are by no means confined to the ranks of labor.

[From the Oregon Journal]

KELLEY LOE A CREDIT TO LABOR

All who knew Kelley Loe, quiet-spoken, scholarly labor leader, editor and author, instinctively liked him, even when they disagreed with him.

As an editor of the Oregon Labor Press, as legislative lobbyist and public-relations chief for the Oregon labor movement, and as an authoritative writer in the labor, civil-rights, and tax fields, his wise counsel was eagerly sought, not only by labor leaders, but by legislators and newspapermen generally. His diligent research work, his inherent fairness not only won for him the confidence and esteem of his fellows in the labor movement, but in the broader fields of civic work and public service.

He took many a brash labor leader by the hand, guiding him skillfully through the legislative maze at Salem and over the public-relations hurdles which otherwise would have meant disastrous spills. Even when he himself was on the firing line, in some battle over labor legislation, the sales tax, or civil rights, he would smile, speak softly, yet make his point and thus win friends for the cause and for labor generally.

That's why governors and mayors often named him to study committees, regardless of partisan politics. And when he turned his hand to writing a book about the labor movement, he brought to the task a fluency, a flair for dispassionate research and appraisal, and an objectivity rarely found among those who work in and write about the labor movement.

So when Kelley Loe died the other day, after a quarter of a century in the labor movement (following his earlier career in the newspaper business), Oregon lost a good citizen, a scholar and a gentleman, a man who did great credit to the cause he represented.

It Is Up to the States

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. HENDERSON. Mr. Speaker, many of us here believe that government is most responsive when it is closest to the people. For this reason, we have been most gratified by President Eisenhower's interest in transferring Federal responsibility for many programs to the States. This, of course, is a reversal of the long trend whereby the Federal Government has assumed more and more functions and, in so doing, has preempted areas of taxation to pay for these programs.

I wish to call the attention of the Congress to an editorial which appeared in the August 29 edition of the Perry County Tribune of New Lexington, Ohio, which commends the President's leadership in this area and discusses the primary issues involved as they affect the cost of government. The editorial is as follows:

UP TO THE STATES

President Eisenhower belongs to that fast-growing group of authorities who believe that one way to bring about tax reduction is for the States to assume responsibility for some of the costly activities that are now carried on by the Federal Government.

The President proposes a task force for action which would have a three-pronged job: To designate functions which the States are ready and willing to assume and finance, that are now performed or financed wholly or in part by the Federal Government; to recommend the Federal and State revenue adjustments required to enable the States to assume such functions; and to identify functions and responsibilities likely to require State or Federal attention in the future and to recommend the level of State effort or Federal effort, or both, that will be needed to assure effective action. As specific examples of programs in which there should be greater State participation, the President cited slum clearance and disaster relief.

It is an obvious fact that the Federal Government can only spend the money which it has first taken from the people and the enterprises of the States. It is also a fact that a substantial proportion of that money is absorbed by Federal administrative overhead, and that in most instances the States would get more concrete return out of each dollar if they did the work themselves.

Moreover, the money saving, important as it is, would be only a part of the benefits that would result. If the States knew they had to do their own financing, they'd examine spending proposals with much more critical eyes instead of seeking Government aid for all manner of unnecessary projects. Then, best of all, there would be reaffirmation of the largely forgotten principle that local needs should be met so far as possible by local action, a principle which lies at the heart of free, representative government.

Regulation of Firearms

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which was made before the Alcohol and Tobacco Tax Division of the Internal Revenue Service by Fred B. Rhodes, Jr., Esq., who is an attorney with offices here in Washington.

Mr. Rhodes was speaking for approximately 1,500 firearms dealers throughout the United States, many of whom are in Massachusetts and who have separately expressed to me their concern over the proposed ruling of the Internal Revenue Service which would place upon them an onerous reporting burden, as well as, in their judgment, an unwarranted extension of Federal control.

Because Mr. Rhodes has done such an able job of summing up their case, I wish to take this opportunity to bring this statement to the attention of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF FRED B. RHODES, JR., WASHINGTON, D. C., BEFORE THE ALCOHOL AND TOBACCO TAX DIVISION, AUGUST 27, 1957

It is my privilege to appear here on behalf of Pasadena Firearms Co., of Pasadena, Calif.; the Golden State Arms Corp., also of Pasadena, and approximately 1,500 dealers throughout the United States with whom the Pasadena Firearms and the Golden State Arms Cos. conduct an extensive business in firearms and ammunitions, and for whom they act as distributors. My principal clients, the Pasadena Firearms and the Golden State Arms Corp., also conduct an extensive business in direct mail-order and over-the-counter sales to individuals of arms and ammunition, which is sold both for sporting and target practice use and for preservation as collectors' items.

My principal clients also conduct a significant importing business in foreign arms and ammunition, either through their own agency or through that of such well-recognized foreign firms as Sidem International, who also are agents for the Fairchild Airplane & Engine Co. in present negotiations with the Netherlands and Bonn Governments, and have acted as intermediaries between North Atlantic Treaty Organization governments and the United States Government in the matter of purchase of United States military weapons and equipment.

Despite the volume of business conducted by my clients, one must class this as small business. In speaking on their behalf, I wish most strongly to emphasize that my protests to certain proposed regulations relative to the Federal Firearms Act as published in the Federal Register of May 3, 1957, are made from the particular viewpoint of small business.

In this connection, I am authorized to state that without any doubt the proposed sections 177.51 (firearms records), 177.52 (ammunition records), and 177.54 (over-the-counter sales to individuals) would impose penalties in time and cost of additional administration which would be ruinous to the conduct of business. Furthermore, section 177.50 (identification of firearms) would impose additional and very costly procedures which would vary from the serious to the prohibitive. Certainly this would be the case with imported collectors' items.

Concerning the proposed sections 177.51, 177.52, and 177.54, I have used the adjective "ruinous" because investigation since my letter of protest of May 31, concerning the effect of the proposed regulations upon my principal clients' business, has disclosed with certainty that not only would marginal operations be eliminated because such operations could not support the additional administrative burden, but that my principal clients' business as a whole would face prohibitive burdens in time and cost of the additional administration. The business volume and profit margins are insufficient to maintain the additional administrative burdens, and especially in the present state of the national economy, the additional administrative burden could not be passed on to the customers in the form of price increases.

The same may be said for my clients' dealers. Those whose business consists wholly, or almost wholly, of arms and ammunition, would face similar prohibitive problems, while those whose arms and ammunition

business constitutes only a part of their retail activity, would carry on this part of their business at a loss, or, at best, as a marginal operation.

These conclusions have been based upon my clients long experience as distributors, dealers, and importers.

In connection with the additional burden of cost of administration which the new regulations will impose, I call especial attention to the fact that the Congress specified in the Federal Firearms Act, a license fee for manufacturers of $25 and for a dealer of $1 per annum. No transfer tax whatever was imposed by the act, and yet the additional administrative burden imposed by the proposed regulations will, in effect, impose a heavy transfer tax in those cases where customers can be induced to bear the increased cost. In other cases wherein customers cannot be induced to pay the resultant increased selling price, the net effect of the proposed regulations will be to prohibit trade. It is estimated that there are 100,000 dealers in the United States and of these perhaps 45,000 to 50,000 are licensed.

I wish to question whether it was or is the will of the Congress either to impose such a transfer tax, or so to prohibit trade, or virtually to eliminate a whole category of small business. On the contrary, it is the frequently expressed will of the Congress, as well as of the executive branch of the Government, to assist small business, and to reduce the number of small business failures per annum.

The section of the proposed regulations causing my principal clients the gravest concern is section 177.54 (over the counter sales). Since this section requires the person or persons to whom firearms or ammunition is sold, distributed, or delivered, to receipt in their own handwriting upon the main company record format as prescribed in other sections of subpart D, the proposed regulations would abolish the present mail-order trade. Strictly interpreted, the proposed regulations therefore would, upon going into effect, immediately put out of business such firms as the Pasadena Firearms Co. and the Golden State Arms Co., which depend to a large extent upon mail-order business. It may well not have been the intent of those who prepared the proposed regulations so to abolish the mail-order trade in arms and ammunition, but if there is in the proposed regulations any method of conducting the mail-order business which does not have such effect, that method is not apparent to my clients or me. * * *

Of especial concern to my clients is the fact that the proposed regulations would place the reputable and recognized dealer at a considerable disadvantage, in comparison with sales and exchanges between individuals, since the latter remain unregulated, while the former are subject to the imposition of additional administrative burdens having effects varying from the extremely grave to the prohibitive. I question whether it is or was the will of Congress to place established and reputable dealers under such disadvantage.

* * * * *

It, therefore, appears that the proposed regulations are properly a subject for further legislation, rather than for imposition by administrative action. It is basically logical and in conformity with past precedent that if the problems of firearms regulation are so great that they require the extensive and sweeping additions to the firearms identification and recordkeeping procedures as called for by the proposed regulations, then new legislation, preceded by appropriate congressional hearings, is very much in order.

That such is the case is further borne out by determination of the legal basis of the proposed regulations. This legal basis is to be found only in section 903 (d) of the Federal Firearms Act ("Licensed dealers shall maintain such permanent records of importation, shipment, and other disposal of firearms and ammunition as the Secretary of the Treasury shall prescribe") and in section 907 ("Rules and regulations: The Secretary of the Treasury may prescribe such rules and regulations as he deems necessary to carry out the provisions of this chapter").

The marking of firearms is not called for in any part of the Federal Firearms Act, although called for in section 5843 of the National Firearms Act ("Identification of firearms: Each manufacturer and importer of a firearm shall identify it with a number or other identification mark approved by the Secretary or his delegate, such number or mark to be stamped or otherwise placed thereon in a manner approved by the Secretary or his delegate"). The only mention of identification markings in the class of arms covered by the Federal Firearms Act is found in section 902 (i) ("It shall be unlawful for any person to transport, ship, or knowingly receive in interstate or foreign commerce any firearm from which the manufacturer's serial number has been removed, obliterated, or altered").

Having made a close study of the Federal Firearms Act, the National Firearms Act, and the present and proposed regulations for the Federal Firearms Act, and after consultation with my clients, I call your attention to the following detailed arguments regarding the proposed regulations:

1. Section 177.50, identification of firearms: This section provides for the identification of firearms by certain markings thereon to be made by manufacturer or importer (name and location of same, serial number, caliber, and model of the firearm). The Federal Firearms Act itself does not call for any such identification, either by serial number or other means, much less for the details demanded by the proposed regulations. The act mentions serial numbers only to prohibit transport or receipt of firearms in interstate or foreign commerce "from which the manufacturer's serial number has been removed, obliterated, or altered" (sec. 902 (i)).

Previous regulations did not call for any such identification as is now proposed, and, indeed, the only mention of serial numbers of firearms in the previous regulations was in connection with the required recording by dealers of serial numbers of firearms "if such weapons are numbered" (sec. 315.72 (a), pt. 177 of title 26 (1954), Code of Federal Regulations, printed in the Federal Register of April 15, 1954).

During the times when the Federal Firearms Act was passed and amended, and at all times before and since, the custom of the firearms industry in the United States and abroad has been to manufacture large numbers of firearms (especially of the sporting type, cheap .22-caliber rifles, and military weapons, such as the M1903) have been manufactured without such identification as called for by the Treasury in the proposed regulations, and these rifles have been and are being made available for wide public sale.

Had the Congress considered it necessary to identify firearms in the manner prescribed by the proposed regulations, it is reasonable to conclude that at the times of passage and amendment of the act, and since, legislation would have been provided to alter common commercial and Government practice, and provide for identification as was done in the National Firearms Act (Sec. 5843: Identification of Firearms). At least, it may be expected that the Army would have been induced to follow the desires of the Treasury.

As the proposed regulations stand, they leave the development of firearms marking systems to individual manufacturers and importers, which can result in confusion and inefficiency of operations, both business and governmental.

Furthermore, the cost and time involved in identifying weapons in the proposed manner would vary from prohibitive to serious proportions. Importers in particular are gravely affected, since it is impossible in many, if not most, cases to develop the type of mass production methods (which may be justified in manufacturing) which can render bearable the effort of so marking miscellaneous lots of firearms. In the case of collectors' items, such marking would constitute defacement, and result in considerable lowering of value of the weapon on the domestic market. So far as the regulations are concerned, antique arms, as well as modern, are affected.

Finally, the regulations would leave unaffected approximately 30 million of already manufactured arms in use in the United States and not identified as called for in the proposed regulations. Importers, compelled to identify arms in the manner proposed, would thus be placed at a serious disadvantage in relation to trade in such domestic unidentified arms.

While the proposed section 177.51 implies that the permission of the Director of the ATT Division may be sought in order that the firearms identification information demanded in this section may be omitted, the time as well as the expense involved in the seeking of such permission would be prohibitive to extremely costly. Rapid turnover and maintenance of low inventories are recognized essential business practices to which the seeking of such permission in each case would run seriously counter. In the case of single items or small-volume transactions, the seeking of such permission would be out of the question financially.

2. Section 177.51, firearms records: Procedures added and expanded from those previously approved and in general practice will impose such additional administrative burdens resulting in the effects on business mentioned above. The following points are considered especially critical:

(a) New prescribed record format: A prime net effect of the proposed regulations is to impose upon dealers a specific business record form, which is both described and illustrated in the Federal Register of May 3, 1957. This has been accomplished without prior consultation with business. This format calls for procedures different from those now in general use, no previous standard format having been called for either by legislation or regulation. This format is by no means necessarily adapted to the various standard business methods (especially machine records systems where used) in common use in the manufacturing, wholesale, importing, and retail fields. As a result the proposed regulation will call for keeping of a new and additional set of records not consonant with standard business practice.

(b) Keeping of separate records: This requirement imposes upon dealers additional business procedures, with consequent grave effect upon administrative overhead costs both initial (to effect the change) and continuing.

The proposed format and recordkeeping, when taken in consideration with the proposed section 177.54 (over-the-counter sales to individuals), which requires receipt by individuals in their own handwriting in the record prescribed in the proposed section 177.51 (firearms records), will impose the gravest complications and administrative handicaps and burdens upon the conduct of business. The results are further developed below in the comments upon the proposed section 177.54.

(c) Length of time records are to be kept: Previous regulations called for retention of records in permanent form for 6 years. The proposed regulations specify retention of such records in perpetuity. The question is asked: Is the gain to firearms control worth the burden imposed on the industry? De-

pending upon location and the value of real estate and floor space, the retention in perpetuity of firearms records will impose a serious burden in the form of storage space occupied, and the material equipment required for such storage. Moreover, the expense of such storage is affected by the proposed section 177.55, which requires that firearms records be available for examination by designated internal revenue officers during business hours, which is taken to signify that such records must be sorted in such a manner as to be available and not stored in locations and in a manner minimizing cost and space requirements. Since the proposed section 177.51 requires that such records be delivered to the Director of the ATT Division for permanent retention in the event of absolute discontinuation of business, why (provided that permanent retention of records is necessary to adequate firearms control) should not such records be turned over to the Director after 6 years? Would it not be more convenient and efficient for the Government to have a central file, than for the agents to have to go to the trouble and expense and time of calling on individual businesses and inspecting their files as necessary? And if firearms-control requirements do not justify the maintenance of such a central file, can it be maintained that they justify putting business to the trouble and expense of maintaining permanent files?

3. Section 177.52, ammunition records: This section is a new one, since previous regulations provide for no recordkeeping whatever of pistol and revolver or any other ammunition. It is noteworthy that the act nowhere provides for any recordkeeping of transactions on such ammunition.

The maintenance by dealers of such records, especially in the case of sales of small numbers of rounds, and most especially in the case of several or single rounds for collectors, imposes an especially great additional administrative burden. The amount of the burden is greater than that regarding firearms records (as expounded in 2 (a) above) in that in the case of ammunition, in retail sales especially, the burden of time, staff, and materials involved in additional administration will normally be greater in proportion to the value of the sale, than in the case of a firearm. Moreover, the records of ammunition will be additional to the separate new system for firearms. In consequence this section will have signal effect on trade, and therefore most definitely raises the questions of whether the gain to firearms control is worth the deleterious effect upon business, and of whether Congress intended that the act should have this effect.

When the proposed section 177.54 (over-the-counter sales to individuals) applies, the burdens imposed will be extremely grave, and the obtaining of signatures of individuals involved in mail-order transactions would appear to abolish mail-order business as stated above.

It is noted that whereas the proposed section 177.51 specifies in some detail that entries in firearms records shall be posted at the time of the transaction, or in each instance not later than the close of business on the day next succeeding the day on which the transaction occurs, the proposed section 177.52 (ammunition records) makes no regulation as to the time of posting. If it is necessary in the public interest that firearms records should be promptly posted, it would appear equally so in the case of ammunition records. Therefore, it is feared that the apparent discrepancy in the proposed regulations may be an indication that the fullest consideration thereto has yet to be given in the public interest as well as in that of businesses concerned.

4. Section 177.54, over-the-counter sales to individuals: Actually covers, because of the phrase "or distribution to individuals," mail-order sales as well as true over-the-counter sales and requires, therefore, receipt in the handwriting of the "persons to whom the firearms or ammunition are sold, distributed, or delivered * * *," both of direct and mail-order sales on the record prescribed by this subpart. Not only does the requirement for such signatures seriously complicate and add to the cost of administration as described in 2 and 3 above, but in the case of mail-order sales the obtaining of the signature on the main firearms record appears impossible.

The grave effect of the proposed recordkeeping may be illustrated by reference to the hitherto approved and satisfactory recordkeeping system employed by my principal clients.

This system has been to describe the firearm and state the serial number (if any) on the clients' copy of the invoice. This is accomplished by a single typing which produces in a single operation a set of 10 sheets, which fulfill all extant requirements of business administration. The introduction of the proposed special form and separate records would result not only in the acquisition of new stationery and other material equipment, but also the addition of the special administrative procedures and space for the former and latter. The special typing required in itself can definitely be stated to be an added overhead item prohibitively costly in its general effect upon much of my clients' business. * * *

It is hoped that the above is sufficient to illustrate why the question arises as to whether the gains to firearms control are worth the cost to business and the resultant restraint of trade and hence of manufacture.

The people I represent are small-business men in 47 out of the 48 States of the Union, the District of Columbia, and Alaska. They are honest people who are attempting to make an honest living. It is very natural that they would resent any Federal interference which would increase the cost of doing business, and in some instances would drive them out of business, unless it was apparent that the national welfare was endangered. If this was the case, they like every other patriotic citizen would be in favor of such changes in regulation; it is apparent that this is not the case, and they know it, and further they resent being put upon by the Federal Government. To impose the costs, to bring about the hardships which these regulations will bring to small-business men is unfair and unjustified. If this agency feels that the welfare of the Nation is at stake then it should take the problem to the Congress of the United States for a revision of the act.

General Lafayette

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News on the 200th anniversary of the birth of General Lafayette:

GENERAL LAFAYETTE, 1757–1834
(By Abe E. Eisenstein)

September 6 is the 200th anniversary of the birth of General Lafayette.

East-siders, New Yorkers, Americans, and freedom-loving people everywhere will on this day salute the memory of that illustrious, fearless Frenchman, military hero and champion of freedom.

He is New York's and America's beloved adopted son who, at 19, using his own funds and accompanied by 11 loyal companions, sailed for America to join Gen. George Washington and other patriots fighting for this Nation's independence.

The War of American Independence had begun in 1775 and Colonel Lafayette of the Noailles Dragoons mentally followed the American struggle for freedom:

"The feelings of my heart, long before it became my duty, engaged me in the love of the American cause.

"I shall neglect nothing on my part to justify the confidence which the Congress of the United States has been pleased to repose in me as my highest ambition has ever been to do everything only for the best of the cause in which I am engaged.

"As the defender of that liberty of which I adore, free myself beyond all others, coming as a friend to offer my services to this most interesting Republic. I bring with me nothing but my own good will, no ambitions to fulfill, and no selfish interest to serve. The happiness of America is intimately connected with the happiness of all mankind; she is destined to become the safe and venerable asylum of virtue, of honesty, of tolerance, of equality, and of peaceful liberty."

General Lafayette made four visits to the United States during his lifetime. The first was in June 1777, when he began his service with the American Army under General Washington, and lasted until January 1779. Lafayette then spent a little more than a year in France, where he supervised the outfitting of a fleet and an army of 6,000 to aid the Americans.

Returning in April 1780, Lafayette continued his military service with the Revolutionary forces until the victory at Yorktown, October 1781. His mission accomplished, in December of the same year Lafayette sailed to France.

From July 1784 to January 1785, Lafayette visited the United States on a peacetime tour. Finally, in 1824, he was invited by the Congress and President James Monroe to visit this country as its guest of honor.

On August 14, 1824, Lafayette, at the invitation of Congress and President Monroe, arrived in New York Harbor on the vessel *Cadmus*. He was accompanied by his son, George Washington Lafayette.

On August 16, 1824, after leaving Staten Island, Lafayette and his party landed at the Battery in lower New York City. More than 30,000 persons came to greet him. They lined the streets, rooftops, and wharves. Cannon boomed a salute and for 4 days and 4 nights the city of New York was turned into a huge festival center. In triumphal parade, Lafayette was driven to City Hall for a mammoth reception. He reviewed troops at City Hall Park and later at Battery Park; he watched the ascension of the balloon, American Eclipse.

At City Hall, the mayor said:

"In the name of the municipal authority of the city, I bid you a sincere welcome to the shores of a country, of whose freedom and happiness you will ever be considered one of the most honored and beloved founders. Your contemporaries in arms, of whom indeed but few remain, have not forgot, and their posterity will never forget the young gallant Frenchman, who consecrated his youth, his talents, his fortune, and his exertions to their cause; who exposed his life, who shed his blood, that they might be free and happy. They will recollect with profound emotions, so long as they remain worthy of the liberties they enjoy, and of the exertions you made to obtain them, that you came to them in the darkest period of their struggle, that you linked your fortune with theirs, when it seemed almost hopeless,

that you shared in the dangers, privations, and sufferings of that bitter struggle, nor quitted them for a moment till it was consumated on the glorious field of Yorktown. Half a century has elapsed since that great event, and in that time your name has become as dear to the friends as it is inseparably connected with the cause of freedom, both in the old and in the new world.

"The people of the United States look up to you as to one of their most honored parents—the country cherishes you as one of the most beloved of her sons. I hope and trust, sir, that not only the present but the future conduct of my countrymen, to the latest period of time, will, among other slanders, refute the unjust imputation that republics are always ungrateful to their benefactors.

"In behalf of my fellow citizens of New York, and speaking the warm and universal sentiments of the whole people of the United States, I repeat this welcome to our common country."

Lafayette's reply:

"Sir, while I am so affectionately received by the citizns of New York and their worthy representatives, I feel myself overwhelmed with inexpressible emotions * * * it is the pride of my heart to have been one of the earliest adopted sons of America, I am proud, also, to add that upward of 40 years ago I was honored with the freedom of this city. I beg you, Mr. Mayor, I beg you gentlemen, to accept yourselves, and to transmit to the citizens of New York, the homage of my profound and everlasting gratitude, devotion, and respect."

On September 9, Lafayette attended a special oratorio at St. Paul's Church, at Broadway and Fulton Street. On September 12, Lafayette worshipped at Trinity Church, at Broadway and Wall Street, and on September 14 more than 6,000 persons jammed Castle Garden at the Battery to fete Lafayette and wish him bon voyage on his journey up the Hudson River.

The life story of this young nobleman is one of the most romantic in history, and the fame of such a character can find no limit except in earthly gratitude.

Congress made him a gift of $200,000 in cash and a township of land. A full-length portrait of Lafayette by Samuel F. B. Morse is now in the art gallery of the New York Public Library, and facing Fourth Avenue is the Lafayette statue, by Bartholdi, presented by the French Government to the city of New York.

Pork Barrel and Beans

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BOYLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a very fine editorial which appeared recently in the Chicago Sun-Times entitled "Pork Barrel and Beans" which follows:

PORK BARREL AND BEANS

Looking back on the economy wave that more or less swept through Congress, it is interesting to note that the major escapee was the old pork barrel, or public works. Congress cut the overall budget requests 7.7 percent but hometown projects, needed or not, only 2.1 percent.

Senator PAUL H. DOUGLAS, Democrat, of Illinois, turned out to be the only sponsor interested in trimming the pork barrel substantially. He sent us a letter calling attention to a vote in which he was snowed under 85 to 1 when he wanted to cut about $200 million out of the $858 million appropriation for 400 rivers and harbors projects in 41 States.

Senator DOUGLAS, who is an economist, argued that the construction work would mean money would be spent for the very commodities where price inflation is strongest. Ultimately, this would affect business costs and the cost of living. At least a fifth of the projects, he said, weren't worth in benefits the money that would go into them.

DOUGLAS knew he was arguing a lost cause. Too many Senators were getting too many public projects for cities and towns in their home States. They are against inflation, but not at the expense of some favorite projects.

But PAUL is undeterred. He wrote:

"Until I am convinced I am in error, I shall try to cut expenditures upon capital goods in periods of inflation and try to practice thrift at all times. I must confess I get discouraged at the way the economy vows of January melt away by August."

On another occasion he tried to save the taxpayers $30,000 by moving that this amount be knocked out of the Federal budget because it is used to subsidize the Senate restaurant. DOUGLAS said that the famous bean soup and other items on the menu should not be sold at a cut price to Senators who could afford to pay free-enterprise prices out of their $22,500-a-year salaries. But he was shouted down. When it comes to pork barrel or bean soup for themselves, Senators don't mind spending your money.

An Economy-Mandated Congress

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. WILSON of Indiana. Mr. Speaker, with the close of the 1st session of the 85th Congress, we who are Members of this body can agree on 1 fact, at least—that we were mandated by the American people to reduce Federal spending, balance the budget and otherwise get the Government's financial affairs in order. Everyone knows, or should know, that we are in a life-and-death struggle with Public Enemy No. 1—inflation. People are worried, scared, and they look to Washington for protection and relief.

In analyzing my own record in this and previous Congresses, Mr. Speaker, I am proud that I have consistently sought economy in government. As a member of our Appropriations Committee, I have been strong in demands for drastic cuts in departmental budgets, particularly the multi-billion-dollar Defense Department. I cannot, for the life of me, see why it is necessary for our military forces to spend some $40 billion a year even though the maintenance of defenses, with the consequent easing of war hazards, is very expensive.

My Ninth Congressional District in Indiana is comprised of 14 counties with a population total of some 260,000. It is a typical grassroots section where people are thrifty, realistic, and aware of the fact that money does not grow on trees. Early in this session they let me know of their firm determination against $72 billion Federal budgets and doubtful give-away programs to foreign powers.

The mandate of Indiana people was so strong that I joined with my Indiana colleagues in late February 1957, in signing a declaration of economy in Government which stated, in part:

The Indiana Republican delegation in the House of Representatives, after careful study and evaluation, has unanimously agreed that a reduction of the $72 billion budget will be in the best interests of the people of the United States. It was further agreed that every proposed reduction in the budget, which does not curtail essential services or endanger the security of our country, will be supported.

I know, Mr. Speaker, that I have consistently followed that declaration of policy. In fact, my record of economy votes was noted in the Congressional Quarterly, as being the highest in the State of Indiana and among the highest in the entire Nation.

Despite the demands of my committee work, I was present on this floor to cast my vote on virtually all of the 100 roll-calls of the session just closing.

As an example of my economy policies, I would mention the various appropriation bills on which this chamber acted, after these measures had cleared the committee on which I serve. I helped in two places to get these appropriations reduced—in committee and on this floor.

For fiscal 1958 the various appropriation bills sought a total of $64,048,466,290. When they passed the House they had been reduced to $58,515,233,806. After Senate and conference clearance they totaled $59,134,110,706. These totals do not reflect certain other costs which the Nation's taxpayers are called upon to assume. One huge item is the fixed charge of approximately $7,400,000,000, which represents interest on our public debt, now exceeding $270 billion.

I had great misgivings about the amounts requested in these appropriation bills. In every instance where there appeared a possibility of voting for responsible reductions, I did so. In one of the appropriation bills, 14 amendments were voted upon with an aim of effecting reductions. I am proud to have been one of those who voted in favor of each of those 14 amendments.

The Congressional Quarterly tabulations for 26 so-called economy bills through July 28 showed that I had favored 22 of them for a percentage of 81. This is among the most consistent records held by any Member of Congress.

In analyzing the record of this congressional session, we find that relatively few major bits of legislation were acted upon. Of more than 13,000 measures introduced, only about 250 merged with House and Senate approval. Much remains to be done next year. Little was done about veterans' legislation, and I am particularly anxious that Congress consider problems of World War I veterans. They truly are the forgotten men of this century's American wars.

Giving them some help where it is needed would be sound economy and entirely justified.

It is also noteworthy that taxpayers of America received no relief during the first session. No substantial tax reductions were enacted, and few were given the courtesy of consideration. Yet the tax revenues under existing laws increased from $68,165,000,000 in fiscal 1956 to $70,989,000,000 in fiscal 1957 because of the economic growth of the Nation.

The Mutual Security Act, or foreign aid bill, was reduced to a $3 billion figure from the $4.4 billion sought. I opposed this bill because I know our people, already suffering from oppressive taxation and ruinous inflation, strongly doubt the wisdom or fairness of spreading money abroad with the abandonment so evident in the past. Foreign aid, as we are doing it, should be thoroughly scrutinized and reevaluated. That is the temper of the American public.

It is my determination, Mr. Speaker, to press vigorously for economy in government for as long as I remain in Congress. It is an urgent necessity if we are to stem the rapid drift toward inflation. Ever since we deserted the philosophy of those who framed our Constitution, which limited our powers to tax ourselves, this Nation has known little about the blessings of economy.

I have long advocated a full-scale reform of our national tax structure. Whether the 16th amendment, which provides for the levying of an income tax of unlimited amounts according to the whims of Congress, was a proper step is indeed gravely doubtful.

When we come back to Washington for the second session of this Congress, I hope every Member on this floor will remember that he carries a mandate from his constituency. It is a mandate as strong as any ever declared by the American people. They want a return to commonsense, economical Government. That is our job for 1958.

Bordentown, N. J., Celebrates 275 Historic Years

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, Bordentown, N. J., located in the Fourth District of New Jersey, which I have the honor to represent, will celebrate its 275th anniversary the week of September 7–14 this year.

Bordentown was founded in 1682 by William Farnsworth, one of William Penn's party of friends, and has had a part to play in the great periods of American history since then.

Bordentown was the home of Thomas Paine and Francis Hopkinson—musician and signer of the Declaration of Independence. The home of Francis Hopkinson still stands.

Joseph Bonaparte, brother of Napoleon, and the former King of Spain, chose Bordentown for exile and built a mansion there in a beautiful park. The park and the mansion live on, and the home is now occupied by a religious order, the Society of the Divine Word.

Clara Barton, of Red Cross fame, lived in Bordentown at one time and established a public school there around 1852. The little, one-room, red brick schoolhouse is one of Bordentown's proudest possessions.

From the time when, as one of the earliest towns in what was then west Jersey, Bordentown was established, it has occupied a special place in the history of New Jersey and our country.

The residents of Bordentown have spared no efforts to give a proper and fitting tribute to their historic city and to those who so brilliantly wrote its history by word and deed.

I include here articles from the Trentonian and the Bordentown Register:

[From the Trentonian, Trenton, N. J., of August 30, 1957]

BORDENTOWN LOOKS AT 275 HISTORIC YEARS

On the banks of the Delaware River where it bends, just below Trenton, is Bordentown, a colonial town which was founded in 1682 by one of William Penn's party of Friends, Thomas Farnsworth.

This year, with a whole week of celebration planned from September 7 to 14, the old colonial town commemorates its 275th birthday.

Bordentown has had a part in every facet of American history. Starting with the Quakers who established a trading post there in 1682, the first milestone was reached when Joseph Borden, a shipmaster originally from New England, came to town in 1717 and established a stage line from New York to Philadelphia.

With packet ships between Philadelphia and Bordentown, stagecoaches from Bordentown to South Amboy, and sailing ships from Amboy to New York, the line was established. It was famous in its day.

In the pre-Revolutionary days and after, Bordentown was the home of Thomas Paine, Francis Hopkinson—signer of the Declaration of Independence—and many other notables. The Hopkinson House which was built in 1752 is still in excellent state of preservation.

In 1817, Joseph Bonaparte, brother of Napoleon and ex-King of Spain, chose Bordentown for his home in exile. He built a large mansion set in a beautiful park on the riverbank. Both mansion and park are still intact though greatly changed. It is now the home of a religious order, the Society of the Divine Word. The Bonaparte influence through 30 years greatly affected the town.

It was in 1831 that the first railroad in New Jersey was started at Bordentown, the Camden & Amboy Line, now a part of the Pennsylvania Railroad. The Johnny Bull locomotive, now in the Smithsonian Institution, Washington, D. C., made its first run on the tracks built through Bordentown. It was built in Bordentown.

The next national figure to make history in Bordentown was Clara Barton of Red Cross fame. Miss Barton came to Bordentown from New England in 1850. New Jersey had not been successful in establishing public schools which were popular in New England and New York. Miss Barton, who was a teacher, thought New Jersey should have this type of school and started one in Bordentown.

The little, one-room red brick schoolhouse which was New Jersey's first successful public school is one of Bordentown's proudest possessions. Miss Barton started with 6 students and in a year's time had 600 with schoolrooms wherever available. In 1852 a school building was erected to house her growing public-school enrollment. The Clara Barton school building is a New Jersey landmark.

The Gilder estate and house built in 1788 are other proud possessions of Bordentown. The home of Richard Watson Gilder, editor of Century magazine; Joseph and Jeanette, New York newspaper writers and editors of the seventies and eighties; William Gilder, an explorer and writer; John Francis, musician and composer; and Robert, an artist and newspaper editor of Omaha, Nebr., it is now the possession of the city and the shrine of the Bordentown Historical Society, while the ample grounds provide a municipal stadium and recreation park for the area.

The new Carslake Community House will offer a historical exhibit of mementoes of all notables who have made Bordentown history—artists, writers, military and others, during the week of celebration.

Opening with a firemen's parade on September 7, the week will end with a giant historical and military parade on September 14. A spectacular pageant will be presented 6 nights on Gilder Field. "Open house" days, industrial exhibits and lots of other events will round out a week of activity in historic old Bordentown.

Bordentown's pages are crowded with historic personages and events. Her quiet shaded streets are reminiscent of another day, with scores of houses built in the 1700's changed a little, still in use and well cared for by their owners and occupants. Bordentown is the home of the famous Bordentown Military Institute which for neary 75 years has offered scholastic and military training for young men.

[From the Trentonian, Trenton, N. J.]

HISTORIC BORDENTOWN

With all of the historic Trenton area looking on fondly, historic Bordentown today begins a week-long celebration of its 275th anniversary. Bearded men dressed in adaptations of what their forefathers wore will abound; ladies becomingly turned out in fashions of the past will lend their charm to the notable event; and a series of highlights will weave an aura of gaiety about the city on the bend of the Delaware.

Gaiety is always the keynote of such a celebration, but under it all there is a deep significance which, we note, will receive full attention in Bordentown. Through the 275 years of its existence, Bordentown has grown as the Nation grew. The city can look back on colonial connections, Revolutionary events, the beginning of public education, early transportation, and a long list of people who contributed much to the cultural and economic progress of America.

The days that have been set aside during the week tell the story of Bordentown—religious observances tomorrow, followed by Railroad and Industrial Day, Fraternal Day, Neighbors and Open House Day, Youth Day, and Historical and Military Day.

From the time when, as one of the earliest towns in what was then West Jersey, Bordentown had its beginning, it has occupied a rather special niche in the annals of State and Nation. We note with neighborly pride that residents of a modern Bordentown have spared no efforts to give proper and fitting tribute to their historic city and to those who so brilliantly wrote its history by word and deed.

[From the Bordentown Register, Bordentown, N. J., of August 22, 1957]

ANNIVERSARY HOMECOMING ARRANGEMENTS COMPLETED

The Reverend James E. Purdy, chairman of Homecoming Sunday (September 8), has recently announced the completion of plans for this part of the 275th anniversary for Bordentown. Letters have been made available through all the religious bodies of our community whereby present members may invite former residents to attend a special service in each of our 10 churches and synagogues during the morning.

Arrangements have been made with Mayor Edward J. Koenig to have the newly completed Carslake Memorial Community Center dedication at 2 p. m. The Honorable Robert B. Meyner, Governor of New Jersey, will dedicate the new structure.

In the evening at 7:30 p. m. there will be a community service at Gilder Field. The speaker at this service will be Dr. Samuel Engle Burr, Jr., of Washington, D. C., a former Bordentonian, and now a distinguished educator, traveler, lecturer, and author of numerous books.

Dr. Burr has this year published Small Town Merchant, the story of his father's long and very active life as a merchandiser in Bordentown in the post-Civil-War days. Many successful business men and women received their early start through the efforts and interest of Mr. Burr, smalltown merchant.

The combined choirs of the churches and synagogue will render two selections and lead in community singing.

Working with Father Purdy completing the arrangements have been all the clergy of the town and Mr. George Groveman. One of the features of the Sunday program will be the bestowal of a memento commemorating the 275th anniversary to the oldest man and the oldest woman returning to participate in the afternoon exercises. The historical pageant will not be presented Sunday evening.

An American Student Visits Moscow

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. JAVITS. Mr. President, appended is a letter which I received from a young man, George S. Abrams, who was one of a group of Americans visiting Moscow recently during the International Youth Festival. Mr. Abrams, it will be recalled from press reports, was the individual who spoke at length to Muscovites in Red Square regarding the United States and our sincere desire for world peace. The Russians listened and learned. This bespeaks the value of an exchange of persons program between our country and the European Soviet bloc as set forth in my bill, Senate Concurrent Resolution 44, presently pending before the Senate Committee on Foreign Relations.

Mr. Abrams' letter follows:

NEW YORK, *August 29, 1957.*

Senator JACOB JAVITS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR JAVITS: The bill for increasing reciprocal exchanges which you sponsored was drawn to my attention yesterday. I hope you will allow me to express a few of my personal feelings and experiences that may bear a little on your bill.

I have just returned from a 3-week stay in Moscow. During that time I had an opportunity to speak to many thousands of Russians. These Russians were average citizens, "the man on the street."

I came home with two main impressions. The first is that the Russian people live in a vacuum and see and hear only what their government chooses to allow them to see and hear. They know virtually nothing of the West and are full of distortions created by the Russian Government.

This leads to my second main conclusion: That there is an urgent need to get any and all information to the Russian people and by far the best way of getting such information to the Russian people seems to me to be by personal contacts through exchanges, as advocated by your bill.

One more brief point. The problem of fingerprinting is a very difficult one. The average Russian with whom I talked said that he would not like to be fingerprinted if he came to the United States. The Russian people sincerely seem to regard fingerprinting as a personal shame—something within their knowledge and belief restricted only to criminals. Anything that can be done to relax the present fingerprinting requirements would seem to me to go a long way toward ending the stalemate presently preventing exchanges between East and West.

I feel that America can afford to relax the fingerprinting requirement because it has nothing, I believe, to fear from such exchanges. We can only gain by allowing the people of Russia and her satellites to see the West and westerners and to find out for themselves many of the things they are told are not true.

I have written this letter in somewhat of a hurry as on September 15 I will enter the Army in the 6-month training program. I do very much want to use all my available time in the next few weeks to give such information as I might have gained from my Russian experiences to such people as yourself.

Thank you very much for allowing me to express some of my very personal opinions, and I sincerely hope that your bill will gain enough support to pass.

Very truly yours,

GEORGE S. ABRAMS.

NEWTON, MASS.

The Tax That Chokes

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the RECORD an editorial from the Pioneer Press, of St. Paul, Minn., of August 2, 1957, entitled "The Excise on Freight," and one from the Herald-Whig, of Quincy, Ill., of August 5, 1957, entitled "A Tax That Chokes."

These editorials have been published in response to my article in the August 1957 issue of Railway Progress magazine entitled "The Tax That Chokes the West."

I am happy to report that the editorials support effectively and vigorously my claim that this unfair and discriminatory levy works against the best interests of the States in the West and the Northwest.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Paul (Minn.) Pioneer Press of August 2, 1957]

THE EXCISE ON FREIGHT

One of the most illogical and unfair excise taxes levied by the Federal Government is the 3-percent impost on freight charges. It is especially discriminatory against Minnesota and other States which are far from the big centers of population and markets.

Senator RICHARD L. NEUBERGER, of Oregon, in an article in Railway Progress magazine, urges that the levy be repealed. His State and others in the West suffer ever more punishment from this tax than the Midwest. However, its injustices extend throughout the country. There is no sound justification for its existence at all.

Northwest manufacturers, already handicapped by distance from the big consuming markets, are handed a further penalty by the Government through this 3-percent penalty on their freight bills. Northwest farmers pay more for what they buy and get less for what they sell because of the freight tax. Consumer prices in general are increased.

Railroads and common-carrier trucklines are penalized. The 3-percent freight penalty fosters private tax-free hauling of goods which normally would be handled by the common carriers. The private-haul loophole discriminates against small businesses and individuals, since they are not as capable as big companies of hiring private truck fleets. Another way in which the tax is avoided is by shipping goods on Canadian railroads instead of on American lines. The Great Northern and Northern Pacific are among companies hit in this manner.

"By all possible tests," writes Senator NEUBERGER, "the 3-percent Federal excise tax on freight has been an abysmal failure. The time has come to repeal this unfair levy."

[From the Quincy (Ill.) Herald-Whig of August 5, 1957]

A TAX THAT CHOKES

Oregon's Senator RICHARD L. NEUBERGER, writing in the August issue of Railway Progress, says the Federal excise tax on freight transportation "threatens to doom economic development in the West and Northwest." But it is doing the rest of the Nation no good, either.

Senator NEUBERGER says the 3-percent excise tax on the 2,000- to 3,000-mile freight hauls necessary to reach the centers of major population from the West and Northwest frightens manufacturers away from those areas. The tax on a carload of lumber from Oregon to Pittsburgh, he points out, is 40 percent higher than on a carload of lumber from Georgia. Pittsburgh is chosen as a freight focal point because 55 percent of the Nation's population lives within a 500-mile radius of Pittsburgh.

The 3-percent freight tax and the 10-percent excise on passenger transportation were instituted during World War II to discourage all but essential traffic. But of even greater general interest than the Senator's analysis of its harm to the West and Northwest is the Interstate Commerce Commission's estimate that the tax on freight, by diverting traffic to private carriage and through deductions as a business expense, is causing a Federal tax loss of $24 million a year.

It adds up to a good argument for the success of legislation introduced by Senator NEUBERGER to repeal the freight tax, and to his contention that the passenger transportation tax is much more unfair than would be a luxury tax on a man's second suit of clothes or a family's second automobile.

Everybody's Fight

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BOLAND. Mr. Speaker, since the Springfield Armory, the oldest of the Army's manufacturing arsenal plants established by President George Washington, stopped producing the M–1 Garand rifle earlier this year, the 2,500 skilled employees have been very uneasy because of threats and rumors of large-scale layoffs. Fortunately, the employment level was maintained because the armory was producing the Vulcan 20-millimeter air cannon for the Air Force. But now come reports that the Vulcan gun production will be cut back at the armory, with a possible loss of 500 jobs, while all of the air-cannon production will be turned over to a private corporation.

Mr. Speaker, I have said this before and I repeat it now: I have favored this administration's policy of getting the Government out of business—the dry-cleaning business, the coffee-roasting business, the cobbler-shop business—but I do object to the concerted effort on the part of those in high places in this administration who are bent on stripping the Army's historical and efficient arsenal production plants and giving the important task of gunmaking to commercial profitmaking corporations.

In this connection, and under leave to extend my remarks, I would like to have printed in the RECORD an editorial from the Springfield, Mass., Daily News on August 29, which points up the threat that faces the Springfield Armory, the employees, and the community.

The editorial follows:

EVERYBODY'S FIGHT

The Springfield Armory workers are building a $5,000 kitty to finance a campaign to get the Defense Department to use the local facility instead of giving contracts to private firms.

The Federal Employees Veterans' Association is running the 8-day drive to raise $5,000 for an advertising promotion to attract interest to the plight of the armory.

There is something incongruous in the action. Employees are donating money to run a campaign to influence their employer to make use of his own plant and employees instead of paying a much higher price to have the work done somewhere else. However, the Federal Employees Veterans' Association members have seen the effects with which private manufacturers have used lobbying and educational funds, and have decided to adopt similar tactics, insofar as possible.

The campaign is certain to attract public attention. The failure of a private manufacturer to fulfill a previous contract to make rifles for the Defense Department, and the high cost of such contracts, will undoubtedly be cited to point up taxpayers' questions about the Defense Department plans.

How do private firms win Defense Department contracts, despite the fact that the armory can do a better job at a lower price? Politics and lobbying conspire to provide the answer. So the armory employees are trying to use those weapons, unfamiliar to them, to win this battle.

Of course, it is not exclusively their fight. The country loses when the country passes up an opportunity to get the best rifle production at the lowest cost. The loss is magnified when the shifting of contracts to private firms reduces the ability of the armory to function as the heart of the Nation's military small arms development program.

Western Massachusetts loses when the armory is permitted to stand idle, and the skilled craftsmen released to seek other employment. Springfield itself, whose history is closely linked to the armory, suffers greatly when the work force there is cut.

Therefore, it is fitting that the armory employees are not carrying this fight alone. James R. Weaver, retired manager of the east Springfield Westinghouse plant, has accepted the chairmanship of the Springfield Rifle for Springfield Committee which will seek to have the file made here where it was developed and engineered.

Mr. Weaver, formerly head of the plant which is the city's largest employer, now heads the committee to assist the armory, the city's largest public employer. The greater Springfield community, which has a big stake in the armory, should assist in any campaign to overcome political influence and turn Defense Department contracts to the armory where they can be best filled at the lowest price.

The Record of the 85th Congress

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. ZABLOCKI. Mr. Speaker, in accordance with a policy which I have followed since first elected to the 81st Congress as a Member of the House of Representatives, I submit to the people of the Fourth District a report on the major legislative actions of the 85th Congress.

THE 85TH CONGRESS

The 1st session of the 85th Congress has come to a close. We can now look back and appraise its achievements, as well as its failures.

The 85th Congress met and continued in session during a period of trial and crisis. On the international scene we have witnessed several upheavals in the Communist realm. Still we have made no apparent progress toward a secure and lasting peace. The Communist threat has not vanished. Red penetration into the Middle East, southeast Asia, and other areas has continued. By crushing the rebellion in Hungary and going unpunished, the Soviets reasserted their supremacy over the captive nations. Further, aided by the bungling and inaction on the part of our administration, they managed to gain an important foothold in the Middle East. In spite of the disarmament talks in London, we seem to be no closer to peace than we were a year ago.

On the legislative front, foreign affairs legislation fared poorly. The first session was marked by, first, a signal lack of new approaches to the solution of world problems; and second, growing discord between the majority in Congress and the Chief Executive. Both can be traced to the lack of Presidential leadership.

Extensive studies conducted during the past year pointed to the need for a new approach to foreign policy problems. Virtually none have been forthcoming from the administration. The $4 billion foreign aid bill proposed by the President did not help the situation; it was padded, arrived late, and was not actively championed by the President until too late. Congress cut into it deeply, appropriating little over $3 billion in new funds. Other bills in this field either failed to clear the committee stage, or ran into stiff opposition on the floor of the House.

With respect to domestic legislation, the picture was more encouraging. Faced with a recordbreaking $72 billion budget proposed by President Eisenhower, Congress spent much of the session trying to trim it to the bone, and made encouraging progress. The budget was cut by $4.9 billion.

A detailed report on legislative actions—and on my votes on the various bills—is tabulated with this report. It outlines all major legislative actions, including the passage of reorganization legislation, the Housing Act, civil rights, and other measures.

There were, however, three important areas which needed—but failed to receive—special attention:

First. Inflation, aided by high Federal spending, continued to spiral. The cost of living is still on the upswing. Ever-increasing interest rates, pushed up by deliberate Government action, are fattening the purses of big investors but place a heavy burden on the average wage earner. The cost of home mortgages, business loans, auto and other consumer borrowing has gone up. Even the cost of servicing our national debt has jumped $1 billion a year. This comes out of our pockets.

Second. The average taxpayer and the small-business man are hard pressed. Federal tax revenues are at an alltime peacetime high. Together with high interest rates resulting from the tight-money policy, they spell trouble for the average taxpayer and the small-business man. While large corporations are reporting record profits, small-business earnings dropped sharply. The number of bankruptcies has increased. On top of high taxes and the tight-money policy, the administration, first, has been bypassing small business in Government procurement; and second, reneged on a tax cut recommended by a special Presidential Commission.

Third. The farm problem has not been solved, even though the cost of running the Agriculture Department has gone up under Mr. Benson from $1 billion in 1952 to $4 billion a year under current rate of spending.

Voting record of Representative CLEMENT J. ZABLOCKI, 85th Cong., 1st sess.

Stand	Issue	Status
	INTERNATIONAL AFFAIRS	
Opposed	Resolution giving President standing authority to use United States Armed Forces in the Middle East	Became law.

Increase Annuities for Retired Federal Employees

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BOLAND. Mr. Speaker, I am very disappointed that action will not be taken by Congress in this session to increase the annuities of Federal employees who have retired after a record of devoted service to their Government. Many of these annuitants are elderly and they did not benefit from the liberalized retirement law which went into effect on October 1, 1956. I introduced a bill this year, H. R. 4085, which would have corrected this disparity between the annuities received by those who retired under the new liberalized law, and those who had retired prior to enactment of the law. My bill would have increased the annuity for these elderly persons, many of whom now require constant medical attention, by 25 percent. That increase is not large when you remember that many of these annuitants retired from Government when salaries were small in terms of today's dollars, and that 40 percent receive less than $100 a month. It seems to me that there is an obligation upon Congress to increase the annuities of these retired people who are facing the heavy burden of increased living costs on fixed incomes. I sincerely hope that this legislation will be one of the first items of business in the next session of Congress in January.

Report to My Constituents in the Sixth Congressional District of Maryland

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. HYDE. Mr. Speaker, as United States Representative for the Sixth Congressional District of Maryland, I would like to publish in the CONGRESSIONAL RECORD my voting record for the 1st session of the 85th Congress:

Voting record of Representative DEWITT S. HYDE, 6th District, Maryland (85th Cong., 1st sess.)

Date	Measure	Vote
Jan. 29	H. Res. 123, providing for consideration of H. J. Res. 117, to authorize the President to undertake economic and military cooperation with nations in area of Middle East to assist in the strengthening and defense of their independence. (Approved 262 to 164.)	Yea.

Apr. 4	H. R. 6287, appropriations for Departments of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $442,000 Bureau of Employment Security. (Passed 214 to 205.)	Yea.
Apr. 4	H. R. 6287, appropriations for Departments of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $12,186,000 grants to States for unemployment compensation, Labor. (Passed 220 to 200.)	Yea.
Apr. 4	H. R. 6287, appropriations for Departments of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $1,500,000 unemployment compensation for Federal employees, Labor. (Passed 253 to 167.)	Yea.
Apr. 4	H. R. 6287, appropriations for Departments of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $263,800 Mexican farm labor program, Labor. (Passed 342 to 77.)	Yea.
Apr. 4	H. R. 6287, appropriations for Departments of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $346,000 Bureau of Labor Statistics. (Passed 217 to 202.)	Nay.
Apr. 4	H. R. 6287, appropriations for Department of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $31,000 Women's Bureau, Labor. (Failed 206 to 210.)	Yea.
Apr. 4	H. R. 6287, appropriations for Department of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $288,000 for Wage and Hour Division, Labor. (Passed 214 to 205.)	Nay.
Apr. 4	H. R. 6287, appropriations for Department of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $1,327,000 Food and Drug Administration, HEW. (Failed 130 to 285.)	Yea.
Apr. 4	H. R. 6287, appropriations for Department of Labor and Health, Education, and Welfare for fiscal 1958. On amendment reducing by $1,482,000 Office of Education, HEW. (Failed 206 to 207.)	Nay.
Apr. 4	H. R. 6287, appropriations for Department of Labor and Health, Education, and Welfare for fiscal 1958. On amendment to delete total appropriation of $50,000,000 for waste treatment works construction, HEW. (Failed 185 to 231.)	Nay.
Apr. 8	H. R. 6306, amend the act entitled "An act authorizing and directing the Commissioners of the District of Columbia to construct 2 4-lane bridges to replace existing 14th Street or Highway Bridge across Potomac River." (Passed 190 to 131.)	Yea.
Apr. 10	S. J. Res. 72, to implement further the act of July 15, 1946, by approving the signature of the Secretary of the Treasury of an agreement amending the Anglo-American Financial Agreement of Dec. 6, 1945. (Passed 218 to 167.)	Yea.
Apr. 11	H. Res. 191, to amend H. Res. 152, 85th Cong. (Passed 225 to 143)	Nay.
Apr. 17	H. R. 6871, appropriations for Departments of State and Justice, the Judiciary and related agencies for fiscal 1958. On amendment on international organizations and conferences. (Failed 167 to 205.)	Nay.
May 15	H. R. 7441, appropriations for Department of Agriculture and Farm Credit Administration for fiscal 1958. On amendment to suspend soil-bank program. (Passed 192 to 187.)	Nay.
May 22	H. R. 7599, appropriations for legislative branch for fiscal 1958. On motion to recommit with instructions to strike out $7,500,000, New House Office Building. (Failed 176 to 206.)	Nay.
May 22	H. R. 7599, appropriations for legislative branch for fiscal 1958. On passage. (Passed 279 to 93)	Yea.
May 22	H. Res 254, resolution providing for consideration of H. R. 2, to authorize the State of Illinois and District of Greater Chicago to test the effect of increasing diversion of water from Lake Michigan. On agreeing to resolution. (Agreed 267 to 102.)	Yea.
May 22	H. R. 2, authorizing the State of Illinois and district of Greater Chicago to test the effect of increasing diversion of water from Lake Michigan. On motion to recommit. (Failed 143 to 225.)	Absent.
May 22	H. R. 2, authorizing the State of Illinois and district of Greater Chicago to test the effect of increasing diversion of water from Lake Michigan. On passage. (Passed 222 to 144.)	Absent.
May 23	H. R. 985, to provide that chief judges of circuit and district courts shall cease to serve as such upon reaching the age of 70. On motion to recommit. (Failed 47 to 293.)	Nay.
May 29	H. R. 7665, appropriations for Department of Defense for fiscal 1958. On motion to recommit with instructions to restore $313,000,000. (Failed 151 to 242.)	Yea.
May 29	H. R. 7665, appropriations for Department of Defense for fiscal 1958. On passage. (Passed 394 to 1)	Yea.
June 5	H. Res. 259, resolution providing for consideration of H. R. 6127, the civil-rights bill. On agreeing to resolution. (Agreed 291 to 117)	Yea.
June 18	H. R. 6127, to provide means of further securing and protecting the civil rights of persons within jurisdiction of the United States. On motion to recommit with instructions to provide for trial by jury. (Failed 158 to 251.)	Yea.
June 18	H. R. 6127, to provide means to further securing and protecting the civil rights of persons within the jurisdiction of the United States. On passage. (Passed 286 to 126.)	Yea.
June 18	H. R. 7221, supplemental appropriations for fiscal year ending June 30, 1957. Conference report. On motion to recede from its disagreement to Senate amendment on Federal flood insurance. (Failed 186 to 218.)	Nay.
June 21	H. R. 6974, to extend the Agricultural Trade Development and Assistance Act of 1954. (Passed 345 to 7)	Yea.
June 25	H. R. 7963, to amend the Small Business Act of 1953. (Passed 393 to 2)	Absent.
June 26	H. R. 6287, appropriations for the Departments of Labor and Health, Education and Welfare for fiscal 1958. On conference report. Motion to recommit. (Failed 73 to 321.)	Nay.
June 27	S. 1428, to authorize furniture and furnishings for the additional Senate Office Building. On motion to recommit with instructions to give specific cost figures. (Failed 135 to 232.)	Yea.
June 27	S. 1429, authorizing the enlargement and remodeling of Senators' suites and other improvements in existing Senate Office Building. On motion to recommit for specific figures. (Failed 148 to 216.)	Nay.
July 10	H. R. 8340, to authorize certain construction at military installations. On amendment to strike sec. 411. (Failed 183 to 230)	Nay.
July 10	H. R. 7390, to amend the Administrative Expenses Act of 1946. On motion to recommit. (Failed 183 to 225)	Nay.
July 10	H. R. 8364, to further amend the Reorganization Act of 1949 so that such act will apply to reorganization plans transmitted to the Congress at any time before June 1, 1959. On motion to recommit. (Failed 46 to 338.)	Nay.
July 12	H. R. 72, to amend sec. 21 of the World War Veterans' Act of 1924, to provide for disposition of unpaid benefits at death of intended beneficiary. On motion to recommit. (Recommitted 191 to 161.)	Yea.
July 19	S. 2130, to amend the Mutual Security Act of 1954. On motion to recommit. (Failed 181 to 227)	Nay.
July 19	S. 2130, to amend the Mutual Security Act of 1954. On passage. (Passed 254 to 154)	Yea.
July 23	H. R. 2474, to increase the rates of basic compensation of officers and employees in the field service of the Post Office Department. On passage. (Passed 379 to 38.)	Yea.
July 25	H. R. 1, to authorize Federal assistance to States and local communities for school construction. On motion to strike out the enacting clause. (Approved 208 to 203.)	Yea.
July 31	S. 1856, to provide for development and modernization of the national system of navigation and traffic control to serve needs of civil and military aviation. On passage. (Passed 375 to 17.)	Yea.
July 31	H. R. 2147, to provide for construction by Secretary of Interior of reclamation project in Texas. On motion to recommit. (Failed 189 to 202)	Yea
July 31	H. R. 2147, to provide for construction by Secretary of Interior of reclamation project in Texas. On passage. (Passed 201 to 190)	Nay.
Aug. 1	H. R. 8643, to authorize construction of certain works of improvement in the Niagara River for power, etc. On passage. (Passed 313 to 75)	Yea.
Aug. 1	H. R. 6763, to amend the act to authorize and direct the construction of bridges over the Potomac River. On motion to go into committee. (Approved 297 to 76.)	Yea.
Aug. 1	H. R. 6763, to amend the act to authorize and direct the construction of bridges over the Potomac River. On motion to strike out the enacting clause. (Failed 175 to 194.)	Nay.
Aug. 2	H. R. 6763, to amend the act to authorize and direct the construction of bridges over the Potomac River. On motion to go into committee. (Approved 275 to 59.)	Yea.
Aug. 2	H. R. 6763, to amend the act to authorize and direct the construction of bridges over the Potomac River. On amendment to change tunnel to bridge. (Passed 226 to 109.)	Nay.

Voting record of Representative DEWITT S. HYDE, 6th District, Maryland (85th Cong., 1st sess.)—Continued

Date	Measure	Vote
Aug. 5	H. R. 6709, to implement a treaty and agreement with the Republic of Panama. On motion to suspend rules and pass. (Passed 279 to 91)	Yea.
Aug. 7	H. R. 9131, supplemental appropriations for fiscal 1958. On motion to recommit to reduce funds TVA. (Failed 158 to 244)	Yea.
Aug. 7	H. R. 9131, supplemental appropriations for fiscal 1958. On passage. (Passed 330 to 75)	Yea.

Aug. 19	H. R. 7993, to provide for guaranty of private loans to air carriers for purchase of aircraft and equipment. On motion to suspend rules and pass. (Passed 242 to 94.)	Yea.
Aug. 20	H. R. 1937, to authorize the construction, maintenance, and operation by the Armory Board of the District of Columbia of a stadium in the District of Columbia. On adoption of conference report. (Failed 135 to 234.)	Yea.
Aug. 20	S. 1520, to amend act entitled "An act to provide for the disposal of federally owned property at obsolescent canalized waterways." Conference report. On motion to recommit. (Failed 137 to 232.)	Nay.
Aug. 21	H. R. 9131, supplemental appropriations for fiscal 1958. On motion to recede and concur in Senate amendment for funds for airport. (Failed 125 to 233)	Yea.
Aug. 21	H. R. 9131, supplemental appropriations for fiscal 1958. On motion to recede from its disagreement to Senate amendment on Rathbun Dam. (Failed 141 to 216.)	Nay.
Aug. 21	H. R. 9379, appropriations for the Atomic Energy Commission for fiscal 1958. On amendment to restore funds for industry cooperative program. (Passed 214 to 135.)	Yea.
Aug. 22	H. Con. Res. 17, to authorize the printing of additional copies of H. Doc. No. 232. (Approved 183 to 120)	Yea.
Aug. 23	H. R. 9131, supplemental appropriations for fiscal 1958. Conference report. On motion to recede from its disagreement to Senate amendment on Rathbun Dam. (Approved 166 to 121.)	Nay.
Aug. 23	H. R. 9131, supplemental appropriations for fiscal 1958. Conference report. On motion to recede and concur in Senate amendment which would reduce funds for dredging Columbia River. (Approved 165 to 120.)	Nay.
Aug. 23	S. 2229, to provide for guaranty of private loans to air carriers for purchase of aircraft and equipment. On conference report. (Approved 203 to 77)	Yea.
Aug. 23	H. Res. 407, resolution certifying the report of the Committee on Un-American Activities as to the refusal of Louis Earl Hartman to answer questions before subcommittee. On agreeing to resolution. (Agreed 276 to 0.)	Yea.
Aug. 23	H. Res. 409, resolution certifying the report of the Committee on Un-American Activities as to the refusal of Bernard Silber to answer questions before subcommittee. On agreeing to resolution. (Agreed 263 to 0.)	Yea.
Aug. 27	H. Res. 410, resolution providing for the disposition of the Senate amendments to the bill, H. R. 6127, civil rights. On ordering previous question. (Approved 274 to 101.)	Yea.
Aug. 27	H. Res. 410, resolution providing for the disposition of the Senate amendments to the bill, H. R. 6127, civil rights. On agreeing to resolution. (Agreed 279 to 97.)	Yea.
Aug. 27	H. R. 7915, to amend sec. 1733 of title 28, United States Code, regarding FBI files. On passage. (Passed 351 to 17)	Yea.
Aug. 27	S. 2792, to amend the Immigration and Nationality Act. On passage. (Passed 295 to 58)	Yea.
Aug. 30	S. 2377, to amend ch. 223, title 18, United States Code, regarding FBI files. On conference report. (Approved 315 to 0)	Yea.
Aug. 30	H. R. 9302, appropriations for mutual security for fiscal 1958. On adoption of conference report. (Approved 194 to 122)	Yea.

The Impact of Federal Income and Social Security Taxes on Personal Income

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. REED. Mr. Speaker, under leave to extend heretofore granted, I am inserting a report by Paul O. Peters, an economist, on the impact of Federal income and social-security taxes on personal income:

IMPACT OF FEDERAL INCOME AND SOCIAL SECURITY TAXES ON PERSONAL INCOMES—COMPARISON OF 1930 WITH PERIOD 1950–56

In any study of what personal incomes mean in an economy primarily based upon the expansion of credit and debt, it is important to have for ready reference statistical tables of various kinds.

It must be understood that the whole economy depends for its operation on individuals who labor in the productive enterprises which furnish the payrolls for those engaged in the public service and the service trades. It also must be understood that the wealth of the Nation is dependent primarily upon its natural resources and the ability and willingness of the people to convert natural resources into things useful to man individually and society collectively. Thus, in considering personal per capita incomes over the years, consideration should be given to the fact that after the Federal Government has taken its toll, there still remains an almost unidentifiable toll which is included in the cost of all purchases of capital, producer, and consumer goods since they are part of the purchase price.

Also, not to be overlooked is the impact of State and local taxes of all kinds. In this study we will cover only the impact of Federal taxes on incomes and the relationship of the Federal debt to the income which apparently caused the depreciation in the purchasing power of $1.

As a part of this study there is here presented a table showing the percent of per capita incomes absorbed by Federal income and withholding taxes together with the per capita public debt:

Year	Per capita personal income	Per capita income tax	Percent	Per capita Federal debt
1930	$569	$9.34	1.64	$131.51
1950	1,491	122.40	8.21	1,696.66
1951	1,649	173.94	10.54	1,653.42
1952	1,727	211.87	12.66	1,650.06
1953	1,788	230.42	12.88	1,666.74
1954	1,767	226.32	12.81	1,670.14
1955	1,846	223.81	12.12	1,660.15
1956	1,940	247.77	12.77	1,622.64

Should It Be Free or by Fee To See TV?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. LANE. Mr. Speaker, Bill Cunningham, nationally known feature writer for the Boston Herald, has detected the fierce struggle that is going on behind the scenes of the telecasting industry. Like everything else, TV programs cost money. We cannot expect to get something for nothing. Shall the programs be paid for by advertisers or by the viewers? What is the best method to finance and bring topnotch entertainment to the TV screens that are standard equipment in almost every American home?

Shall we be able to choose our own programs for free as at present? Or shall those who want to put parking meters on our sets so that we will have to feed the coin box in order to get certain special programs have their way?

The general public, which is supposed to have the deciding vote on this question, has been kept in the dark.

Maybe this battle to determine whether free dialing, or pay as you see, shall prevail may wind up in a compromise, but the televiewing audience in the United States ought to know what is going on so that public opinion will decide the issue.

How about nonsecret congressional hearings on this, brought to us over all channels?

In the meantime, let us look through the door that Bill Cunningham has pried open for us.

Under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the stimulating views of Bill Cunningham that appeared in a recent issue of the Boston Sunday Herald under the heading "Pay Television Becomes Issue":

PAY TELEVISION BECOMES ISSUE

(By Bill Cunningham)

Occasionally, and even incidentally, a subject will make a quiet start on the sports pages and gradually balloon to such size that it requires special handling. Such, at the moment, is the facts of life or pay-as-you-see TV. What do you know about it? The answer, probably is "Nothing"—thus making it practically unanimous. This is an effort to relieve that situation.

The heavy majority, however, will undoubtedly be interested because TV has now become such an integral part of their daily and, especially, nightly existence. The virtues of the medium may be arguable but nobody can argue with the fact that it's here, and here to stay. The only future question is, in what form?

There's no argument about the fact that, in its few short years, it already had tremendous impact upon the American scene, and has already greatly changed life as we knew it. Offering free entertainment, granting the cost of the set, it naturally began to compete on the cheapest plateaus—cheap referring to the cost, not the quality, of the diversions already existing.

Radio, a giveaway, felt the hardest smash. Network radio as separate from strictly local programing, has been the gradual but almost complete casualty there. Another way to say it is that radio was driven into mostly local operation, featuring, for the most part, disc jockeys and news.

Somewhat to the amazement of radio, this has proved highly and increasingly successful. It's network radio—soap operas, panel discussions, big musical hours, and such—that have really suffered. In fact, it's practically dead.

Next were the movies, and the cheaper sorts of movies—both the pictures themselves, and the shoddier places that ran them. The casualty rate in cinema temples, especially neighborhood small town and side street shrines of the celluloid has been enormous. But, here again, a strange thing happened.

The new competition forced the movie industry to fight or expire. So the big companies fought. They began to make bigger and more magnificent pictures. They devised new inventions and techniques—the wide screen, better color, truly super spectaculars such as The Ten Commandments, Around the World in 80 Days, CinemaScope, etc.

There's also been a big and prosperous trend toward drive-ins. The field has been drastically reduced, but what's survived is better—better much than TV, which has its obvious limitations. It hasn't all been loss.

The newspapers have felt, and are showing, the new impact. More space is given now to TV programs, chatter, and columns than the movies ever knew even in the days of their monopoly. We have a new phenomenon now, the daily TV critic in almost every paper, a marvel to all because he does an entertaining job despite a hurdle that would seem to be too high for even the most nimble journalistic kangaroo.

The hurdle is that he's forced to write behind himself all the while, discussing something that's happened and gone and won't be back. Unlike the movie critics and drama critics, his typographical korpsbrudders, he's forced to deal in obituaries.

When a man reviews a play or a movie, he's writing about something that's going to be around for at least a few days, maybe a few weeks. He's writing about something people can see.

The TV critic, however, is writing about something that was. If his readers didn't chance to see it, they won't even know what he's talking about. If they did, the best he can do is match his opinion against theirs.

There are all these things, and more, but to get to the point the master controversy now ahead, either far or near, concerns the possible intrusion of subscription, or pay-as-you-see TV, and what it will or won't do to the present free variety.

This got its current mushrooming on the sports pages recently in connection with the proposal to move the two National League baseball clubs, the Brooklyn Dodgers and the New York Giants, from New York to Los Angeles and San Francisco, respectively.

ONE OF SEVERAL FACTORS

Sports writers, delving into the matter, discovered one of the several factors, but probably the most powerful, was the proposal to telecast all games there on a pay-as-you-see basis. One of the three companies claiming to have perfected that type of process was reported to have offered both teams $125,000 per game for such rights.

This was sensational news for two reasons. First, it meant that each ball club would be guaranteed $9,625,000 per season, plus whatever it took at the gate. Next, it meant that this system was perfected, believe its officials, and ready to go, pending permission of the Federal Communications Commission. Heretofore, pay TV has been just something predicted, a possibility of the future, like atomic powered motorcars.

To the moment that baseball development has gone no further, but the queries from TV zealots have been coming in by the bale. They want to know what pay TV is, how it works, what it promises to do to their current TV opportunities and habits. The pros and cons do seem to be pretty formidable but the mechanics of this particular system involved in the baseball news don't seem to be too involved.

It would be like subscribing to a telephone service. For some monthly rate—$3 has been mentioned—you'd actually be renting the service of a particular channel. This would play hi-fi music 24 hours a day, which you could turn on at any time. On the set, however, would be a coin box, costing an extra sum to install. Everything from $10 to $100 has been mentioned.

Special events, such as the ball games, big fights, dramatic shows, Broadway musicals, new movies, or whatever, would be available at a price at certain specified and advertised times.

If you wanted one of these, you'd feed the specified price into the coin box, as if it were an old-fashioned quarter gas meter. This would stop the music, and bring on the ball game or whatever. It would unscramble the wavelength, to use the technical language. At the end of the month, a man would come 'round, like a meter reader, to unlock the box and collect the money.

Theoretically, as the proponents of the new plan explain and extoll it, the viewer of the future would be in positive clover. He'd have his choice of both the free and the pay. He could sit in his living room enjoying the present type of program if nothing better appealed to him.

Or if there was something special he wanted to see on the pay-as-you-see, he could insert his half dollar, dollar, or whatever, and get the world series, Notre Dame versus Army, or, possibly, whatever corresponds to My Fair Lady in that theoretical tomorrow.

JUST AS BITTERLY OPPOSED

Opponents of the new idea, including such powerful interests as the current TV networks, many motion-picture companies, motion-picture theater owners' associations, etc., including an overall group known as Organizations for Free TV, are just as bitterly opposed, just as resoundingly certain that TV, as presently constituted, will be swallowed and ruined and its enormous cost passed on to the public for the personal profit of a slick group of musclers-in.

They claim this is no miracle nor progress, in the sense that it's a further step or a new idea like the invention of the automobile, the airplane, or broadcasting itself. Instead, as they explain it, a bunch of smart tinkerers have found out how to unscramble the picture and sound, which cost millions to develop, and this way not only cut themselves in, but take over the whole show. It would make no new jobs. In fact, it would throw thousands out of work. It would offer nothing that can't already be had. And had, now, at no cost to the public, they say.

"It has no value whatsoever in the television industry except to make money for its inventors and promoters by taking away free entertainment and making the public pay them for it," says one statement. It, furthermore, calls this "an unwarranted and outright invasion of its [the public's] rights."

Other claims, statements, and arguments offered by the information bureau of the Organizations for Free TV runs about as follows:

Pay-to-see TV claims it will simply add "premiums" in entertainment from stage, screen, concert hall, and stadium; that it will merely supplement free programing, entering the present structure as a healthy competitor. Instead, there are no more than a dozen extraordinary shows, concerts, even fights and baseball games a year. What do they do when they run out of "premiums"?

Instead of friendly and healthy competitors, they're not a supplement but a substitute. "Being in no respect whatever, a creative aim, pay-to-see TV is a competitor for profit, nothing else. What we have here is an astonishingly frank announcement that the pay-to-see group intends to buck free TV and, by every means at its disposal, seek to destroy it."

Pay-to-see TV claims it would help movie producers, sports promoters, and legitimate theater owners by giving them a gigantic outlet for their new products. "But," says the rebuttal, "the gigantic outlet referred to was created by free TV. Now that it has been established, a handful of men are desperately trying to take it over."

FULLY AWARE OF APPEAL

"These men are fully aware of the appeal to producers and promoters—no real-estate taxes, no unemployment taxes, no social-security benefits, no payroll to meet. And clearly the producers and promoters will not have to meet these obligations if they abandon the theaters, playhouses, and arenas. But, just as clearly, thousands of wage earners will lose their jobs. Thus the handful of men will profit tremendously while the country as a whole suffers seriously."

Still quoting the opposition: "Pay-to-see TV claims you could experience the thrill of an opening night on Broadway for a fraction of the box-office price. Actually, however, this couldn't be done. Once a theater is mechanically equipped to televise a show, it is no longer a theater but a studio. It

can't accommodate the lights, cameras, and equipment and an audience, too. The very first move is to rip out the first 25 or 30 rows of seats to make room for the equipment—exactly the seats that make a 'first night' what it is.

"Pay-to-see TV operates on credit, billing the viewer on the basis of holes punched in cards by a decoder, or on a cash basis—such is the claim. Actually, the decoder, by itself, is not enough. In addition, the set owner must purchase a 'cash register' (the coin box) which is attached to the set.

This operates, along with the card he has bought, to unscramble the picture. Sets are delicate. Unscrambling may well lead to trouble and loss of picture. On any pay-to-see TV basis, the owner will have no way yet described to get his money back if unscrambling results in picture failure. There is no way of getting a refund if the program bought for cash fails to please, or interest, the viewer.

"It will be impossible for any station to transmit free and pay shows at the same time. The customer who wants the free show will have to wait until the pay show is over. * * * The claim is made that pay TV would operate on new part-time UHF-TV stations only. That might be the start, but only the incredibly naive will believe it will stay that way. Once established the pay group will capture all the talent, all the networks, everything the free has built, and sell it back to the set owner at a high price.

"Pay-to-see TV claims it will not affect today's pattern of sponsored television but will introduce new programs. This is simply not true. They're already trying to tie up major-league baseball, and they talk of the World Series and championship fights already covered by free TV.

DON'T STOP AT SPORTS

"But they don't stop at sports. Here are excerpts from a letter written by the public-relations director of one of the groups on March 25, 1955, to every television station in the United States:

" 'On March 7, 65 million people watched Peter Pan, and the reaction from every segment of the industry and the public was overwhelmingly favorable. According to figures quoted to us, it cost something more than $600,000 to put it on the air. It is exactly the kind of entertainment which subscriber television could bring to the home viewer, and to your station, as a regular weekly event.

" 'While the sum of $600,000 for a single program is staggering to a sponsor, it represents less than 1 cent per viewer for the Peter Pan audience. On subscription television and, with the same audience paying only 25 cents a set, the box office would have amounted to $5 million for division among producers, distributors, and broadcasters.'

"Does this sound as if the 'slot-machine boys' will keep their hands off today's free TV. Of course not, and they know it, even though they continually mouth insincere promises that they have no designs on today's top programs."

And so go the arguments to much further, and even more bitter lengths, but this should be enough to sketch the size and form of the controversy. This is no new subject. It's simply been under cover until the recent play by one of the subscription groups, Skiatron, to sew up the Giants and Dodgers brought part of it into the open.

The eventual decision is in the hands of the Federal Communications Commission, as matters stand, but there's some talk now that the Congress, or at least some Congressmen, may try to move into the argument.

In the meantime, the televiewer can only wait and wonder.

Or he can express his views in a letter to the Federal Communications Commission, Washington, D. C. That's what these friends of free-TV are urging the public to do—against the pay variety, naturally.

Those are the issues, and some of the arguments. The eventual decision? I'm just reporting, not forecasting, at the moment. I'd say some form of pay-TV figures to be with us eventually, but what kind or when I wouldn't presume even to try to guess.

Changing Pattern of Income Payments to Individuals

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. REED. Mr. Speaker, under leave to extend I am inserting as part of my remarks a report entitled "Changing Pattern of Income Payments to Individuals" by Paul O. Peters, an economist:

CHANGING PATTERN OF INCOME PAYMENTS TO INDIVIDUALS: AN ANALYSIS—A COMPARISON OF 1930 WITH THE PERIOD 1950–56

The Office of Business Economics in the Department of Commerce has again published in the Survey of Current Business, a detailed study of personal incomes, by State and regions for the calendar year 1956 together with revised data for the years 1954 and 1955.

From our own files, the table following has been prepared. It shows the gross personal income, the reported population, and the computed per capita income for the year 1930 as compared with the years 1950 through 1956:

[United States average]

Calendar year	Midyear population	Gross personal income	Per capita personal income
1930	122,775,046	$73,325,000,000	$569
1950	151,683,000	225,473,000,000	1,491
1951	154,360,000	252,960,000,000	1,649
1952	157,028,000	269,050,000,000	1,727
1953	159,636,000	283,140,000,000	1,788
1954	162,417,000	284,823,000,000	1,767
1955	165,270,000	303,268,000,000	1,846
1956	168,174,000	324,281,000,000	1,940

To properly evaluate the actual gain or loss to the individuals who received the incomes in the years under study, there is presented a compilation from official Government reports showing the revenues collected on personal or individual incomes and the per capita amount in current dollars with a column showing the relative purchasing power of the current dollar as reflected by the wholesale price index for the year 1926 equals $1:

Year	Revenue collected from incomes	Population, midyear	Revenue per capita	Value of $1
1930	$1,146,844,763.08	122,775,046	$9.34	$1.157
1950	15,566,957,888.15	151,683,000	122.40	.570
1951	26,849,780,916.00	154,360,000	173.94	.543
1952	33,269,505,721.00	157,028,009	211.87	.528
1953	36,783,850,714.00	159,635,000	230.42	.528
1954	36,919,986,858.00	162,417,000	226.32	.527
1955	36,969,678,132.00	165,270,000	223.51	.521
1956	41,670,881,000.00	168,174,000	247.77	.494

St. Lawrence Seaway Tolls

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. SALTONSTALL. Mr. President, the Greater Boston Chamber of Commerce has adopted a resolution relative to the establishment of tolls on the St. Lawrence seaway so as to make that project entirely self-liquidating. Since this is a question of great concern to Massachusetts and to other sections of the country, under unanimous consent, I include this resolution in the Appendix of the RECORD:

RESOLUTION OF THE GREATER BOSTON CHAMBER OF COMMERCE RE ST. LAWRENCE SEAWAY TOLLS

Whereas the Congress of the United States authorized our country's participation, financially and operationally, in the development of the St. Lawrence seaway with the understanding that the project be a completely self-liquidating one; and

Whereas costs involved in completing above project have risen so significantly ($35 million thus far) over original cost estimates made in the year 1953 that liquidation of debt in 50 years' time appears more difficult to accomplish than originally expected; and

Whereas there are likely to be still further costs, not presently foreseen, incurred before completion; and

Whereas there are indications of a movement to transfer part or all of the above financial burden from users to taxpayers: Therefore be it

Resolved by the Greater Boston Chamber of Commerce, That users of the St. Lawrence seaway should pay rates which will reflect the full economic cost of said waterway and will discharge all costs incurred within 50 years after completion of project and without any recourse to taxation on nonusers; and be it further

Resolved, That the accomplishment of complete liquidation be as follows:

1. Complete tabulation of all costs involved in building the seaway, including an accurate forecast of all maintenance expenses for 50 years;

2. Division of above total cost by 50 to find the yearly dollar figure which must be realized by tolls;

3. Deduction of the most realistic tonnage estimates by taking an average of the tonnage predictions of 3 leading economists, 2 of whom should be Canadians and 1 a citizen of the United States;

4. Division of the yearly writeoff dollar figure (see No. 2) by predicted tonnages to find the basic per ton toll charge;

5. Rigid adherence to the per ton toll charge, except in the most unusual circumstances, for at least 3 years. Although this policy may seem severe, it is the only realistic policy that can be followed at the outset in establishing a firm basis of repayment;

6. If, at the end of 3 years, tonnage estimates have proven to be substantially inaccurate, further hearings should be held to determine whether tolls should be raised or lowered from previously determined levels for the purpose of raising more revenues. A willingness to experiment intelligently with different toll schedules should be exhibited, if needed;

7. If, at the end of 50 years, despite all possible effort, liquidation is not complete, tolls should be continued at levels which will

produce greatest total revenues until the seaway is fully paid for;

8. To insure a sound program of future maintenance thereafter, tolls should be continued but at a very low level sufficient to cover these maintenance costs only; and be it finally

Resolved, That a copy of this resolution be sent to all members of the Massachusetts congressional delegation in Washington, D. C.

Shell, British Petroleum, and American Express Co. Capitulate to Arab Blackmail

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. CELLER. Mr. Speaker, realizing they cannot defeat Israel in military combat, the Arab States have banded together in an endeavor to strangle Israel by economic boycott. The Arabs have been staging this economic quarantine of Israel since 1948. But their three latest successes with Shell, British Petroleum, and American Express Co. have exacerbated the seriousness of this situation.

The action of Shell and British Petroleum is not without political significance. The British Government has a 51-percent interest in British Petroleum. This decision, therefore, of British Petroleum to pull out of Israel was made, undoubtedly, with the consent of the British Government. There have been some dubious excuses that the pullout was due to lack of business. These excuses will not wash. Both of these companies have yielded to Arab blackmail. Their operations in Israel were most attractive. They have a 9-year profit record in Israel. The latest figures available show, for example, that the business of Shell in Israel amounted to almost $20 million during the calendar year of 1956. Since the total supply of petroleum products in Israel during the calendar year of 1956 amounted to roughly $40 million, it can be seen that the share of the Shell Co. was about 50 percent of the entire sales.

Since the early beginnings of the British mandate over Palestine, Shell has maintained the largest operation of any single company in Palestine and, subsequently, in Israel. It maintained this large volume of business in the infant State of Israel despite Arab boycott pressure since 1948. In fact, Shell has been the backbone of Israel's entire fuel economy. It has supplied oil, shared in the operation of oil refineries of Haifa, operated the largest network for commercial distribution of gasoline, liquid cooking gas, insecticides, and various other byproducts. Shell practically had a monopoly in the supply of machine oils for all the industrial needs of Israel. The sudden withdrawal of Shell is bound to be felt in the many fields of Israel's economy. It will unquestionably also hurt many American business investments in Israel, since it will make more difficult the position of American businesses which have resisted the pressure of the Arabs. The London Times and Economist have stated that this ostensibly commercial decision is, in fact, the beginning of a turnabout of British policy, indicating the desire of the British to reestablish themselves in favor of the Arabs—almost at any price. I point out that there is an oil adviser to the British Foreign Office, who is Harold Beeley. The decision of Shell is a triumph of Beeley. He is an Israeliphobe, as was his former employer, Ernest Bevin, the erstwhile Foreign Minister of Great Britain.

The director general of the Arab boycott office stated over the Damascus radio, January 19, 1957, "Continuation of the present policies is likely to lead to the elimination of Israel."

Already, in these past years, the burden on Israel's economy and financial resources, caused by the Arab boycott, has virtually wiped out the benefits of economic aid annually extended to Israel by the United States Government.

Dag Hammarskjold has stated that the Arab boycott is a deadweight on united efforts for settlement in the Middle East. Thus, the action of these two British companies can only serve to encourage the Arabs in their ambition to bring about a total collapse of Israel. The Washington Post, on August 5, 1957, declared that anything that seems to be knuckling under to this boycott will invite more highhandedness and it is to be hoped that the British Government will consider fully the psychological implications of a withdrawal. The August issue of Fortune magazine points out that the boycott has been strictly observed by the Middle East oil companies anxious to please their Arab landlords. Fortune says that Aramco has reportedly gone so far as to threaten to cancel its contract with European firms producing such innocent apparatus as floating roofs for water tanks if those firms do business with Israel.

Now we have the American Express Co. which joins those who would put the squeeze on Israel. It, too, has shut up shop in Israel after many years of successful operations—first under the British mandate and then under the Government of Israel. From the very day of the opening of their office in Tel Aviv they have been under constant pressure to sever their connections with Israel and were threatened with trouble in their offices in Arab countries. Now the American Express Co. has decided to take the line of least resistance and to close shop in Israel. All it has now in Israel is a mere agent who can only provide inferior service. For an international tourist company to work through an inferior facility and not through its own office, is to provide inadequate service as well as a complete cessation of some services. A full-fledged office of the American Express in any country receives passengers at the airport or the harbor, accompanies them to hotels after making hotel reservations, and so forth. A single agent cannot offer such facilities and provide such service. He works on his own account and cannot charge the wages of his personnel to the principal company with whom he only has a contract. The agent will take care of passengers only if they call on him. He cannot possibly be as effective with reference to hotel reservations, obtaining space on boats and airlines, as is a strong company like the American Express which enjoys the maximum cooperation of airlines and maritime companies.

The American Express also gives the argument that it in no sense yielded to external pressure and that its decision was purely a business one based on lack of demand at a continued loss. The facts do not bear out this assertion.

Americans interested in Israel cannot be mere bystanders and observers in this attempt to kill off Israel, nor should the United States Government be unconcerned with the change of attitude of the British Foreign Office and its return to the old, discredited policy of appeasement of the Arabs. The Arab boycott has spread so far as to cause blacklisting of American citizens who happen to be Jews and are directly or indirectly concerned with American firms that have done business in Arab lands. Firms that have Jewish directors or Jewish executives or employees are the object of Arab spleen.

As a Member of Congress, I cannot view with complacency this admitted economic rape of Israel and this vile discrimination against many American citizens because of their faith.

The American Express Co. has heretofore enjoyed the goodwill of Americans of all faiths. I have always used American Express money orders on my travels abroad. I shall never do so again. I shall refrain from purchase of these certificates as a protest against this unwarranted and unfair operation. Likewise, the Shell Oil Co. has heretofore earned the goodwill of Americans of all faiths. Last year its gross intake totaled $1,365,000,000. That company has a responsibility to American public opinion, especially when their activities, like succumbing to Arab extortion, involve them in international politics and international relations and affect world peace. As a protest against the Shell Oil Co., I shall never again fill my car with Shell oil or use any of its products.

If my fellow Americans join me in this protest, I shall be greatly gratified. I hope that this statement will be widely broadcast among the users of all gasoline products. Too little has been bruited about in the press and over the airways as to the actions of American Express and Shell Oil Co., as well as British Imperial Oil. I am sure that when the public knows about these matters, it will act in a way not unlike my own. It is also hoped that various organizations may become apprised of these facts to the end that suitable action can be taken by their members individually, if not collectively.

Tribute to Navy and Marine Corps Teamwork

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Stamford (Conn.) Advocate regarding a condition which I believe merits the attention of all persons interested in our national security.

This example of smooth, cooperative command functioning within the Department of the Navy should be observed and followed by other elements of our military forces.

Our strength, defensewise, depends on a combination of leadership, such as has been displayed by the top civilian of the Navy Department, Secretary Thomas S. Gates, Jr., together with his principal military assistants, Admiral Burke, Chief of Naval Operations, and General Pate, Commandant of the Marine Corps.

The editorial follows:

AN EXAMPLE FOR THE SERVICE

The conflict between the armed services, often exaggerated in observers of the news columns, is nonetheless real. As long as this competition is limited to a natural esprit de corps, it can be advantageous. There is no necessity for the conflict to spill over to a stage where it is detrimental to the armed security of the Nation.

We would point out that there is at present one department which actually has two services and that these two services exert at the present time an unprecedented spirit of cooperation. The Department of the Navy controls both naval operations and the Marine Corps. Here is a wide separation of activity, especially in modern warfare. Yet because of the daily example set by the heads of these two services a cooperative spirit exists which could well be emulated by the larger divisions, Navy, Army, and Air Force. Adm. Arleigh A. Burke, Chief of Naval Operations, and Gen. Randolph McC. Pate, Commandant of the Marine Corps, are more than warm personal friends. They have an understanding of each other's problems and a mutual respect. With Secretary of the Navy Gates handling executive affairs, the Department of the Navy is an ideal team.

If anyone believes this teamwork is gained at the loss of service spirit, they haven't even a rudimentary knowledge of what makes the Navy tick. The Marines, of course, are in a class by themselves when it comes to fighting men.

Summary of Veterans' Legislation Reported, 1st Session, 85th Congress

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary of veterans' legislation reported during the 1st session of the 85th Congress:

LAWS ENACTED

Public Law 85-24: Provides that pension under public or private laws administered by the Veterans' Administration shall not be paid to an individual who has been imprisoned in a Federal, State, or local penal institution as a result of conviction for a felony or misdemeanor for any part of the period beginning on the 61st day after his imprisonment and ending when the imprisonment ends. Apportionment of pension may be made to dependents under certain conditions.

Public Law 85-56: Incorporates into a single act the subject matter of the extensive body of existing legislation authorizing and governing the payment of compensation for service-connected disability or death to persons who served in the Armed Forces of the United States during a period of war, armed conflict, or peacetime service, and to their widows, children, and dependent parents. Provides the same sort of consolidation of the laws relating to pension, hospitalization, medical and domiciliary care, and burial benefits. Consolidates into one act all the administrative provisions relating to these benefits, as well as those common to all benefits administered by the Veterans' Administration. Also incorporates the provisions of existing law relating to the ancillary benefits of financial assistance for specially adapted housing and automobiles for certain disabled veterans. Repeals those provisions of law relating to such benefits which are obsolete, executed, or restated in substance in the bill.

Public Law 85-168: Effective October 1, 1957, increases rates of compensation for service-connected disabilities as indicated on the following table of wartime rates:

	Prior Law [1]	Public Law 85-168
(a) 10 percent disability	$17	$19
(b) 20 percent disability	33	36
(c) 30 percent disability	50	55
(d) 40 percent disability	66	73
(e) 50 percent disability	91	100
(f) 60 percent disability	109	120
(g) 70 percent disability	127	140
(h) 80 percent disability	145	160
(i) 90 percent disability	163	179
(j) Total disability	161	225
(k) Anatomical loss, or loss of use of a creative organ, or 1 foot, or 1 hand, or blindness of 1 eye, having only light perception, rates (a) to (f) increased monthly by	47	47
Anatomical loss, or loss of use of a creative organ, or 1 foot, or 1 hand, or blindness of 1 eye, having only light perception, in addition to requirement for any of rates in (l) to (n), rate increased monthly for each loss or loss of use by	47	[2] 47
(l) Anatomical loss, or loss of use of both hands, or both feet, or 1 hand and 1 foot, or blind both eyes with 5/200 visual acuity or less, or is permanently bedridden or so helpless as to be in need of regular aid and attendance, monthly compensation	279	309
(m) Anatomical loss, or loss of use of 2 extremities at a level, or with complications, preventing natural elbow or knee action with prosthesis in place, or suffered blindness in both eyes, rendering him so helpless as to be in need of regular aid and attendance, monthly compensation	$329	$339
(n) Anatomical loss of 2 extremities so near shoulder or hip as to prevent use of prosthetic appliance, or suffered anatomical loss of both eyes, monthly compensation	371	401
(o) Suffered disability under conditions which would entitle him to 2 or more rates in (l) to (n), no condition being considered twice, or suffered total deafness in combinations with total blindness with 5/200 visual acuity or less, monthly compensation	420	450
(p) In event disabled person's service-incurred disabilities exceed requirements for any of rates prescribed, Administrator, in his discretion, may allow next higher rate, or intermediate rate, but in no event in excess of	420	450
(q) Minimum rate for arrested tuberculosis	67	67

[1] Peacetime rates are 80 percent of wartime rates.

[2] But in no event to exceed $450.

Additional disability compensation because of dependents [1]

	Wife, no child	Wife, 1 child	Wife, 2 children	Wife, 3 or more children	No wife, 1 child	No wife, 2 children	No wife, 3 or more children	Dependent parent or parents
Service on or after June 27, 1950	$21.00	$35.00	$45.50	$56.00	$14.00	$24.50	$35.00	$17.50(1)
World War II	*$3.00*	*$9.00*	*$0.00*	*$2.00*	*$5.00*	*$7.00*	*$9.00*	*19.00*
World War I								35.00(2)
Spanish-American War, Philippine Insurrection, Boxer Rebellion								*38.00*
Civil War								
Indian wars								
Peacetime service (under combat or extrahazardous conditions)								14.00(1)
Regular peacetime service	16.80	28.00	36.40	44.80	11.20	19.60	28.00	*15.00*
	18.00	*31.00*	*40.00*	*50.00*	*12.00*	*23.00*	*31.00*	28.00(2)
								30.00

[1] Above rates are for 100-percent disability. If and while rated partially disabled, but not less than 50 percent, additional compensation is authorized in an amount having the same ratio to the amount specified in the applicable table, above, as the degree of disability bears to the total disability; e. g., war service-connected disability of 50 percent, compensation rate, $100. If veteran has a wife, his compensation is increased as follows: $100+$11.50=$111.50.

NOTE.—Rates in italics as in Public Law 85-168.

Public Law 85-171: Permits forwarding of all types of Veterans' Administration benefit checks where the person has moved and left no forwarding address instead of the prior requirement of returning the check to the Veterans' Administration.

Public Law 85-194: Increases from $10 to $25 the maximum amount that may be paid by VA for shipping charges on personal property of deceased veterans who die on VA property.

Public Law 85-200: Terminates, 60 days after enactment, the operation of the Veterans' Education Appeals Board and transfers its records to Archives.

Public Law 85-209: Section 1 provides a uniform alternative marriage date requirement for widows applying for pension or compensation. It provides that a widow who does not otherwise meet the applicable delimiting marriage dates as presently existing in the law be eligible for pension or for compensation if she was married to the veteran for 5 or more years or for any period of time if children were born as a result of the marriage. Section 2 permits women to receive pension, compensation, or other gratuitous benefits based on the service of a veteran even though there was a legal impediment to her marriage to the veteran which she entered into without any knowledge of such legal impediment, if other requirements are satisfied.

Public Law 85-311: This law excludes from computation as annual income in determining eligibility for non-service-connected disability or death pension as well as service-connected death compensation or dependency or indemnity compensation for parents, any payment of veterans' bonus by a State, Territory, possession of the United States, the District of Columbia, or the Commonwealth of Puerto Rico, based on service in the Armed Forces of the United States and their widows and children.

BILLS PASSED BY THE HOUSE AND PENDING IN SENATE COMMITTEES

Finance Committee

H.R. 76: Provides that the statutory award rate of $47 for service-connected disability shall be awarded in the case of each loss—for example, the loss or loss of use of the hand, foot, or an eye, or creative organ. The present law provides for only one such award of $47 in addition to the award under the basic compensation structure.

H.R. 358: Increases to $75 monthly the rate of pension payable to widows of Spanish-American War veterans—present rates are $54.18 and $67.73, the latter rate applying if the widow was the wife of the veteran during his service.

H.R. 1264: Provides that when the veteran is in the hospital for tuberculosis he shall be eligible for payment of a non-service-connected disability pension based on the presumption that he is totally disabled. The present regulation permits payment only after 6 months has elapsed. For most other diseases for which the veteran may be hospitalized, pension is payable immediately upon a finding of total disability without the elapsing of any particular period of time.

House Joint Resolution 73: The purpose of this resolution is to provide service pension under the conditions and at the rate prescribed by the laws reenacted by Public No. 269, 74th Congress, August 13, 1935, as now or hereafter amended, for any person who served in the Armed Forces of the United States in the Moro Province, including Mindanao, or in the islands of Leyte and Samar, after July 4, 1902, and prior to the first day following the last armed engagement between such armed forces and inhabitants of the Philippine Islands in the province or island in which he served, and who was honorably discharged from the enlistment in which such service occurred, and to the surviving unremarried widow, child, or children of such person. No pension would be paid for service after December 31, 1913. The pension rates currently payable to veterans and their dependents under the mentioned laws are as indicated in the following table:

Type of benefit	90 days' or more service; or less if discharged for disability incurred in service in line of duty	70 to 89 days' service
A. Veterans' benefits:		
Age 62 or more, or 10 percent or more disabled	$101.50	$67.73
Helpless or blind or so nearly helpless or blind as to require regular aid and attendance	135.45	88.04
B. Dependents' benefits:		
Widows	54.18	(1)
Wife during service	67.73	(1)
Additional for each child	8.13	(1)
Children, no widow:		
1 child	62.31	(1)
Each additional child	8.13	(1)

[1] No provision.

Labor and Public Welfare

H.R. 7251: This bill amends the definition of the term "State" as set forth in the Veterans Readjustment Assistance Act of 1952, Public Law 550, 82d Congress (GI bill of rights for Korean veterans), and the War Orphans' Educational Assistance Act of 1956, Public Law 634, 84th Congress, in order to make clear that the benefits of those acts may be given to persons pursuing a course of education and training in the Panama Canal Zone. It also authorizes training under Public Law 634 in the Republic of the Philippines.

H.R. 6908: Authorizes modification and extension of the program of grants-in-aid to the Republic of the Philippines for hospitalization of certain veterans, to restore eligibility for hospital and medical care to certain veterans of the Armed Forces of the United States residing in the Philippines. The bill would—

1. Permit use of Veterans' Memorial Hospital for cases other than those involving service-connected disabilities.

2. Permit treatment of service-connected veterans on out-patient basis.

3. Extend period of assistance from December 31, 1959 to June 30, 1963.

4. Place overall ceiling of $2 million on expenditures for this purpose in any 1 year.

5. Grants hospitalization to American veterans residing in the Philippines on a permanent or temporary basis and outpatient care to service-connected American veterans.

BILLS PASSED BY THE SENATE AND PENDING IN HOUSE COMMITTEE ON VETERANS' AFFAIRS

S. 166: Extends for a period of 2 years the laws granting educational and training benefits to veterans of World War II who were prevented from entering or completing such training within the prescribed time because such person had not met the nature of discharge requirements of the Servicemen's Readjustment Act prior to a change, correction, or modification of a discharge or dismissal, or the correction of a military or naval record.

S. 1698: Extends the time for filing claims for mustering-out payments under the Veterans' Readjustment Assistance Act of 1952 to July 16, 1958 (now July 16, 1956).

REPORTED AND PENDING ON HOUSE CALENDARS

Union Calendar

H. R. 5930: Amends the War Orphans' Educational Assistance Act of 1956 to provide educational assistance thereunder to the children of veterans who are permanently and totally disabled from wartime service-connected disabilities. Grants educational assistance on the same basis as provided by the War Orphans' Educational Assistance Act of 1956, Public Law 634, 84th Congress. That law is limited to the children of individuals who died from an injury incurred in, or aggravated by, service in the Armed Forces during World War I, World War II or Korea. Funds for operation of program to be obtained from assets accruing to Government from Trading With the Enemy Act.

H. R. 6719: Provides adjustments in organization and salary structure of the Department of Medicine and Surgery in the Veterans' Administration, as indicated in the table below:

	Present salary	H. R. 6719 (sec. 1)
Chief Medical Director	$17,800	$19,500
Deputy Chief Medical Director	16,800	18,500
Assistant Chief Medical Director	(8) 15,800	(8) 17,500
Director of Service	(20) $13,225-14,300	(20) 16,000
Director, Nursing Service	11,610	12,690
Deputy Director, Nursing Service	10,320	(1)
Chief Dietitian	10,320	12,690
Chief Pharmacist	10,320	12,690
Chief Physical Therapist	10,320	(1)
Chief Occupational Therapist	10,320	(1)

[1] No change.

Grade	Present salary		H. R. 6719 (secs. 2 and 3)	
	Nonspecialist	Specialist (25 percent)	Nonspecialist	Specialist (10 percent)
Physicians and dentists:				
Chief	$11,610-$12,685	$13,760	$13,015-$14,200	$14,316-$15,620
Senior	10,320- 11,395	$12,900- 13,760	11,820- 12,700	13,002- 13,970
Intermediate	8,990- 10,065	11,238- 12,581	10,300- 11,500	11,330- 12,650
Full	7,570- 8,645	9,463- 10,806	8,930- 9,950	9,845- 10,945
Associate	6,390- 7,465		7,650- 8,650	
Junior	5,915- 6,720		7,000- 7,400	
Nurses:				
Assistant director	$7,570-$8,645		$8,010-$9,300	
Senior	6,390- 7,465		6,505- 7,795	
Full	5,440- 6,250		(1)	
Associate	4,730- 5,500		(1)	
Junior	4,025- 4,885		(1)	

[1] No change.

	Present salary	H. R. 6719 (sec. 4)
Lay managers:		
GS-16	$12,900-$13,760	$13,015-$14,200
GS-15	11,610- 12,690	13,015- 14,200
GS-14	10,320- 11,395	13,015- 14,200
GS-13	8,990- 10,065	13,015- 14,200

Also places optometrists on the professional level in the Department of Medicine and Surgery.

VETOED

H. R. 4602:

1. Extended direct and World War II guaranteed loan programs to July 25, 1959.

2. Repealed section 512 of the Servicemen's Readjustment Act, the present direct

loan program, and substitutes a new section, establishing a new policy.

3. Congressional intent as to declaration of direct loan areas was expressed to include small cities, towns, and rural areas. Thirty thousand population was used as a guideline where the town is not part of the metropolitan area of a big city. VA could declare larger towns as eligible areas on the basis of a historical shortage of mortgage funds.

4. Authorized an additional $150 million for the period July 1, 1957, to June 30, 1958; and provided that the Administrator may recover, until July 25, 1958, the $60 million he failed to draw prior to June 30, 1956.

5. Increased the maximum amount of direct loans from $10,000 to $13,500.

6. Provided for an advance commitment to a builder for a reservation of direct loan funds upon the payment of a commitment fee of 2 percent of the amount of the funds reserved. The commitment to be valid for not over 3 months and subject to extension if the builder is active and has contracted with an eligible veteran. This provision would have provided a means under which builders could obtain financing for new construction in small cities, towns, and rural areas.

7. Provided that the Administrator should commence processing the direct-loan application of the veteran without delay, submitting the information to the voluntary home mortgage credit program and giving that agency 20 days to find a lender. Also gave the Administrator the authority to transfer the commitment fee paid by the builder to the private lender who purchases the loan from the VA.

8. Provided that the Administrator could make construction advances to the veteran and builder during construction, thereby eliminating the necessity of the builder obtaining a construction loan.

9. Provided discretionary authority to the Administrator to exempt new construction under this section from the subdivision and land-planning requirements. Permitted the building of homes in keeping with the area in which they are located, thereby eliminating the Veterans' Administration's present demands that a builder, building in a country town, must pave the streets, install curbs and gutters in front of the house, that being the only place in the town in which that type of improvement is done. The bill did not permit any deviations from the Veterans' Administration minimum construction requirements.

10. Included a technical correction requested by Veterans' Administration with reference to the guaranteeing of automatic loans.

NOTE.—The Committee on Veterans' Affairs has reported 5 bills (4 enacted into law) which convey land either to the Veterans' Administration or from the Veterans' Administration to certain municipalities, etc.

Veterans' Administration appropriations

(Fiscal year ending June 30, 1958)

PUBLIC LAW 85-69, APPROVED JUNE 29, 1957

General operating expenses	$161,374,000
Medical administration and miscellaneous operating expenses	21,763,400
Inpatient care	702,000,000
Outpatient care	79,000,000
Maintenance and operation of supply depots	1,790,000
Compensation and pensions	2,826,250,000
Readjustment benefits	784,047,000
Military and naval insurance	4,275,000
Hospital and domiciliary facilities	42,500,000
Major alterations, improvements, and repairs	2,028,000
National service life insurance	7,600,000
Servicemen's indemnities	$29,877,500
Grants to the Republic of the Philippines	1,500,000
Service disabled veterans insurance fund	1,500,000
Automobiles and other conveyances for disabled veterans	
Total	$4,665,504,900

VETERANS IN AMERICA

Population of veterans

America's population of living veterans is more than 22,600,000.

Seventy percent, or more than 15,300,000, served in World War II. They average 38 years of age.

More than 5 million—average age 28—served during the Korean conflict period. Approximately 900,000 of them are "double duty" veterans, serving both in World War II and the Korean conflict.

Less than 3 million—average age 63—served in World War I.

Spanish-American War veterans, average age 80, number 55,000. Another hundred or so oldtimers, in their 80's and 90's, served in the Indian wars.

The Nation's veterans, together with their families, make up more than 40 percent of the total population of the United States.

MEDICINE

VA operates 173 hospitals for the care of ill and disabled veterans. On any average day, VA's patient load approaches 115,000. During an average year, VA admits nearly half a million veterans to its hospitals.

Admissions are under a priority system.

First call goes to veterans with service-connected conditions. Generally, the service-connected can get admitted immediately.

And next, if beds are available, come veterans with non-service-connected ailments who are unable to pay for private hospitalization. In addition to signing a statement of inability to pay, they also must submit a statement of their assets and liabilities.

INSURANCE

Nearly 6 million veterans today hold GI insurance policies valued at nearly $44 billion. The breakdown:

Nearly 5 million World War II veterans hold $35.7 billion of national service life insurance; 640,000 Korea veterans hold $6.6 billion of special nonconvertible, nonparticipating GI term insurance; 24,000 disabled Korea veterans have $239 million of term and permanent insurance available just to them; 800,000 World War I veterans hold $1.6 billion of United States Government life insurance.

GI LOANS

Eligibility: Any person who served in the armed services at any time on or after September 16, 1940, and prior to July 26, 1947, or on or after June 27, 1950, and prior to February 1, 1955, discharged under conditions other than dishonorable after active service of 90 days or more or because of disability incurred in line of duty is eligible. Generally loans must be made prior to July 26, 1958, for World War II veterans; veterans of Korea have until January 31, 1965. Widows of deceased veterans whose death was due to service may also qualify.

Amounts: Non-real-estate loans up to $2,000 and real-estate loans in certain cases up to $7,500, or a prorated portion thereof, or loans of both types or combinations thereof, may be guaranteed with interest at not more than 4½ percent per annum, repayable in not more than 30 years, except in the case of farm realty, which may run for 40 years. (Maturity on non-real-estate loan may not exceed 10 years.) If the proceeds of the loan are to be used for the acquisition of residential property, the amount guaranteed may be 60 percent of the loan but not over $7,500. Banks or other lending institutions make the loans, with the Government guaranteeing 50 or 60 percent of the loan, but in no case to exceed the above amounts. Under certain conditions, Veterans' Administration is authorized to lend, until June 30, 1958, up to $10,000 directly to the veteran when private sources are not available.

EDUCATION

More than 10 million veterans so far have trained under these 4 programs. That's four times the total enrollments in every college and university in the United States of America.

Of the 10 million total—

More than 7,800,000—one-half of all World War II veterans—trained under the World War II GI bill. Of them, nearly 50 percent went to schools below the college level (such as trade and technical schools); more than 25 percent studied in college, and the rest trained on the job and on the farm.

Another 1,800,000—2 out of every 5 Korea veterans—trained under the Korean GI bill. Their numbers will grow (the program doesn't end until 1965).

A new trend has developed under the Korean GI bill. Fewer veterans have attended schools below the college level (less than 40 percent), and more have gone to college (more than 50 percent). Enrollments in on-the-job and on-the-farm courses account for the balance.

Another 612,000 disabled World War II veterans and 48,000 disabled Korea veterans have received vocational rehabilitation training. Some 40 percent have trained for top-level jobs in professional and managerial fields.

It has helped raise the educational level of veterans to better than 4 years of high school, whereas the level of nonveteran males, same age group, is but 2 years of high school.

"(Your every voter, as surely as your chief

magnistrate, exercises a public trust," said Grover Cleveland. Through more education, veterans have become better prepared to exercise this public trust.

It has helped build up America's reservoirs of trained manpower, so urgently needed for our Nation's strength and well-being. This country has gained immeasurably from the 500,000 engineers, 250,000 school teachers, 170,000 doctors, dentists, and nurses, and 115,000 scientists who learned their skills under the GI bill.

Theodore Roosevelt's Contributions to Our Country

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. DEROUNIAN. Mr. Speaker, as a member of the centennial commission for the celebration of the 100th anniversary of the birth of Theodore Roosevelt, it is my pleasure to request that there be included in the CONGRESSIONAL RECORD the following sketch of the life and accomplishments of a great President, our beloved Teddy Roosevelt:

THEODORE ROOSEVELT

On October 27, 1958, we celebrate the centennial of the birth of Theodore Roosevelt. It is especially fitting that the armed services should pay him honor. Not only was he a great President, but he was one of the best friends that the Armed Forces ever had in the White House. He had a clear vision of the importance that the military would have in preserving our national security and in promoting our national ideals. In fact, he was one of the first Americans fully to understand the new demands that the 20th century would make upon the American people.

The people probably had a greater affection for Roosevelt than for any other man of his time. This affection did not rise from the great successes of his career, nor even from the enormous range of his interests and ability. It rather was a response to the quality of his character and the contagion of his personality. History will remember Roosevelt as much for the ideals he personified as for the momentous events of his career.

ROOSEVELT, THE MAN

What were those qualities of character? Roosevelt himself honored "those most valuable of all qualities, the soldierly virtues." In a day when many men looked upon corruption as an inevitable part of public life, Roosevelt raised a higher standard of public duty and honor. At a time when many men thought they best served the general interest by serving their own interest, Roosevelt personified an ideal of personal service that refused to count the personal cost. The people loved him because they sensed that honor, courage, loyalty, and dedication to his conception of the common welfare were so completely a part of the man that his acting according to these virtues was doing what came naturally for him. They loved him the more because he did it joyously. In him the life of service and courage was a life of exuberant adventure. His life showed that achieving high ideals was not a matter of putting on a long face, but rather was high excitement and much more fun than sin.

Because the American people sensed the greatness of his character and admired the enthusiastic, full-blown way he did things, they could love him even more because of his human weaknesses. They knew that the quickness of his temper, his tendency to be overcertain he was right, his flair for dramatizing whatever he did, and even the favoritism he displayed for the Rough Riders when he made Presidential appointments, were exaggerations of good qualities. He did nothing from meanness or cold calculation. His life seems to have been guided a bit more by his heart than by his head, but the heart was good and the head seldom had cause to disagree with it. It was this quality of serving the public interest gaily and with exuberance in a dramatic and forceful way, never hesitating to antagonize powerful men when necessary, that the public loved.

One monument to his sense of honor and integrity was a civil service system cleansed of many of its worst abuses through his efforts. His loyalty and patriotism were well illustrated by his personal desire for military service when no one would have blamed him for being content with civilian service. His courage was both moral and physical. His moral courage was perhaps best illustrated by his willingness to run for President in 1912 when he knew that to do so would cost him the friendship of many men whose friendship he valued. The examples of his physical courage are endless. This highly excitable man seemed to be the coolest of men in firing at a charging lion or other wild animal on a big-game hunt. The affection the Rough Riders had for him was based partly upon his demonstrated courage as a soldier.

But the quality which in many ways was most impressive about Roosevelt was his enormous energy. He typified better than any other American the explosive outpouring of activity in the United States during the years following the Civil War. His enormous energies are suggested by the range of his activities. He was a voluminous author, a first-rate naturalist, explorer, soldier, cowboy, big-game hunter, and, of course, statesman. Although he was a sickly child, especially troubled with asthma as well as being very nearsighted, he became the champion of the strenuous life. Just how strenuous his life was can be seen by a brief review of his career.

YOUTH AND EDUCATION

His father was a prominent New York merchant who devoted a great deal of time to civic and charitable affairs. His mother was a gentlewoman from Georgia; two of her brothers fought in the Confederate Army.

As a boy, young Roosevelt was greatly interested in natural history. He enthusiastically collected insects of various kinds and learned all their Latin names. On his first trip to Europe at the age of 11 he visited all the museums of natural history he could find.

When he was about 12 his athletic father told him that he was a sorry physical specimen and that something should be done about it. A gymnasium was built on the second floor of the Roosevelt home in Manhattan. So young Roosevelt began to work out with a punching bag, dumbbells, and horizontal bars. Roosevelt, in later years, was proud of his physical ability. He won it through hard work and he gloried in it. However, at first he went about his exercises in a routine way without much enthusiasm. When he was 13 years old, though, an incident occurred that set him to building his strength in earnest. Two youngsters teased him in that cruel way children sometimes have. Finally he decided to fight, only to find that one of the boys could easily hold him at arm's length. He wasn't hurt physically, but his pride was wounded. This was Roosevelt's first lesson in preparedness—a lesson he turned to the service of his country when he became President. His character is nowhere better illustrated than in his reactions to this incident. He immediately began to take boxing lessons and made rapid progress. His interest now turned to sports and hunting with that combination of enthusiasm and determination that marked everything he did.

Just before his 18th birthday he entered Harvard College. His classmates remember that Roosevelt ran everywhere he went. He was always in a hurry, bursting with the same energy that was transforming the United States into a great industrial country and a world power. That force of will and perseverance which had made him a good athlete, rider, and marksman in spite of poor physical equipment continued in Harvard. A great disappointment was his defeat in the final round for the lightweight boxing championship of Harvard. Roosevelt applied himself to the intellectual side of Harvard with the same energy. He made Phi Beta Kappa. However, he dodged the classes of a young history instructor, Henry Cabot Lodge, as being too tough. Lodge later became a close friend of Roosevelt and a United States Senator. Some of his classmates thought he took education too seriously because he questioned and even contradicted his professors, but he could not be passive in anything he did. He had to live life to the hilt.

EARLY VENTURES INTO POLITICS

Following Roosevelt's career after leaving college is almost like tracing the course of a rocket. At the age of 23 he was elected to the New York Assembly. He exhibited independence and courage in fighting corruption and in promoting practical reforms. Before he was 25 he was one of the leading members of the Republican Party in New York State. Despite his other activities, his interest in military affairs continued; he joined the New York National Guard in 1882.

Personal tragedy struck Roosevelt in February 1884. His mother and his wife died within a few hours of each other. This, coupled with a discouraging political outlook after the Republicans nominated James G. Blaine for President—a nomination Roosevelt had unsuccessfully tried to block, caused Roosevelt to leave public life temporarily. The next 2 years he spent as a ranchman in the Dakota country. He enjoyed the vigorous life and even caught some thieves and knocked down a gunman who advanced on him in a bar. Roosevelt didn't drink but had to go through the bar to get to his room. Many aspects of his life read like the dream of any healthy American boy.

In 1886 Roosevelt attempted, at the age of 28, a political comeback as the Republican candidate for mayor of New York City. Despite a vigorous campaign he ran last in the three-man race.

ROOSEVELT, THE AUTHOR

While in college Roosevelt had begun to write The Naval War of 1812. He undertook this work, which he finished shortly after graduation, because he found the existing accounts unreliable. This book is still a classic in naval history. Roosevelt devoted a great deal of time to writing between 1884 when he went to the Dakota Bad Lands and 1889 when he accepted a Federal appointment in Washington. During this period he wrote Hunting Trips of a Ranchman, Ranch Life, and The Hunting Trail, biographies of Senator Thomas H. Benton and Gouverneur Morris, The Wilderness Hunter, and a History of New York. Other books followed, among them the popular 4-volume The Winning of the West (1889–96). The output was great, but the quality was unequal. The biography of Benton was superficial, but his hunting books were exceptional in their field and are still excellent reading.

PROMOTING GOOD GOVERNMENT

In the Assembly he had become interested in civil-service reform and in 1889 President Harrison appointed him a member of the United States Civil Service Commission. Roosevelt's vigorous promotion of the merit system did much to improve the quality of the Federal service and gain for himself the enmity of the professional politicians who had not taken the civil service law too seriously up to this time. Roosevelt enjoyed the battle. He fought hard and repeatedly risked his career to promote the public welfare, but he had no consciousness of sacrifice. Rather he seemed to consider it a high privilege.

He resigned from the Civil Service Commission in 1895 to become president of the police board of New York City. Here, again, the same flair he had shown for dramatizing good Government in Washington, was used with telling effect. Corruption was widespread in the police department, with the police taking graft from saloonkeepers, gamblers, and prostitutes. He stalked the streets at night to see if his policemen were on the job. It was during this period that cartoonists made his prominent front teeth famous. It became the talk of the town how delinquent policemen became uneasy with the coming of nightfall, expecting any moment to see the approach of a dark figure with gleaming teeth. A reporter disguised himself with a broad-brimmed hat and went about frightening members of the police force by chattering his teeth at them. Roosevelt was not able to accomplish as much as he had hoped in the way of permanent reform, since the other two police commissioners blocked his program. However, his colorful behavior and vigorous attack upon real abuses kept him constantly before the public and helped his future. New Yorkers loved to read how the commissioner caught a policeman drinking a glass of beer at the side door of a saloon and how the policeman fled at the sight of those white teeth only to be caught after a chase of 50 yards and hauled in for trial.

STRENGTHENING THE NAVY

Roosevelt fought hard for McKinley's election in 1896, and was rewarded with an appointment as Assistant Secretary of the Navy. The success of our fleets in the Spanish-American War can be attributed in great measure to his efforts to promote the efficiency of the Navy. In this position he exhibited his customary energy, demonstrating also great talent as an administrator and the finest patriotism. As Acting Secretary of the Navy (the Secretary having taken a short vacation) Roosevelt ordered Admiral Dewey at Hong Kong to coal his ships and in the event of war to make certain the Spanish squadron did not leave the Asiatic coast. These preparations, taken deliberately without the knowledge of his chief, prepared the way for the brilliant naval victory at Manila.

IN ACTIVE SERVICE

If Roosevelt's biography had been written as a piece of fiction it would have been dismissed as overdramatic and highly improbably. The most improbable episode in his amazing career was his active service in the War with Spain. As soon as war became certain, he submitted his resignation as Assistant Secretary of the Navy and offered his services as a soldier. It seemed an absurd thing to do, but it proved to be his path to the White House. He was aching to get into the fight. Offered the command of a volunteer cavalry regiment, he declined on the grounds that Capt. Leonard Wood (later major general) was better qualified for it. He accepted the rank of lieutenant colonel when Wood was made colonel.

The regiment was the famous Rough Riders. From the beginning they were Roosevelt's Rough Riders, although he was nominally second in command. He dispatched telegrams to the territorial governors in the West asking for men who were young, good shots, and good riders. The applications poured in. From the first, Roosevelt was afraid he would miss the action. Within a month from the outbreak of war, he left for San Antonio where the Rough Riders were assembling in May 1898.

He almost immediately won the affection of as tough and varied an aggregation of men as ever were assembled in this country. Recruits came from Harvard, Yale, and Princeton. They came from the fancy clubs of Boston and New York. But there were also cowboys, broncobusters, professional gamblers, clergymen, Indians, stage drivers, miners, mountaineers, hunters of bear and buffalo, and muleskinners. They were men who went by such names as Cherokee Bill, Happy Jack of Arizona, Smoky Moore, and Rattlesnake Pete. The men added new nicknames for each other. A courageous but natty member of an exclusive eastern club was called Tough Ike and his rough cowpuncher bunkmate was christened The Dude. One cowpuncher was dubbed Metropolitan Bill because he talked so much about having an aunt in New York.

Roosevelt loved these men and they loved him. He loved them because they had courage and loyalty to each other and because they were gay adventurers. It was perhaps this common love of adventure and respect for each other that bound Roosevelt and the Rough Riders together. After only a few weeks of frantic training the Rough Riders left for Tampa, Fla., to await transportation to Cuba. When Wood and Roosevelt reached the quay in Tampa on the morning of June 8 they discovered that 2 other regiments had been assigned to the U. S. S. *Yucatan* ahead of them. It was the only ship available. There couldn't possibly be room for the Rough Riders. Roosevelt himself described what he did in this emergency:

"I ran at full speed to our train; and * * * double-quicked the * * * regiment up to the boat, just in time to board her as she came into the quay, and then to hold her against the Second Regulars and the 71st, who had arrived a little late, being a shade less ready than we in the matter of individual initiative. There was a good deal of expostulation, but we had possession."

He and the Rough Riders arrived in time to fight and distinguished themselves with the charge up San Juan hill. Roosevelt was breveted brigadier general "for gallantry in battle." It was a short war, but battle and disease took their toll. The disease-ridden troops arrived on Long Island on August 15, a little more than 2 months after leaving Tampa.

Roosevelt never forgot the Rough Riders. He considered the war the greatest experience of his life. From that point on he was constantly helping his old comrades who were in trouble. As President he placed many of them in Federal positions.

FROM GOVERNOR TO PRESIDENT

After returning from Cuba in the fall of 1898, Roosevelt became the Republican candidate for governor of New York. He was nominated because the party bosses needed someone who could win, not because they liked him. Although a popular hero, he won by a narrow margin. He had just turned 40.

During his 2 years as governor, Roosevelt made himself thoroughly disliked by many large corporations and the politicians they controlled by insisting that the corporations pay reasonable taxes. Since the fruits of victory soured in the politicians' mouths with an honest and courageous governor, they looked about for some means of getting rid of him. In the national convention in Philadelphia in 1900 they maneuvered him into a position where he could scarcely refuse the nomination for Vice President. He was "kicked upstairs."

In those days the Vice President had very little to keep him busy, so Roosevelt decided to continue the study of law with the Chief Justice of the Supreme Court as his teacher. But fate took a hand and cut his studies short. President McKinley was shot on September 6, 1901, and died 8 days later. Theodore Roosevelt became the youngest President in American history, being not quite 43 years old. In 1904 he was reelected in his own right by a large majority.

The host of new problems confronting the country and the energy with which Theodore Roosevelt attacked them made his Presidency one of the most eventful in American history. However, it was a disciplined energy he now displayed. Some people thought of him as a bull in a china closet. His opponents made the mistake of assuming that his flair for publicity meant that he was unpredictable. They feared that his enthusiasm might lead him into rash actions at home or abroad. But they were wrong. His Presidency is an example of the way in which the Office of President seems to bring out the very best in a man. He demonstrated a capacity to rise to the job and to more greatness than his previous career had indicated. No one questioned his intelligence or courage, certainly not his patriotism. It was maturity, patience, an ability to discipline his enthusiasms that he now displayed, as well as perseverance in promoting the public interest, and great administrative ability.

Roosevelt was probably the most athletic President in our history. He led panting diplomats on frantic walks over rocks and streams while lecturing them on the importance of the strenuous life. He took jiu-jitsu lessons in the White House. While boxing with a young army officer his left eye was injured. His doctor told him he had to give up boxing. Within a few years the eye failed completely. Roosevelt's enormous vitality was properly characterized by a visitor from Great Britain, John Morley, when he said, "Do you know the two most wonderful things I have seen in your country? Niagara Falls and the President of the United States, both great wonders of nature."

MILITARY REFORMS

The Spanish-American War had revealed shocking deficiencies in our war machine. Remembering the evil consequences in Cuba of fighting a war with volunteers who were inadequately trained and under military leadership grown slack through public neglect, Roosevelt began sweeping reforms in 1903. The Army was thoroughly reorganized and its efficiency improved. A permanent General Staff was created. A new militia law led to a more efficient National Guard. Noticing that some officers had become too fat, Roosevelt decreed that they must be able to ride horseback a specified number of miles.

As he himself put it:

"Our Army and Navy, and above all our people, learned some lessons from the Spanish War and applied them to our uses. During the following decade the improvement in our Navy and Army was very great; not in material only, but also in personnel, and above all, in the ability to handle our forces in good-sized units."

NAVAL EXPANSION

Although the Navy had been better prepared for the Spanish-American War than the Army, the consequences of the war made the development of the Navy particularly important. We now had distant possessions, particularly the Philippines, which brought new responsibilities that could be met only with a strong Navy. Roosevelt stated the matter well when he said in his inaugural address in 1905, "* * * much has been given to us and much will rightfully be expected of us. * * * Power means responsibility and danger. * * * We have become a great Nation, forced by the fact of its greatness into

relations with other nations of the earth." These responsibilities could only be met if we had a Military Establishment sufficient to compel respect. At this point in our history that meant a strong Navy more than anything else.

Upon every possible occasion Roosevelt called for a stronger Navy, since "it is not possible to improvise a navy after war breaks out." He kept after Congress for larger appropriations and used all his skill as a great popular leader to develop support. In his first message to Congress he appealed thus for a stronger Navy:

"No one point of our policy, foreign or domestic, is more important than this to the honor and material welfare, and, above all to the peace, of our Nation in the future. Whether we desire it or not, we must henceforth recognize that we have international duties no less than international rights. Even if our flag were hauled down in the Philippines and Puerto Rico, even if we decided not to build the Isthmian Canal, we should need a thoroughly trained navy of adequate size, or else be prepared definitely and for all time to abandon the idea that our Nation is among those whose sons go down to the sea in ships. Unless our commerce is always to be carried in foreign bottoms, we must have war craft to protect it."

Our Navy at this time consisted of 9 battleships with 8 more in the process of construction. Roosevelt advocated more battleships, plus the proper proportion of other craft, including cruisers and auxiliary and lighter craft. He especially objected to our fleets rusting out before they wore out. He instituted fleet maneuvers in order to train the personnel. Naval maneuvers on a large scale, commanded by an admiral of the United States Navy, were held for the first time in our history. Roosevelt urged that Congress appropriate the necessary funds for gunnery practice.

It seems strange today that these measures should have appeared novel, but Congress was reluctant to provide the funds required. Congress did agree, however, to build one additional battleship a year in addition to replacing existing ships as they became worn out.

In 1907 it became clear to the President that one additional battleship a year was not enough. In his message to Congress that year he said:

"It was hoped The Hague Conference might deal with the question of the limitation of armaments. But even before it had assembled informal inquiries had developed that, as regards naval armaments, the only ones in which this country had any interest, it was hopeless to try to devise any plan for which there was the slightest possibility of securing the assent of the nations gathered at The Hague. No plan was even proposed which would have had the assent of more than one first-class power outside of the United States. * * * It is evident, therefore, that it is folly for this Nation to base any hope of securing peace on an international agreement as to the limitation of armaments. Such being the fact, it would be most unwise for us to stop the upbuilding of our Navy. To build one battleship of the best and most advanced type a year would barely keep our fleet up to its present force. This is not enough. In my judgment, we should this year provide for four battleships.

Congress did not agree to 4 that year, but it did agree to 2 in each of the next 2 years.

"By 1908, when our battle fleet steamed around the world," in the words of Roosevelt, "the Navy had become in every respect as fit a fighting instrument as any other Navy in the world, fleet for fleet. Even in size there was but one nation—England—which was completely out of our class; and in view of our relations with England and the English-speaking peoples, this was of no consequence."

Roosevelt's decision to send the United States battle fleet around the world was a master stroke. It accomplished many objectives at once. First, it kept the Navy on the front page at home and helped develop public support for his naval program. Second, it created respect for American power abroad. Third, it was enormously beneficial to the Navy itself. Instead of being merely a series of individual units, the Navy learned to operate as one body. The lessons learned in fueling, maintenance, and other things were invaluable.

In summary we can say that under Theodore Roosevelt the Navy was greatly expanded and its new capital ships had the heaviest offensive and defensive power in the world. The Navy was developed into an efficient and highly trained battle unit. Our naval gunnery improved enormously. The enlisted strength of the Navy doubled and the officers were increased by 20 percent. Most important, perhaps, Roosevelt convinced the American people of the importance of the Navy to our dignity, strength, and prosperity as a Nation. Without the Navy, Roosevelt could hardly have said that the proper conduct in foreign affairs was to "speak softly and carry a big stick."

OTHER PRESIDENTIAL ACCOMPLISHMENTS

Roosevelt acquitted himself well in many other respects during the eventful years of his Presidency. By his new-found qualities of restraint and patient negotiation he succeeded in ending a great coal strike. He earned the title of trust buster in his fight to break up some of the great industrial monopolies developing in the United States. He successfully mediated a peace between Russia and Japan in 1905 and won the Nobel peace prize for his efforts.

In 1906 he intervened in Cuba, upon the request of the Cuban President, to restore order. When this was accomplished the United States withdrew. This action did much to diminish Latin American fear of American domination. He vigorously enforced the Monroe Doctrine. He recognized the new Republic of Panama when it rose against Colombia, which had been stalling on the Panama Canal, then negotiated a treaty with Panama and initiated the construction of the canal.

One of his greatest achievements was his success in conserving our natural resources. He constantly tried to preserve public lands from destruction and misappropriation. Roosevelt made the conservation movement a reality, fighting to prevent exploitation of our mineral and timber resources and waterpower. He conducted this fight partly as a matter of justice, since these resources belonged to all the people, and also because he knew our power as a nation would be weakened if the waste continued. It was with deep satisfaction, in February 1905, that he signed the act creating the United States Forest Service.

As President, he continued the fight he had begun as a member of the Civil Service Commission. He insisted upon a high sense of public duty. He was quick to root out corruption and favoritism in public service.

Roosevelt was a great executive. He had imagination and a keen sense of the trend of history. He had a capacity for careful planning, for weighing all the factors and alternatives. His capacity for efficient action was enormous. Although his earlier career sometimes suggested action without reflection, his actions as President showed that he usually understood the great historic issues at stake and that his course of action was well thought out. Things had to move, but, if need be, he could be patient.

WILD-GAME HUNTING

Roosevelt was only 50 years old when he left the White House after serving 7½ years as President. Retirement was inconceivable to a man of his energy and enthusiasm. Less than 3 weeks after Taft's inauguration, Roosevelt sailed with his son Kermit to east Africa for a hunting trip. The Smithsonian Institution mounted and exhibited 50 of his best trophies. When Roosevelt came out of the jungle he was perhaps more of a world figure than he had been in the White House. He made a triumphal tour of Europe.

RETURN TO POLITICS

Upon his return to the United States in 1910, his supporters in the Republican Party urged him to reenter politics. A Progressive Party was organized to run Roosevelt for President in 1912 against President William Howard Taft, who had won Republican renomination, and Woodrow Wilson, the Democrat nominee.

Roosevelt fought hard as the Bull Moose candidate. In one instance he insisted upon making a scheduled speech, although he had just been shot and badly wounded in an attempted assassination. Roosevelt polled 88 electoral votes to only 8 for Taft, but the split in the Republican vote sent Wilson to the White House.

EXPLORING BRAZIL

Roosevelt's sense of adventure was still strong. He set out in October of 1913 to explore an area in the interior of Brazil. His party encountered great hardship and suffered from tropic fever. He became very ill. Thinking himself a burden on his exhausted party, he urged them to leave him to die but they refused to do so. Outwardly Roosevelt seemed to recover his old energy, but his health had been undermined.

WORLD WAR I

When the Frst World War broke out, Roosevelt disliked Wilson's policy of neutrality. He saw great danger to the United States in a German victory. He deplored our unwillingness to prepare ourselves adequately in the event we should become involved in the war.

When war did come Roosevelt urged that it be prosecuted energetically. Characteristically he offered to raise a division of volunteers, and some 300,000 men responded. Congress authorized the organization of the division, but President Wilson refused to permit its organization.

This was a great disappointment to Roosevelt, who earnestly desired to serve his country on the field of battle. However, he did not sulk in his tent, but did his best to arouse public opinion to a vigorous prosecution of the war. All 4 of his sons served in the Army with distinction; 3 were wounded and 1 was killed. He campaigned for a Republican Congress in 1918, but his health was failing. He died early in the morning on January 6, 1919. He was only 60, but into that span he had somehow managed to fit several careers and more service to his country than it seems possible one man could give in so short a life.

AN APPRECIATION

In the perspective of history it appears that Theodore Roosevelt's greatest contribution was his insistence that the United States had a new role to play on the international scene. Most of the 19th century had been a period of relative stability, largely maintained by the British Navy. Consequently, during the 19th century the United States could safely concentrate its expanding energies upon internal expansion and development. But by 1900 it was evident that new forces were at work in the world. We ourselves had become a great power. In the future the enforcement of the Monroe Doctrine would be more our responsibility and less that of the British Navy. Japan was a rising naval power in the Far East, and Great Britain would have increasing trouble enforcing the peace in that part of the world. On the European Continent, Germany was a rapidly rising power and Italy, too, had

been unified. In the Balkans, Turkish power was on the decline and movements for independence were growing among the Slavs.

By the time Roosevelt became President in 1901, the Pax Britannica was insecure. Few Americans realized the profound international changes that were occurring. We had been able for so long to take international stability for granted and therefore to concentrate our energies upon our own development, that many of us had come to believe that we need not concern ourselves much with foreign affairs. Theodore Roosevelt and a few other Americans realized that the course of events had carried us beyond the point where we could continue to avoid a larger role in international affairs.

One consequence of our traditional attitude had been neglect of our Armed Forces. We felt secure between two great oceans. Congress, the people, and most of our Presidents had felt little need to concern themselves seriously with military power. Roosevelt awakened the country to the new dangers and opportunities abroad in the world and the need to be prepared militarily for any eventuality.

There are many reasons for Americans to honor the centennial of Theodore Roosevelt's birth—too many to enumerate completely. We of the Armed Forces especially honor this versatile and many-sided genius because of his great achievements in the military field and because he demonstrated to the Nation that the "soldierly virtues" are the price of peace in an imperfect world.

We honor him as a great statesman because of his demonstrated ability to mediate industrial and international disputes, his vigorous enforcement of the Monroe Doctrine, his forceful action that made the dream of a canal across the Isthmus of Panama a reality.

We honor him for putting the public welfare above private industrial and personal interests. We honor him for his measures to conserve our natural resources for the welfare of generations to come. We honor him because he raised the moral tone of American political life, for his patriotism and the quickened sense of patriotism he spread abroad.

We honor him for all of these things, but we love him—as the people of his own generation loved him—because he taught us that the life of honor, courage, loyalty, and patriotism is a great adventure and a lot of fun.

Backward Step

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the Washington Post of August 30, 1957, is worthy of the attention of our colleagues:

BACKWARD STEP

The stampede for adjournment of Congress may very well save the country from a congressional stampede to shore up the Federal employee security program in needless and, indeed, senseless fashion. The House Post Office and Civil Service Committee has reported a bill sponsored by Representative WALTER which is designed to overturn the Supreme Court decision in the Cole case last year. That decision held that the power to dismiss summarily any employee of the United States whenever the head of an agency deemed it advisable in the interest of national security could be applied only to positions actually involving national security. Mr. WALTER's bill would lump all Government jobs together, from charwoman to Secretary of Defense, treating them all as sensitive and as involving national security.

Mr. WALTER's bill takes the form of an amendment to a noncontroversial Senate measure intended simply to clarify suspension provisions in existing law. It could be brought before the House at this late date only through a suspension of the rules; but if passed by the House, it would be subject to conference and possible acceptance by the Senate in the rush to get out of town. The Senate, of course, has had no chance to hold hearings on the Walter bill or to give it any consideration. Apart from other defects in the proposal, therefore, House action ought to be held off until Congress reconvenes next year. There is not the slightest evidence that the Supreme Court ruling in the Cole case has had any harmful effect on the Federal employee security program. On the contrary, it has tended to make the program more effective by focusing its force on the sensitive positions where it is most needed.

The Van Zandt Bill, H. R. 6975, Is a Compromise Measure Which Will Provide Aid to Labor Surplus Areas in a Reasonable and Realistic Manner, Thus Solving a Vexing Problem That Has Been Permitted To Become a Political Football at the Expense of the Misery and Heartaches of the Unemployed

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. VAN ZANDT. Mr. Speaker, on the eve of the adjournment of the 1st session of the 85th Congress, it is regretted that during the 8-month session no progress has been made in having distressed area legislation enacted.

This inactivity on the part of Congress is inexcusable since both major political parties are on record in giving recognition in their 1956 party platforms to the urgent need for Federal aid to areas having persistent and substantial unemployment.

Although the need for Federal aid to labor surplus areas is readily apparent, it is impossible to understand the action of the democratically controlled 85th Congress in pigeonholing distressed area legislation.

A subcommittee of the Senate Banking and Currency Committee held hearings on distressed area legislation last March, at which time I testified to the urgent need for Federal aid to labor surplus areas. To date, the subcommittee has not submitted its recommendations to the Senate Banking and Currency Committee.

As far as the House of Representatives is concerned, I am informed that there are over 40 bills pending before the committee, including the 2 bills I introduced on the subject—1 of which is H. R. 6975, which is designed as a realistic approach to the solving of the perplexing problem. Despite the interest manifested, no action was taken nor scheduled by the committee on distressed area legislation during this session of Congress. Meanwhile, unemployment conditions in distressed areas have become gradually worse each month since the convening of Congress on January 3, 1957. It is a serious indictment of the 85th Congress that this important legislation has been sidetracked and virtually ignored during this session.

Can it be true that the failure to enact distressed area legislation is deliberate since this is not an election year? If so, the Democratic leadership is guilty of playing politics with the misery of the unemployed by withholding action on such vital legislation until 1958. It will be recalled that in 1956 Democrats made distressed area legislation a major campaign issue. One would expect, therefore, that since the Democrats are in control of both branches of Congress—and likewise, all congressional committees—they would redeem their oft-repeated pledge to get action on distressed area legislation as soon as the 85th Congress convened.

Since it is an accepted fact that actions speak louder than words, the wailing and beating of breasts by Democrats in the 1956 campaign with respect to providing aid for distressed areas is, in the face of the facts, nothing more than campaign oratory at its worst. This being true, we can expect another torrent of tear-jerking statements from Democratic candidates next year, in the hope of affecting the outcome of the congressional elections in 1958.

Mr. Speaker, since the 83d Congress when I first introduced legislation to aid distressed areas, I have witnessed the clumsy and ineffective manner in which the subject has been handled. This is to be regretted sincerely because, as President Eisenhower pointed out in his state of the Union message, and in other public utterances, we have pockets of unemployment throughout the Nation despite the general prosperity of the country as a whole.

As a result of President Eisenhower's pronouncement, the administration version of a bill was introduced in the 84th Congress. In addition to reintroducing my own bill from the 83d Congress, I also introduced a bill incorporating the views of the Eisenhower administration.

Meanwhile, the Democrats sponsored bills in the Senate and House of Representatives known respectively as the Douglas and Spence bills. It was evident from the action taken on the Senate bill in the 84th Congress, when it was approved in the Senate by a 2-to-1 vote that there is intense interest and a compelling need for distressed area legislation. Unfortunately, the conflicting versions of the bill approved by the House Committee on Banking and Currency and the Senate-approved bill resulted in no action on the legislation in the House before the adjournment of the 84th Congress. The conflict developed over a difference of opinion regarding some administrative details and a few substantive matters with regard to the execution of the program.

This year, with the history of the fate of the Senate bill fresh in the memories of all interested Members of Congress

was expected that a new start would be made in finding a practical solution to the legislative stalemate encountered in the 84th Congress.

Recalling the rosy promises of the Democrats during the 1956 campaign, it was regarded as a certainty that the Democratically controlled 85th Congress would lose no time in making good its avowed promise to enact the legislation speedily. As previously stated, the record of the House of Representatives during the 1st session of the 85th Congress, which shows no action taken or scheduled on distressed area legislation, is a sorrowful reminder of how soon glib campaign statements are forgotten. In view of the lack of action on distressed area legislation, they can only be interpreted in their true light—as purely "window dressing" and mere campaign oratory.

Regardless of the attempt to find a readymade excuse for delaying action during this session on distressed-area legislation, the grim fact is that unemployment conditions in these affected areas are steadily growing more acute. This is confirmed by the July 1957 Summary of Labor Market Developments in Major Areas, issued by the United States Department of Labor.

The summary discloses that 11 States and Puerto Rico have several areas of "substantial labor surplus." They are plagued with unemployment to such an extent that they are classified as major areas with unemployment ranging from 6 to 11.9 percent. In addition to the 11 States with major areas of substantial labor surplus, there are 20 other States, classified as smaller areas, in which unemployment is equally acute. In other words, there are 31 States that are adversely affected by the gaunt specter of unemployment.

In discussing unemployment I know whereof I speak, because a major portion of my congressional district in Pennsylvania has been classified since 1949, save for a short period during the Korean war, as an area having a substantial labor surplus. At various times during the period from 1949 to the present unemployment was over 18 percent in the Altoona, Pa., area, which is one of the major labor-surplus areas in the Nation. At the present time unemployment in the Altoona area is over 9 percent. For years unemployment in the DuBois-Clearfield area in my congressional district has exceeded 6 percent.

As a matter of fact, in Pennsylvania we have the following areas that have been classified for years as having a "substantial labor surplus": Altoona, Erie, Johnstown, Berwick, Bloomsburg, Clearfield, DuBois, Lewistown, Lock Haven, Pottsville, Sunbury, Shamokin, Mount Carmel, Uniontown, and Connellsville. These labor-surplus areas in the great Keystone State are joined by scores of areas in the other 30 States where unemployment is a persistent and chronic economic malady.

Mr. Speaker, it is time to face the grim fact that a compromise bill—as exemplified by my bill, H. R. 6975—is the only practical solution to the legislative deadlock facing distressed-area legislation.

It is abundantly clear that, due to the failure of the 84th Congress to resolve its differences in the Senate and House versions of distressed-area legislation and to the listless attitude of the 1st session of the 85th Congress in trying to effect a compromise, we face 1958 without enactment of this important legislation. In good conscience we simply cannot continue to ignore this distressing situation any longer.

We owe it to the distressed areas in 31 States and Puerto Rico to stop squabbling over details and to unite our efforts in approving a reasonable, yet realistic, program to ease the pangs of unemployment that are a blight on the economy of an otherwise prosperous Nation.

I am not interested in who gets the credit, nor do I have pride of authorship in recommending a careful study of my compromise bill, H. R. 6975. I think it is an accepted fact that the differences in the administration bill, the Douglas bill, and the Spence bill appear insurmountable. Meanwhile, Congress is stymied in its efforts to carry out the desire expressed by President Eisenhower that "we must deal with the pockets of chronic unemployment that here and there mar the Nation's general industrial prosperity." To achieve this goal, my compromise bill, H. R. 6975—which is a revised version of similar bills on the subject introduced by me in Congress since 1953—incorporates the best provisions of the proposals of the administration bill as well as the best that can be found in the bills introduced by Senator DOUGLAS and Representative SPENCE.

In arriving at a fair and reasonable compromise, I found that in some instances the administration bill fell short of providing adequately to meet the needs of chronically distressed areas. On the other hand, the Douglas and Spence bills provide too liberal assistance to areas whose economic decline is of recent duration. I took into consideration the fact that normally such communities have sufficient resources and are not in need of the variety of programs offered in these bills. In other words, I came to the conclusion that a fair compromise can be effected by providing different types of aid to labor surplus areas based upon the duration and levels of unemployment.

Therefore, my compromise bill, H. R. 6975, would reduce the cost of the program and yet leave sufficient funds for communities which meet the most rigid tests of chronic unemployment and economic distress. In short, my bill would assure that the neediest communities would get aid. At the same time, by establishing limits on some of the aid provided in the Douglas and Spence bills, it would be possible to reduce the overall cost of these programs. Although my bill would greatly decrease the cost of the Douglas bill, and liberalize the provisions of the administration bill, it would still provide essentially the same benefits—such as grants for technical assistance, loans and participations, grants for public facilities, vocational training, and retraining subsistence payments.

My bill, H. R. 6975, would also amend section 207 (a) of the Small Business Act of 1953 by empowering the Small Business Administration to make loans to local private nonprofit organizations—including industrial foundations, development corporations, and similar groups—formed to assist, develop, and expand the economy of areas of substantial and persistent unemployment, but only where the purpose of the loan was to enable such organizations to provide supplementary assistance to one or more small-business concerns in such area—and only after such concerns had qualified for loans from the Small Business Administration.

I am convinced that a thoughtful study of my bill, H. R. 6975, will reveal it as a practical and reasonable approach in ending the legislative bickering which has nullified all efforts to enact distressed area legislation. This is especially true when you consider the cost of the various bills.

The administration bill, S. 1433, is considered as a conservative approach and will cost about $55 million. The Douglas bill, S. 964, represents an ultraliberal approach to the subject and would cost in excess of $325 million. By comparison, my compromise bill, H. R. 6975, would cost in the neighborhood of $200 million and would extend Federal aid to labor surplus areas in a reasonable, yet realistic, manner.

Mr. Speaker, I have been zealous in my efforts since 1953 in sponsoring distressed area legislation in Congress, and I know I am joined by my colleagues in my reluctance to see the misery of unemployment become a political football. We are about to adjourn this session of Congress with little or no success in attaining the common objective of enacting a program to aid areas certified by the United States Department of Labor as areas of substantial labor surplus. It is my sincere hope that we recognize the futility of endless bickering and legislative stalemates which have hovered over distressed area legislation for the past 5 years.

As previously stated, I have no pride of authorship in urging consideration of H. R. 6975 as an acceptable compromise in the field of distressed area legislation.

Therefore, I earnestly beseech that we unite in support of the compromise bill, H. R. 6975, because I honestly feel it provides the means of leading us out of the legislative wilderness of delay and despair in which distressed area legislation has needlessly floundered the past 5 years.

Much More Than the H-Bomb Is Needed

EXTENSION OF REMARKS
OF
HON. JAMES P. S. DEVEREUX
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DEVEREUX. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the following article written by Mr. Hanson W. Baldwin, New York Times military editor, that appeared in the New York Times magazine section of August 18, 1957, and en-

titled "Much More Than the H-Bomb Is Needed":

MUCH MORE THAN THE H-BOMB IS NEEDED

(By Hanson W. Baldwin)

The mushroom cloud overshadowed the House floor.

The gentleman from Missouri, Representative CLARENCE CANNON (Democrat), was urging reductions in the defense budget: "The next world war will be decided in a matter of hours. There will be a period of mopping up and taking over, but the war will be decisively fought on one afternoon or less. * * * The Army is no longer of any use in war except in occupying territory taken from the air and in enforcing martial law. * * * Could the Navy protect us? Ridiculous.

"The one thing that stands out like Mars at perihelion—like the headlight on a locomotive on a moonless midnight," said Mr. CANNON, warming to his subject, "is that if there is a war there will be no time for the Army and Navy to nibble around the edges."

Mr. CANNON'S confident predictions are part of the now familiar arguments of the great debate. In the era of megaton thermonukes, of what use are armies, navies, or conventional forces, industries, or manpower—or even will to fight? The war will be over in an afternoon. Planes and missiles and nuclear weapons are the decisive factors, so decisive that they have not only made obsolete the traditional surface forces but would threaten, if invoked, civilization and even life on earth. War itself has become obsolete: "The imminence of war is receding," said Mr. CANNON. "An age of nuclear stalemate is dawning."

What's wrong with this picture? Are nuclear weapons alone sufficient? Can we insure our security by a one-weapon, one-service strategy? Does the threat of massive retaliation deter war? Is there, in truth, a nuclear stalemate?

The capsuled answers to these questions are simple:

The picture drawn by Mr. CANNON is black and white and hence fallacious. Nuclear weapons alone are not sufficient. We cannot provide security solely by big bombers and bigger bombs. Massive retaliation postulates a threat that, it has been said, would be morally criminal and practically disastrous to implement. Or, as Dennis Healey, British Labor Member of Parliament, has put it: "No people whatever in the world are prepared to commit suicide unless they are threatened with murder and perhaps not even then." The threat of nuclear bombardment may deter world wars but it obviously has not deterred small wars. A nuclear stalemate exists only in the sense that the United States and Soviet Russia each possesses the power to devastate the other and neither is likely to utilize this capability so long as each maintains it.

The problem of United States—or world—security in the nuclear age is as complex as the technology that is supposed to be its servant. It is, in the first place, a political and psychological problem, the problem of the nature of man; it is only secondarily a military problem. As long as men want things other men have, as long as men quarrel, as long as they are aggressive, just so long will there be conflict in all the broad interpretations of the word.

It is true that the acquisition of tremendous power by nation-states and the technological revolution in war pose such frightful threats to civilization that most men and all rational rulers shrink from general war, draw back from the prospect of nuclear conflict. The fear of devastating retaliation tends to impose caution upon the war lords and to force them to calculate most carefully the risks of any aggressive course. It restrains the enemy, limits his actions. For this reason the capability of massive retaliation is one of the basic essentials in any security policy—indeed, in our national and foreign policy. We are trying to deter war, to avert it, and, at the same time, protect the vital interests of the Nation.

But the equation of deterrence is far more complex than that of bombs plus bombers equals security. Deterrence is the sum of all its parts. The capability of retaliating massively against any aggressor—the capability which is essential to stay his hand against us—means the capability of surviving an enemy's first blow, of preserving enough of our retaliatory power to devastate the enemy. It means not only bombs and bombers, but also bases—dozens of them, at home and overseas, dispersed and hidden. It means bases at sea—the submarines, missile ships, carriers, and seaplanes of the fleet—mobile bases which can be sunk, of course, but threatening to the enemy because of their mobility; bases which act as magnets for enemy attack, thus dispersing and weakening his threat to our cities and fixed installations. It means bases in the air—great planes with seven-league boots, like the future nuclear-powered bomber, capable of days of flight, mother ships for guided missiles. These, too, can be easily destroyed, once found, but they are elusive targets; they, too, distract and disperse an enemy's offensive effort, and they, too, help to insure that no enemy, once he draws the sword, can escape unscathed.

Deterrence also means the smaller bases of the tactical plane—the fighter bomber and light bomber; it means missile bases in this country and overseas. And it means a multiplicity of weapons systems; the more ways there are to attack the enemy, the less certain he is that he can defend himself.

Deterrence also means defense—point and area defense of our military installations and bases and cities, defense by manned interceptor aircraft, by Air Force Falcon and Army Nike guided missiles, by electronic warning lines, by the Navy's radar picket lines of planes, surface ships, submarines, blimps. It means passive defense—civil defense—arrangements for the protection of our cities and people which would insure survival of at least some of our civilization.

All this and much more is deterrence and deterrence is no stronger than its weakest link. Deterrence, therefore, is quite obviously more than bombs and bombers, more than Air Force, more than the Army or Navy; it is a posture of strength, the Nation in arms, and its will to take action if attacked.

This kind of deterrence might deter, as it has so far helped to deter, large-scale overt attacks by Soviet Russia itself. But it also deters us. It obviously has political and military limitations and liabilities The power of nuclear deterrence and the threat of nuclear retaliation are so great that they can only be invoked for most serious cause—actual evidence of large-scale overt military attack upon our vital interests. Even then any rational ruler would hesitate to unleash the whirlwind unless the enemy attack took the form of nuclear assault.

Suppose, for instance, that the Soviet armies were to move across the East German frontier tomorrow, but with conventional forces only and without utilizing nuclear weapons in any way. We are supposedly committed by our announced NATO doctrine and by our strategic concepts to use nuclear weapons—both small tactical ones and huge thermonuclear bombs—if Soviet forces attack in Europe, or if they attack United States forces anywhere. Yet fear of the consequences of such an action—the terrible chain reaction that it would bring—might well make any President hesitate.

This is the first great limitation of nuclear deterrence. If the chips were down would we actually use it, unless the enemy used nuclear weapons first? An overdependence upon it obviously hampers our diplomacy, reducing its flexibility, and concentrates too much of our military effort upon a strate that, because of fear of consequences, would be most reluctant to implement.

But there is another great limitation. T nuclear bomb obviously has not deter small wars, border conflicts, peripheral strug gles, or even major wars like Korea and Indo china. It did not stop the Anglo-Frenc attack upon Port Said. Today, several smal wars are raging—civil strife in Algeria, Indo nesia, Malaya, and the Arabian peninsula and the A-bomb has no part whatsoeve military or political, in these conflicts.

Suppose that tomorrow a Hungarian-typ revolt started in Poland. The chain rea tion might spread to East Germany, an brutal Russian repression might cause inci dents along the Iron Curtain. Would th A-bomb help or hinder?

The terrible prospect of atomic disast would certainly tend—as it did in Hungary— to stay our hand. Border incidents cann be handled by A-bombs, only by men on foo with guns in their hands and artillery behin them. And nuclear weapons cannot enforc freedom, except at the price of Armageddon

There could be, of course, special case where nuclear weapons of limited powe could be used in limited ways against limite targets for limited ends without too muc risk of spreading a war or of making a bi war out of a little one.

In the defense of Formosa, for instanc nuclear shells or warheads on guided mis siles might be used defensively against at tacking planes or an invading amphibiou force. But if United States planes droppe nuclear weapons on Chinese mainland air fields, the war might well balloon to un manageable dimensions.

This, indeed, is the greatest danger w fact. So long as we keep our guard and re tain a massive retaliatory capacity, no wa of tomorrow is likely to start with a planne and deliberate nuclear blitz, unless a megalo maniac comes to political power. The dan gers of war are the dangers of miscalculatio or accident. And the atomic danger wi come not as war starts, but when one sid or the other starts losing. Then only lim ited aims—a way out for the enemy, limite targets, limited weapons, and fortunate geo graphical conditions—might avoid holocaust

Small wars, therefore—the most likely kin of war we face—cannot be deterred or even won by nuclear weapons alone. If we plac all our dependence upon such weapons, w may be forced, when faced with limite aggression, to choose, as Robert Endicot Osgood puts it in his book, Limited War, be tween "total war, nonresistance, or ineffec tive resistance." The alternatives obviously are unacceptable—either defeat by Commu nist small-scale aggression or the invocation of all-out war.

What kind of military program, then, d we need? What kind of forces are essentia for security?

They must be forces capable of meeting the various kinds of threats we face. The must be able to deliver a big punch or a gentle tap. They must be able to make the punishment fit the crime, to adapt the mili tary force required to the strength and skil of the enemy aggression, to the terrain and climate, to the geographical limitations, to the objectives desired. They must include forces capable of handling a military police man's job in a street riot, a fire brigade tailored for quick transportation to any conflagration in the world, and a hard-slug ging element with nuclear punch ready to implement the ultimate sanction. The de mand for variety and versatility in the forces needed has not been lessened by the advent of the nuclear-missile age; it has been in creased. We have not dispensed with the doughboy with his feet in the mud and the rifle in his hand; we have merely comple mented him with new elements of military force.

It is interesting and noteworthy that in the two most recent crises it was neither nuclear weapons nor airpower that played a major role, but forces of all arms and services teamed and harnessed to a common goal. During the Suez crisis, British surface ships took British fighting men and many British planes to the scene of battle where marines and paratroopers landed in the now familiar, and still useful, manner of World War II. And in the Jordanian crisis, it was the United States 6th Fleet which was the instrument of diplomacy. This a fleet with nuclear bombs and guided missiles, but it is also a fleet with 1,800 marines, combat loaded and ready for business. It is, in other words, a rounded and balanced implement of power, tailored to apply graduated deterrence to troublemakers.

More and more, as the nuclear age matures, we must grow accustomed to living in the shadow of the mushroom cloud. But more and more it seems probable that the great atom carriers—the strategic bombers of SAC, the intercontinental ballistic missiles of tomorrow—will assume the role of navies of a bygone age, the role of fleet in being. They must be built, nurtured, maintained, and replaced as threat, as symbol, as deterrent. The fleet in being could checkmate an enemy's fleet, prevent invasion, and restrict an enemy's strategy, but it was no defense against submarine warfare or surface raiders.

We face a skillful enemy who believes that the ends justify any means and acts accordingly. His strategy is a composite of political, economic, psychological, and military factors. Some of his important victories have been won without presenting us with a casus belli. The most dangerous threats today—in the Middle East, in southeast Asia, in Indonesia, and in Africa—postulate not the onslaught of atoms, but the creeping communism of political, psychological, and economic infiltration and the subversion of fractionalization and civil war.

To meet these threats, more than military power is needed. Any task force for security must include psychological elements to sway men's minds, economic elements to develop resources and build a better life, political elements to couple freedom and responsibility—and military elements to safeguard against conquest. It must include covert as well as overt defenses, imaginative strategies, and new ideas.

Thus security in the atomic age is not as simple as some Congressmen, eager for economy, believe. The formula transcends military force. But it must include military power in all its varieties, from lethal punch to tiny tap. We must have a flexible strategy, freedom of choice, alternatives of action. If we become frozen or fixed to one weapon or service or to one concept—to a denial (100 percent) defense, to massive retaliation, to ballistic missiles—we may achieve economy, but at the expense of liberty and life itself.

To the Veterans of World War I of the U. S. A.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. LANE. Mr. Speaker, the Veterans of World War I of the U. S. A. is an organization that is only 8 years old. Its membership has passed the 100,000 mark. It is the fastest growing group of ex-servicemen in the world.

At last, the men and women who served their country in 1917–18 have an identity of their own, and the way they are joining the new organization that is reserved exclusively for them, is reminiscent of the way they flocked to the colors—40 years ago.

The enthusiasm and the cooperation of these old soldiers is good to see.

Too long have they remained in the background, so busy helping others that they gave no thought to themselves.

Now, their legitimate pride is demanding recognition. They have an objective. And they are uniting in comradeship to achieve their goals.

They were the first battle group in our history to defend the principles of freedom in the world arena.

As such, they are entitled to the honors, respect, and rights of those who served in this conflict, as distinct from the veterans who served in other wars.

In tribute to them, under unanimous consent, I include in the CONGRESSIONAL RECORD the following editorial entitled "Veterans of 1917–18" from a recent issue of the National Tribune:

VETERANS OF 1917–18

"Give me some men who are stouthearted men
Who will fight for the right they adore.
Start me with ten who are stouthearted men
And I'll soon give you ten thousand more."

Veterans of World War I of the U. S. A., as you meet in Minneapolis, Minn., for your national convention, September 8–11, you might well adopt the above lines taken from an oldtime popular operetta as your theme song through the coming year and through the years to come.

For, truly, your group has proven that you are indeed stouthearted men as you have striven through the years to become a recognized force in the ranks of American veterans.

Led, this year, by Harlan W. Barnes, your national commander, you have proven your right to the designation "stouthearted men." You have met with disappointments in seeking the objectives for which you were organized. Undaunted, you have recognized the fact that, to the courageous, disappointments are but steppingstones to ultimate success.

The tens of thousands in the song have been secured. Figuratively, some short years ago, you started with 10 men and today you number your membership at nearly 100,000, and as more and more veterans of World War I realize what you are striving for, your membership will grow until it can take its place proudly in the ranks of the greatest veteran groups.

The men who are joining your ranks are also members of other veteran organizations but, little by little, they are beginning to realize that here is an organization which is distinctive—which has but one objective—an adequate recompense in time of need for the men who fought to save the world for democracy.

These men who are joining your ranks are not giving up their affiliation with the older groups to which they belong. They have no desire to sever the ties of comradeship which membership in those organizations betokens.

No, but they have come to the conclusion that membership in this new organization means something to them personally—something which they seek and need—something which they believe as their right as fighting members of the Armed Forces of the United States in time of war, when their country called them.

In the realm of veterans' organizations you occupy an almost unique place. The only other veteran group which can lay claim to a distinction as men apart is the group which served in the Spanish-American War—those who fought from 1898–1902. Just as no veteran of later wars can ever become a member of the United Spanish War Veterans, no man who served his country, no matter with what distinction—can belong to the Veterans of World War I of the U. S. A. if he did not serve during the First World War.

This is something to bear in mind as you begin your next year of existence when seeking to recruit members for your organization.

What have the Veterans of World War I of the U. S. A. accomplished since its puny beginnings some 8 years ago? What, indeed? In that short space of time you have welded together a cohesive group of men who believe in your principles and who are now devoted to the cause which you have espoused.

They know that here is a group of veterans which has but one thought—to secure justice for war veterans—a justice which has been acknowledged down through the years since April 19, 1776, when the embattled farmers stood at the bridge near Concord to fight for the right they adored.

At your meeting in Minneapolis you will have many things to consider—your new officers for the coming year—many subjects of national import, and, above all, your overall objectives, which are the reasons for your existence. Never lose sight of that. Pensions without an income limitation and a charter for your organization are what you are fighting for and you should never cease to fight for them until you win.

Bear in mind in your endeavors that, up to 2½ million men, there is no limit to your scope. The size of your organization depends on the zeal of your present membership and the devotion of your leaders. If every member of your group goes out and sells your cause to eligible members the results would be surprising, not only to you but to the men who make our laws when you come before them to plead your cause.

There is an old French proverb, to wit: "Nothing is impossible to the valiant heart." Be valiant in your fight for what you believe in and you cannot lose.

We wish you well at your national meeting. We feel sure that you will come away from it as fully determined as you have been in the past and instilled with the knowledge that stouthearted men cannot fail. Good luck to you.

PROCEEDINGS OF THE HOUSE SUBSEQUENT TO ADJOURNMENT

The SPEAKER, pursuant to the provisions of Public Law 85–262, 85th Congress, and the order of the House of August 30, 1957, empowering him to appoint commissions, boards, and committees authorized by law or by the House, did, on September 3, 1957, appoint as members of the Lincoln Sesquicentennial Commission the following members on the part of the House to serve with himself: Mr. CHELF, of Kentucky; Mr. DENTON, of Indiana; Mr. MACK of Illinois; Mr. ALLEN of Illinois; Mr. ROBSION of Kentucky; and Mr. NIMTZ, of Indiana.

BILLS AND JOINT RESOLUTIONS ENROLLED

Mr. BURLESON, from the Committee on House Administration, reported that on August 31, 1957, that committee had examined and found truly enrolled bills and joint resolutions of the House of the following titles:

H. R. 580. An act to authorize the exchange of certain land in the State of Missouri;

H. R. 1315. An act for the relief of Mr. and Mrs. Charles H. Page;

H. R. 1411. An act for the relief of George H. Meyer Sons; Brauer & Co.; Joseph McSweeney & Sons, Inc.; C. L. Tomlinson, Jr.; and Richmond Livestock Co., Inc.;

H. R. 1419. An act for the relief of Mrs. Hannah Mae Powell;

H. R. 1474. An act for the relief of Mrs. Jennie Maurello;

H. R. 1502. An act for the relief of Homer Cazamias;

H. R. 1677. An act for the relief of Gilbert B. Mar;

H. R. 1883. An act for the relief of Benedict M. Kordus;

H. R. 2486. An act to authorize Commodity Credit Corporation to grant relief with respect to claims arising out of deliveries of eligible surplus feed grains on ineligible dates in connection with purchase orders under its emergency feed program;

H. R. 4174. An act for the relief of Filomena and Emil Ferrara;

H. R. 4335. An act for the relief of Ramon Tavarez;

H. R. 4351. An act for the relief of G. H. Litts;

H. R. 5719. An act for the relief of Clara M. Briggs;

H. R. 7014. An act for the relief of Madame Henriette Buaillon, and Stanley James Carpenter;

H. R. 7096. An act to amend paragraph 1684 of the Tariff Act of 1930 with respect to istle or Tampico fiber, to admit free of duty a beta-ray spectrometer for use at Stanford University, Stanford, Calif., and for other purposes;

H. R. 7900. An act to permit the Secretary of Agriculture to sell to individuals land in Ottawa County, Mich., which was acquired pursuant to the provisions of title III of the Bankhead-Jones Farm Tenant Act;

H. R. 7964. An act to remove the limitation on the use of certain real property heretofore conveyed to the city of Austin, Tex., by the United States;

H. R. 7972. An act to provide for the conveyance to the city of Warner Robins, Ga., of certain lands and any improvements located thereon in such city;

H. R. 8374. An act for the relief of Virginia Ray Potts;

H. R. 8576. An act to authorize the conveyance of certain lands within the Old Hickory lock and dam project, Cumberland River, Tenn., to Middle Tennessee Council, Inc., Boy Scouts of America, for recreation and camping purposes;

H. R. 9280. An act to facilitate the conduct of fishing operations in the Territory of Alaska, to promote the conservation of fishery resources, hereof, and for other purposes; and

H. R. 6760. An act to grant to the Territory f Alaska title to certain lands beneath tidal aters, and for other purposes;

H. R. 7014. An act for the relief of Mme. enriette Buaillon and Stanley James Carenter;

H. R. 7536. An act to amend the act of anuary 12, 1951, as amended, to continue effect the provisions of title II of the irst War Powers Act, 1941;

H. R. 7654. An act for the relief of Richard . Taylor and Lydia Taylor;

H. R. 7900. An act to permit the Secretary f Agriculture to sell to individuals land in ttawa County, Mich., which was acquired ursuant to the provisions of title III of the ankhead-Jones Farm Tenant Act;

H. R. 7964. An act to remove the limitaion on the use of certain real property hereofore conveyed to the city of Austin, Tex., y the United States;

H. R. 8576. An act to authorize the conveyance of certain lands within the Old Hickory ock and dam project, Cumberland River, enn., to Middle Tennessee Council, Inc., Boy couts of America, for recreation and campng purposes;

H. R. 8928. An act to amend the act of une 9, 1880, entitled "An act to grant to the orporate authorities of the city of Council luffs, in the State of Iowa, for public uses, certain lake or bayou situated near said ity";

H. R. 9282. An act to provide additional ffice space in home districts of Congressmen, elegates, and Resident Commissioners; and

H. J. Res. 253. Joint resolution to establish commission to commemorate the 100th anniversary of the Civil War, and for other urposes.

On September 9, 1957:

H. R. 6127. An act to provide means of urther securing and protecting the civil ights of persons within the jurisdiction of he United States.

HOUSE BILLS DISAPPROVED SUBSEQUENT TO SINE DIE ADJOURNMENT

The message further announced that the President had disapproved the following bills of the House; his reasons for such actions are as follows:

On September 2, 1957:

VETO OF H. R. 2224

I am withholding approval of H. R. 2224, directing the payment of $581,721.91 to the State of Washington as full satisfaction of a claim against the United States for the cost of replacing and relocating a 28-mile portion of secondary Highway 11–A which was condemned and taken by the United States in 1943 as part of the Hanford atomic energy project.

The claim involved in the bill has been thoroughly litigated and its payment denied by judicial determination. The statements in House Report No. 401, 85th Congress, on H. R. 2224, concerning the basis of the court decisions appear to be in error. Both the United States District Court for the Eastern District of Washington and the United States Court of Appeals for the Ninth Circuit found that there was in 1943 no necessity for replacing the road since there were adequate substitutes available. They held that the State was therefore not entitled to compensation. Certiorari was denied.

No equitable reason for overruling the decision of the courts has been advanced. This is not an instance in which a strict application of the law of eminent domain renders a claim noncompensable or in which denial of the claim will cause undue hardship and suffering to the condemnee because of peculiar circumstances. The doctrine requiring payment only when a substitute highway is necessary is based on the consideration that there is no money loss when it is unnecessary to replace the road. As a matter of fact, there is a saving of expense to the State in that the burden of maintaining a road has been removed. Enactment of this bill would encourage the reopening of other similar claims which the courts have denied.

The State is now constructing a new road across a portion of the Hanford project. The findings of the courts indicate that any need which this road may serve as a substitute for Highway 11–A must have been created by developments since 1943 and not by the Government's taking of a portion of Highway 11–A. Furthermore, the Atomic Energy Commission has contracted to give the State an easement over Commission-owned lands for such a highway. The Department of the Army has constructed 14 miles of this road to serve its own needs. While the State has reimbursed the Department for the extra expense involved in constructing the road to meet State specifications, the contribution of the Department has resulted in substantial savings to the State. No equitable reason has been established to justify further Federal contributions to the cost of this road.

On September 2, 1957:

VETO OF H. R. 4602

I am withholding approval of H. R. 4602, which would extend and expand the direct-loan program for housing for veterans in rural areas and small cities and towns.

The Veterans' Administration direct-loan program was established for the purpose of granting to veterans for whom guaranteed loans were not readily available an equal opportunity to receive the homeownership benefits of the Servicemen's Readjustment Act. The terms and conditions of these direct loans were intended to conform as closely as possible to the guaranteed loans. Since the direct-loan program was established, in 1950, approximately $700 million in funds have been disbursed.

In recent months a steadily expanding economy with continued strong demand for available investment funds has resulted in a general rise in the interest-rate structure. Because of the higher yields available on other forms of investment, the flow of investment funds into VA-guaranteed mortgages has been drastically reduced. To correct this situation, this administration strongly urged the Congress to increase the maximum interest rate on VA-guaranteed mortgages from 4½ to 5 percent. No action was taken on this recommendation and, as a result, eligible veterans are finding guaranteed mortgages almost impossible to obtain. It is still within the power of Congress, however, to stimulate the flow of private investment funds into VA-guaranteed mortgages by adjustment of the maximum interest rate.

What the proposed legislation seeks to do is to make substantial amounts of additional mortgage funds available by providing for direct Government loans at interest rates well below the current market. These funds are to be made available only to a limited number of veterans—namely, those in rural areas and small cities and towns. I cannot approve a program that has such a potential inflationary effect upon the economy or that is so discriminatory. There is no justifiable reason for making loans at interest rates below the current market available to some veterans and denying them to others.

Help to veterans in the field of housing can be met most effectively with programs available to all our citizens, veterans and nonveterans alike, through the coordinated activities of the Housing and Home Finance Agency. The recent liberalization of loan terms under the FHA mortgage-insurance program should make this program available to a far wider segment of the population, thus stimulating private home-building activity to meet the growing needs.

It is my considered judgment that the above-mentioned deficiencies of H. R. 4602 are of a magnitude and importance which preclude my approval of the bill.

On September 7, 1957:

VETO OF H. R. 1315

I have withheld my approval from H. R. 1315, a bill for the relief of Mr. and Mrs. Charles H. Page.

H. R. 1315 would pay the sum of $14,430.88 to Mr. and Mrs. Charles H. Page in connection with the wrongful death of their son who was a member of the Armed Forces.

On the night of July 4, 1954, the decedent, Pfc. Charles H. Page, Jr., was a member of a motorized patrol at Killeen Army Base, Killeen, Tex. As the patrol approached a classified area after dark it was properly halted and challenged by a posted walking sentry. The decedent identified the patrol, whereupon the sentry requested that the dome light inside the vehicle be turned on. The patrol had twice passed the same sentry earlier that evening after the fall of darkness and had been allowed to proceed after the sentry had been informed that the light did not work. But, this time, on again being informed that the light did not work, the sentry directed the decedent to dismount and be recognized. The latter refused, calling out to inquire if the sentry did not recognize his voice and, at the same time, directing the driver of the vehicle to proceed. The

sentry ordered the vehicle to halt and then fired, fatally wounding the decedent.

The decedent was survived by his parents who are the beneficiaries of this bill. The parents were paid a death gratuity of $569.22 and are currently in receipt of monthly benefits from the decedent's free $10,000 indemnity. In addition, upon a showing of dependency, they could qualify for regular monthly payments under the Social Security Act and under laws administered by the Veterans' Administration. The award proposed in H. R. 1315 is additive to the foregoing benefits.

I cannot see my way clear to approve this bill. The Federal Government has provided a costly, comprehensive, and orderly system of benefits for survivors of members of the Armed Forces who die in service. As long as the death is service connected, these benefits are payable regardless of the cause, whether it be in combat or as the result of a tragic incident like the present one. As I have previously noted, the parents here have already received, and presently are continuing to receive, substantial benefits on account of their son's death. On a showing of dependency they could qualify for additional benefits.

H. R. 1315 would add to the benefits, to which the parents have heretofore or may hereafter become entitled, a further award in the amount of $14,430.88. To make such an award in this case would establish a most undesirable precedent with respect to other cases involving service-connected deaths. If this bill were approved, it would be difficult to deny similar awards to the survivors of other servicemen who die under a wide variety of circumstances. To follow such a course would, in my opinion, jeopardize the entire structure of benefits which has been built up for the protection of servicemen's survivors.

I am constrained, therefore, to withhold my approval from H. R. 1315.

On September 7, 1957:

VETO OF H. R. 1419

I have withheld my approval of H. R. 1419 entitled "An act for the relief of Mrs. Hannah Mae Powell."

The bill would authorize and direct the Secretary of the Treasury to pay, out of any money in the Treasury not otherwise appropriated, to Mrs. Hannah Mae Powell, 1950 East Lehigh Avenue, Philadelphia, Pa., the sum of $11,197.95 in full settlement of all claims of said Mrs. Hannah Mae Powell for refund of excise taxes and other expenses sustained as a result of the actions of the collector of internal revenue of Philadelphia, Pa., in the years 1937, 1941, and 1942.

An examination by the Treasury Department of the facts in this case discloses that Mrs. Hannah Mae Powell has recovered by court action all taxes assessed and collected from her which were in dispute—plus interest—except $464.76 which was barred by the expiration of the statutory period of limitations. These taxes which were in dispute were manufacturers' excise taxes.

After a recovery of the taxes, Mrs. Hannah Mae Powell instituted a damage suit against the former collector, both individually and as collector of internal revenue of Philadelphia, Pa. The district court rendered a judgment in favor of the former collector and denied damages to Mrs. Hannah Mae Powell. This judgment was later upheld by the court of appeals.

The bill, therefore, would give to Mrs. Hannah Mae Powell the sum of $11,197.95 as damages which were denied to her by the Federal district court and the court of appeals. The court of appeals in affirming the decision of the lower court stated (*Powell* v. *Rothensies* (C. A. 3d, 1950), 183 F. 2d 774, 775):

> The evidence offered by the plaintiff herself conclusively establishes that at the time of the levy and seizure in question there were outstanding in the hands of the defendant 2 unpaid assessments against the plaintiff for manufacturer's excise taxes and that the warrant for distraint under which the levy and seizure were made was expressly based upon these 2 outstanding assessments, which with interest and penalty then amounted to $4,716.44. Under these circumstances it was within the scope of the defendant's ministerial duty to make the levy and collection here in controversy and he cannot be held answerable in damages for so doing. The trial judge, therefore, rightly directed a verdict for the defendant.

It would thus appear that the damages sustained by Mrs. Powell resulted from her failure to satisfy two unpaid assessments and that, in collecting the unpaid assessments, the former collector of internal revenue was acting within the scope of his ministerial duties.

H. R. 1419 would have a discriminatory effect, as it would afford to Mrs. Powell relief which had been denied her by the Federal Courts and which would be denied all others in similar circumstances who do not have the benefit of special legislation. Furthermore, H. R. 1419 would create an undesirable precedent by allowing damages to be collected from the United States under these circumstances.

Under the circumstances, therefore, I am constrained to withhold my approval of the bill.

On September 7, 1957:

VETO OF H. R. 1591

I am withholding approval of H. R. 1591, a bill for the relief of the Pacific Customs Brokerage Co., of Detroit, Mich.

The proposed legislation would provide for the payment of $29,502.55 to the beneficiary in full settlement of all claims against the United States arising out of an erroneous classification of baler twine which was imported at Detroit, Mich., between May 5, 1950, and February 16, 1951. The collector of customs liquidated these entries at the rate of 15 percent ad valorem, the rate applicable under paragraph 1005 (b) of the Tariff Act of 1930, as modified, in accordance with established and uniform practice for merchandise of this type. The importer failed to protest this ruling within 60 days after liquidation of the entry.

About a year after the entries had been liquidated, the Customs Court, in connection with the importation made by another importer, decided that similar merchandise was entitled to entry free of duty under paragraph 1622 of the Tariff Act. This decision was later affirmed by the Court of Customs and Patent Appeals. This interpretation of the law had no effect on the classification of the merchandise in H. R. 1591, since the duty determination had been made and had become final and binding.

The Congress has established a regular procedure for importers to contest the rate of duty and obtain a judicial determination by the Customs Court of the correct rate. This judicial review is obtained by filing a protest to the collector's decision within 60 days after it is made. No protest was filed by the Pacific Customs Brokerage Co. The Congress, in section 514 of the Tariff Act, has provided that if such a protest is not made within 60 days, the decision of the collector is final and conclusive upon the importer and all other persons, including the United States. This provision, like other statutes of limitations, is desirable to permit the final disposition of cases in an orderly manner.

The importer had a legal means to contest the classification decision but failed to do so within the terms of the statute. To grant relief in this situation would be inequitable and would discriminate against the hundreds of other importers who have paid duty based upon a construction of the law which the courts have subsequently decided would be erroneous.

For these reasons, I return the bill without my approval.

On September 7, 1957:

VETO OF H. R. 1733

I am withholding my approval of H. R. 1733, for the relief of Philip Cooperman, Aron Shriro, and Samuel Stackman.

The bill would provide that, for the purpose of determining the individual liability for income taxes for the taxable year 1951 of Philip Cooperman, Aron Shriro, and Samuel Stackman, the elections of said Philip Cooperman, Aron Shriro, and Samuel Stackman, sole stockholders of Queens Syndicate, Inc., which was liquidated pursuant to a plan of complete liquidation adopted on the first day of September 1951, to have the benefits of section 112 (b) (7) (A) of the Internal Revenue Code of 1939 would be considered to have been filed within 30 days after the date of adoption of such plan. The bill states that the benefits of section 112 (b) (7) were denied to the stockholders because the mailing of the elections was delayed, without negligence or fault on the part of the stockholders, until after the 30th day following the adoption of the plan of complete liquidation.

Section 112 (b) (7) provides a special rule in the case of certain complete liquidations of domestic corporations occurring within 1 calendar month for the treatment of gain on the shares of stock owned by qualified electing stockholders. The effect of this section is to permit deferral of tax upon unrealized appreciation in the value of the property distributed in liquidation. An election to be governed by section 112 (b) (7) must be filed by the shareholder or by the liquidating corporation with the Commis-

ner of Internal Revenue on or before midnight of the 30th day after adoption the plan of liquidation. Essentially, R. 1733 would waive this requirement the named taxpayers.

The records of the Treasury Department disclose that it was not involved in e untimely filing by these taxpayers the elections. These records show at on September 1, 1951, Queens Syndite, Inc., adopted a plan of complete quidation. On November 18, 1951, elecns on Form 964, signed by the electing areholders, were received by the Office the District Director of Internal Revene, Brooklyn, N. Y. Accordingly, the ing of the elections was delayed for ore than 6 weeks after the 30-day peod prescribed by law for the filing of ch elections.

The granting of special relief in this se would constitute an unfair discrimiation against other taxpayers similarly uated and would create an undesirable recedent which might encourage other xpayers to seek relief in the same anner.

Under the circumstances, therefore, I m constrained to withhold my approval the bill.

On September 7, 1957:

VETO OF H. R. 2462 AND H. R. 2474

I am withholding approval of H. R. 462 and H. R. 2474, bills providing inreases in salary rates scheduled under he Classification Act of 1949, as amendd, and the Postal Field Service Comensation Act of 1955, as amended, and roviding salary increases for other ederal employees.

H. R. 2462 would increase salaries, nder the Classification Act, by about 1 percent, and would make the increases pplicable to all except the most responible jobs. H. R. 2474 would increase alaries in the Postal Field Service by 546. The increases would range downard from about 19 percent for the less esponsible jobs to about 3.5 percent for he most responsible jobs.

I cannot approve these bills because, irst, they are not justified by considerations of equity; second, they would materially accentuate existing disparities in he pay scales; third, they would increase otal Federal expenditures so as to make arge supplemental appropriations necessary; fourth, they would increase the ate of Federal expenditure so as to reuire in all probability an increase in the tatutory debt limit; and fifth, they ould contribute unnecessarily to existng and incipient inflationary pressures n our national economy.

First. The claims that the increases rovided for in these bills are justified y increases in the cost of living have not een sustained. From July of 1951, the ffective date of the 1951 pay increases, o March of 1955, the effective date of he 1955 pay increases, the cost of livng increased by slightly more than percent. Yet the 1955 pay increases mounted to an average of about 8 percent for postal employees and about 7.5 ercent for classified employees. Since March of 1955 the cost of living has gone p a little over 5½ percent, or a total ncrease since July of 1951 of about 8.9 percent. Against this increase of 8.9 percent in the cost of living, approval of these bills would result in there having been granted since 1951 to postal employees increases in pay averaging about 20.6 percent and to classified employees increases in pay averaging about 18.5 percent. During this same period, fringe benefits have grown substantially—low-cost life insurance, unemployment compensation, liberalized retirement, and survivor benefits. By no standards do the equities of the situation justify the increases provided for in these bills.

Second. Federal employees have the right to expect fair and equitable wage treatment in relation to each other and in relation to employees in private business. These bills disregard that fundamental principle. Both would widen existing pay discrepancies within the Federal establishment and aggravate existing inequities, and it has not been demonstrated that generally the present conditions of Federal employment are out of line with those of the millions of other citizens working in private industry.

Third, in the absence of any compelling justification on the merits, great weight must be given to the serious fiscal and economic implications of these bills. The bills would increase annual expenditures by about $850 million for increased base pay and increased benefits computed on base pay. To meet these increased costs, either drastic curtailment of postal services and programs covered by the Classification Act, or large supplemental appropriations would be necessary, notwithstanding our firm efforts to operate these Federal programs within existing resources.

Fourth, the bills, by increasing the rate of Federal expenditures in relation to receipts, would press the public debt upward to a point so dangerously close to the statutory debt limit that an increase in the limit would appear unavoidable. The undesirable economic consequences of such action are apparent.

Fifth, these increased expenditures and the threat of increased public debt which they pose would have the effect of adding to the upward pressures on the prices of things Americans buy. I am firmly convinced that our people want orderly economic growth with reasonable price stability. The attainment of this goal lays heavy obligations upon us all. Of the Federal Government it demands fiscal integrity, however hard the choices such a course may impose. There can be no doubt, moreover, that the health of our economy and the defense of the dollar require economic statesmanship of employers and workers, public and private alike, in determining how much we as a nation pay ourselves for the work we do. Government cannot in good conscience ask private business and labor leadership to negotiate wage adjustments with full regard to the whole Nation's interest in price stability while at the same time approving the enactment of these wholesale salary-increase bills.

My decision to withhold approval of these bills is made with firm belief that the Government's salary position must support recruitment and retention of able employees in the thousands of different occupations essential to our Federal operations. An inquiry into the need for adjustments in the structure of executive branch pay systems has been undertaken at my direction. In the event this inquiry demonstrates the need for logical, fair, and discriminating adjustment, recommendations for appropriate action will be made early in the next session of the Congress.

On September 7, 1957:

VETO OF H. R. 2904

I have withheld my approval from H. R. 2904, for the relief of the Knox Corp., of Thomson, Ga., for the reason that it provides for a return by the Government of fees to a private corporation which had been properly paid pursuant to a valid contract. In this case, there were fees of $7,809 paid by the Knox Corp. in connection with commitments by the Federal National Mortgage Association to purchase mortgages on housing to be constructed in the future. The housing was not constructed. However, the Government was not responsible in any way for the failure to construct such housing. Accordingly, the commitments were terminated and the commitment fees were retained by the Federal National Mortgage Association. This action was in accordance with the express terms of the contract and with established procedure. There is no proper basis upon which an exception can be made in this case. Approval of this special relief bill would establish a highly undesirable precedent and result in unwarranted costs to the Government.

MESSAGE FROM THE SENATE—APPROVAL OF BILLS AND JOINT RESOLUTIONS

Pursuant to a special order agreed to on August 30, 1957, the Clerk of the House received from the Secretary of the Senate a message informing the House that, on the following dates, the President had approved and signed bills and joint resolutions of the Senate of the following titles:

On August 28, 1957:

S. 364. An act for the relief of the village of Wauneta, Nebr.;

S. 959. An act to amend the Agricultural Adjustment Act of 1938, as amended, to exempt certain wheat producers from liability under the act where all the wheat crop is fed or used for seed or food on the farm, and for other purposes;

S. 999. An act authorizing the Secretary of the Interior to convey certain land to the State of North Dakota for the use and benefit of the North Dakota State School of Science;

S. 1631. An act to amend certain sections of title 13 of the United States Code, entitled "Census"; and

S. 1866. An act to amend the act entitled "An act to require the inspection and certification of certain vessels carrying passengers," approved May 10, 1956, in order to provide adequate time for the formulation and consideration of rules and regulations to be prescribed under such act.

On August 29, 1957:

S. 336. An act for the relief of Angela Ferrini;

S. 465. An act for the relief of Maria Concetta Di Turi;

S. 976. An act for the relief of Charles A. Sidawi;

S. 1685. An act for the relief of Sic Gun Chau (Tse) and Hing Man Chau;

S. 1736. An act for the relief of Rosa Sigl; and

S. J. Res. 96. Joint resolution to authorize establishment of the U. S. S. *Enterprise* (CV–6) in the Nation's Capital as a memorial museum.

On August 30, 1957:

S. 397. An act for the relief of William Woeras;

S. 398. An act for the relief of Benjamin Wachtfogel;

S. 441. An act for the relief of Jose Ramirez-Moreno;

S. 463. An act for the relief of Pedro Ampo;

S. 485. An act for the relief of Luigi Lino Turel;

S. 499. An act for the relief of Daniela Renata Patricia Zei;

S. 562. An act for the relief of Hideko Takiguchi Pulaski;

S. 567. An act for the relief of Vida Djenich;

S. 660. An act for the relief of Ursula Rosa Pazdro;

S. 662. An act for the relief of Howard I. Buchbinder;

S. 796. An act for the relief of Zacharoula Papoulia Matsa;

S. 1306. An act for the relief of Carmen Jeanne Launois Johnson;

S. 1387. An act for the relief of Rebecca Jean Lundy (Helen Choy);

S. 1496. An act for the relief of Nicoleta P. Pantelakis;

S. 1574. An act to provide for the disposal of certain Federal property in the Coulee Dam and Grand Coulee areas, to provide assistance in the establishment of a municipality incorporated under the laws of Washington, and for other purposes;

S. 1767. An act for the relief of Eileen Sheila Dhanda;

S. 1783. An act for the relief of Randolph Stephan Walker;

S. 1804. An act for the relief of Marjeta Winkle Brown;

S. 1848. An act for the relief of Michelle Patricia Hill (Patricia Adachi);

S. 1896. An act for the relief of Maria West;

S. 1902. An act for the relief of Belda Roidriquez Ternoir;

S. 2165. An act for the relief of Gertrud Mezger;

S. 2431. An act granting the consent of Congress to the Klamath River Basin Compact between the States of California and Oregon, and for related purposes; and

S. 2460. An act to authorize the transfer of certain housing projects to the city of Decatur, Ill., or to the Decatur Housing Authority.

On August 31, 1957:

S. 268. An act to provide that the United States shall return to the former owners certain mineral interests in lands acquired for the Arkabutla, Sardis, Enid, and Grenada Reservoirs, Miss.;

S. 939. An act to amend section 22 of the Interstate Commerce Act, as amended;

S. 1290. An act for the relief of Lee-Ana Roberts;

S. 1293. An act for the relief of Ethan Thu (Eton) Yellin;

S. 1306. An act for the relief of Pao-Wei Yung;

S. 1307. An act for the relief of Toribia Basterrechea (Arrola);

S. 1421. An act for the relief of Anais Luiz Darzins;

S. 1815. An act for the relief of Nicholas Dilles;

S. 1817. An act for the relief of John Panagiotou;

S. 1838. An act for the relief of Charles Douglas;

S. 1910. An act for the relief of Salvatore Salerno;

S. 1962. An act to authorize the Secretary of Agriculture to convey a certain tract of land owned by the United States to the Perkins Chapel Methodist Church, Bowie, Md.;

S. 2003. An act for the relief of Jozice Matana Koulis and Davorko Matana Koulis;

S. 2095. An act for the relief of Vaclav Uhlik, Marta Uhlik, Vaclav Uhlik, Jr., and Eva Uhlik; and

S. 2603. An act to amend the act entitled "An act making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes," approved June 3, 1896.

On September 2, 1957:

S. 524. An act for the relief of Robert F. Gross;

S. 1035. An act for the relief of Alice Eirl Schaer (Mi On Lee);

S. 1050. An act for the relief of Hrygory (Harry) Mydlak;

S. 1167. An act for the relief of John Nicholas Christodoulias;

S. 1335. An act for the relief of Sandra Ann Scott;

S. 1370. An act for the relief of Wanda Wawrzyczek;

S. 1482. An act to amend certain provisions of the Columbia Basin Project Act, and for other purposes;

S. 2063. An act for the relief of Guy H. Davant;

S. 2377. An act to amend chapter 223, title 18, United States Code, to provide for the production of statements and reports of witnesses;

S. 2438. An act to amend the District of Columbia Business Corporation Act; and

S. 2500. An act to make uniform the termination date for the use of official franks by former Members of Congress, and for other purposes.

On September 4, 1957:

S. 281. An act for the relief of Jaffa Kam;

S. 684. An act for the relief of Ilse Striegan Bacon;

S. 807. An act for the relief of Jackson School Township, Ind.;

S. 880. An act for the relief of Necmettin Cengiz;

S. 882. An act for the relief of Pauline Ethel Angus;

S. 1049. An act for the relief of Mrs. Ahsapet Gamityan;

S. 1153. An act for the relief of Zdenka Sneler;

S. 1175. An act for the relief of Helene Cordery Hall;

S. 1241. An act for the relief of Edw Martin Hinsberger;

S. 1271. An act for the relief of Daniel cide Charlebois;

S. 1321. An act for the relief of Ju Matsuoka Eckrich;

S. 1456. An act for the relief of Ref Guerrero-Monje;

S. 1467. An act for the relief of Ita Kasahara;

S. 1520. An act to amend an act enti "An act to provide for the disposal of erally owned property at obsolescent ca ized waterways, and for other purposes";

S. 1635. An act for the relief of M Talloura Boist;

S. 1636. An act for the relief of Del Cinco de Lopez;

S. 1645. An act to authorize the Secret of the Interior to grant easements in cert lands to the city of Las Vegas, Nev., for ro widening purposes;

S. 1791. An act to further amend the organization Act of 1949, as amended, so t such act will apply to reorganization pl transmitted to the Congress at any time fore June 1, 1959;

S. 1835. An act for the relief of M Domenica Ricci;

S. 1921. An act for the relief of M Goldet;

S. 1972. An act for the relief of Let Maria Arini;

S. 1996. An act to approve the contr negotiated with the Casper-Alcova Irrigati District, to authorize its execution, and other purposes;

S. 2028. An act for the relief of Sherwo Lloyd Pierce;

S. 2041. An act for the relief of Sala Wei bard;

S. 2204. An act for the relief of Marga E. Cullotv; and

S. J. Res. 18. Joint resolution to author and request the President to issue a proc mation in connection with the centenn of the birth of Theodore Roosevelt.

On September 7, 1957:

S. 1007. An act for the relief of Sgt. Dona D. Coleman;

S. 2080. An act relating to the computati of income for the purpose of payment death benefits to parents or pension for no service-connected disability or death certain cases;

S. 2229. An act to provide for Governme guaranty of private loans to certain air ca riers for purchase of modern aircraft an equipment, to foster the development an use of modern transport aircraft by su carriers, and for other purposes;

S. 2413. An act to clarify the authority the President to fill the judgeship for th district of South Dakota authorized by th act of February 10, 1954, and to repeal th prohibition contained in such act again filling the next vacancy occurring in th office of district judge for such district; an

S. 2434. An act to amend the act entitle "An act to provide books for the adu blind."

Appendix

Legislative Record of the 1st Session of the 85th Congress

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. McCORMACK. Mr. Speaker, the 1st session of the 85th Congress has been a successful one, and in the legislative history of our country it has been a historic one.

For the passage of the civil-rights bill—right to vote—is an event that will forever mark this Congress as one of historic significance. The importance of this event, the first time in over 80 years, is further emphasized by the fact that this bill was passed by a Democratic controlled Congress. And yet, only a few years ago, when the Republicans controlled the 83d Congress, with President Eisenhower then, as now, in the White House, such legislation was not even reported out of the Republican-controlled committees of either branch. In the language of the legislator, in the 83d Congress, civil-rights legislation was killed in committee.

In making my statement as majority leader on the accomplishments of the first session of this Congress, I could rest my case on the statement that I have made that the past session has been a successful one, and in the legislative history of our country, a historic one in the passage alone of this bill.

Another history-making event was the passage of the Middle East resolution. It is rare in our history that an entire Congress, never mind one of its sessions, is faced with two such historic events and handles them in a successful manner.

The importance of these two events from the angle of legislative history cannot be denied or minimized.

After his election last January, and on the opening day of the Congress, Speaker RAYBURN delivered to the Members of the House of Representatives a brief but expressive address in acknowledgment of his election as Speaker of the 85th Congress.

I quote a part of Speaker RAYBURN'S remarks because they are worth our reconsideration today—months later—as a standard for evaluating the work accomplished during those long months. The Speaker said, referring to Congress:

This is the highest theater that anyone plays in upon this earth today. I must refer again to the tremenedous and at times appalling responsibility that falls upon the shoulders of each and every one of us. We must so act in the days to come that we will merit the confidence and the faith not only of our own people but of the people of the whole world, because your country and mine has been challenged to take the leadership of the free world. If we do not with courage and judgment accept that leadership, then the world will be a place in which good men and women will be unhappy.

He concluded:

This is no time for acrimony. This is a time of dedication for every human being that lives within the confines of the United States of America. Therefore, I look forward to a session that will be fruitful, that will be serviceable not only to us but to the other people of the earth.

The Speaker's simple but practical statement of his test of the success of the newly assembled House of Representatives by implication makes of less importance many other tests which are being applied today as the session closes. The President, majority and minority Members of the Senate and House, authors of newspaper editorials and special columns, TV and radio commentators, and the representatives of numerous special interest groups and geographical areas, are expressing widely different views, largely because they have set up as basis for their judgments so many different criteria of successful congressional achievement. Some persons measure our work in terms of the number of Presidential recommendations we enacted into law or defeated. President Eisenhower himself during the closing days of the session expressed disappointment that more of his proposals had not been adopted, but others have judged that in the light of all surrounding circumstances Congress did rather well by the administration's program. The record shows that President Eisenhower received generous treatment, particularly with a large segment in a number of cases, a majority of his own party voting against him.

To try to summarize all these evaluations of the record of the 1st session of the 85th Congress presents a difficult task. During the past few days I have been reading a large sample of these analyses, ranging from the strongly partisan to the more objective, and I quote a part of an editorial in the New York Times which stated, in part:

The 1st session of the Democratic 85th Congress has left a record sure to frustrate all those analysts who demand verdicts of precision. No such clear-cut summation is possible on the facts. This session has rejected some of the President's proposals; but some presidential defeats, as, for example, in the death of the school-aid bill, were caused largely by members of his own party, and were compounded by his own occasional lack of enthusiastic leadership. The session has adopted some Presidential proposals intact; others it has adopted and then basically redesigned to suit Democratic purposes. * * * The political climate in general, indeed, has been good. There has been a total absence of irresponsible and merely punitive congressional investigatory action. The President and the Congress have moved together, each in decent regard for the rights and privileges of the great separate constitutional house which the other occupies.

On the last day of the session Senate Majority Leader JOHNSON said:

Mr. President, this session acted responsibly. This session acted courageously. This session acted constructively. We can leave it to the historians to determine the rank of this Congress in history. For the present I think it is sufficient to say it was a job well done. Individuals may have been disappointed. But the country was not disappointed, as was demonstrated in Wisconsin earlier this week. And when the adjournment bells ring, the record of this Democratic session I think will compare with any.

It is apparent that Speaker RAYBURN and Senate Majority Leader JOHNSON have, in substance, said the same thing. Speaker RAYBURN'S emphasis on the responsibility of the Congress for "a session that will be fruitful, that will be serviceable not only to us but to the other people of the earth," is matched by Senator JOHNSON'S emphatic statement that "This session acted responsibly—courageously—constructively." This is not merely a partisan defense of a record, but the statements of these two leaders represent the consensus of the views of objective-minded persons, in and out of Congress.

For myself, I subscribe wholeheartedly both to Speaker RAYBURN'S test of successful congressional action and to Senator JOHNSON'S conclusion that Congress has met this test in the session which has just ended.

President Eisenhower's expressed disappointment in the record of Congress is difficult to understand. It seems to be a personal and hasty reaction rather than a conclusion justified by the facts. Every President in modern times has had a list of measures which constituted the legislative program of his administration, and it is right and proper in our system of government that he should work to get every item enacted into law. But no President has ever achieved that aim—not even Presidents supported by large majorities of their own parties in both Houses of Congress. Probably their disappointment has been just as great as President Eisenhower's. But in most cases they have worked harder, more skillfully, and more consistently than he has done to get his program enacted, and their disappointment may have been tempered by the realization that at least

they had not failed by default. President Eisenhower, furthermore, appears to be rather naive in his belief that he could get immediate action on all of the recommendations he submitted during the first session of the present Congress, some of them highly controversial, and many minor in nature. Normally, the first session of a Congress starts out with a large program of its own and administration measures, and it takes about 3 months to organize and get started. Some of these receive final action during the first session, but always a very large number—many of which may have been passed by only one House or given hearings before committees—remain on the calendar for disposition in the second session. True to form, a very considerable number of administration measures was enacted in the past session, a few were defeated, and many remain to be acted on next year. If the President understood this, or were reasonably patient, he would direct his attention to getting congressional action on the remainder of his program, rather than complaining against Congress for not having disposed of his entire program during the first half of its normal working period. He might work to have more of the members of his own party support his recommendations. Furthermore, the President should realize that there is no particular reason to believe that his program of legislation is so perfectly prepared that agreement with it is inevitable. Most legislative proposals in their original form are extremely complex and their impact cannot be fully appreciated. Such matters as foreign aid, for example, require the joint consideration of the administration and the Congress, and the final legislative measure may be—and frequently is—a combination of the original views of these elements, plus modifications which develop during the process of consideration. A few of President Eisenhower's recommendations, after submission to such joint consideration, were defeated during the past session; some were enacted in almost their original form; others were amended before passage; others have yet to be given that thorough consideration which Congress is obliged to accord them if it is to be responsible to its obligations. President Eisenhower must realize and expect that his proposals to Congress—proposals of major importance because of their source—need thorough consideration and that the Congress is working with him, and not against him, in the effort to enact legislation which is in the best interests of all our people. If the Congress were to be merely a machine for processing into the form of statutes every recommendation from the President, we would not be the Congress of the United States as our duties are prescribed by the Constitution and as they are accepted to be under our form of government.

Particular interest has been attracted to the record of the present Congress because of the divided control in our Government. The record of the past session shows that instead of a stalemate resulting, that the Democratic-controlled Congress has cooperated with President Eisenhower in the most understanding and effective manner. An examination of rollcall votes shows that on many of his recommendations and budget estimates President Eisenhower received more support from the Democratic Members than from Republican Members.

This record of action for the national interests of our country, and for the best interests of our people will continue in the second session of this Congress, for the Democratic Party is not a party of blind opposition.

The policy of the Democratic Party is to constructively support, constructively propose, and when in opposition to a measure, to constructively oppose.

The Democratic Party, even at times when the opposition was playing partisan politics, has steadfastly adhered to bipartisan action.

In the world of today it is important that bipartisan action continue, and that understanding relationships between the two great political parties and the leaders thereof exist. For of paramount importance to all Americans is the United States of America and its national interest.

And in establishing bipartisanship and national unity so necessary to meet the problems of the present emergency, President Eisenhower must play his part. In attaining this important and necessary objective the President is a leading figure. The making of unwise or emotional statements by the President, particularly when they vary from the facts, such as his statement of being "keenly disappointed" with the record of the first session of this Congress, is not consistent with such leadership.

The reply of Speaker RAYBURN to that statement is not only pertinent, but expressive and justified. I quote the Speaker, "When I operate with a man I always like to know where he stands today and where he stands tomorrow."

In the best interests of our country, and for a future world of peace, bipartisan policy and action is as necessary today as any time in the history of our country.

There is a strong feeling among our people, which feeling I have, as well as many other Members of Congress, that our position internationally is not as secure as it was 2 or more years ago. It is not too late for this situation to change, but it calls for firm and consistent leadership on the part of President Eisenhower.

The quicker we get back to the basic policy of peace through strength the better it will be for our country and for the free world.

In addition to the civil-rights bill and the Middle East resolution which I have already referred to, I call attention to some of the important measures enacted during the past session.

Another bill of great importance that required months of hearings and consideration is the International Atomic Energy Agency Participation Act. The President considered this to be a recommendation of great importance in carrying out of foreign policy and in making progress toward ultimate peace.

As Chairman DURHAM, Democrat, of the Joint Committee on Atomic Energy, well said on this measure:

> By participating in this Agency, the United States has an opportunity to demonstrate to all nations of the world our leadership and interest in the field of atomic energy, our technical accomplishments, and our willingness to help other countries to apply the best use of the atom. The Agency also provides a real means and method of developing an effective international control system to divert fissionable materials from weapons to peaceful purposes, and to emphasize the best use of atomic energy.

Another important bill passed is the Atomic Energy Indemnity Act, designed to encourage private industry to develop atomic energy in this country.

One of the significant results of the past session was the action taken on President Eisenhower's budget message, the largest peacetime budget in the history of our country.

While different opinions have been expressed as to reductions made by the Congress, it is generally recognized and understood that the reductions are in excess of $5 billion. In itself, this is a remarkable achievement.

In addition to the passage of the various appropriation bills, among which were many controversial items, and the foreign assistance—mutual aid—authorization bill, and later the foreign assistance appropriation bill, many other bills of importance were passed, such as:

Extension of the Agricultural Trade Development and Assistance Act of 1954.

Amendment of the Small Business Act of 1953, improving that act in the interests of small and independent businesses and particularly the establishing of the Small Business Administration on a permanent basis.

Extension of the Reorganization Act of 1949.

Amendment of the Airways Modification Act of 1953, and the establishment of the Airways Modification Board.

Amendment of the Immigration and Naturalization Act. While this particular bill does not go as far as some would like, it represents a marked step forward, and will bring humane and beneficial results to about 60,000 persons and orphans each year.

Establishment of a deferred grazing program. The rolcall vote of the passage of this bill is an interesting one, for 192 Democrats voted for its passage, with 9 against. On the other hand, 78 Republicans voted for its passage, but 100 Republicans voted against it.

The House resolution requesting the President to furnish information on the results of the survey conducted by him and the executive agencies as to where the President's original budget estimates could be reduced. The passage of this resolution was a matter of great concern to the American people. If complied with by the President, it represented cooperative action with the Congress as intended by the Constitution.

On this rollcall 210 Democrats voted for the resolution, with only 3 Democrats against it. On the other hand, only 10 Republicans voted for the resolution, and 175 Republicans voted against it.

Amendment of the Anglo-American greement. This was a major recommendation of President Eisenhower. If failed to pass it could have had serious iverse results in the field of foreign ffairs. President Eisenhower was very uch concerned about this bill and its assage. The rollcall vote is very interesting. On this measure, strongly urged President Eisenhower, 133 Democrats oted for it with 68 Democrats against s passage. On the other hand, only 85 epublicans voted for its passage and 99 epublicans against it.

This clearly illustrates the division ithin the Republican Party, and which as shown itself on a number of other otes during the past session. And with his division, the record of the past session under Democratic control is all the ore remarkable.

Appropriation of adequate funds for he Tennessee Valley Authority. On the ollcall vote to reduce the apropriation, 19 Democrats voted against this amendent, and 2 for the reduction. On the ther hand, 156 Republicans voted for he reduction and only 25 against it. vote for the reduction of funds for he TVA was not in the best interests of he people of the area of the country erved by this great activity.

The bill authorizing the Federal Power ommission to issue a license to New ork Power Authority for the construcion of a power project at Niagara Falls.

A bill to restrict the use of the Fedral Bureau of Investigation files by dendents in criminal cases. The passage f this bill was a matter of vital imortance.

Extension of the excise and corporate axes.

The Housing Act, more liberal than he one recommended by President isenhower.

Adequate appropriations for medical esearch. This action on the part of the ongress is a matter of paramount imortance to all the people of he United tates. The amount appropriated was arger than that requested by Presient Eisenhower. While all Members re entitled to credit, a special comendation is due in the progress made y the Federal Government in the field f medical research to the gentleman rom Rhode Island [Mr. FOGARTY] and he Senator from Alabama [Mr. HILL].

The pay raise bill for postal employes, which, unfortunately has been ocket-vetoed by the President.

The pay raise bill for other classified mployees, which, unfortunately has lso been pocket-vetoed by the President.

In connection with these two bills, it my firm opinion that pay raise legisation for the postal and other classied employees will go into effect next ear. One thing is certain, the Demoratic-controlled Congress which passed hese bills in the last session will make very effort to do so in the coming session. The pay raises carried in the bills ere justified. The action of President isenhower in vetoing these bills is most fficult to understand, and is justifiably ubject to criticism.

There are some measures and appropriations which failed to pass, which eserve comment.

Much has been said and written about the school-construction bill. The bill reported out of the House committee represented a reasonable compromise between Democratic and Republican views on such legislation. The President stated that he would sign the bill as reported out of committee. While under debate in the Committee of the Whole, a motion was made by a Republican Member which, if adopted, would have made the bill conform to the President's original recommendations. The Democratic Members in charge of the bill stated they would support this amendment. However, before this vote could be taken in the Committee of the Whole, the motion to "strike out enacting clause" was made, and it carried.

The bill then came before the House of Representatives for consideration on whether or not the enacting clause would be stricken out. To strike out the enacting clause meant to kill the bill.

The rollcall vote on this question is very interesting. It shows that 97 Democrats voted in favor of striking out the enacting clause, but 126 Democrats voted against such action. On the Republican side, the vote was 111 Republicans to strike out the enacting clause—which meant to kill the bill—and only 77 Republicans voted against it. The enacting clause was stricken out by a vote of 208 to 203.

This is another illustration of what I have said in the House of Representatives that the President goes one way, and the majority of his party in the House goes the other way.

The House resolution for a Subcommittee on Banking and Currency to study national and credit policy came up for action in the House. This was a very important resolution in the interests of the average American. It was defeated. The vote of this resolution is also very interesting, for 172 Democrats voted for it, 38 Democrats against it; and on the Republican side, only 2 Republicans voted for it, with 187 Republicans voting against this important resolution.

An appropriation for $14 million to start the Federal insurance program, which Congress had voted in 1956, and which was the minimum amount necessary to keep this necessary program alive. This appropriation was defeated by a vote of 218 to 186. It was a part of a larger amount recommended by President Eisenhower. On this vote 127 Democrats voted to keep the program alive, and 89 Democrats voted against it. On the Republican side only 59 Republicans voted for this appropriation and 129 Republicans voted against it.

There are measures that will be acted upon in the second session of this Congress, such as statehood for Alaska, which has been reported out of committee, and I am confident that statehood for Hawaii will also be reported out of committee and acted upon.

If the President and Republican leadership can persuade 50 percent of the Republican Members of the House to vote for these bills, they will pass during the next session.

There are other measures such as wider minimum wage coverage that can be enacted into law during the next session if some Republicans, both in committee and the House of Representatives, will support such legislation.

The Hells Canyon bill has been vigorously opposed by President Eisenhower and his administration. This is most unfortunate and contrary to the best interests of the people of the area affected. It is also an advisable project for our country to develop. On the vote in committee, not a Republican voted in favor of this bill. In committee it was defeated by a few votes. Every member in committee who voted for this bill was a Democrat, and all Republican members on this committee voted against it. The Republican Party and each Republican member have their responsibility for this and for votes on other measures.

Continuing until July 1, 1959, suspension of 2,000,500 statutory limitation on personnel strength of Armed Forces.

Extending until July 30, 1958, the President's authority to expedite defense contracts under title II of the first War Powers Act of 1941.

Authorizing $1.2 billion program of construction at installations and bases of Armed Forces here and abroad, which includes $51 million for new housing facilities.

Assuring adequate medical treatment for those in the Armed Forces by legislation inducting doctors, dentists, and allied specialist categories into the Armed Forces, as needed, with Reserve commissions; and ending special doctor-dentist draft.

Increasing by $150 million authorization for acquisition of housing and nursing facilities for Reserve components of the Armed Forces.

Authorizing $44.7 million construction and equipment program for research facilities of National Advisory Committee for Aeronautics.

House resolution condemning Communist China's failure to account for 450 American prisoners of war taken in Korea.

House concurrent resolution declaring the sense of Congress that Spain should be admitted to membership in NATO.

House concurrent resolution expressing the sense of the Congress that the President and United States delegates to the U. N. General Assembly seek adoption of report of its Committee on the Hungarian Revolution and work for measures to bring about freedom of captive nations.

Extending operating authority of Export-Import Bank for 5 years to June 30, 1963.

Authorizing agreements for construction of atomic reactors in Berlin, West Germany.

Establishing Airways Modernization Board to assure safe, efficient navigation system for all civilian and military planes.

Requiring the Atomic Energy Commission to obtain specific authorization of Congress for civilian power project appropriations.

Limiting issuance of tax-amortization certificates for fast writeoff of new defense plants; ends program December 31, 1959.

Increasing borrowing power of FNMA by $0.5 billion to $1.6 billion to help ease mortgage—money market.

Permitting Great Lakes shipyards to compete for construction or reconditioning of United States merchant ships.

Providing for Government guaranty of private loans to certain air carriers for equipment purchase.

Increasing the rates of compensation for service-connected disabilities and for dependency allowances.

Extending home-loan and loan-guaranty programs for World War II veterans to July 25, 1959.

Increasing maximum of loans; and otherwise encourages new construction in rural and smalltown areas.

Providing career incentives for nurses and medical specialists of the armed services.

Consolidating into a single act and simplifying the laws governing compensation, pensions, burial benefits, hospitalization, and administration by Veterans' Administration.

Extension to June 30, 1958, the Agricultural Trade Development and Assistance Act.

Providing for deferred grazing and protein feed program in drought areas.

Providing for compulsory inspection of poultry and poultry products.

Promoting of development of phosphate production under public domain.

Providing for construction of San Angelo reclamation project, Texas.

Extending to June 30, 1959, aid to school districts affected by Federal activities.

Extending to July 1, 1958, time for disabled persons to file applications to preserve their rights to old-age, survirors and disability insurance; permitting veterans with service-connected disability to receive both social-security and VA benefits.

Providing for Federal indemnity against atomic-reactor hazards for protection of public.

Increasing penalties for violations of Interstate Commerce Commission safety laws and regulations.

Facilitating coverage under Social Security Act of employees of various States and local governments.

There are many other bills I could mention that have passed or will pass in the second session of this Congress, but I have mentioned enough to evaluate the past session in terms of constructive and successful service to our country and to our people.

But those that I have mentioned will place the 1st session of the 85th Congress in the legislative annals of our country as not only a successful one but as a historical one. For certainly in the passage of the civil-rights bill—right to vote—and the Middle East resolution alone, the first session of this Congress has made history.

The success of a Congress, or a session thereof, is judged by what it has done affirmatively, but also by preventing the passage of legislation that is not in the best interests of our people.

It will be remembered that the 83d Republican-controlled Congress is remembered for what has properly been termed its giveaways to certain special interests.

In the 84th Democratic-controlled Congress this was stopped. There was no more giveaway legislation passed by this Congress.

Among the achievements, little noted, of the 1st session of the 85th Congress, is, like during the 84th Congress, there has been no giveaway legislation passed. There will be none passed in the coming second session of this Congress.

The life and action of a Congress, or one of its sessions, are a part of the life and action of our Government during the same period. Many of the important actions or inactions are nonlegislative, but are made administratively by the administration in control of the executive branch of Government, at present the Republican Party, under the administration and leadership of President Eisenhower.

There are matters of important concern to our people, such as inflation; high cost of living; high interest rates; the plight of the farmer, with the consumer paying more and the farmer receiving less for farm products; the plight of small and independent businesses, the increasing bankruptcies among them that are all traceable to and which are the responsibility of the President and the executive branch and not of the Congress.

It is a well-known fact, for example, that our Government is paying the highest interest that has been paid in years, and this means higher interest in all fields of activity in the borrowing of money.

It is a well-known fact that President Eisenhower and Secretary of Agriculture Ezra Benson are bitterly opposed to Democratic measures to lighten the load of the farmer and to enable our farming community to obtain its fair and proper share of the national income. For a depressed agriculture is not healthy for our national economy.

And in connection with these situations, the responsibility rests on President Eisenhower and not on the Congress. There are millions of Americans—and this feeling is growing—who are "keenly disappointed" with the record of President Eisenhower and his administration.

I express my thanks for the many courtesies and considerations the Members have given to me personally and as majority leader during the past session.

I wish for each of my colleagues and your loved ones every happiness, as well as a most restful adjournment.

You can meet your constituents with the knowledge that the 1st session of the 85th Congress was not only fruitful but, above all, historical.

I am looking forward to seeing and meeting with you next January and in serving with you during the second session of this Congress. I am looking forward to our carrying out the bipartisan relationship, particularly in the field of foreign affairs, as in the past session, which is so necessary in meeting the problems that might confront our country in the days that lie ahead.

Budget Estimates and Appropriations, 85th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. CANNON. Mr. Speaker, under leave to extend, I include herewith certain tabulations summarizing the work of the 1st session of the 85th Congress on appropriation bills. Comparisons are made with the budget estimates submitted by the President. Numerous pertinent related facts and tabulations are included.

The first tabulation is in the usual stereotyped form by bills, segregated as between deficiencies and supplementals for fiscal year 1957 and the bills for fiscal year 1958. Permanent appropriations—those which recur automatically under substantive law without annual action—are included for purpose of showing a more complete picture; they are, perforce, on an estimated basis at this time.

These summaries are necessarily confined to appropriation bills over which the Committee on Appropriation has original jurisdiction. The President recommended numerous authorities to take money out of the Treasury by means other than direct appropriation. Some legislation has ensued as a result. Other budgetary provisions contingent on passage of legislation recommended but failing of enactment, or differing from the President's budget, will affect final overall budgetary results, definitive tabulation of which is not presently available.

For example, Congress again exceeded the President's request for obligating authority for the housing program—to the extent of about $1.1 billion. This is the principal instance, dollarwise, where this was done. On the other hand, final tabulations will show that Congress reduced the 1958 budget through failure to enact legislation for which contingent provision was made in the budget. Principal examples are the $451 million obligational authority included for the school-construction program which failed of enactment and $477 million cut from the foreign-aid authorization request. Preliminary figures indicate that total new obligating authority written into law for fiscal year 1958, including direct appropriations in the following summary, will be somewhat more than $3 billion below the $73.3 billion recommended in the January budget submission.

The executive branch and the Congress in recent years have tended toward lodging more and more budgetary determinations outside the traditional annual appropriation bill procedure. Substantial amounts of the budget are passed upon or set in legislative bills. Various devices to get money out of the Treasury through the side door and the back door rather than the front door have gained in popularity. Action on these matters is often diffused. They all ought to go through 1 procedure, 1 system, under

et of rules, so that the Congress and the country can clearly see the whole picture at any given time or point. Present practices tend to undermine and impair effective determinations on the budget each year.

Comparison of budget estimates and appropriations, 85th Cong., 1st sess.

Department or establishment	Estimates considered by House	Reported to House	Passed House	Estimates considered by Senate	Reported to Senate	Passed Senate	Public Law	Increase (+) or decrease (−), appropriation compared with estimates

APPROPRIATIONS SUMMARY FOR THE SESSION

Budget estimates of appropriations submitted to the House during the session just concluded totaled $64,494,927,778. Against these requests, the Committee on Appropriations recommended $58,964,425,894, a net cut of $5,530,501,884. The House approved a total of $58,979,154,594, a cut of $5,515,773,184, or about 8.6 percent.

Budget estimates considered by the Senate aggregate $64,638,110,610, and bills passed by that body total $60,832,433,816, a reduction of $3,805,676,794, or 5.9 percent.

Final appropriations approved amount to $59,589,731,631, a reduction of $5,048,378,979, or 7.8 percent below budget estimates submitted by the President. As noted, this does not take into account actions outside the appropriations process with respect to 1958 budget recommendations.

These summaries attest to the determination of the House and the Congress to follow with action the declaration of the House on March 12 in resolution 190 that the public interest required "substantial reductions" in the President's recordbreaking 1958 budget. That budget has been substantially reduced. We have delivered on our promise. It should have been reduced even further. And as I shall shortly demonstrate, it has been reduced under the most extraordinary and anomalous cicumstances in memory. The executive branch first repudiated the budget and openly invited Congress to cut it, then failed to point out where it could be effectively reduced. Furthermore, it fought practically every cut made, then turned around and issued a general order to withhold use of substantial sums after they were appropriated.

THE BUDGET FOR 1958—GENERAL SUMMARY

Mr. Speaker, the story of the 1958 budget is in several respects one of the most remarkable within memory. It would consume pages and take hours to recount the details. I shall confine my remarks to a general summary of the budget and subsequent events.

The President submitted his budget for fiscal year 1958 on January 16. Measured in terms of both authority to obligate the Treasury, and proposed expenditures, it is the largest budget ever submitted in time of peace.

It proposed to initiate numerous new programs and to expand and extend others.

It called for spending $71.8 billion—$73.6 billion including the highway trust fund formerly carried in budget totals.

It called for enactment of $73.3 billion in appropriations and other authority to obligate—$76.4 billion including the highway item.

It proposed the highest tax take ever submitted in time of war or peace.

It specifically recommended another extension of Korean wartime tax rates—though the war ended 4 years ago. Otherwise, it would have proposed a deficit instead of a small surplus.

It proposed a public debt $3.1 billion higher after 5 years of the present administration.

It proposed a cumulative 5-year budget deficit of $1.4 billion counting the highway trust fund and $2.2 billion without it.

It proposed a 45-percent increase in nondefense spending over fiscal year 1954—the first full fiscal year of the present administration.

It proposed total spending on a comparable basis within 1 percent of fiscal year 1953, which was a war year—the last fiscal year of the previous administration.

Rather than reducing expenditures, it proposed to continue the unbroken chain of increased spending for the third straight year in time of peace.

Another measurement is to note that it omitted, for the first time in 4 years, pointed comparisons with spending in 1953 and President Truman's last budget, that for 1954. The reason seems obvious: the 1958 budget recommends authority to obligate $4.6 billion more than did the 1954 budget. Suggested 1958 peacetime spending was only 1 percent less than 1953 wartime spending. The budget for 1958 is so excessive that such unfair and unfavorable comparisons are no longer expedient.

The January budget for 1958 called for spending about $3 billion above 1957; between five and six billion dollars more than 1956; and between seven and eight billion dollars more than the year before that.

Finally, in terms of authority to obligate the Treasury—and this is the crux, because an obligation has to be paid—the January budget for 1958 called for $3.2 billion more than 1957; and $13.2 billion more than 1956.

REACTION TO THE BUDGET

Mr. Speaker, this is what the President submitted to us in the same message in which he expressed his "firm belief that tax rates are still too high" but so utterly failed to reduce spending that he was forced to urge another extension of Korean wartime tax rates in order to show a small budget surplus.

This is the message which advises that the Federal budget must contribute to stability of living costs and preservation of the purchasing power of the dollar, but simultaneously proposes higher spending which aggravates and feeds the fires of inflation and further reduces the buying power of the dollar.

This is the record peacetime budget submitted in time of record national income and it misses by billions—$12 billion to be exact—the President's promise in the fall of 1952 of a $60 billion budget. What is more serious, it proposes a steady trend upward, not downward.

Reaction to this excessive and burdensome budget was swift, widespread, and violent. Never has there been such severe condemnation, such deprecation of an Executive budget, by the press and the people generally. Both sides of the aisle repeatedly sounded a serious note of alarm at the size and direction of the President's budget. Taxpayers the

ength and breath of the land sounded sustained crescendo of criticism, demanding that Congress cut the budget nd reduce spending.

More significantly, we witnessed the nprecedented repudiation of the budget y the President and the key members of is official family who were its chief rchitects. On the same day it was submitted, Treasury Secretary Humphrey, onceded by all to have the ear of the President on fiscal matters, said in a engthy statement to the press:

The cost of living has recently moved up somewhat in spite of monetary measures to restrain it. Governmental expenditures and the number of Government employees are now increasing. This trend should promptly be stopped.

The President approved this statement. He concurred in it. In fact, he cleared the statement before the Secretary gave it out. But he failed to reflect it in his budget as the law clearly requires the law, written in 1921, specifically instructs the President to send up a budget every year and to include in it such requests for appropriations and spending as are necessary "in his judgment" to run the Government. He has complete freedom to make such recommendations—and only such recommendations—as are in his judgment necessary. He is not directed to include new programs or expand existing programs. He could promptly have stopped this upward trend in his budget recommendations. But he did not. He asked for more than last year, more than any other year in peacetime history. And his recommendations clearly pointed to even higher spending in the future in that he asked for increased authority to commit the Treasury.

Everyone immediately realized the President and his chief fiscal officials had repudiated the 1958 budget. Apparently it did not represent, as the law states, what was necessary "in his judgment." It obviously represented something in excess of that.

Secretary Humphrey went further in his statement:

I think there are a lot of places in this budget that can be cut.

* * * * *

I think there is some hope you can reduce expenditures all along the line. I would certainly deplore the day that we thought we couldn't ever reduce expenditures of this terrific amount, the terrific tax take we are taking out of this country. If we don't over a long period of time, I will predict that you will have a depression that will curl your hair, because we are just taking too much money out of this economy that we need to make the jobs that you have to have as time goes on.

Coming from one so intimately in touch with the compilation of the budget and so close to the President, these are frank and startling statements. The Secretary especially deplored the ever-increasing trend of higher and higher budgets, more and more spending, repeated extension of near-record tax rates. He insisted that tax cuts were necessary, but should be considered only if the trend of spending was downward, not upward. But the trend is steadily upward, not downward, as I shall demonstrate. The Director of the Budget said he was "fearful" that spending in future years might go even higher. The record of the past 2 years corroborate his fears.

The President originally estimated fiscal 1956 spending at $62.4 billion but wound up spending $66.5 billion—$4.1 billion more. His original fiscal 1957 budget indicated spending of $65.9 billion but the year closed this past June 30 with actual spending of $69.4 billion without the highway trust fund item and $70.3 billion with it—over-runs of $3.5 billion or $4.4 billion, depending on how you want to figure it. In light of these facts—and every figure is documented—and events of the past 6 months, the budget as submitted is undoubtedly bigger than otherwise apparent from official totals.

REVIEW OF THE BUDGET

Alarmed by this recordbreaking budget, its repudiation by the executive branch, and especially since it was apparent the budget did not comply either with the spirit or the letter of the law under which submitted, the Committee on Appropriations immediately invited the Secretary of the Treasury and the Budget Director to come up and discuss the budget with us. We took it for granted they would throw some light on the situation and offer information of assistance in processing the budget and the appropriation bills. We tried for 2 days, but received no concrete suggestions. They repeatedly expressed the hope—a fond hope, I would say—that Congress would make substantial cuts, but they refused to point out where we could cut a single dollar. They further advised that they were planning a concerted effort within the executive branch to cut both 1957 and 1958 spending, but they steadfastly refused to revise the budget pending before us. They proposed to revise it without telling Congress how and where. The Budget Director said:

I would like to see you cut, but, frankly, I do not quite see where you can do it, either.

He could not see how we could cut the budget, but he already had undertaken to see that the executive branch cut it.

The outcry against the President's budget continued unabated. We were importuned from all sides to reduce it substantially. The Republican conference of the House, representing the entire Republican membership, significantly adopted a formal resolution calling for a "substantial" reduction in the budget of their administration. Rebellion was rampant.

Then came another volley of statements from high officials in the administration, going simultaneously in both directions. In some respects, the mystery of the budget was deepened, but the pronouncements also indicated belated administration recognition of the budget rebellion. Still no assistance in cutting was forthcoming. The departments defended every dollar of the budget in the official committee hearings. They could not—or would not—tell us where they could get along on less money.

On March 6 Secretary Humphrey had this to say:

It is the size of this budget, even though balanced, that concerns us.

Who is "us," Mr. Speaker? Obviously, this includes the President. The Secretary, therefore, tells us that the President is concerned about the size of his budget—yet he made it big; he made it excessive. With wide discretion and power in his own hands, he could have made it smaller. But he did not.

Echoing his superior, Treasury Under Secretary Burgess on March 11 said:

But, after all explanations, the budget is still too big for the future best good of the citizens of this country.

Also, on March 11 the Assistant Budget Director and the President's Special Economic Assistant made speeches of similar import. All these statements were critical of the size of the President's budget.

Then in a rather abrupt about-face, statements from the executive branch made it appear that this high budget was the sole doing of the Congress. In a widely publicized speech of March 6, Secretary Humphrey undertook to explain the division of responsibility for making the budget and for approving the budget. He quoted the law but failed to explain its meaning. As I indicated a little while ago, the law directs the President to request only those amounts which are "necessary in his judgment"—his judgment, not the judgment of Congress or anyone else. Speaking of various programs, the Secretary said:

In these programs, after Congress passes the laws, the Executive has little opportunity to exercise any discretion, but merely administers the program and writes and distributes the checks which the various laws direct.

The import of this statement is that the President is confined to a routine, mechanical, ministerial role. Nothing could be further from the truth. The job of making the budget is his job. And he has a constitutional role in enactment of the laws. He is directed to confine his recommendations to what is "necessary in his judgment." The Congress did not compel him to budget for numerous and costly new programs. He did so voluntarily. He is the special pleader for them. And some of them are for purely local responsibilities, yet he has often urged that the Government should avoid assuming purely local burdens.

And the Secretary signally failed to point out that these laws are submitted for Presidential approval. If he approves, he signs them; if not, he vetoes them. When he signs a bill calling for expenditure of funds, he signifies approbation. He embraces it. And he has the duty not to provide for them in his budget if "in his judgment" he so determines.

So, Mr. Speaker, let no one be misled as to whose budget it is, although I must confess to some difficulty in determining just what budget the President recommended for 1958. That has never been clear.

HOUSE RESOLUTION 190

It was with view to securing some clarification on the firmness of the budget requests that on March 12 the House,

faced with the highest budget in peacetime history and uncertain as to the President's support of it, took the unprecedented action of formally soliciting his advice as to how and where he thought substantial reductions could best be made. We were anxious to have all possible up-to-date information available. We needed to have the President tell us whether we had the right budget before us or if changing conditions warranted alterations. The departments were telling us we had the right budget—they were defending every dollar. But they did not seem to be in step with those who drew up the budget.

The Budget Director had said a resurvey was underway by order of the President.

The confusion got worse before it got better. Several agency heads announced through the press that their budgets could be revised. On March 15 the Housing Administrator announced a $200 million reduction in his 1958 budget. The Secretary of Commerce publicly stated that he knew where $50 million could be taken from his budget, but he failed to specify when the Committee on Appropriations asked him to cite line and page number. He indicated he had in mind projects approved by Congress last year which he had not requested—but I do not recall his pointing out that the President had approved the laws containing the projects.

Then on March 26 the President vigorously defended his budget, saying it had been drawn "carefully, intelligently." He took full responsibility for it. He said it was "futile" to talk about cutting the budget "severely."

RESPONSE TO HOUSE RESOLUTION 190

The President responded on April 18 to the request of the House for advice as to where and how the President thought his budget could best be substantially reduced. It was a disappointing message since it offered no suggestions for appreciable budget reductions of a durable character.

Referring to his $71.8 billion spending budget, he flatly told us that no substantial reduction could be made—that to do so, in his words, would "weaken the Nation's defenses, or cut back or eliminate programs now required by law or proposed in the public interest, or both. That forces the conclusion that a multibillion-dollar reduction in 1958 expenditures can be accomplished only at the expense of the national safety and interest."

In other words, Mr. Speaker, the President in effect told us precisely what he told us when he submitted his budget in January. In sum and substance, he advised that the $71.8 billion spending estimate was in the public interest for one reason or the other, or both. That was repetitious—the House was looking for information and clarification.

As to his $73.3 billion obligational budget, involving thousands of budget items, the President suggested reductions in only 7 instances totaling $1.342 billion. They had told us earlier they were resurveying the whole budget, yet only 7 out of thousands of items were included. But there was a qualification. Much of this $1.342 billion was labeled "postponement," "delay," and "adjustment"—not genuine, lasting retrenchment. In fact, after offering the list, the President made this flat and amazing admission:

> Once again I remind the House that less than half of this reduction (this $1.342 billion) in new spending authority can be reflected in reductions in expenditures during the next fiscal year, and even a part of these expenditure reductions will have to be restored in the future.

It is truly a remarkable circumstance that the President would first submit this list—even though it only had 7 items on it—and then immediately discredit its validity by admitting it would have no real effect and that if adopted much of it would have to be restored. The House had every reason to expect more helpful information.

The President concluded his message with this promise:

> All elements of the budget, meanwhile, will remain under searching examination by the executive branch in its continuing effort to find additional savings, large or small, that are possible under existing law. Any additional reductions found possible in new spending authority will be promptly reported in the usual way to the Senate and House of Representatives.

Here the House was given an unequivocal promise that it would be advised promptly of any additional reductions found possible. The entire 1958 budget was still pending in Congress—not a single regular 1958 appropriation bill had then been sent to the President.

The Congress meanwhile continued to process the appropriation bills with the departments defending every dollar. But we made substantial reductions nonetheless. As noted, we have cut the budget estimates of appropriations by the substantial sum of $5,048,378,979. We should have cut deeper.

HOLDING AT OR BELOW THE 1957 RATE

Except for one or two items necessarily resubmitted, based on revised authorization legislation, we heard nothing further from the President as to additional reductions he had found possible in his 1958 budget. He had promised to promptly advise the Congress if and when he did. He had determined on additional cuts but we were not advised. The press obtained and published on July 12 a secret letter issued by the budget Director in the last days of June to all agencies conveying the President's order to take "positive action" to "keep the rates of commitments, obligations, and expenditures for fiscal year 1958 at or below the level for the fiscal year 1957, to the extent feasible."

By way of emphasis, the order further provided:

> In most cases direct obligations should not rise above the level for the fiscal year 1957.

After listing some allowable exceptions, it went on:

> In the case of those appropriations that are for major capital outlay and development—construction, procurement, research, etc.—the requests for apportionment and the allotments should reflect the postponement of a significant part of the obligations planned in the budget for 1958.

For all appropriations, however, there should be a critical analysis of all activities and advantage should be taken of every possibility for reductions; apportionments in all cases should be consistent with "allowable" sums being used in planning the 1958 budget. The sums available in excess of minimum needs will be placed in reserve for contingencies.

We had been told throughout the session that every dollar requested was necessary—that all items had been "critically analyzed" before submission. The President had ordered 1 resurvey back in January and out of the thousands of budget items, he advised on April 18 of only 7 items we could cut—and as noted earlier—much of this was not of lasting quality. Then, in a secret order, he suddenly directed another resurvey after Congress had adopted several bills and was in the final stages of consideration on the others involving some $44 billion of his total budget. Why did he not hold the 1958 budget to the 1957 level when he sent it up in January? We have insisted all session long that he should have done that. Why did he not advise us, as promised, of this new order when we still had $44 billion of his budget under consideration? Why did they keep insisting on the 1958 budget when they had decided on a policy of cutting back to the 1957 level? Why was not Congress advised that it had obsolete information before it—that the policy had changed?

I am glad the administration is finally evidencing some concern. Spending has been running at such an unbridled rate that unless some effective action is taken we are headed farther down the road to full-blown inflation and possible financial disaster. But if we had been supplied with a budget at the 1957 level, instead of this recordbreaking 1958 budget, we could have made even deeper retrenchment with hope of hastening both tax relief and respectable payment on our staggering national debt.

The Committee on Appropriations promptly called the Budget Director to secure some light on this latest order. Unfortunately, he did not give us any information which would assist in disposing of the $44 billion still pending. He left us completely at sea. He first said he "had no plans"—those are his words—to withhold any of these funds but later advised they would be considered under the secret order along with appropriations already sent to the President.

We inquired specifically about the $34 billion defense bill because we were on the eve of conference with the other body which had raised the House amount by about $1 billion at the insistence of the President. This is the bill on which the President had accused the House of "needlessly gambling" with the national security. This is the principal bill the President had in mind when he advised the House in these words in responding to House Resolution 190:

> I most solemnly advise the House that in these times a cut of any appreciable consequence in current expenditures for national

security and related programs would endanger our country and the peace of the world.

This is the bill as to which the President told the press and the Nation on May 22, referring to the item for military personnel strength:

We had taken the figure of 2.8 million (personnel), as it now stands and, realizing that it was going to be very difficult to stay at that strength, had trimmed the budget down until we thought that it was the bare minimum.

After all these stern warnings, all this information to the contrary, they pulled the rug from under us. On the day before conference with the other body, we received official notice that the President had approved a 100,000-man reduction in military strength—2.8 million men sudden became 2.7 million. With this and other adjustments, we could cut the Senate amount by $142,249,000, they advised. Strange proceedings, Mr. Speaker.

But that is not half the story. When the President "solemnly advised" the House not to make any cut of "appreciable consequence in current expenditures for national security" the Department was running at an annual rate in excess of $40 billion. It actually spent $2.4 billion in excess of the $36 billion estimate for fiscal 1957. When the fiscal year 1958 began it was operating at a rate about $2 billion above the $38 billion estimate for 1958. Spending was completely out of control. They were desperate. Immediate and drastic action was necessary—and they knew it. All the while, right up to the eve of conference, they insisted they must have the budget. Possibly because without it even more drastic cuts would be necessary.

In consequence, almost daily in past weeks administrative orders have been issued to cut defense spending. Among them:

First. Reduction of 100,000 military personnel—with indications of additional cuts;

Second. Cut in number of Reserve drills;

Third. Cut in progress payments to defense contractors;

Fourth. Layup of Navy ships;

Fifth. Five-percent cut in civilian personnel;

Sixth. Cancellation of major missile program;

Seventh. Cutback in several major procurement programs;

Eighth. Stretchout and slowdown in construction;

Ninth. Closing of installations.

Mr. Speaker, a strong, healthy economy is the wellspring of a strong defense. Without it, we could not long afford a defense adequate to our protection and survival in event of crisis. Substantial reduction in spending and substantial payments on our huge debt are indispensable essentials. These belated cuts ordered by the President should have been made before he asked for too much money, but they are nevertheless welcome. They are long overdue. They are indisputable evidence the administration has let spending get way out of control. In fiscal year 1956, the Government spent $4.1 billions more than its original estimate. In fiscal 1957, it spent $4.4 billion more than its original estimate.

Speaking of uncontrolled defense spending, they over-ran that estimate in fiscal 1957 by $2.4 billion—$38.4 billion as against the estimate of $36 billion. This over-run recalls the intriguing entry in the President's 1956 budget for defense. He estimated total spending at $35.7 billion but to get the total down to an even $34 billion, inserted a discount of $1.7 billion and called it an "unallocated reduction." Not specified. An unknown, said to represent savings to be picked up during the year. I have always suspected this was little more than an 11th hour decision and so inferred at the time. They not only did not save any of the $1.7 billion; they spent it and more besides. This beguiling entry did not show up in the 1957 budget, but they still understated defense spending—not by $1.7 billion, but $2.4 billion.

Mr. Speaker, these belated Presidential orders to cut spending and impound appropriations compel the question: Would the President say he is "needlessly gambling" with the national security in making them? He said the House was. Is he? Of course not, and neither was the House. On the contrary, it could be said to be "needless gambling" to keep on spending more and more and making no significant reduction in the debt.

Yes, Mr. Speaker, when this record-breaking budget was received in January, the administration could not see where it could be cut.

When the Treasury Secretary and the Budget Director came before the committee a week later, they wanted it cut but they said they could not see where it could be cut.

When the President responded to the House in April, he could not see where it could be cut—at least not in a durable, lasting way.

When the House cut the largest appropriation bill, the defense bill, we were accused of "needlessly gambling" with security. The President asked that our action be reversed. Still the budget could not be cut.

But suddenly, Mr. Speaker, on June 28 the secret letter was issued. At last, after many of the bills had been processed and sent to the President, after defending the budget as submitted, at last they could see where the budget could be cut. The general policy is to cut back to the 1957 level, which they should have done in the first place.

But they still would not tell us how this secret order would cut the bills still then pending in Congress. They wanted every dollar appropriated when they knew they were going to turn right around and cut spending. That is what they are doing right now in Defense. And they are doing it in other departments.

THE PUBLIC DEBT

Mr. Speaker, after all these years we still have a colossal national debt. In December 1955 the debt reached its highest point in history. Failure to control spending and make substantial payments on the debt resulted in 3 straight requests from the administration to raise the debt ceiling of $275 billion—twice to $281 billion and once to $278 billion. The executive branch is now engaged in belated, desperate efforts to delay spending in the ensuing months so as to be able to squeeze by within the $275 billion ceiling. Of course, this situation could have been avoided if spending had been controlled. Failure to do so is catching up with them.

The debt situation is summarized in the following table:

The public debt increase during 4 fiscal years of the present administration

[In billions]

	Beginning of year
Fiscal year 1954 (July 1953)	$266.1
Fiscal year 1955 (July 1954)	271.3
Fiscal year 1956 (July 1955)	274.4
Fiscal year 1957 (July 1956)	272.8
Fiscal year 1958 (July 1957)	270.5
Actual increase during last 4 years (July 1953–July 1957)	+4.4

This record of utter failure to hold the public debt at the level reached when the present administration assumed full fiscal responsiblity in July 1953 is in sharp contrast with the 4 preceding years of similar nonwar operation when it was reduced $12 billion, as shown:

The public debt decrease during 4 previous nonwar years

[In billions]

	Beginning of year
Fiscal year 1947 (July 1946)	$269.4
Fiscal year 1948 (July 1947)	258.3
Fiscal year 1949 (July 1948)	252.3
Fiscal year 1950 (July 1949)	252.8
Fiscal year 1951 (July 1950)	257.4
Actual decrease during the 4 years (July 1946–July 1950)	−12.0

These are the facts. They cannot be hidden. And they are distressing. We now owe $4.4 billion more than we did 4 years ago. This is the inevitable result of the succession of record peacetime budgets. Even the Korean wartime taxes still being levied in order to show a budget surplus have not been enough to overtake spiralling Federal expenditures sufficiently to make significant payment on the debt. And, Mr. Speaker, this record of failure is miles away from the promise when President Eisenhower said in 1952:

Our children deserve a little better of us than to keep hanging bigger and better debts about their necks.

Failure to reduce the debt has contributed to substantially increased cost just to carry it. A significant but often unnoticed expenditure is the inescapable item of interest payments. We now spend as much for interest as we did to run the entire Government only 20 years ago. This item cost $6.4 billion in 1954. In 1957 it cost $7.3 billion. For fiscal 1958 it will undoubtedly exceed the President's estimate of $7.360 billion because recent refundings have been made at a much higher interest rate. We are now having to pay 4 percent on a sizable part of the debt. The average computed interest rate on the

debt has consistently increased for several years past, as follows:

Fiscal year	Debt at end of year	Interest cost	Computed interest rate
1952	$259.1	$5.9	2.329
1953	266.1	6.5	2.438
1954	271.3	6.4	2.342
1955	274.4	6.4	2.351
1956	272.8	6.8	2.576
1957	[1] 270.5	[1] 7.3	[1] 2.7

[1] Preliminary.

At the present rate, it will take hundreds of years to pay off the debt. One calculation submitted several months ago shows that if we set about to pay it off by the year 2100—144 years from now—it would entail total payments of $1,205,078,709,686.40. This assumes a 3-percent interest rate which is probably low in light of recent experience, but the figure alone dramatizes the magnitude of the matter.

DEFICITS AND INFLATION

We received many pledges of economy. They assured us they would reduce spending. They said they would reduce the national debt. They would do away with inflation. They would balance the budget.

They have not reduced spending. Spending has been increased—and continues to increase. It increased $2.5 billion between 1954 and 1957. It increased $5.7 billion between 1955 and 1957.

They have not reduced the debt. They have increased the debt—to the tune of $4.4 billion in 4 years.

They have not banished inflation. The official cost-of-living index shows successive increases in each of the past 11 months. It has increased in 15 of the last 16 months. It stands at the highest point in history. The purchasing power of the dollar continues to shrink. Millions of families, especially those with fixed incomes, find it increasingly difficult to provide the necessities of life. Bonds, life insurance, savings accounts, and pensions continue to drop in real value.

And finally, Mr. Speaker, they have not balanced the budget. They are claiming they have. But they have not. They did not balance it—it balanced itself. It just happened—and by a precarious margin at that. It stands as an indisputable fact that the facade of budget surpluses in the fiscal years 1956 and 1957 has not been erected by economy and retrenchment, as I have shown. It is due solely to repeated extension of excessive wartime tax rates and the rising national income. Not a single American family can find any comfort or relief in that because they are still saddled with wartime tax rates. And this excessive spending contributes to their being robbed by unnecessarily high taxes and by inflation. Our taxes are so high that, together with State and local taxes—and, of course, they all come out of the same pocket—nearly 33 percent, one-third, of the national income goes for taxes.

The surplus of $1.6 billion for fiscal 1956 was immediately hailed in an official pronouncement a year ago as a great achievement. In sharp contrast, the tone of the recent announcement of a $1.6 billion surplus for fiscal 1957 was subdued. Possibly the reason can be found in the fact they slipped backward. The surplus was not as large as forecast only 6 months earlier. A recent issue of a national publication carried this story:

> The inside story is that payment was delayed beyond June 30 on more than $500 million worth of armament bills in order to make the 1957 budget year that ended June 30 look better than it actually was. The budget surplus of $1.6 billion otherwise would have been about $1 billion or less.

I had been closely following expenditures in the closing weeks of fiscal 1957. For defense military spending, the daily rate during June averaged $135 million, ranging from a low of $61 million to a high of $487 million, except on the last business day of June, when only $10 million was spent. Furthermore, through July 18—the first 18 days of the new fiscal year—the daily average was up to $164 million.

For the first month of fiscal 1958, budget expenditures exceeded the first month of fiscal 1957 by $800 million. Budget receipts were down $400 million.

This report brings to mind what they did on the last day of the fiscal year 1955, 2 years ago, when they reserved approximately $600 million, or over 21 percent of total reservations made during the whole year under the military assistance program. The effect was to continue the funds available into the following year.

Terming inflation "the most critical economic problem now facing this country," the Chairman of the Federal Reserve Board recently said that larger budget surpluses are essential to s rising prices. He admonished:

> It is clear that the present situation both for a larger budgetary surplus tha have had or have in prospect.

In similar vein, the Under Secretar the Treasury recently said:

> A more antiinflationary governmental f policy is desirable. In the present high s of prosperity in this country, the Fed Government should have a larger surplus should be retiring debt more rapidly.
>
> This is probably the most effective which could be taken by the Federal Gov ment.

The alarming thing, Mr. Speaker that we have no assurance of a lar surplus. Certainly not if needed tax lief is granted. As I indicated, the fi 1957 surplus was smaller than ear forecast. And they are spending m and more. Revised executive estima of spending and income for the curr fiscal year 1958 are not yet availa The original estimate of $1.8 billion s plus will, I assume, be revised. It sumed passage of a postal-rate incre priced at $654 million which was enacted. Full results of the secret or to hold to the 1957 level are unknown will also affect the outcome.

In any event, Mr. Speaker, failure achieve a substantial surplus and fail to make significant payments on the d is not due to inadequate tax rates or sufficient taxable income. It is due failure to control and reduce spendi That is an undeniable fact.

The following tabulation summari the income and spending record of last 4 years:

Budget receipts, expenditures, deficit (−) or surplus (+)

[In billions]

	Actual, 1954	Actual, 1955	Actual, 1956	Actual, 1957		4-year totals	
				Budget basis	Including highway trust fund	Budget basis	Includ highw trus fun
1. Receipts (net)	$64.7	$60.4	$68.1	$71.0	$72.5	$264.2	$2
2. Expenditures (net):							
(a) Major national security	46.0	40.6	40.6	43.2	43.2	171.3	1
(b) All other items	20.9	24.0	25.9	26.2	27.1	97.0	
	67.8	64.6	66.5	69.4	70.3	268.3	2
3. Deficit or surplus	−3.1	−4.2	+1.6	+1.6	+2.2	−4.1	

Mr. Speaker, the country is gravely concerned over the steadily increasing cost of government. Throughout the Nation there is a constantly growing demand for reduction in public expenditures. It is confined to no one political party and to no one locality. Everywhere there is a rising clamor for retrenchment to stop the spreading conflagration of runaway inflation, to check the rising cost of living now in its 11th month of consecutive skyrocketing advances, to halt the successive sliding drops in the purchasing power of the dollar, to break the upward trend of taxes and permit the repeal of war taxes in time of peace, and really balance the budget. The budget has not been in actual balance the last 4 years through any act of economy or retrenchment reduction in public expenditures but, the contrary, has mounted until it n stands at the extreme high-water ma in the peacetime history of the Americ Republic.

This nationwide protest was intensifi when after a presidential campaign bas on promises of economy by both parti the budget sent to the House in Janua was found to be in excess of any peac time budget ever submitted to the Co gress. Time has more than justifi that protest. The price of food has co sistently risen since that time while t farm parity index has lagged behi Interest rates are higher while the Fe eral Reserve banks are tightening t supply of money and loans. The Go

ernment is faced with a possible decline in Federal revenues. Just the other day, August 19, stock prices on the New York exchange took the steepest drop in the last 2 years. Notwithstanding assurances of economy, the civilian payroll of the executive branch has increased for the third successive year and now exceeds $11 billion, the highest in the fiscal history of the Nation. Fixed incomes, insurance policies, and savings accounts are dwindling in value and frequently the widow finds today they will buy less than half they would have bought when contracted for. There are indications that the statutory ceiling of $275 billion on the national debt is in danger of being breached as the debt today approaches $274 billion. So instead of substantially reducing the debt, as promised in the campaign, it has increased with the inevitable results of more inflation, higher cost of living, further reduction in the buying power of the dollar, continuation of war taxes in time of peace, and serious complications in the national economy, with corporate profits, after taxes, and labor, agriculture, the small-business man, and every dinner table in the Nation penalized accordingly.

The gentleman from New York [Mr. TABER], at one time dubbed "The Meat Ax," today finds himself cast in the unenviable role of defender of big and reckless spending. He and other administration apologists would have us believe that $5 billion is not $5 billion when cut from the budget estimates of appropriations. Many devious and labored excuses have been advanced, and doubtless many more will be advanced to show that the magnificent record made by the Committee on Appropriations and the House and Senate, in cutting the appropriation bills of the session are "phony," "paper cuts," and "bookkeeping maneuvers." But the fact remains that our drive for economy and sane appropriations have turned back the big spenders with a saving of close to 8 percent below the specific appropriation requests from the White House. That means $5 billion and more the taxpayers will not have to turn over to the tax collectors. Of course, the Government will continue to spend money, money appropriated in former Congresses and carried over. But by the same rule, money denied this year in this budget, this session, will be saved the taxpayers in subsequent years. Practically every general appropriation bill carries money, not only for the current year but for next year and the next year as well. Savings of money denied on estimates and budgets for future spending are savings nevertheless of just that much cash left in the taxpayer's pockets. Eventually if not now.

And in addition, the economy sentiment which we created throughout the Congress and the country undoubtedly resulted in voluntary reductions by the administration of large sums in originally planned requests.

I also want to take advantage of the occasion to say to those disgruntled spenders, booted away from the public trough, who sarcastically assert that much of the money we have saved will "be put back next session in supplemental bills" that we now have an antideficiency law with teeth in it, and each department is required to apportion its appropriations by months or quarters. May I caution the departments that we have given them money to run their departments for 12 months, and we expect them to operate on that basis. To give a Government agency a definite amount for the year and let them spend the money in less than a year and come back and tell us their money is gone, and they will have to have a supplemental appropriation is to permit the departments to appropriate. The Constitution places that responsibility on the Congress and not on the departments, and we invite the entire executive branch to cooperate with us in supporting the Constitution. I trust no governmental employees from the Cabinet officers down to the janitors will labor under any misapprehension on that score. We expect to enforce the law.

Of course, there may be emergencies and unforeseen contingencies which rise unexpectedly. The antideficiency law makes provision for these. But they must come within the letter of the law. Congress, exercising its prerogative under the Constitution, has provided the amount of money it deems sufficient for the year. And Congress expects that amount to cover the year's expense of operation. If any governmental agency, in its superior wisdom, decides that it knows more about that than Congress, it is in for a rude awakening. The country is demanding economy, and it is high time someone in Washington gave heed to that very reasonable demand.

In closing may I say that the committee and the House expect to receive the complete budget estimates for fiscal 1959 much more promptly. For a number of years the foreign aid and the defense construction authorization estimates have been so delayed that the legislative committees could not process the authorizations in time to permit the Committee on Appropriations to complete consideration of the appropriation estimates before the beginning of the fiscal year. There is no tenable reason why all these estimates should not be ready in time to permit the Congress to dispose of its appropriations and avoid the inexcusable delay which has kept Members of the Congress in Washington when they should have been in their States and districts and discharging other engagements and commitments which they should have been free to meet.

May I also assure any who entertain any apprehensions in the matter that in making this much needed reduction in the estimates we have left no Government agency without adequate funds to carry them over the congressional recess. We have cut the fat but not the muscle. As a matter of fact, we could have extracted another $5 billion without material interference with the legitimate functions of Government. That will be our goal in the future.

Half a Cup of Sugar

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Wall Street Journal of August 30, 1957:

HALF A CUP OF SUGAR

If a neighbor dropped by this morning with a half cup of sugar to repay a full cup borrowed last week, we suspect there would be some strain on the good-neighbor policy. And if this were often repeated, it wouldn't be long before the borrowing neighbor found your doorbell went unanswered.

Which is why it is not too surprising that the Federal Reserve Board has discovered people are less enthusiastic about United States savings bonds than they used to be.

The Treasury has been having trouble with its savings bond program for some time now. The total amount of money it is able to borrow from the public on savings bonds is down. Moreover the amount it has had to pay out has exceeded the amount it has been able to borrow. In the first 7 months of this year the redemptions of old savings bonds were $600 million more than the sales of new bonds.

Several reasons have been advanced for this; people generally aren't saving as much money, the rate of interest has been too low, and so on. Just recently the Treasury boosted the interest rate in an endeavor to sell more of these bonds.

All these reasons certainly have something to do with the case. The public generally is still saving money, but as Reserve Board Chairman Martin noted the other day the rate of savings is not as high as it ought to be considering the supposedly high level of prosperity. The interest rate on savings bonds has been low relative to the general money market. To some extent the Treasury savings bonds suffer from the fact that they are a little more inconvenient than a bank savings account.

But that isn't the whole of the matter. The Reserve Board's surveyors not only found that the number of families preferring savings bonds had dropped from 42 percent in 1954 to 26 percent now; they also found a decreasing enthusiasm for fixed-return investments generally. The number of people who prefer to put their savings in real estate has grown from 8 percent to 12 percent. Those who prefer stocks have grown from 7 percent to 10 percent.

Well, it took quite a bit of sugar to buy a $100 savings bond in 1944. In 1954 when those bonds matured, the patriotic citizen received about a third more dollars than he had lent the Government, exactly according to promise. But with those one-third more dollars he couldn't buy one-third more. He couldn't buy as much.

Nor does the thrifty householder have to go all the way back to 1944 and the war years to have suffered the same pains. The people who are today claiming the return of loans made to their Government on savings bonds in 1947 are also finding that their savings have shrunk, not grown, in a decade.

You don't have to be a financial expert to learn from that kind of experience. The trouble the Government is having right now with its savings-bond program—indeed, with

its whole debt-management program—is traceable to its past actions in slashing the value of the dollar.

It would have been surprising if the Federal Reserve surveyors had found any other attitude among the Nation's families. For it's just plain hard to keep people from noticing that what comes back is only half a cup.

Annual Report to Constituents by Hon. Stuyvesant Wainwright, of New York

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. WAINWRIGHT. Mr. Speaker, this is my fifth annual report to my friends and constituents of Suffolk and Nassau Counties on Long Island. As you are interested in what your Congressman does to earn his salary, please take a few minutes to read my personal accounting to you. As the taxpayer, homeowner, voter, and citizen, you are the "boss." As your Congressman, I am the employee. Our Government exists for service and protection alone. This is fundamental to the Republic. Should we breach this trust, the Government must change.

Actually, only a nominal percentage of congressional time is spent in floor debate and voting. The major portion is divided between two fields: committee work and personal service. However, it is well to review, briefly, the accomplishments—or lack of accomplishments—of this 1st session of the 85th Congress. The guide for legislation is set by the President of the United States in his state-of-the-Union message delivered in early January. This year President Eisenhower laid principal stress on the rights and dignity of the individual, saying:

> We have much reason to be proud of the progress our people are making in mutual understanding—the chief buttress of human and civil rights. Steadily we are moving closer to the goal of fair and equal treatment of citizens without regard to race or color. But, unhappily, much remains to be done.

Here we find the principal battleground of the first session. Unhappily, due to the efforts of a small band of men from a particular section of the land, this wonderful goal has been partially frustrated. It could never have happened if these men had not had support from the leaders of their political party. Partisanship nearly destroyed the objective.

The second great battle was over the Presidential budget. A figure of $72 billion was presented to the Congress. It was reduced to approximately $66 billion. Actual spending will be less. I supported the reductions recommended by the various congressional committees except in military preparedness and defense, especially in the missile field. The Republic must be vigilant and strong. The Communist empire is searching constantly for a weakness in our armor. Acute economy in this field would be false and wicked.

Your Congressman participated in two major debates: One, to raise postal salaries; and the other, to put the Federal Government in the field of education at the grassroots. It became obvious early in the session that postal employees should have a cost-of-living wage increase. However, the postal unions demanded an increase of 12 percent, across the board. The President made it clear that he would veto such a measure. Consequently I fought for—and voted for—a 5-percent increase. I opposed the larger amount, believing it would be an hypocrisy to try for an amount certain of eventual defeat.

The grave question as to whether the Federal Government should dip down into each and every school district of the Nation constituted the second major issue. I opposed the measure on the grounds that no State indicated inability to handle its own school problem; the truly needy States would get but a small handout, while the rich States would get the lion's share; the classroom deficit across the Nation had been reduced from 400,000 to less than 80,000 in 2 years without Federal interference; and, finally, it appeared to me unwise to risk placing the control of our school system in the hands of the Federal Government.

Little significant legislation was passed at this session. It is rather difficult to blame the President, for the Congress is and should be an independent body. At the present time, and for the past 3 years, it has been controlled by the Democratic Party. Naturally, it would not be enthusiastically inclined to act quickly and favorably on legislation recommended by a Republican President. The prospects for an improvement of this situation in 1958 are rather poor: The congressional elections will be just around the corner.

Of a more personal nature, each week I have written a report to keep you current and familiar with the Washington work. The important weekly papers have presented this column regularly as a fine public service. So, too, have Suffolk's radio stations broadcast each Sunday my program from the Nation's Capital. All work of proper representation must be based on understanding and knowledge of the views of the persons represented. Therefore, each year I have sent out a poll to obtain the benefit of your thinking on the key issues of the day. Of equal importance is personal contact. Regular office meetings were held in my Huntington office and at Wainscott. They will continue to be held on a weekly basis through the fall until the next session of Congress convenes. Phone Hamilton 7-9400 or Bridgehampton 2-0751 for a personal appointment.

Nearly 100 young men took examinations for the service Academies: Annapolis, West Point, the Air Force, and Kings Point Merchant Marine. Nine nominations were made, all based on the abilities of the young men. In the 5 years I have served in Congress no man named to an academy has failed. Each nominee has been a distinct credit to his community, Long Island, and his country. I shall continue this nonpartisan, nonpolitical method of selection.

This year the Senate confirmed 10 our recommendations for postmaster more acting postmasters have been stalled. City delivery has either been stalled or improved for Bayport, Far ingdale, South Farmingdale, Oakda Wyandanch, Halesite, and East Brer wood. Rural free delivery routes ha been established or extended for Rid Hampton Bays, and Bohemia. A route under consideration for Wading Riv The existing facilities have been i proved in Brookhaven, Eastport, Far ingdale, and Lindenhurst. With the v growth of our area it is essential th the postal facilities stay abreast of t increase.

The economic stability of our area crucial. In my reports for 1954, 19 and 1956 I predicted continued full e ployment and prosperity. This proved highly accurate despite the f that it was the most criticized statem in the reports. Unfortunately, I am quite as optimistic for 1958. Stocks a supplies are at an alltime high. T housing industry has fallen off 25 p cent. Military contracts have been back. A readjustment period is progress rather than an overall econor recession. To counter this I reco mended the reduction of downpayme on Federal housing. The Defense D partment has been asked repeatedly protect Long Island's extraordinary p of skilled workers in the aircraft a allied industries by giving us our f share of Federal contracts. I beli that 1958 should be a period for cons dation rather than large-scale expansi

The necessity of preserving our natu heritage at Fire Island in the form a national park has been a subject constant conferences with the Depa ment of the Interior. A citizens' co mittee was established which has d an extraordinary job. The econo drive kept the project out of the F eral budget, but it is hoped that it be restored next year.

Long Island's housing industry, w the cooperation of the Long Island Ho Builders Institute and the Federal Ho ing Administration, has made gi strides to provide better homes for many new residents. This is a const and continuing process.

Many minor projects were effected instituted, such as an Army engine study of the harbor facilities at P Jefferson and Sag Harbor; a foghorn the Montauk breakwater; a radio bea at Shinnecock Inlet has been promis improved military housing at the Suff Airbase; attracting commercial use MacArthur Airport; dredging of sh areas in the Great South Bay Chann farm group conferences, with spe reference to disposing of potato s pluses; several hundred individual migration cases; the expediting of numerable passport applications, and processing of nearly a thousand milit cases, either hardship discharges transfers or veterans' service matter

In addition, I introduced legislatio keep former enemy assets from be turned over to Italy, Germany, and pan—H. R. 7318. These funds con tuted the only reparations ever rece

from these nations who declared war on us. They must be used as reparations for those who have legitimate claims against these governments. I introduced many other bills, such as H. R. 498, to provide a permanent home for the Vice President of the United States; H. R. 4842, to provide control of advertising on federally owned or controlled lands; House Concurrent Resolution 168, calling for the creation of a permanent United Nations police force, and H. R. 4532 and H. R. 7144, bills dealing with quality requirements for inspection, certification, and labeling of Irish potatoes.

It has been an honor and pleasure to be of service to you and to my country for another year. Your patience and tolerance where we have disagreed and your understanding where we have been unable to solve your problem completely are especially appreciated. Your comments, advice, and suggestions are always welcome.

Nigeria Looks Toward Independence

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call the attention of the House to a very significant event. Monday the 2d of September will mark a major step in Nigeria's resolute march toward independence. On that day the Honorable Abubakar Tafawa Balewa will take office as the first Prime Minister of the Nigerian Federation, and then convene the opening session of Nigeria's all-African Cabinet.

Mr. Balewa's appointment implements the decision of the Nigerian Constitutional Conference, held in London earlier this year, to grant a considerable measure of internal self-government to the Federation. The selection of Mr. Balewa, formerly Minister of Transport, as Prime Minister assures Nigerians a capable and dedicated leader, a man who is firmly committed to independence for his country in 1960. He is well prepared by temperament and training to form a national government, whose immediate task will be to coordinate the policies of the three regions and the cameroons.

In recent years, Mr. Speaker, there has been an ever-increasing sentiment within Nigeria for national independence. Conferences were held in 1953 and 1954 in London and Lagos, respectively, to determine the character of the Federal constitution, and to consider the question of self-government. Earlier this year the three regional premiers agreed upon 1959 as the target date for independence, and a resolution to that effect was passed unanimously by the house of representatives on March 26. With this background the London conference convened May 23 with nearly 100 delegates and advisers from Nigeria and Great Britain to "review the constitution and examine the question of self-government."

In commenting on this proposal, Mr. Lennox-Boyd stated that it would be very difficult for Her Majesty's Government to draw a blank check in favor of independence in 1959, as it was presently impossible to foretell what the structure of Nigeria would be by 1959. Two regions—the east and the west—were only just launching out on regional self-government, while the third and largest—the north—did not want independence until 1959. Consequently, Nigeria as a whole had not yet been in a position to feel the strain of regional self-government, and the British wanted some idea as to how that strain would be taken before finally settling the issue of independence. Furthermore, the conference had only just agreed to establish a commission to look into the position of minorities, and there was a possibility that recommendations of this commission might lead to the establishment of further states in Nigeria. While he expressed concern lest Nigeria move too quickly into an independence for which she might not be prepared, Mr. Lennox-Boyd alined himself squarely behind eventual self-government.

The decision of the conference to grant immediate self-government to the eastern and western regions, but to defer until 1960 setting a firm date for federal independence, indicates considerable qualities of statesmanship on the part of Nigerian leaders. Although disappointing to those who sought a fixed date for national independence, the decision will provide opportunity for exercising nearly complete self-government within regional spheres, and limited self-government within the Federation.

As regard the legislature, the conference recommended that a House of Representatives and a Senate be created. The Senate would be coequal with the House, and be comprised of 12 members from each region and the Southern Cameroons, 4 representatives from Lagos, 4 special members appointed by the Governor-General, members of the Council of Ministers who are also Members of the House, and the President, if elected from outside the Senate. It was agreed that the present House should run its full course; thereafter, it would consist of 320 members, elected on the basis of one member for approximately each 100,000 of the present population. Members of the House would be elected by universal adult suffrage in the eastern and western regions and the Southern Cameroons, and by adult male suffrage in the northern region. The franchise in the northern region is to be reviewed from time to time.

The problem of minorities in each region was given considerable attention by the conference. A minorities commission was set up to go in detail into the fears of minorities, and to consider how these could best be met. The conference took a strong position against splitting up Nigeria into further states, but the commission was given authority to recommend the creation of additional states if no other solution seems practicable.

The decisions taken by the constitutional conference will do much to strengthen Nigeria's preparations for full self-government, and provide much of the transitional machinery that is so essential to establishing a viable constitutional and administrative structure. Much credit is due the British who are unselfishly devoting themselves to training Nigerians for the assumption of governmental responsibilities.

A land of some 30 million people, Nigeria is confronted with many problems as she moves towards independence. Yet I am confident that these problems will be surmounted, and Nigeria will prove herself equal to the responsibilities that lie ahead.

To Prime Minister Balewa and his compatriots may I offer heartiest congratulations, and assurances that we stand ever ready to assist him and his country to a responsible and durable independence.

Report of Congresswoman Coya Knutson to the 9th Congressional District of Minnesota on the 1st Session, 85th Congress

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. KNUTSON. Mr. Speaker, this report will cover two groups of issues: national issues and matters of purely local or district interest and need. These are of equal importance in the sense that a sound and healthy national economy is the background and foundation of a sound and healthy local economy. A good national farm program and a healthy farm economy are essential to a good farm situation in the Ninth District. The opposite is equally true. If there is a weak spot in the national economy—as in the depressed farm income—the effect is felt not only in the Farm Belt but throughout the entire national economy. For this reason, the obligations of a Representative to the country as a whole are as great as to the congressional district he represents. The job of the Representative is to act with the greatest care, diligence, and judgment in the best interests of the country and in the best interests of the constituents whom he represents. These two interests are almost never at odds with each other.

APPROPRIATIONS

In the national picture, the most important issue is undoubtedly the problem of appropriations. The temper of the country since midsummer of 1956 has been one of complacency, and a feeling almost of normalcy—with a few notable exceptions—has prevailed throughout the country. Unquestionably, this atmosphere was largely responsible for the

economy wave, the demand for across-the-board cuts in Federal expenditures which swept over the entire country. Congressmen felt the impact heavily and the greatest single influence in the consideration of the President's budget for the executive agencies was this tidal wave of grassroots demand for economy.

These executive agencies include the Department of Health, Education, and Welfare, with its Office of Education, its Public Health Service which protects the health of the citizens against epidemics and scourges such as polio and Asian flu, the research in the fields of cancer, heart disease, mental health, neurological diseases and blindness, infectious diseases, arthritic, and metabolic diseases and dentistry, carried on by the National Institutes of Health; its Social Security Administration which assists the States in the administration of the program, old-age and survivors insurance; the Children's Bureau which provides the know-how in assisting the States in their problems of juvenile delinquency, training of nurses and technicians for the care of retarded children, and many other important State-administered children's programs; the Department of Labor with its Bureau of Employees Compensation, including disability and unemployment compensation, its apprenticeship and training section, and its Division of Prices and Cost of Living, among others; the Commerce Department with its Bureau of Standards, its Bureau of the Census, the Coast and Geodetic Survey, the Civil Aeronautics Board and Administration, the Bureau of Public Roads, and others; the Justice Department with its FBI, its Immigration and Naturalization Service; the Interior Department with its Bureau of Reclamation and its Bureau of Indian Affairs and others; the Treasury Department with the Coast Guard, the Internal Revenue Service, the Bureau of Customs, and all the financial operations of the Government; the Post Office Department; and so on and on through the Government, all the executive agencies, independent offices, and commissions.

Of the requested amount of over $73 billion in new appropriations, cuts of an estimated $4.9 billion were made. Of this total, the administration agreed to about half, although there was considerable disagreement within the administration itself and the various Cabinet officers of the administration, on the majority of the fiscal issues.

Each of these appropriations required minute study but the result was invariably the same—reduced budgets—many of them in essential functions and services, many of them with far-reaching and widespread effects. While there is probably no one who would question the principle that economy is a good thing wherever possible, there are obviously certain dangers inherent in economy for economy's sake. Carried to its logical conclusion, this theory could end up with the elimination of whole programs, good or bad according to one's view—and even of the Government itself. This is absurd, of course. But so is the thoughtless and indiscriminate slashing of essential Government programs and services. There are a number of such programs over which there should never have been any disagreement—programs which are essential to the Nation's health, or to its security, or to the normal conduct of its business and its agriculture.

These are programs which are of equal importance to citizens in my district and to the citizens of the southernmost districts of Florida and California. These are the programs over which there could be no possible quarrel on grounds of regional interests. Yet, because of the weight of the economy pressure wave, we had to spend valuable hours on the floor of the House when we should have been in committee conducting our studies or in our offices tending to our districts' business. We had to have rollcall after rollcall—14 in 1 day, estimated at 40 minutes each—in an effort to persuade our colleagues of the differences between cutting an appropriation where such a cut could be made with continued efficiency of the operation, and cutting an appropriation merely for the sake of cutting where the country's vital interests required the full requested amount. Just simply swinging the appropriations meat cleaver resulted in the elimination or drastic curtailment of some pretty essential services, not only to my own district, but the country as a whole.

There were some threats to essential programs which fortunately we were able to fight off by just simply digging in our heels and refusing to give in on. One of these was the sewage disposal aid to the States. Pressure to knock out the grants, which are the heart of the water pollution control program, was spearheaded by the United States Chamber of Commerce, the National Association of Manufacturers, and trade associations representing certain polluting industries. The attack was mounted under the guise of economy. Conservationists in Congress were able to turn back this powerful attack on the year-old water pollution control program when, by a rollcall vote of 231 to 185, the House reversed a previous decision to eliminate the grants to stimulate the building of sewage-treatment plants.

Here is the perfect example of the parallel of national and local interests. I don't think anyone will question the need of our doing our utmost to halt the frightful and rapidly increasing pollution of our national streams and rivers which provide the water with which we bathe our babies and cook our food. Even the most economy minded States-righter will agree: First, that this is not an issue of State versus Government control—since, what good would it do if one State did something about water pollution and the next State, geographically speaking, through which a particular river flowed, did nothing; and second, that the increasing pollution, if unchecked, will have a devastating effect upon the health of our citizens. Manifestly, this is the perfect marriage of national and local interests. In my own district, any number of our cities have or will have sewage disposal problems—Fergus Falls, among them. I am glad to say that we can now see some hope for a solution of this problem.

In such an atmosphere as was crea by this economy drive, there were, fortunately, many measures of regio interest as well which "fell between slats" and were eliminated altogeth Some of these affected my own distr The elimination of funds for provision improved facilities for customs offices our borders was accomplished despite best efforts. In some cases such were made because of lack of regio interest, as for example, eastern Me bers' disinterest in western Membe border problems, and southerners' northerners' problems.

Other deep cuts were made in budg of agencies such as the Weather Bure the importance of which is better kno in such areas as Minnesota, where forces of nature are alternately threat boon, and where provision must be m in accordance with long-range foreca ing. City constituents may be merely convenienced by faulty weather repo ing. The farmer is not so fortunate.

ADMINISTRATION'S MONEY POLICY—TAXE

The work on appropriations is one the most important functions of House of Representatives provided in Constitution. It requires the most c scientious and continuous study on part of every Member. It is also one the most interesting functions becaus is here that we have an opportunity study the vast functioning of our G ernment in all its relations to our p ple and to the world. It is here, a that we find out exactly what the adm istration's policies are and how they operating.

One of the interesting things ab these fiscal matters is that the figu approved by Congress in the various propriations measures do not include permanent and indefinite appropriati of moneys to pay interest on public de interest on various trust funds and forth. These amounted in fiscal y 1956 to nearly $7 billion. In short, C gress has no control over these outl whatsoever. The Government must interest to the purchasers of its bon from the sale of which the Treasury p the costs of operating the Governme These purchasers are, principally, large national banks, insurance co panies and the Federal Reserve Boa On account of the hard money, high terest policy of this administration, the inflation which these policies fe this cost to the Government for mon to pay for its operations has increa from 1952 to 1957 by approximately per capita—roughly $850 million year or over a 3-year period, more th $2 billion.

This huge sum alone would cover appropriations for fiscal year 1958 any one of the following Departments Agencies—for combinations of a nu ber of them: Commerce, $537 milli Agriculture, $1.59 billion; Interior, $ million; Labor, $354 million; Treasu $691 million; State, $189 million; Justi $227 million; United States Informati Agency, $96 million; all public wor $858 million—or any number of the dependent offices and commissions together. These figures are approxima

The enormity of this loss of taxpayers' hard-earned money due to inflation can be better appreciated by comparison with other benefits which might have been purchased. With this $850 million per year, we could have met three-fifths of the cost of the proposed Federal aid for school construction; we could have paid 95 percent of the cost of an adequate slum-clearance and urban-renewal program—estimated at $900 million by the United States mayors' conference; we could have met the total cost of the drought-relief programs from 1954 to 1957 and still have close to $400 million to spend on needed soil- and water-conservation programs in the stricken areas; we could have built the high Hells Canyon Dam and had close to $500 million left over.

We are all, as individuals, keenly aware of the effects of the inflation and the hard money, high interest rate policies on our own pocketbooks. Since January 1953, the cost of living, according to the Consumer Price Index, has risen a full 6.1 percent; food—except for seasonal variations—generally up 3.8 percent; clothing up 1.8 percent; mortgage interest up 30 percent; local water rates up 35 percent; transportation up 20 percent, in many areas much more; rent up 12 percent. There are but a few of the increases in our basic expenditures. As I mentioned in the Capital Chat of August 29, the interest rates on Federal Housing Administration-insured loans have been increased by Administration ofder 16⅔ percent in just 8 months.

In addition, according to the former Secretary of the Treasury, George Humphrey, "State and municipal financing has increased by $18.8 billion in the past 4 years." This means that in February 1957, State and local governments had to pay 69.6 percent more in interest to carry their debts than in 1952. I leave it to you to think what your State and local governments could have done for you with that money.

Besides the effect on individual pocketbooks and on State and municipal financing, the exact figures of this increased cost to the Government of its own operations on account of the administration's fiscal policies were certainly an eye opener. It would be an interesting speculation to figure for this period, 1953–57, the excess funds Congress has had to appropriate for Government operation on account of the lower purchasing value of the dollar. Probably well within this vast sum lies the amount of money which might have gone for a substantial tax reduction for everyone—not just for the corporations and for individuals above the 42 percent income-tax bracket.

FOREIGN AID AND TECHNICAL ASSISTANCE

Our stature in the eyes of the world is dependent upon our international relations. The only part that the Congress plays in the conduct of foreign affairs, is in the approval of appropriations and certain personnel. In the process, of course, we must examine the work of the various executive agencies which are engaged in the day-to-day conduct of these affairs with all other nations. Parallel and supplementary to the military and diplomatic negotiations, these operations include the contributions of know-how and personnel to the various specialized agencies of the United Nations: Among others, the World Health Organization, Food and Agriculture Organization, and the United Nations Education, Scientific, and Cultural Organization; the independent international service agencies, International Monetary Fund and World Bank, the Intergovernmental Committee for European Migration, and others.

Technical assistance is furnished in most of these areas to help other countries, principally the underdeveloped countries, to help themselves, to build up their native skills to productive levels, to eliminate the tremendous starvation areas of the world, and to build strong economies, widely based educational systems and democratic institutions. These agencies and those of our citizens who are engaged in this worthy work, are quietly making friends for us all over the world, in helping to eradicate the dreadful diseases bred of poverty and lack of sanitation—and by ignorance. These devoted and dedicated people are the 20th century missionaries of democrary and they are sent wherever they are needed. They are building the only effective and lasting barrier against the spread of the atheistic communism which breeds upon poverty, ignorance, suspicion, hate, and despair.

Despite the pressures of the economy wave, most of the little amount needed for this great democratic effort was saved. It amounts to only about one-seventh of the noncongressionally controlled interest payments paid out by the Government for fiscal year 1956, mentioned above. It is only about one one-hundredth of the yearly cost of World War II, not including the entire atomic bomb development project and the collateral "shooting war" expenditures, such as transportation of troops, hospitalization, veterans' benefits, and war claims. But the effect of this worldwide missionary work is inestimable in the cause of peace and in counteracting with the people, the threat to liberties throughout the world.

ORPHAN BILL

Important in this people-to-people relationship, is the question of immigration—particularly of orphans being sought for adoption by American couples. Next to the economy mail, and mail in support of Hells Canyon, one of the subjects about which the next greatest number of constituents has written is the adoption and immigration of orphans. I am happy to be able to report that through the combined efforts of like-minded Members, this legislation has been passed by the Congress. The language of the so-called orphan bill was incorporated in the omnibus refugee bill, which also made certain other desired changes to provide for the reuniting of families, and so forth. Adoption by proxy will be permitted, the age limit is raised to 14 and no restrictions were added except for the cutoff date of June 30, 1959. This is indeed good news for these American couples who have asked Congress to help them share their abundance and their way of life with young orphaned refugees.

SIGNIFICANT SETBACKS AND FAILURES: LOST RIVER AND RUFFY BROOK, SCHOOL CONSTRUCTION

An important failure—although temporary—is the public works omnibus rivers and harbors bill, which among others, includes authorization for the Lost River and Ruffy Brook flood-control projects. As you will remember, the omnibus rivers and harbors bill of 1956—which also included the Lost River and Ruffy Brook projects—was vetoed by the President last year. There has been a real attempt this year to avoid another veto by eliminating several projects which, beside the purely political purpose, caused the veto last year. A number of these projects were eliminated. However, certain of those which came within this category, were not eliminated and reports have been requested on these from the Corps of Engineers.

These reports are not expected to be filed with the committee until this fall. If reported on favorably by a branch of the administration, there would be no reason for a Presidential veto. However, if the bill had been passed before the engineers' report was received, that alone might have provided an excuse for a Presidential veto. Members of the committee felt that rather than risk a veto of these important projects again, with very poor prospect of overriding, it would be better to hold the bill over until next year. If this bill had been passed, vetoed and the Congress had been unable to override, Congress would not have had another chance to consider these projects again until the 86th Congress convenes, January of 1959. These projects in different parts of the country, for flood control, channel dredging, and other improvements of rivers and harbors required for the continued flow of commerce and the protection of those along their banks, are too important to waste again as political ammunition. We cannot waste an additional year. Unfortunately, for all our great need, we must consider the stark political realities of the situation.

A most unfortunate failure of legislation passage for lack of support by the President for his own bill, is the ill-fated, critically needed school-construction measure. The campaign to meet the growing crisis of classroom shortages has been stymied once more. A shift of three votes would have saved the bill. On January 28, 1957, the President told the Congress that classroom shortages are our most critical education problem—and he might have added that for lack of trained engineers, scientists, and other skilled persons in this highly technological age, we might very well lose the race against time in our cold war with the Russians. The proposal of the committee was a bill, H. R. 1, for $300 million a year for 5 years, compromising the distribution formula to allot half of the money to the States on the basis of need—the administration proposal—and half according to school population. In addition, the bill provided for $750 million to purchase school construction bonds and $150 million in advances to

school financing agencies. In a last-minute effort to save the program, the Democrats threw their weight behind a proposal to substitute the original administration plan for the committee bill. They fought a delaying action, hoping that a White House call would line up the necessary support—but the call never came.

SUMMARY OF FARM SITUATION AND LEGISLATION

Of deepest concern to my district is the farm program and related legislation. There is very little I can add to what you already know. The facts are evident to you, to the consumer and to the country at large. Net farm income during the past 5 years has fallen 27 percent as a result of the administration's farm policy. Interest costs per acre have risen 67 percent since 1951 and taxes 33 percent. Since June 30, 1953, Commodity Credit Corporation stocks have more than doubled. In the same period, losses for supporting crops under this administration have been nearly three times more than the costs of its over two decades of existence. Early estimates of farm mortgage debt indicate that this figure will reach the highest point in 1957, since 1921—a huge total of $9,902,000,000. A further tragic estimate is the loss to the Nation annually of 100,000 farms—family farms.

In a February 12 press release, you may recall, I protested the steady downbeat on sliding scale parity price cuts. This downbeat is entirely consistent with the whole Republican program of the past 3 years which was interrupted during the election year. There is no question that price cuts in supports are intended to be lower than the market price and consequently of no value to the farmer. The drop in barley prices from June election-year prices of $1.02 to 94 cents, oats from 65 cents to 60 cents, rye from $1.27 to $1.15, sorghums from $1.97 to $1.83 a hundredweight, less freight costs, cuts the very threads out of the family farmer's net income. Not only is this a loss to the farmers but it is a $50,400,000 direct loss to the United States through the Commodity Credit Corporation, in the drop of prices that affect these commodities, the downbeat of prices is designed to confuse the consumer and abrogate the farmer's land tenure. There has been no cutback in farmer production on account of sliding-scale parity. The present cut in parity, subtracted from last year's election-year prices, means a loss of $57 million to farmers on oats, a $29 million loss to farmers on barley, a $3 million loss on rye, and a $17 million loss on grain sorghums.

As for legislation, we have a new compulsory poultry inspection law, a durum bonus acreage program extension for 1 year, a law making permanent the ACP, and the extension of Public Law 480 for disposal of surplus commodities abroad. There is in addition a new law to permit farmers to produce up to 30 acres of wheat for feed without penalty instead of the previous limit of 15 acres. And that is about that. Among the important measures we were not able to get through were the potato bill and the prohibition of futures trading on onions, although this year we were able to get the onions bill at least out of committee and ready for floor action.

Add to this summary rumors of administration's efforts in the next session to get rid of Public Law 480 altogether, and Secretary Benson's request for authority to eliminate all price supports and return to the uncontrolled chaos of the 1930's, which would result in far greater farm production than ever known before. Last spring, in the hearings before the Agriculture Committee, Secretary Benson, who bases his recommendations on the idea that lower prices will naturally reduce production and thereby eliminate surpluses, made the amazing statement that he knew of no competent authority to indicate to the contrary. I was able to produce figures from his own Department's agriculture statistics of 1955, indicating that in some 30 cases—that is, over half the time in certain commodities—this theory has been proved wrong. In these 30 cases, lower support prices had increased production and higher support prices had decreased production. In other words, Secretary Benson is basing his recommendations on an idea that works only about 50 percent of the time. That is not good enough for Congress—or for the farmers.

Next session, armed with materials and testimony gathered in hearings this fall—and an election year—we will be prepared for the knockdown and dragout fight with Mr. Benson.

The Family Farm Subcommittee and the Consumer Study Subcommittee will be making investigations in the field this fall, following their preparatory hearings here in Washington during the session. These are the only two committees which will be working on agriculture during the period between the first and second sessions of this Congress. The family farm hearings will be held for the purpose of securing testimony on actual experiences of family farmers in order to develop a sound farm legislative program. One of the sites chosen for these important hearings is Fergus Falls, Minn., and one of the considerations in choosing this particular city was its location in Otter Tail County, which has the largest number of family farms of any county in the State of Minnesota, and is one of the top 20 counties in the number of family-operated farms in the Nation. Much may be learned from the farm families of this area on the shaping of Government policy to strengthen the basic family system of agriculture.

The Consumer Study Subcommittee, whose schedule is not yet firmly set, will continue with its study of food price trends and will probably hold its hearings principally in cities and food-processing centers.

MISCELLANEOUS NATIONAL ISSUES

Natural-gas legislation: Some 20 million consumers have more to fear from the latest version of the natural-gas bill than from the one vetoed during the 84th Congress on grounds of arrogant lobbying by oil interests. That earlier bill would have frankly and openly amended the Natural Gas Act of 1938 to free the field sales of natural gas to interstate pipelines from Federal regulations, thus permitting big producers to raise fie prices to levels at just about all th traffic would bear. The new bill will exactly the same thing by a camouflage pretense at continued regulation of pr ducer prices. By use of elaborate lega isms, a reasonable-market-value fo mula is devised which actually directs th Federal Power Commission to regula on the basis of a general increase producer prices in line with the risin market value of gas—all of which is to arrived at by private arm's-length ba gaining. The implications of such a bi are astounding. Through the concerte efforts of a small group of Represents tives, the consumer interest in holdin the line on natural-gas prices has bee protected, and the bill held over unt next year. The consumers of Americ who stood to lose about $800 million an nually out of their pockets to the alread economically overfed oil-and-gas indus try, can breathe a sigh of relief—but onl until next session. The need for con tinued vigilance was never more clea and my district can be assured of m continued opposition to this bad legis lation.

Rural electrification: Riding on th outcome of the fight over REA are pow costs to farmers served by REA co-op and much more. REA's defenders ar under fire from two fronts: the adminis tration money managers who favor up ping interest rates on new REA loans-now fixed by law at 2 percent—to n less than what the Treasury pays on i long-term debts—roughly 3½ percent-and private power interests which pla an all-out effort to prevent further ex pansion by the co-ops.

Fish and game, duck stamp: In 193 when duck faced extinction, Congres passed the Duck Stamp Act. Duc hunters were to buy a Federal duc stamp for $1, with the proceeds going t buy and develop more land for the na tional waterfowl refuge system. Th money was not coming in fast enough t do the huge job which sportsmen figure needed doing. So they came to Congres in 1949, asking that the price of the duc stamp be doubled. Congress went alon

Four years later, 1953, the money wa rolling in. There were funds for greatly expanded refuge acquisition an development program. It never got o the ground, because the new administra tion picked the duck hunters' pocket and used the money for current operat ing expenses of the Fish and Wildlif Service. This is one of the many mean by which this administration has pre sented a balanced budget to the publi Even the Post Office Department got int the act. In 1954, the price which tha Department charged for printing an distributing the stamps was almost fiv times what it was in 1953—for about th same number of stamps.

Once again it is proposed that Con gress increase the fee. The preferre alternative is the Democratic propos to earmark 65 percent of the receipt from the present $2 fee for the purchas administration, maintenance, and de velopment of refuges. Hearings on thi last bill revealed that sale of duck stamp grossed almost $5 million last year. I

the past 20 years, duck stamps have brought in nearly $50 million. Of that, only $4.5 million has been spent for land—the rest has gone for operating expenses in the past 4 years of the Fish and Wildlife Service. Another example of the need for vigilance.

Retirement security measures: Only relatively minor bills dealing with social security were considered by the 85th Congress during the 1st session. Public Law 109—H. R. 6191—extends until July 1, 1958, the time for disabled persons to file applications for disability freeze to preserve their rights to old-age, survivors, and disability insurance. An important section of this law prohibits deductions from social-security disability benefits of the service-connected disability compensation paid to veterans. This will permit a totally disabled veteran to receive the full amounts of both payments without any reduction.

Several bills authorizing various States to combine retirement systems with social security were enacted. Another bill, H. R. 1944, liberalized regulations relating to the payment of social-security benefits to alien survivors of certain members of the armed services. H. R. 8892 extends for 2 years the time within which a minister may elect coverage as a self-employed individual for social-security purposes.

LOCAL ISSUES

H. R. 8508, the two ASC county committee bill—Public Law 85-278: I introduced a bill to prevent the consolidation of the two ASC county committees which have been serving the large counties of Otter Tail and Polk in the Ninth District. These are 2 of the counties of the 4 in the United States which would have been affected by a recent ruling of the General Accounting Office that no county shall have more than 1 ASC committee and that those which have 2 must consolidate these 2 by the end of September. These 2 counties are in the group of 20 largest counties in the country and a much smaller group of large counties principally engaged in farming. The system of two ASC county committees grew out of a need for them—to give adequate service to the farmers in these widespread areas.

Despite the fact that this bill is noncontroversial—no one is injured by its passage—only local interests are involved and there is nothing but advantage to be gained by its passage, yet this bill encountered one of the peculiar obstacles, by coincidence, which sometimes befalls a bill in the legislative process. When the bill reached the Senate, it passed favorably through the subcommittee to the Committee on Agriculture and was reported favorably to the Senate for action on a calendar which is similar to the House's Consent Calendar. There, quite by coincidence, this bill at the time was the only bill having to do with agriculture and was picked by a Senator seeking to secure passage of a very important piece of watershed legislation by the customary method of attaching it as an amendment to another measure. When we on the House side got wind of this, we were perturbed because there was a deadline for passage of the ASC committee bill, and none, or at least no known deadline requirement for the watershed legislation. To this there was the added possibility of a Presidential veto of the bill in amended form. This we just could not risk, important as the watershed legislation might have been.

The minute we found out in a routine check with the Senate bill clerk, that this bill had been objected to—that is, put over for further debate on account of the proposed amendment, we immediately got in touch with Senator HUMPHREY and he, in turn, immediately went to work in the Senate to eliminate the amendment and secure passage of the bill without amendments. But for Senator HUMPHREY'S valuable assistance in the Senate in giving the bill the final push without crippling amendment, this important deadline bill might have been lost. The bill has now gone to the President for signature and there is not any reason whatever for a veto. By the time this report goes to press, undoubtedly H. R. 8508 will be law.

In conclusion, I would like to discuss the ways in which your Representative can be of service to you, other than as a Member of Congress engaged in the legislative process. The additional services, largely advisory and representative of your interests with the various executive agencies and commissions, such as the Farmers' Home Administration, Defense Department, Social Security Administration and so forth, are limited to requests. Frequently, however, the very fact of expressed interest or protest on the part of the elected Representative is sufficient to make these agencies reconsider a hasty or an improper decision.

Warroad customs curtailment: An example of such a reaction is a reversal of its decision to curtail customs service in Warroad on the part of the Customs Bureau of the Treasury Department. As a result of vigorous protest based upon the potential damage to commerce and international interchange in the Warroad area, the threatened permanent curtailment of the service between the hours of 9 p. m. and midnight on Sundays and holidays, was removed and the service was restored in full.

Personal problems: Other and more common examples are the frequently successful solutions to personal problems which range all the way from compassionate transfers or harship discharges for hard-pressed service people and their families, to pressing for improved loan servicing of our farmers by FHA.

Egg prices: A third type of service is the campaign to draw public attention to a given problem, such as the low egg prices, and in this a continuous flow of letters from you is of considerable assistance to your Representative. In the egg crusade as an example of this part of a Representative's work, there are several steps to be taken. The first, of course, is continuous letter protest to the offending agency—in this case, the Department of Agriculture. Immediately after the convening of Congress last January, I began this phase by writing letters to the Secretary of Agriculture, asking that he do something about the depression-low egg prices by support and by buying eggs. Receiving no satisfactory reply, other letters went to the Secretary, and still receiving no satisfaction, it appeared that national attention should be called to the problem. Here is where your good letters came into the picture. After July 1, as the second phase of the campaign, I started a series of insertions of your letters on low egg prices and the cost-price squeeze in the CONGRESSIONAL RECORD. This was followed by the third phase, a floor speech in the House. This speech was picked up by the international wire services because of the buildup and through them was given a play in newspapers all over the country.

This is about the only way your Representative can influence the policies and operations of the administration—by securing the pressure of widespread public protest. In order to enlist the aid of an aroused public, attention must be focused on the problem. This is exactly what happened on the egg crusade and it has worked. The Secretary of Agriculture has begun to buy eggs in sufficient quantity to have an effect on the price—and prices to the farmer are going up, little by little.

Evaluation of the 1st session: Well, the 1st term of the 85th Congress is over. It was a Congress which might best be described as moderate—a balanced Congress. This is perfectly understandable because there were many instances of crossing party lines in different groupings, which was in turn, undoubtedly, the result of changing political patterns all over the country. The whole country is in a period of political transition. In many ways we who would have liked to see more vigorous and more liberal action on important issues had a feeling of frustration; however, much groundwork for constructive legislation in the second session has been laid.

I stayed until the last horn blew and the session was over August 30 with a rush of last-minute business. Many of my colleagues had been unable to stay the full term for personal reasons; sometimes in the last week or two it had been difficult to find a quorum in Washington. And, now that the congressional children are back home and ready to go to school—in their overcrowded classrooms—their parents can finally take a few days vacation.

Congressman John D. Dingell Reports to the People of the 15th District of Michigan

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. DINGELL. Mr. Speaker, it is my practice to report as often as possible to my people. Accordingly, I offer this report to my people on the 1st session of the 85th Congress.

The distinguished minority leader of the Senate, the Honorable WILLIAM KNOWLAND, said:

The Congress worked hard and long. Of course, the number of bills passed ran into the hundreds.

Our own distinguished majority leader in the House, the Honorable JOHN W. MCCORMACK said:

One of the greatest Congresses this country has ever had.

I am certain that when history has judged this session we will find that this has been one of the great Congresses.

Last session I served my people on the Public Works Committee and on the Merchant Marine and Fisheries Committee. Since the legislative work on the road bill, the St. Lawrence Seaway, and projects of especial interest to my people have by and large been completed my service was no longer so valuable on the Public Works Committee. For that reason I changed from the Committee on Public Works to the Committee on Interstate and Foreign Commerce at the beginning of this session in order to oppose the gas consumers gouge bill.

I maintain two offices to serve the people of my district, one in Washington, and the other in Detroit at 7310 Grand River Avenue staffed by my able assistant, Mr. Charles S. Brown, and my Detroit secretary, Mrs. Theresa Tabin.

BILLS INTRODUCED

This is a short summary of the major bills I introduced.

SOCIAL SECURITY

Mr. Speaker, I devoted much time to improvement and extension of the Social Security Act to more classes of people with better benefits commensurate with the needs of our retirees. I introduced the following bills on this subject:

H. R. 4765, a bill guaranteeing up to 60 days' free hospitalization each year to those eligible for social security benefits, including retirees, widows and dependent children.

H. R. 7669, a bill to raise the amount of annual earnings taken into account in computing benefits under the Social Security Act from $4,200 to $6,200. This bill would more adequately cover our social security retirees, raise the maximum benefit for a retired worker from $108.50 per month to around $140 per month. Under this bill widows who now receive a maximum of $81.40 would be entitled to benefits of over $100 a month. Combined family benefit of a retired husband and wife would be increased from $162.80 to around $200 a month.

This bill would not increase social security taxes for workers earning less than $4,200. The maximum increase to the employer and employee will amount to about $3.75 a month but will apply only to workers earning between $4,200 and $6,200 a year.

H. R. 5737, a bill to reduce the retirement age for men to 60 and for women to 55. The purpose of this bill is to permit our citizens to have the opportunity to receive the advantage of a more realistic retirement age where they desire to retire, or where forced to for health reasons, or because of inability to obtain jobs.

H. R. 6948, the humanitarian old-age rights bill, which I cosponsored with a number of other liberal Members of Congress. This bill establishes for the first time clear legislative intent by Congress that public assistance shall be administered promptly and humanely with due regard for preservation of family life. The bill requires that old-age assistance recipients shall receive benefits at the same age as old-age beneficiaries under title 2 of the Social Security Act. It permits earnings of up to $50 a month by aged and handicapped on public assistance instead of the present $30 a month. It also permits parents of needy children, and needy children thmeselves, to earn up to $30 a month to supplement their assistance checks without reduction in aid. This bill will permit recipients of old-age assistance to own a home of assessed value, less all encumbrances, of up to $5,000 free from imposition of lien as well as household furnishings and an insurance or burial policy up to $500. It would eliminate the practice of enforcing collections from relatives of recipients of old-age assistance. This bill also prohibits publishing of names of recipients of old-age assistance in the so-called pauper lists, and provides that the value of United States surplus food made available shall not be deducted from the recipient's aid.

CIVIL RIGHTS

I am proud to say that I was the author of the first bills introduced this session guaranteeing equal rights to all of our citizens. Those bills are:

H. R. 140, a comprehensive civil rights bill aimed at outlawing discrimination in employment, political participation, travel and accommodations; as well as protection of citizens from lynching; and to establish a civil rights division in the Department of Justice for the protection of the rights of all citizens. This included creation of a joint congressional Committee on Civil Rights, the outlawing of poll tax in the several States, and other things.

H. R. 141, which was purely an anti-poll-tax bill aimed at outlawing the poll tax in the various States as a prerequisite to voting in a Federal election.

H. R. 142, a bill aimed at the creation of a Civil Rights Division in the Department of Justice to protect the rights of all American citizens.

H. R. 143, a statute outlawing lynching and offering Federal protection to all citizens from lynch mobs and lynch law.

H. R. 144, a bill aimed at outlawing discrimination in employment because of race, color, religion, national origin or ancestry. This bill was a vigorous compulsory Federal fair employment practices bill.

Some of the features of these bills are included in the Civil Rights Act passed by this Congress.

HEALTH INSURANCE

I was cosponsor of H. R. 3764, a bill to provide a program of national contributory health insurance. This bill provides for a Federal program of contributory health insurance which sustained by a contribution from an e ployer and employee into a fund like social security trust fund. From t fund each citizen will be entitled to payment of all hospital bills, doctor b and medication. Thus for the first t the American people are offered a and complete guaranty of effect health protection. No longer wo health and adequate medical care be property only of the well-to-do.

URBAN REDEVELOPMENT

This is one of the most pressing pro lems facing the city of Detroit. As people know, the city of Detroit is fac by continued obsolescence both of hom and of factories. Many of our fine re dential areas are deteriorating into slu through the passage of time, and on thriving industrial areas are lapsing cause of changes in factory requiremen and needs. To help this problem I troduced two bills:

H. R. 6551, which would authorize t Federal Government to invest up to billion of the social security trust fun which today totals approximately billion, in bonds or other obligatio issued by local public agencies for urb renewal projects.

H. R. 5302, a comprehensive bill permit Federal cooperation and funds redevelopment of idle factory areas of t kind we have in Detroit which once em ployed thousands and thousands of me This bill would make available to D troit Federal funds for redevelopi blighted industrial areas for industri purposes.

TAXATION

During this session, Mr. Speaker, I i troduced and worked for three bills amend the tax laws of this country:

H. R. 7065, providing for a raise in t exemptions for individuals from $600 $700.

H. R. 7066, which provided for an i crease in exemptions from $600 to $80

I want to make it very clear that the 2 bills are aimed at benefiting low-i come taxpayers and will offer a fami of 4, earning in the vicinity of $5,000, tax reduction of about $120 to about $1 per annum. Under these bills a larg number of low-income taxpayers will removed from the rolls, especially tho earning under $2,000 a year.

H. R. 2541, a bill to give all corporatio with an income of under $525,000 a ye a substantial reduction in taxes and off corporations with incomes larger tha that amount increased taxes at a ver slight rate. The purpose of this bill w to give tax relief to small business an afford some help in their battle again the economic giants of this country, wit no losse of revenue to the Treasury.

IMMIGRATION

Mr. Speaker, during this session, I i troduced two bills on the subject of im migration:

The first was H. R. 4908, an omnibu immigration bill to eliminate the inequ ties and harsh features of our present im migration law. This bill does away wit the national origins quota system an

substitutes for it a general quota system, based only on the ability of this country to absorb newcomers. It eliminates the type of second-class citizenship which is given our naturalized citizens under existing law.

H. R. 4909, a bill to grant permanent refuge to escapees who came into the United States under the parole provisions of the immigration law. The purpose of this bill is to permit the Hungarian escapees who have entered the United States to become eligible for permanent residence and ultimate citizenship.

THE RECORD OF THE 85TH CONGRESS, 1ST SESSION

THE BUDGET AND APPROPRIATIONS

The 1st session of the 85th Congress cut the President's $71.8 billion budget to $66.5 billion.

The House actually voted to cut the President's budget by $6.5 billion. A slightly smaller cut results from the fact that the Senate insisted on higher expenditures for certain items.

I insert a breakdown of fiscal 1958 appropriation bills, and the action taken thereon by the Congress.

Congressional action on appropriation estimates, 85th Cong., 1st sess., Aug. 29, 1957

Appropriation bill	Estimates	Passed by House	Passed by Senate	Conference agreement	Reduction		
					Amount, latest action	Percent House bill	Percent latest action
Bills for 1958:							
Treasury-Post Office	$3,965,291,000	$3,884,927,000	$3,884,927,000	$3,884,927,000	$80,364,000	2.0	2.0
Interior	515,189,700	454,395,700	457,152,600	456,189,600	59,000,100	11.8	11.5

According to an earlier edition of the Congressional Quarterly I voted for economy only 13 percent of the time, but in that 13 percent of the time I voted to cut some $6.5 billion in nonessential items, almost the exact amount cut from the budget by the House of Representatives.

Yet I voted for the full amount of the social-security appropriation; the full amount of the Federal contribution for pollution abatement; the full amount of Federal grants to the States for schools, school lunches, old-age assistance, aid to dependent children; Federal research into cancer, heart disease, and mental illness; and Federal highway construction. I voted for the full amount requested for the Food and Drug Administration to protect the purity of this country's food and drugs, and other essential humanitarian and social programs.

I voted to pare $1.1 billion from the administration's request for $4.4 billion for foreign aid, which has been carelessly administered for the past several years. Waste has been so flagrant as to have been commented on on a number of occasions by House and Senate committees which investigated the program. The amount appropriated is in excess of the amount that the administration can justify. Today $5.5 billion is in the pipeline awaiting expenditure, and the $3.3 billion authorized by Congress gives a total of $8.8 billion available for expenditure. At present rates of expenditure that is enough for about 3 years.

In like manner I voted for reduction in the President's request for defense funds. The congressional committee which studied this matter said categorically after long hearings that the amount authorized was adequate for the needs of a sufficient defense for this country. The President received as much as he was able to spend last year, and more than the amount the administration intends to spend this year.

THE SCHOOL BILL

I voted for the Federal School Construction Act this year, by voting against a motion to kill the enacting clause. The vote on that particular motion was very close, 208 to 203. It broke down into 97 Democrats and 111 Republicans voting to kill the bill and 126 Democrats and 77 Republicans voting against killing the bill. Thus a majority of Democrats voted to save the bill, and a majority of Republicans voted to kill the bill.

It is particularly interesting to note that at the time the bill was killed the Republican assistant minority leader and other prominent leaders on the Republican side were urging that the bill be killed and announcing that they intended to vote against it. The only substantial Republican leader who voted against killing the bill was the minority leader himself. It is also interesting to note that he made no significant effort to save the bill. It is equally important that the people be aware that at the time this bill was killed by Republican Members of the House, a maneuver was on to accept the few precise changes in the bill which the President wanted so as to enact a school bill now.

VETERANS

The House refused to raise interest on Veterans' Administration's direct and guaranteed home loans from 4½ to 5 percent, thus preserving low interest rates for veterans.

This Congress enacted a bill to extend the direct loan and guaranteed loan program for World War II veterans housing to July 25, 1959, and to raise the direct loan maximum from $10,000 to $13,500. Congress also passed H. R. 52, to authorize an increase in pensions for veterans with service-connected disability by approximately 10 percent and included higher increases for completely disabled veterans.

CIVIL RIGHTS

I was one of the backers and sponsors of the first civil-rights bill, H. R. 6127, enacted in over 80 years. This is a good bill, and is a long step toward full equality for all our people. It guarantees the right of all citizens to vote and sets up strong Federal injunctive procedures to protect that right. It creates a Civil Rights Division within the Office of the Attorney General headed by an Assistant Attorney General, charged with enforcement of this and several other existing civil-rights statutes. The bill creates a Commission on Civil Rights empowered to look into civil-rights problems.

THE JURY-TRIAL AMENDMENT

Since there is much confusion over the jury-trial amendment, I want to explain what was done on that matter.

Two weakening changes were made in the Senate after we in the House had beaten off all attempts to weaken the bill. The first was striking of section III, which in effect narrowed the bill to a right-to-vote bill.

The second was the so-called jury-trial amendment. Opponents of the bill ef-

fectively spread the idea that they were protecting the right to jury trial by that amendment. However, it is long settled law that there is no right to jury trial in cases where civil or criminal contempt is the issue; that is, failure to obey lawful order of a court.

A successful compromise was effected very narrowly limiting the jury-trial amendment and guaranteeing the effectiveness of the courts to enforce the bill. The compromise made a new trial by jury available only in contempt cases when the sentence was more than $300 or 45 days imprisonment. There is no jury trial available in civil contempt proceedings at all.

THE GAS GOUGE BILL

During this session of Congress a bill to exempt gas producers from regulation was introduced and was finally reported by the House Interstate and Foreign Commerce Committee. This bill would guarantee $1 billion a year windfall to all producers of natural gas and to the pipelines who own their own reserves, and would mean a big raise in consumer prices for natural gas. I was among those who fought this bill in committee and before the House Rules Committee. We were able to slow the progress of the bill to such a point that its sponsors deemed it unwise to bring it before the Congress for final vote and passage. As said by Drew Pearson in his column of August 16, 1957:

The reason for this (defeat of the gas bill) was the effort of some young, vigorous Congressmen, led by MACDONALD, of Boston; JOHN DINGELL, of Detroit; * * * all Democrats, all first- or second-term Congressmen.

PROTECTION OF THE FBI FILES

I voted for the legislation enacted which would protect FBI files from indiscriminate prying by defendants, yet which would offer to any person accused of crime adequate opportunity to secure sufficient entry into pertinent, relevant documents in the possession of the Government, including the FBI, to adequately prepare for his own defense and to cross-examine witnesses.

IMMIGRATION

I also voted in favor of the compromise Immigration bill, S. 2792, which passed both the House and Senate. This bill, although substantially less than was embodied in my own Immigration bill, was, nevertheless, a good bill. It permits reissuance of 18,656 visas for refugees, and provides for relief for certain classes of child immigrants, tuberculars, and certain classes of wives and dependents presently excludable.

PAY RAISE FOR FEDERAL EMPLOYEES

Postal and classified Federal employees are shamefully underpaid. In order to help these people secure a fair and decent living standard I voted for H. R. 2474, a bill to give a $546 annual increase for each of the 500,000 postal workers, effective September 1, 1957. I also voted for H. R. 2462 to provide an 11-percent increase for Federal white-collar workers. It has been announced that the President will veto both of these bills. In that event I will not only vote for such bills again but will introduce them on the opening day of next year's Congress.

POSTAL RATE INCREASE

I voted against the administration's postal rate increase bill because it continued the several hundred million dollar yearly subsidy to magazines, newspapers, and periodicals at the expense of the individual users of first class and air mail. These last two classes of mail would be raised by up to 33 percent while now paying a profit. Other classes of mail which are losing money would be raised far less than the amount of the present loss to the taxpayer.

I have attempted to follow a good, constructive, liberal program for the benefit of all of the people of my district and of the country. I intend to continue this record as long as my people have me serve them.

Report on Major Legislation of the 85th Congress

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. JENNINGS. Mr. Speaker, the 1st session of the 85th Congress ends today. I have prepared, for my constituents in the Ninth District of Virginia, a brief report on the major legislative actions of the session. I have stressed those actions of particular interest to the people of my district.

No attempt has been made in this report to cover all of the activities of the session. Neither do I try to assess the accomplishments of the Congress, preferring to wait until the second session has been completed and action taken on much important pending legislation. The work of this first session, however, is more than adequate to insure this Congress an appropriate niche in history—perhaps as one of the most responsible ever to serve the people of this Nation.

AGRICULTURE LEGISLATION

I have served as a member of the House Committee on Agriculture again in this Congress, having first been assigned to this committee in the 84th Congress. Since farming is of great importance in the Ninth District, service on this committee enables me to give close consideration to all agriculture legislation passed by the Congress.

The unwillingness of the Secretary of Agriculture to approve the bills referred to him for a report has limited, to a major degree, the agriculture legislation of this session. The committee's records show that the Members of the House concerned with the well-being of agriculture in the Nation have introduced more than 500 bills. After careful study, the bills considered most worthy of action were sent to the Secretary for consideration. He approved only 16 of the 125 bills submitted. He disapproved or proposed substantial changes in all others or did not express an opinion. We know from experience that unless the Secretary indicates to the President that he proves a bill, it is doomed to a ve as the major farm bill passed in the Congress was vetoed.

The farmers of this Nation, de optimistic statements from Secretar Agriculture Ezra T. Benson, are sti trouble. Prices are high on things chased for the farm; prices have not proved on products sold from the f I hope that in the second session we have more favorable comments from Secretary on legislative proposals signed to bring a fair share of the tion's prosperity to our farmers.

The Agriculture Committee has t final action on more than 270 of the introduced in this session. The mittee, with its 18 subcommittees, conducted 176 hearings and study sions and some are also planned du the recess.

Among the major agriculture ac of the session were: A 1-year, $1.3 bi extension of the Agricultural Trade Development Assistance Act, u which our surplus farm commoditie disposed of at home and abroad; the proval of a deferred grazing prog providing assistance to the farme drought areas; establishment of a pulsory Federal poultry-inspection tem to insure sanitary practices and rect labeling of poultry and po products; an improved program of trol and eradication of plant pest cluding a new threat to farmers, th ported fire ant; a change in law t empt—for 1958 and later crops—up acres of wheat from marketing pen when the entire crop is used on the where raised; and authority provide a continuation of the agricultural servation program—ACP.

Preliminary investigation and ings on legislation referred to the culture Committee are often done b of its subcommittees. I am a memb the Subcommittees on Tobacco, W Livestock, and Feed Grains, Res and Extension, Family Farms, and sumers Study. These have been act the first session. For example, the sumers Study Subcommittee has u taken a broad investigation into the sons for increased food prices dur time of declining farm income. Family Farms Subcommittee, which a field hearing in the Ninth Distric year at my invitation, will contin work on ways and means to im farm programs for the benefit o small farm.

BUDGET REDUCTIONS

This has been an economy-m Congress, effecting substantial cu the $71.8 billion recordbreaking p time budget for fiscal year 195 nounced by the President last Jan When the final vote was taken o appropriations bills, the budget had reduced enough to give serious con ation to a tax cut next year.

Estimates of the budget cuts from $4.9 billion, as tabulated b House Appropriations Committee, t billion totaled by the Joint Committ Reduction of Nonessential Expendi Whatever be the final figure, it is

ent to illustrate the deep concern of he Congress over the proposal to increase Government spending.

I have voted for a majority of these udget cuts, including the billion-dollar eduction in foreign-aid funds. In some stances I did not vote for reduced funds ecause it was apparent they would have o be provided at some later date or essential Government services curtailed.

INTERNATIONAL AFFAIRS

The major actions in this important gislative field were the passage of the iddle East resolution to authorize ecoomic and military cooperation with iddle East nations threatened by agression; authority for the United States participate in the International tomic Energy Agency; and a much ilder immigration bill than proposed y the administration.

A continuation of foreign-aid was approved, but plans to make it a permanent peration in some respects were curtailed nd the funds requested for fiscal year 958 reduced. When the authorization nd appropriation bills were finally greed upon, the $4.4 billion proposed in he budget estimates had been cut by a illion dollars. This action, in my opinon, will insure a more responsible and fficient administration of the foreign-id operations.

VETERANS' LEGISLATION

We extended and improved the veterns direct home loan program to provide ore opportunity for veterans seeking ome loans in rural areas and small owns to secure financing, which has beome more difficult under current tight oney policies. Service-connected disbility compensation payments were inreased by an average of 10 percent with he degree of disability determining the mount of the increase. For example, a 0 percent disability monthly payment as raised from $17 to $19 while a total isability payment was increased from 81 to $225. Also, various veterans laws ere consolidated into one volume and a ouse-passed bill to raise pensions for panish-American War widows is awaitng Senate action.

FINANCE, COMMERCE, INDUSTRY

The approval of tax legislation included extension of the present corporate ncome tax rate of 52 percent and the xisting rate of certain excise taxes, and he curtailment of the authority to issue ast tax writeoff certificates for new lants. The House passed the first overall technical revision of the excise tax aws since 1932 and the bill is pending in he Senate. No income tax reduction bill as approved, but hearings on such legislation have now been scheduled for ext January.

The Small Business Administration, hich provides technical and managerial dvice and credit to small business, was xtended for a year and its loan funds ncreased. The Senate is expected to approve a House-passed bill next session to ake this a permanent agency.

The Senate approved, and the House ill probably do so next session, a revision and modification of all the Federal aws governing banks, savings and loan ssociations, and credit unions.

Also, interest rates payable on savings bonds were increased from 3 to 3¼ percent.

CIVIL-RIGHTS BILL

I opposed the passage of the so-called civil-rights bill, which occupied more time in the Congress this session than any other single piece of legislation. As passed, this measure empowers the Attorney General to use Federal injunctions to prevent alleged interference with voting rights, creates a Civil Rights Commission to investigate complaints and determine whether additional legislation should be recommended, and establishes a new section in the Justice Department, headed by an Assistant Attorney General, to be concerned with civil rights. An amendment to provide jury trials in criminal contempt cases growing out of this bill was added in the Senate and later modified by House-Senate agreement. The changes made during consideration of this bill made it less vicious to the sections of the country at which it was aimed than the original bill proposed by the administration.

IMPORTANT MISCELLANEOUS

Passage of a $1.9 billion housing bill, which included lower downpayments on FHA-insured homes, was the major piece of housing legislation of the first session. Funds were also provided for urban development and slum clearance.

The bill to begin a 5-year, $1.5 billion program of Federal aid to the States for school construction was killed in the House after an amendment was adopted to prevent the use of these funds in any State with segregated schools. Extended to June 30, 1959, however, was the assistance now provided school districts affected by Federal activities in their areas.

Pay raises were approved for postal and other Federal workers, but a veto is expected by the President. If action to disapprove these bills is taken by the President, further legislation will be required in the second session to increase pay for Government employees.

A bill to protect the files of the FBI was passed after it became apparent that a uniform procedure was needed for the production in court of statements by Government witnesses.

Also, an Airways Modernization Board was approved to assure a safe, efficient navigation system for all civilian and military aircraft.

SOCIAL SECURITY

Although we have not considered social-security amendments comparable to those of 1956, which reduced the retirement age for women and provided disability benefits at age 50, we have passed bills to make important technical and other changes in the program. The filing time for ministers to secure coverage under social security as self-employed individuals was extended for 2 years. Also, a bill was passed to insure further protection for the disabled by extending the time in which the disability freeze provisions of the Social Security Act could be made retroactive, and to allow a veteran to receive both his service-connected disability compensation and any social-security disability benefits to which he may be entitled.

FLOOD PROTECTION

Included in the public-works appropriation bill for flood control in several areas of the Nation was an initial allocation of $100,000 in planning funds for the proposed Pound River flood-control reservoir in Dickenson County. I will seek further planning funds for this project in the second session, in addition to authorization and planning funds for any other flood-protection dams found feasible under a survey now nearing completion by the Corps of Engineers. Since the flood in the Ninth District earlier this year, I have been exploring every possibility for flood control, such as local protection projects and reservoirs.

COAL RESEARCH

A special Subcommittee on Coal Research, established in the 84th Congress, has now concluded a 15-month study of the coal industry, its problems and needs. Broad recommendations for a greatly expanded program of coal research and development to insure a greater degree of stability for the industry and its workers have been made by the subcommittee. I intend to introduce legislation in the second session to carry out certain of the subcommittee's major recommendations. Coal production in Virginia is concentrated in the Ninth District and is the primary industry in several counties. Therefore, I have supported this subcommittee's work at every opportunity, including the arranging of a field hearing in Abingdon last spring to receive testimony from representatives of the industry in Virginia.

JENNINGS BILLS

I have introduced several bills in the first session and expect consideration of them by the appropriate committees of the Congress in the next session.

Two of my bills pertain to social security changes. The first would lower the retirement age for men to 62 as was done for women last year. The second would provide that a child shall be considered the adopted child of a deceased individual where adoption proceedings were commenced before such individual's death and are subsequently completed by the surviving spouse.

Pending before the Committee on Government Operations is my bill to authorize the donation of surplus Government property to community organizations, such as lifesaving crews and volunteer fire departments.

In the field of agriculture, I have introduced a bill to establish an Agricultural Research and Development Board to begin a research program to find new and increased industrial uses for agriculture products. Early this year I introduced legislation to improve the soil bank, especially to allow more participation by corn and wheat raisers outside the so-called commercial production areas of the Nation. Hearings were held and a bill similar to mine favorably reported. However, the House turned the bill down after amendments were added on the floor. Hearings have also been held on an amendment I have proposed for the soil bank to make grazing lands eligible for inclusion in this program.

Pending in the Agriculture Committee is my bill to establish an acreage-pound-

age quota system for burley tobacco. This bill would also increase allotments by at least 5 percent and provide adequate export tobacco.

As I stated, hearings will begin in the House Ways and Means Committee next January on tax legislation. I have two bills pending before the committee to increase personal exemptions from $600 to $800 and to allow a taxpayer an additional exemption for college students.

CUMBERLAND GAP PARK

Appropriated in this session were funds for the Cumberland Gap National Historical Park, which is being established on the Virginia-Kentucky-Tennessee border. Included in the appropriation, in addition to regular maintenance funds, was $325,000 for the construction of roads and trails, and $322,000 to construct buildings and utilities. Lee County residents have been very much interested in the development of this park on the county's border.

NEXT SESSION ACTIVITY

Among the major bills likely to be taken up at the second session are the postage rate increase bill, which was passed by the House; the natural gas bill, reported by the House Interstate and Foreign Commerce Committee; the TVA bond financing bill, which has passed the Senate; an extension or replacement with a direct appropriation plan, of the Lease-Purchase Act, under which Government buildings are awaiting construction; aid to areas of the Nation with excessive unemployment; trade and tariff bills; and the usual appropriation measures.

Both my district office in Marion, Va., and my Washington office will remain open, as usual, during the recess to serve the people of the district.

Pay Raises for Postal and Other Classified Workers

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. PROXMIRE. Mr. President, as a member of the Post Office and Civil Service Committee, I feel very strongly the urgent necessity of increasing the pay of postal and other Federal classified workers to keep pace with the rapidly rising cost of living. I believe that the President is callous and thoughtless in his apparent belief that the workers are now receiving adequate compensation. In the coming session of Congress I will fully support a bill to grant these workers a decent living wage.

One of my first acts as a Member of the Senate was to send a telegram to President Eisenhower urging him to sign the pay-raise bills passed by the 1st session of the 85th Congress.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the message I directed to the President.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: I most strongly urge you to sign the bills granting long overdue pay raises to postal and other classified Government workers. I am deeply concerned about the failure of salaries for Government workers to keep pace with the rapidly rising cost of living. The necessity for such an increase was a major issue in my campaign. In view of the large majority by which my policies were endorsed by the voters of Wisconsin, it is clear that the people of my State realize that a fair increase is justified and necessary.

Please do not let these Government workers down.

Sincerely,

WILLIAM PROXMIRE,
United States Senator.

Hon. Otto Passman, Statesman Extraordinary

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article that appeared in a recent issue of the Washington Star which I think is of great interest to the Members of this House. It pays a fitting tribute to a man who is constantly endeavoring to protect the Public Treasury. More power to him.

The article follows:

PASSMAN IS VIEWED AS NEW FORCE IN AID

One of the many important developments in the long session in Congress now ending has been the emergence of a new "Mr. Big of Foreign Aid."

He is OTTO E. PASSMAN, a Democrat from Louisiana, whose stalwart opposition to administration requests for new mutual-security funds caused President Eisenhower to suffer perhaps the greatest defeat of his career in the White House.

After Mr. PASSMAN's House Subcommittee on Foreign Aid Appropriations had its say, the administration's original $4.4 billion request for new mutual-security money had been whittled to $2.77 billion. The $1.6 billion reduction was one of the most severe Congress has made in an Eisenhower foreign-aid request.

Not only the Eisenhower prestige, but that of the Senate as well, hung in the balance in the last stages of the congressional debate.

FLAMBOYANT ORATORY

Until some time after 3 p. m. last Wednesday, the Louisiana Representative with the flair for flamboyant oratory and his House colleagues had been insisting on a $2.5 billion final package. It then took all the pressure Speaker SAM RAYBURN and other Democratic leaders could bring to push the House group back to the final $2.77 billion figure.

Even then Representative PASSMAN, who keeps complete foreign-aid statistical tables in his head, was reluctant to go along.

He had stood up to even more pressu few weeks ago, when President Eisenh called him to a special 6 p. m. conference the House and Senate leadership.

The President, Senate Majority L JOHNSON and House Minority Leader TIN occupied a sofa in the White House ond-floor sitting room.

In a chair directly opposite them the P dent placed Congressman PASSMAN. P ing him in semicircles sat other congress leaders, almost all of them publicly mitted to the President's foreign-aid gram substantially as it was. Among were a who's who of the administration strategically important Democrats: Ha Rayburn, Cannon, Saltonstall, Taber, glesworth, Knowland, Radford, Holl Herter.

Mr. PASSMAN, ever conscious of his s cropper beginnings, admits being overw He sat silently as others expressed their port of foreign aid. When the Presi called on him at last, the weight against was impressive.

"There is not a member of my commit Mr. PASSMAN began politely, "who would stroy or cripple your foreign-aid prog Mr. President. But they will make subs tial reduction in the appropriation upon their understanding of the n Either I or you, Mr. President, have given erroneous information about the gram."

Then Mr. PASSMAN, who keeps on his a tabulation of his net worth down to last pair of socks and shorts in his ward began reeling off from memory amounts President had requested and comparing to the amounts of carryover funds the ad istration had not spent from previous y appropriations.

CLICKS OFF CATEGORIES

He clicked off the categories—mil spending, defense support, special fu economic development. All showed a hi of administration overestimation of amounts needed, Mr. PASSMAN said, bec much less than the appropriation was ac ly spent.

In the fiscal year that ended June 3 pointed out, Congress had cut the adm tration's request almost a billion dollars, even then the administration fell shor $500 million of obligating the money ap priated. It appeared to him, he told President, that the administration had o stated its needs last fiscal year by billion.

The Representative concluded his speech with an assurance that his comm intended to ask the House to appropriat the money necessary, in his commit opinion, to carry out the programs the P dent had projected.

Mr. Eisenhower replied, in effect, tha would be satisfied if this were done.

BORN ON FARM

Mr. PASSMAN, now 57, had come a long from the tenant farm near Franklinton, where he was born. His formal schoo ended in the fourth grade, when at the a 13, he left home to go to work in a Covin La., grocery store.

He finally got a high-school diploma by ing to night school, later served in W War II as a naval officer, and now hea profit-sharing factory that makes comm cial refrigerators, restaurant equipment, lounge furniture.

Every morning at 10 o'clock Repres tive PASSMAN gets telephoned reports the Passman Wholesale Equipment Co. the Passman Investment Co. on the prev day's income and expenditures.

He watches the taxpayer's dollars with same loving care he lavishes on his per fortune, now about $500,000.

The Cyprus Question

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HENNINGS. Mr. President, it is a special privilege to ask unanimous consent to have printed in the Appendix of the RECORD a report and resolution of the 31st annual convention of the Order of Ahepa, which was held in St. Louis on August 23. This is a special privilege because of the close association which my good friend, George C. Vournas, has had over the years with this organization.

Mr. Vournas, a distinguished lawyer, a brilliant scholar, and a great American patriot, has done more than any other person in welding into our body politic the Grecian-American community. He has accomplished this not only through his work in the Order of Ahepa, but also in his own individual capacity and through his activities in many other civic organizations. He has made a valuable contribution to our democratic way of life, and his selfless devotion to our country is in the best of American traditions.

There being no objection, the report and resolution were ordered to be printed in the RECORD, as follows:

REPORT OF THE JUSTICE FOR CYPRUS COMMITTEE AT THE 31ST NATIONAL CONVENTION OF THE ORDER OF AHEPA HELD IN ST. LOUIS, MO., AUGUST 18–24, 1957

1. The debate held on the Cyprus question in the United Nations during the week of February 18, 1957, and the resolution passed by that body were important steps forward in the struggle of the people of Cyprus for self-determination.

2. The release of Archbishop Makarios from illegal imprisonment on the Seychelles Islands was hailed throughout the world as the necessary first step to the resumption of negotiations between the controlling power, the British Government, and the people of Cyprus in whom sovereignty alone resides. However, it is to be noted that Archbishop Makarios, the political and religious leader of the people of Cyprus, has not been returned to his homeland from where he was first abducted. In effect, this means that the situation that prevailed in early 1956, prior to the archbishop's illegal imprisonment, of negotiations in Cyprus between the British Government and the people of Cyprus, represented by their leader, Archbishop Makarios, has not been restored.

3. The British conservative government has refused to resume bilateral negotiations with Archbishop Makarios. In this connection, it should be noted that the bilateral talks between Archbishop Makarios and Field Marshal Harding, which started on October 4, 1955, were unilaterally terminated March 5, 1956, by the British Government when a solution was reported near.

4. During the past year, and particularly this past spring, there has been an increasing amount of evidence of brutality by the British security police against the people of Cyprus. A great debate has raged about this in the British press, and some of Britain's leading newspapers have demanded an independent inquiry be made concerning these allegations. Also, in the House of Commons debate on Cyprus (July 15, 1957), the labor opposition called for an independent inquiry into the allegations. Thus far the answer of Field Marshal Sir John Harding and the British Government has been to refuse an independent inquiry into these charges. In this connection, your committee would like to draw the attention of this national convention to the official report by a committee of the United Nations on the mass and brutal repression by the Soviet Union in Hungary. Although the methods employed by Communist Russia in Hungary are different in degree from those employed by the British in Cyprus, in essence the aim of both is the same—the control of an alien population by force.

5. A small minority within the British Government have been referring to partition as a possible solution in order to coerce the Cypriotes to accept less than full freedom. This solution has been uniformly condemned by outstanding authorities in England, in the English press, and in the House of Commons. Mr. C. L. Sulzberger, distinguished foreign affairs analyst of the New York Times, wrote a particularly cogent article pointing out the disaster that could result if partition were considered as a solution. He labeled partition "a fatal solution" (the New York Times, April 24, 1957).

6. During the past year, Senate Resolution 81, calling for application of the principle of self-determination to Cyprus, was introduced under the cosponsorship of 17 United States Senators and the full endorsement of 10 others who had not had time to cosponsor it. The Order of Ahepa played a leading role in this resolution.

RESOLUTION

Whereas on July 18, 1955, the 84th Congress unanimously passed House Concurrent Resolution 149 which reads as follows:

"Whereas Communist imperialism and other forms of colonialism constitute a denial of the inalienable rights of man; and

"Whereas the people of the United States have traditionally supported other peoples in their aspirations to achieve self-government or independence and in their struggle against tyranny or domination: Now, therefore, be it

"*Resolved by the House of Representatives (the Senate concurring)*, That it is the sense of the Congress that the United States should administer its foreign policies and programs and exercise its influence so as to support other peoples in their efforts to achieve self-determination or independence under circumstances which will enable them to assume and maintain an equal station among the free nations of the world"; and

Whereas the above resolution expresses the sense of the Congress that the United States in its international relations should maintain its traditional policy in opposition to colonialism and Communist imperialism; and

Whereas the issue in Cyprus of self-determination is basic to American foreign policy; and

Whereas it is in the interest of American foreign policy and prestige that the compromise solution of military bases for NATO and freedom for the people of Cyprus be accepted; and

Whereas the overwhelming majority of the people of the island of Cyprus are struggling for their liberty and are demanding an end to their present colonial position in the British Empire; and

Whereas the United States fought a great world war under the banner of the principle of self-determination of all peoples: Now, therefore, be it

Resolved, That the Order of Ahepa:

1. Strongly reaffirms its support for the application of the historic American principle of self-determination to the people of Cyprus and all other peoples seeking self-determination.

2. Strongly condemns the totalitarian methods employed by the British to thwart the basic right of the people of Cyprus to government by consent.

Calls for our Government to urge an independent inquiry by the United Nations, similar to the United Nations Hungarian inquiry, to probe the great number of allegations of brutality by the British security police against the people of Cyprus.

4. Express its great sympathy to the hard-pressed people of Cyprus in their gallant struggle for self-determination.

5. Rededicates itself, in the interest of American foreign policy, to the great task ahead of assisting the people of Cyprus in their struggle for freedom.

6. Initiate immediately a comprehensive program, in the interests of American foreign policy, in support of the application of the principle of self-determination for Cyprus and place responsibility on the supreme president for its fulfillment.

7. Appoint a national committee to plan and carry out such a program with headquarters in New York where the United Nations and the central committee of the Cyprus Federation of America are located.

8. Form active local committees throughout the United States and coordinate their efforts through the national committee.

9. Again take serious and sustained steps to enlist the assistance of the United States Government toward a solution of the Cyprus question and the granting to the Greek Cypriotes their inalienable right of self-determination.

10. Reexpresses its sincere appreciation to those Senators who have endorsed the application of the principle of self-determination for Cyprus.

11. Urge our Government to use its influence and prestige as leader of the free world to have negotiations resumed between the British Government and Archbishop Makarios and to allow Archbishop Makarios to return to his people in Cyprus.

12. Transmit these resolutions to the President of the United States, the Congress, the State Department, the United Nations, and the press.

Eisenhower Doctrine in Middle East on Thin Ice

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, a critical situation is developing in the Middle East which is of great concern to all of the people of the United States. We seem to be getting deeper and deeper into a political situation that could perhaps end only in a shooting war. We pray to God that this will not happen.

Mr. Speaker, under leave to extend my remarks, I am including a timely editorial that appeared in the Wall Street Journal and which sets forth the dangerous position that our country is in.

The editorial follows:

GETTING IN DEEP

A few months ago the United States was able to help prevent a Communist coup in Jordan. It is extremely doubtful the United States can pull off a similar feat in Syria; in fact, the deeper the United States gets

into that situation the more dangerous it is likely to become.

Syria is not Jordan. In Jordan there is a prowestern King who was able and willing to take decisive action, buttressed by an American show of force and military aid. In Syria the prowestern elements have been routed and the Soviet stooges are already in control for the time being at least.

There is no way for the United States to grapple directly with the problem of Syria's slippage into the Soviet orbit. For this is a plain case of Soviet subversion, something the Eisenhower doctrine does not and cannot cover. The unhappy fact is that, once a country has gone under, the United States can do little to retrieve it except by the inadmissible course of war.

What the United States is attempting, instead, is to deal with the matter indirectly. By dramatically rushing its arms aid to Jordan and by forceful official statements, it is making a show of force presumably designed to suggest to the Syrians the unwisdom of their Communist plunge. These moves are also intended to restrain the Syrians from any aggression they might contemplate against their neighbors. The implication is that the Eisenhower doctrine, which promises military assistance to any middle eastern nation attacked by a country controlled by international communism might be brought into force.

How serious this threat of Syrian aggression may be is unknown. It would seem the Soviets, well on the way to winning Syria by subversion, might be understandably reluctant to sponsor a Middle East war which might undo their "victory." But if the threat is serious, the question arises whether the United States should get involved in the Middle East Korea, which could be the result of applying the Eisenhower doctrine. The American people might well wonder if Syria is worth that.

Meanwhile the effects of the United States involvement so far could be the reverse of those intended. The tough talk may only speed the Syrians on their way to becoming a fullfledged satellite, if they have not already gone all the way. The stepped-up arms shipments to Jordan may only bring stepped-up Soviet shipments to Syria, adding the fuse of an arms race to a situation already quite explosive enough.

It is obviously unfortunate when any country slips down the Soviet drain. And there are always those who, with more emotion than reason, are ready to ask how the United States can sit idly by and do nothing. The answer is that each case must be viewed on its merits and, above all, kept in perspective.

Not every piece of territory in the whole world is so important as to justify running the risks of war. The United States realized that it could do nothing, short of war, to undo the coup in Czechoslovakia or make the Hungarian rebellion successful. And in the so-called East-West struggle Czechoslovakia and Hungary are far more valuable properties than Syria. It is thus somewhat ironic that this country should even be toying with force for such a relatively worthless objective.

The Soviet Union is far from getting its own way in the world; most places it is stopped cold, and even its success in Syria may prove a doubtful one. But neither should the United States assume responsibility for everything that happens in the world.

In any case, the United States cannot control everything. And to try is to risk fighting everywhere, regardless of any area's stategic importance to the United States. That is not serving the national interest but endangering it.

"After Living 16 Weeks in Cleveland as a Visitor From Vienna to the International Youth Leaders Exchange Program, I See the United States in Another Way: America Now Has a Face for Me and I Must Say I Like This Face"

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. BOLTON. Mr. Speaker, the citizens of my hometown, Cleveland, Ohio, have just completed another unique contribution toward good will among nations. They are just not satisfied with merely studying or talking about foreign affairs; they believe the most effective diplomacy between nations must be carried on by the people themselves.

Thus, they sponsored last year, and have repeated this year, the evergrowing international youth leaders exchange program.

In 1956 this program involved 25 leaders of youth groups and youth organizations from Western Germany. This experiment was so successful that it was not only repeated, but extended this year to include 52 youth leaders from 8 European countries. Austria was represented by 3 youth leaders; Belgium by 1; Finland sent 4, and France 6. Two came from Italy; 26 from Germany; 7 visited with us from the Netherlands, and 3 came from faraway Norway.

What impressed me most about this program was the fact that it was not just operated by our Government, but was initiated and sponsored by a group of Cleveland citizens who voluntarily got together to make this program possible. This group, headed by Kenyon C. Bolton, president of the Cleveland Council on World Affairs, included educators, businessmen, religious leaders—men and women from all walks of life and representing all religious, political, and racial groups.

The administration of the program was in the hands of one of Cleveland's most prominent Red Feather agencies, the Neighborhood Settlement Association of Cleveland. Henry B. Ollendorff, its executive director, acted as the coordinator of the program and was ably assisted by Miss Elizabeth H. Brown, the executive secretary of the project.

Although initiated and sponsored by Clevelanders, the project was a truly cooperative one. Our own Government through the International Educational Exchange Service of our State Department, contributed overseas travel grants for 38 participants, as well as a small cash grant and a great deal of help and advice. The foreign governments made possible the overseas travel of 14 of the visitors and contributed a total of $7,700 directly. Even the foreign visitors contributed directly to the program thro 10 weeks of summer work in Cleve social agencies and children's ca without receiving any salary. The Cl land foundation pioneered, as u with a grant of $3,200. The social a cies of Cleveland in which the visi worked during the summer, made a able to the program the amount of aries which they would otherwise paid for this summer work, tota $10,500. The Cleveland citizens th selves responded to an appeal by Walter K. Bailey, president of the W ner & Swasey Co., and voluntarily ga the program a total of $12,500 hundreds of individual contribut ranging from $2 to the Cleveland Ro Club's $1,000.

Thus, it can truly be said that this a cooperative enterprise of citizens, ernments, and foreign visitors.

The other unique feature of this gram was its combination of study work, of giving and receiving, of learn and teaching.

The foreign youth leaders arrive Cleveland on May 1. During the fir weeks they stayed in private home the guests of Cleveland families. E one stayed in a home for 2 weeks, this made it possible for them to American family life as members of f ilies in three different settings. hundred and fifty-six Cleveland fam volunteered eagerly to serve as host f ilies, and they included all social, ligious, and racial groups in metropolitan city.

Many of my constituents have told how much their visitors have cont uted to the broadening of their fami and their children's horizons; how t went to school with their children told about their countries; how ea they were to learn about everything t comprises the American way of life; how heartbreaking it was to let them to another family after 2 weeks.

These first 6 weeks were filled w many hours of study. This period cluded a course on American group-w methods in the School of Applied So Sciences of Western Reserve Univers taught by Prof. Margaret Hartford. T course was followed by visits to dozens social agencies, settlement houses, ch dren's institutions, the juvenile co factories, but also theaters and musi events. On 12 different occasions th met for discussions with leading Cle land citizens on specific phases of Ame can life, labor, industry, religion, volu tary citizen participation, and welf work. There was never enough time social engagements.

During the following 10 weeks, ea one of our visitors worked in one of t institutions he had before visited, a camp counselor, or a social worker, i settlement house, a children's camp Scout organization, or a children's ins tution. They led groups of Americ children, working, playing, and liv with them and their American fell counselors.

When the group left Cleveland, 400 of their new friends gathered at Hiram House Camp to bid them farewell. Many of the visitors tried to say what they felt, but nobody could really express it. The leader of the Finnish group put it this way:

We are sure that, as the years go by, our sense of the past will have one fixed dividing point: "before or after I was in America."

A young social worker from Vienna put it movingly in these words:

After 16 weeks' experience, I see the United States in another way: America now has a face for me * * * and I must say, I like this face.

Before leaving for their home countries, I had the pleasure of welcoming the group in Washington. They visited the White House and the Capitol, and I can well understand why Clevelanders insist that this program be continued and extended for many years. Not only are these young people ambassadors of good will, but they are representatives of Europe's youth who have to come to know this country of ours as it is, and as it wants to be. At the same time they have enriched the philosophy and the work of Cleveland's agencies by working with our own young people.

This has been an exchange program in every sense of the term.

The West German Government has already responded to last year's program by inviting eight Cleveland youth leaders to come to Germany during the summer of 1958. Other such invitations will follow. Cleveland can certainly be proud of the leadership they are assuming in diplomacy—people-to-people diplomacy.

How Britain Curbs Labor Racketeering

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial based on an article by Victor Riesel which was written in London quite recently. I do not know the source of the editorial so I am asking leave to include the editorial and the article by Mr. Riesel.

HOW BRITAIN CURBS RACKETEERING

Unions and the labor movement are as strong or stronger in Britain than they are in the United States. But the British don't have the same problem of labor racketeering, as we do. Instead they have a unique system set up that protects the rank and file union member against dictation by strong-arm labor leaders and against milking of the union funds.

Evidently, the machinery works to the satisfaction of organized labor since it is more than 85 years old and has obviously not hampered the growth of the British labor movement. This novel device was described the other day by labor columnist Victor Riesel, who appears in the Globe-Democrat.

The British insure fairness and honesty on the part of labor leaders through an agency called the Register of Friendly Societies. It was authorized by law in 1871.

This law says in effect that all public associations, such as unions, can be exempt from taxation and business laws if they register. To sign up, they must agree to permit the Chief Registrar to examine their books and discipline them if they violate ethical practices.

The result, Victor Riesel writes, is this:

"Today some 90 percent of Britain's unions are registered. Each year they file detailed and accurate financial reports, listing every penny owned by the union, every inch of real estate, every shilling spent, and why. This is made public and every union member—in fact, really every British citizen—can get a copy.

"Furthermore, the unions are checked regularly by (the registrar's) small staff.

"The registrar is the man to whom the rank-and-file in the operating engineers or some teamsters' locals or, in fact, any American union could go if they had evidence of corruption."

One thing is crystal clear as a result of the Senate Racket Committee's disclosures. And that is that card-carrying members of the union deserve better protection of the funds collected from them. Instance after instance of loose if not fraudulent use of union funds was revealed before the Senate Rackets Committee.

At present, unions are not required to make public disclosure of what money they took in, what it was spent on, and by whom. That kind of reform is a must—for the protection and good name of unions as well as in the public interest.

And so is some kind of safeguard to insure that the Johnny Dios and other hoodlums can't rule unions with hired thugs or gunmen, masquerading as business agents or organizers.

[From the St. Louis Globe-Democrat of August 29, 1957]

RACKET BUSTING

(By Victor Riesel)

LONDON, August 28.—From Sherlock Holmes I got positively no help on racket busting in America. The old boy was not at home on Baker Street. I ambled over to Jermyn Street, but unfortunately Dr. Watson was on holiday. But that didn't foil your operative. There was someone in at 17 North Audley Street, Westminster, in Mayfair—a three-story, old Georgian brownstone-front house such as we all dreamed was occupied by Detective Holmes.

There is an answer to America's rackets at 17 North Audley. For there resides a modern knight, Sir George Crabbe. He has enough power to crack any labor racket, should some hood here ever catch the disease from the States.

Sir George can seize any union that falls into the hands of a thief. Sir George can seize its books. But he can do more than that. He can seize its property, its public buildings and even its postage stamps. And he can turn the property back after he has vacuumed it.

Yet fewer Britons know Sir George than know that Charles Dickens and Karl Marx were neighbors, in a way. You see, Sir George is the chief registrar of the Registry of Friendly Societies. As such, he has the power to act in the name of the queen, decency, and civilization, all of which are so synonymous here. The Registry, it seems to me, is something we can use in the United States in this year of the shakedown 1957, and not when Congress reconvenes in 1958. Here is why:

The Registry of Friendly Societies was set up under the law of 1871. This act said in effect that all public associations, such as unions, can be exempt from taxation and business laws if they register.

All these unions needed to do was to come in, agree to conduct themselves as the decencies of ethical practices dictate and they could get a certificate, a number, and tax exemptions. But they also had to agree to permit the chief registrar to examine their records and discipline them if need be.

Today, some 90 percent of Britain's unions are registered. Each year they file detailed and accurate financial reports, listing every penny owned by the union, every inch of real estate, every shilling spent and why. This is made public and every union member—in fact, really every British citizen—can get a copy.

Furthermore, the unions are checked regularly by Sir George's small staff. There are no phonied books. Each year the unions must bring up to date the constitutions, procedures and practices and lists of officers which always are on file at 17 North Audley. Included are all union laws covering their own regulation of expense accounts, fines of members, collection of dues, assessments, and initiation fees. Even membership lists are checked. If an officer is removed, the registrar wants to know why.

Furthermore, the registrar makes certain that funds collected for special purposes are spent for these purposes. A union can raise money to back a Laborite candidate. But it puts the pounds in special kitties. Furthermore, this money can't be spent without approval of a majority of the membership—and no one is forced to contribute a political halfpenny.

The registrar is the man to whom the rank and file in the operating engineers' or teamsters' locals or, in fact, any American union could go if they had evidence of corruption. In England, all they would need do would be to call Mayfair 7001. They would get an appointment. They would be listened to. If their evidence held up, Sir George would order some of his 10-man staff to look at the union books, or sit in on union elections, or count the union's cash.

The Cameron Disaster

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, from time to time I have tried to keep the House advised of such disasters as the tidal wave which struck the coast of Louisiana with such vicious force on June 27 during hurricane Audrey.

As president of the National Rivers and Harbors Congress, I have long had a great interest in all the varying aspects of the Nation's water problems. Our Federal program for water utilization is concerned with the control of our water resources and with efforts to minimize its devastation when it goes on a rampage. We are interested in trying to avert disaster and we are interested in analyzing the facts after a disaster so that we can plan and expand control measures.

Therefore, the three Federal agencies most immediately and directly involved in the Audrey storm were asked to prepare brief reports on their activities in the Cameron, La., disaster area. The reports were prepared by the Military Establishment, by the United States Weather Bureau, and the Federal Civil

Defense Administration. In addition, I call the attention of the House to a newspaper article appearing in the Port Arthur, Tex., News on Friday, August 30, 1957, entitled "Lights To Go On—Cameron To Have No Rest for Labor Day."

These reports and this article will give Members a fuller insight into the vastness of the human problems that arise when disaster strikes. They should emphasize again the need for expanding and accelerating our Federal flood-control and water-utilization programs.

EMERGENCY EMPLOYMENT OF MILITARY RESOURCES, DISASTER RELIEF, LOUISIANA, JUNE 27–AUGUST 27, 1957

1. Reference is made to the telephone conversation between Major Capka and Lieutenant Colonel Crayton, reference a request from the office of Representative OVERTON BROOKS, Louisiana, for information, subject as above. The following information is provided as a basis for a reply to the request of the Congressman.

2. A tropical disturbance, hurricane Audrey, struck the Louisiana and Texas coast June 27–28. The area in the vicinity of Cameron, La., was damaged severely. The commanding general, Fourth United States Army, in consonance with his responsibility to control and coordinate emergency military support in disaster relief, designated the commanding general, 1st Armored Division, Fort Polk, to establish a disaster relief operation center at Lakes Charles. The employment of all emergency military assistance rendered by the services in the disaster area was controlled from this center. Liaison and coordination with other Federal agencies, the American Red Cross, State and local authorities were effected at the military disaster relief operation center.

3. The cumulative totals of military assistance rendered in the State of Louisiana, in connection with the disaster caused by Hurricane Audrey, are as follows:

(a) Cumulative totals of military personnel employed:

(1) Army: 3,755 man-days with a maximum of 512 personnel, employed on June 29.

(2) Navy: 448 man-days with a maximum of 246 personnel, employed on June 28.

(3) Air Force: 1,846 man-days with a maximum of 49 personnel, employed on July 10.

(4) Coast Guard: 725 man-days with a maximum of 280 personnel, employed on June 28.

(b) Cumulative totals of military equipment employed:

(1) Army: Cots, 3,600; blankets, 8,900; litters, 110; medical kits, 1; baby delivery kit, 1; sedans, 4; trucks, 116; ambulances, 11; tractors, 5; dozers, 3; refrigeration vans, 5; water purification units, 2; water tankers, 7; mobile shower units, 3; helicopters, 14; light aircraft, 3; radios, 26; tent hospitals, 4; tent kitchens, 4; field tents, 27; ranges, 24; and, in addition, engineer bridging and timber, generators, power saws, and compressors.

(2) Navy: Blankets, 500; pumps, 5; one-half-kilowatt light plant, 1; trucks, 15; radio and transmitter unit, 1; helicopters, 3; aircraft, 3.

(3) Air Force: Helicopters, 9; other aircraft, 31.

(4) Coast Guard: Cutters, 3; buoy tenders, 2; patrol vessels, flood-relief boats, 20; helicopters, 3; aircraft, 4; communication trucks, 2; other trucks, 4.

4. The above totals do not include personnel who indirectly supported the disaster operations, such as command, staff, liaison, maintenance, and communications or resources alerted and held available for possible employment.

5. Army helicopters were used for personal reconnaissance of the affected area by the Governor of Louisiana and key Federal Civil Defense Administration officials. The number of military personnel and military resources employed were reduced and withdrawn as State, local, and FCDA control was organized. Assistance to the American Red Cross, such as necessary personnel to operate field kitchens and equipment, refrigeration trucks, water-purification units, and some heavy engineer equipment were not withdrawn from the area until August 27, due to the fact that civil authorities were incapable of coping with the requirement of providing for the humanitarian demands in the affected area.

For the Deputy Chief of Staff for Military Operations:

F. T. PACHLER,
Brigadier General, General Staff, Director of Operations, ODCSOPS.
H. P. DONALD,
Lieutenant Colonel, General Staff, Assistant Executive Director of Operations, ODCSOPS.

DEPARTMENT OF THE AIR FORCE,
Washington, August 27, 1957.

Hon. OVERTON BROOKS,
House of Representatives.

DEAR MR. BROOKS: I refer to your recent expression of interest concerning United States Air Force support rendered during the domestic emergency hurricane Audrey.

The Air Force participation in the hurricane disaster in the State of Louisiana extended from June 28, to July 23, 1957. Seventeen aircraft and seventy-nine aircrew members participated in airlifting personnel, clothing, and supplies. Helicopters and liaison aircraft assisted in the coordinated air-sea rescue effort. A large number of men participated at various Air Force bases in loading supplies and refueling aircraft.

Final reports have not yet been received from field activities, and the complete extent of United States Air Force participation is not known at this time.

Your interest in this matter is appreciated.

Sincerely yours,

F. ADDUN

(For and in the absence of Joe W. Kelly, major general, USAF, director, legislative liaison.)

BRIEF REPORT ON HURRICANE AUDREY, JUNE 25–28, 1957, BY UNITED STATES WEATHER BUREAU

On Monday, the 24th of June, reports of light westerly winds at upper levels over the southwest portion of the Gulf of Mexico gave indications to Weather Bureau hurricane forecasters that a tropical storm was forming in the Bay of Campeche area. Later in the day a weather report sent in by a shrimp boat confirmed the beginning of a tropical storm that later was to be known as hurricane Audrey and which would strike Cameron Parish with great violence on Thursday morning, June 27.

The tropical depression remained almost stationary during Monday night, but gradually became more intense. At 4 a. m., central standard time, Tuesday, June 25, a bulletin was issued by the Weather Bureau's hurricane forecast office at New Orleans stating: "There are some indications that it is beginning to intensify and a slow northward movement is expected."

A Navy weather-reconnaissance plane departed from Jacksonville early on Tuesday morning, to report on what was happening over and near the storm area in the western Gulf of Mexico. By noon the Navy plane had obtained a definite fix on the location of the center of the depression, and also reported that the surrounding winds had increased to hurricane force (75 miles per hour or more).

Hurricane Advisory No. 1 was issued Tuesday noon on June 25, advising a hurricane watch (an announcement for specific areas that a hurricane or incipient hurricane condition off the coast poses a threat; all pe in the indicated areas should take stoc their preparedness requirements, keep ab of the latest advisories and bulletins, an ready for quick action in case a warnin issued; otherwise, the usual daily activ need not be interrupted) for the Texas Louisiana coasts and stating that "all terests along the Texas and Louisiana co and in the Gulf of Mexico should watch later advisories."

During the remainder of Tuesday, the h ricane continued to move northward at ab 5 miles per hour and then increased its ward speed to about 10 miles per hour next morning. Navy weather reconnaissa aircraft continued to report the position the center of the storm and the intensit the wind around the center through the of radar, pressure measurements, and dr sondes (a device released from the pl which automatically transmits atmosph conditions back to the plane as it float the earth beneath a balloon). In additi many weather reports were received f ships in the Gulf of Mexico which assis in locating and forecasting the movemen the storm.

At 10 a. m. Wednesday, June 26, hu cane warnings were issued for the en Louisiana coast and stated that "• • • to the size of the hurricane, gales will s along the Louisiana coast tonight." same advisory contained this statement: persons in low, exposed places should m to higher ground." Added impetus to importance of the advisory was given by local statements issued by Weather Bur offices along in the warned area, such as one issued by the Weather Bureau airp station at Lake Charles, La., Wednesday af noon warning all residents of coastal area evacuate before dusk. In some areas ext sive evacuation of low places was carried Wednesday noon and evening. The Cross estimates that shelter was provi for about 18,000 people from exposed pla on the Louisiana and extreme southe Texas coasts.

Hurricane warnings for the Louisiana co were continued in the 4 p. m. Thursday visory from the New Orleans Hurricane Fo cast Center. At 10 p. m. Thursday warnings were extended westward to H Island, Tex., and the advisory included statement that "the area from High Isla to Morgan City is expected to bear the bru of this hurricane Thursday."

During Wednesday evening, June 26, tides slowly rose on the Louisiana and sou east Texas coasts and there was a slow crease in the wind, but it was not un about 3 a. m. central standard time Thursday, June 27, that the winds and tid became dangerous. At Lake Charles, La., t highest wind, 97 miles per hour, occurred 9:30 a. m. Thursday; and at Port Arth Tex., a wind gust reached 86 miles per ho at 10:33 a. m. Thursday. The highest ported wind over land was 105 miles hour from the Cities Services Refining Co near Lake Charles, but there was an unc cial report of 160 miles per hour from oil rig in the Gulf of Mexico.

Rainfall was heavy over a large area wi the greatest fall reported from Jennings, L of 10.40 inches. Tides of 6 feet or mo were reported from Galveston, Tex., to C codrie, La., with the highest of 10.6 feet be measured from a watermark inside a buil ing in Cameron. Most of Vermillion a Cameron Parishes were overrun by sea wat

After the center of Audrey crossed coast near Sabine, La., it began curving the Northeast and lost some of its streng It then moved across central Tennessee, in western Pennsylvania and western New Yo State. However, the storm maintained su cient strength to cause heavy rains, floo and winds up to 100 m. p. h. in the Gr Lakes region.

As the storm moved to the Northeast at least eight tornados occurred in Alabama on the morning of June 28, 1957, as a result of the unusual atmospheric conditions.

Press reports show 534 deaths from hurricane Audrey, and most of them occurred in Cameron Parish from drowning in the high water. Property damage was estimated at $150 million ($120 million in Louisiana; $9 million in Mississippi; $8 million in Texas, and lesser amounts eastward and north as far as Canada).

As soon as the tragic death toll in Cameron Parish became known, an extensive investigation was launched to determine the reasons for the disaster, in view of what appeared to have been excellent warnings. This investigation has not yet been completed but the following points have immediate interest:

1. The Weather Bureau warnings in connection with Audrey were as excellent as can be expected with present facilities and under the present state of the science of meteorology.

2. Almost everyone in the warned area was aware of the approach of Audrey at least 1 day before the storm struck Cameron.

3. Except for Cameron and Vermillion Parishes, extensive evacuation was completed by Wednesday night, and was organized and carried out in an orderly manner.

4. Hurricane preparedness plans were practically nonexistent in Cameron and Vermillion Parishes.

5. Conflicting and unofficial advice was issued over certain television and radio stations which gave incorrect representations of the Weather Bureau's warnings and thereby may have lulled people into a false sense of security.

Weather Bureau plans for an improved hurricane warning service include an extensive hurricane preparedness information program, an expanded telecommunication network, additional modern weather search radar stations along our coasts, the installation of dozens of automatic tide height recorders from Maine to Texas, enlarged surface and upper-air observation networks, more aircraft reconnaissance flights, and an expanded tropical storm research program which would give special attention to the problem of forecasting more precisely the heights and times of storm tides that might engulf inhabited points along our coasts.

FEDERAL CIVIL DEFENSE ADMINISTRATION PARTICIPATION IN THE HURRICANE AUDREY DISASTER OF JUNE 27, 1957, IN CAMERON, LA.

The Natural Disaster Office at the national headquarters of the Federal Civil Defense Administration, in its role of assisting the Administrator in carrying out his responsibilities for the President's disaster program, received (as standard operating procedure) all weather reports of Audrey. The FCDA region 5 office at Denton, Tex., maintained close watch of the impending hurricane and alerted all Federal agencies in the area for any possible assistance that might be rendered. During the disaster, supplies and equipment such as blankets, cots, and generators were authorized for release from FCDA warehouses for use in the affected areas.

By Friday it was apparent that a very serious disaster had occurred, especially in the parish of Cameron. FCDA coordinated the activities of other Federal agencies acting under their statutory authority in providing material, supplies, personnel, and equipment for rescue and life saving. At the request of the Governor of Louisiana and upon recommendation of FCDA, the President, on June 29, amended his previous Louisiana declaration of a major disaster to include the areas damaged as the result of hurricane Audrey. Former FCDA Administrator Val Peterson accompanied by his successor, Gov. Leo A. Hoegh and his deputy, Mr. Lewis E. Berry, arrived in the area early Saturday, and they were joined on Sunday by Gen. Holmes E. Dager, Director of the Natural Disaster Office, and his deputy, Mr. Charles Beal. Meanwhile, regional people were in the affected areas, and at one time or another the entire regional staff was engaged in this disaster operation, as were personnel on loan from other Federal agencies.

Through coordination of activities of other Federal agencies such as the Corps of Engineers, Department of Defense, Department of Health, Education, and Welfare, Housing and Home Finance Agency, General Services Administration, Small Business Administration, Small Business Administration, Bureau of Public Roads, and assistance and cooperation with the American National Red Cross, and through project applications for work determined eligible under Public Law 875, the following types of rehabilitation work have been or are being performed where necessary:

1. Rescue and transportation of cattle and providing them with hay and water.
2. Debris clearance.
3. Health and sanitation measures including removal of dead animals, chlorinating water wells, pumping septic tanks, etc., including vector control, spraying, and insecticiding.
4. Clearing roadways and waterways of obstacles and debris.
5. Replacing communication and power facilities.
6. Repairing schools and other public facilities.
7. A temporary housing program in cooperation with the American National Red Cross, Housing and Home Finance Agency, and General Services Administration.
8. Making surplus property available to the State and to small business.
9. Furnishing professional assistance and administrative guidance in the disaster operation.

[From the Port Arthur (Tex.) News of August 30, 1957]

LIGHTS TO GO ON—CAMERON TO HAVE NO REST FOR LABOR DAY

CAMERON, LA., August 30.—Labor Day weekend will be a holiday of rest and relaxation for most of the Nation, but not for the hurricane Audrey victims of stricken Cameron Parish, La.

However, Red Cross officials who have been working side by side with the people of this area to restore them to their predisaster status feel that the holiday weekend will be much more than just another 3 days of hard work.

According to Frank Kelly, disaster chairman for the Calcasieu-Cameron chapter of the American Red Cross, this weekend will actually mark a major milestone on the road to Cameron Parish's recovery.

LAST MASS FEEDING

For one thing, electric power will be restored to Cameron for the first time since the tidal waves and hurricane-born waters swept through the gulf community on June 27. The Red Cross mass feeding program, which has provided more than 125,000 hot meals for the disaster victims, will be discontinued on September 3 because the advent of electricity will mean the restoration of refrigeration and cooking facilities and will finally make possible the reopening of at least one restaurant and food store in each of the stricken communities of Cameron, Grand Chenier, and Creole. The last mass feeding will end with the meal on Monday evening, September 2.

"It will mean that each family can start cooking for itself, either in the tents which the Housing and Home Finance Agency has provided on a loan basis, or in the few homes which have been repaired and which have been reoccupied," Kelly said. "It means that a positive step has been taken by the people of Cameron Parish to get back on their feet again."

At the same time, the work of repair and rebuilding will go on right through the weekend, with another AFL–CIO volunteer "building bee" in cooperation with the Red Cross scheduled to erect seven more new homes with materials supplied by the Red Cross. In the swamps of Pecan Island, houses will be towed out and returned to their foundations.

PLAN FOR FUTURE

In the hundreds of tent homes which are being used until all the homes can be repaired or rebuilt, the Red Cross supplied basic furnishings and equipment for the temporary dwellings of the people of this parish. Every family applying to the Red Cross will have a plan for its future this weekend because earlier in the week the Red Cross Advisory Committee completed the review of the last of almost 1,600 plans for family rehabilitation recommended by disaster workers serving in the Calcasieu-Cameron area since late June.

In the entire area of southwestern Louisiana and 4 counties in Texas, 3,670 families have requested Red Cross rehabilitation help. The Red Cross anticipates that by the time the job is complete and all of the financial awards have been made to help the stricken people with those things they cannot do for themselves, approximately $2,500,000 will have been spent for Red Cross relief and rehabilitation work.

While plans for Red Cross assistance to the families have been completed and approved, the Red Cross staff still has a great amount of work to do in the Calcasieu-Cameron area. Red Cross specialists will stay on the job, disbursing the approved funds, reviewing building contracts, and helping families with their purchases; however, by Labor Day 1957, the end of the job is in sight.

HARD WORK AND HOPE

As Frank Kelly said here today, "2 months ago, there was tragedy and despair. This weekend, the keynote is hard work and hope."

The hurricane took 363 lives and 190 persons are believed missing. Twelve hundred homes were destroyed and 600 suffered major damage. But the accent today is on recovery, not loss statistics, and the Red Cross disaster staff workers predict that Labor Day 1958, will find the events of the past 9 weeks will be part of history, and that next year Cameron Parish, too, will take a holiday.

Making Living Easier for the Housewife

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. AYRES. Mr. Speaker, American industry is to be credited with most of the laborsaving ideas and appliances that have given the housewife her freedom from drudgery and added hours of leisure time to enjoy her family.

The Bon Ami Co. has come up with an idea in this connection which I believe will be of interest to all Members of the House. Bon Ami is sending a representative to every major city in the country this fall to lecture before women's groups on how to make living easier for the housewife. It is a good-will program of helpful hints.

A great deal of preparation and research have been done to make the lectures worth while and interesting and I hope that many thousands of American mothers will have the opportunity of attending.

Trials of Servicemen Abroad

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. PROXMIRE. Mr. President, the Green Bay, Wis., Chapter of the Veterans of Foreign Wars passed a resolution August 22, 1957, concerning the status-of-forces agreement which this country has with other nations where American troops are based. I do not agree with this resolution. I believe that such agreements are necessary and desirable not only to assure amicable relations with the foreign nations involved but for the real protection of the individual soldier. Nevertheless, I take this opportunity to insert in the RECORD the resolution of the Green Bay chapter in order that the views of this outstanding organization may receive the public attention they deserve. The Green Bay VFW is a dedicated and loyal group of citizens deeply concerned not only with veterans' affairs but with the many troublesome issues which face this Nation. I know that the members of this chapter have given a great deal of thought to the status-of-forces problem.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolution adopted by the organization.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF BROWN COUNTY COUNCIL, VFW, EIGHTH DISTRICT OF WISCONSIN, IN MEETING ASSEMBLED AUGUST 22, 1957, PERTAINING TO THE PREROGATIVE ESTABLISHED OF SUSTAINING THE CONSTITUTIONAL RIGHTS OF OUR SERVICEMEN TO TRIAL BY OUR MILITARY TRIBUNALS, IN CASE OF CRIMES COMMITTED ERRONEOUSLY OR WITH CRIMINAL INTENT, OR FOR OTHER CAUSES, WHILE ON ACTIVE DUTY IN THE ARMED FORCES OF THE UNITED STATES ON FOREIGN SOIL

Whereas it has been an established custom since Revolutionary War days to grant our servicemen in the armed services of our country the constitutional inherent right of trial by a military tribunal for any felony, misdemeanor, or crime perpetrated, while on active service of the United States on foreign soil or home territory; and

Whereas since World War II this distinctive and protective right has unjustifiably been taken from him, through negotiations of the so-called status-of-forces treaties between the United States and certain foreign countries, without congressional sanction or confirmation of the Senate, but by Executive order in presumptive authority; and

Whereas citing the case of Sgt. William Girard, the Supreme Court of the United States, on July 11, upheld the administration's contention, according to forces treaties agreement, to turning Sergeant Girard over to a Japanese civilian court for trial for manslaughter charges, perpetrated by him, while on active duty, protecting Government supplies and rifle range property; the Supreme Court's opinion being that they could not find anything in the Constitution to prevent the Government from using this method, if desirable, nor any laws enacted to prevent such action, of turning their servicemen over to the countries' courts, with which agreements had been made; and

Whereas in our opinion it is throwing to the four winds a time-tried precedent which has satisfactorily proven itself over the years and it was appeasement purposes (for protecting our overseas bases) that the State Department has diplomatically, politically, and expediently engineered this status-of-forces treaties agreement, by usurpation of the servicemen's inherent and constitutional rights in doing so. Therefore, we have to disagree with the Supreme Court's decision in this instance, the status-of-forces treaties has taken the aspect of a war crimes commission, so, it is with discord and displeasure that we quote our feelings on the Court's decision and the administration's policy of sacrificing jurisdiction over their own servicemen's actions on foreign soil. There is seemingly billions for appeasement and foreign aid but only peanuts for the veteran.

Respectfully yours,
BROWN COUNTY COUNCIL, VFW,
FRANK BYRNES, *Commander*,
CEYLON BERG, *Adjutant*,
LEONARD WISNESKI, *Quartermaster*,
LLOYD A. LAPLANTE, *Legislative Officer*.
GREEN BAY, WIS.

How To Stop Paying Taxes

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. GWINN. Mr. Speaker, the time has come to recognize the fact that neither this nor any other Congress is going to repeal socialistic measures one at a time. It cannot order one group of beneficiaries of Federal subsidies to get out of the feed trough first. They must all be taken out together which means that we need an overall measure to do just that. If some such overall measure is not adopted we are faced with the inevitability of continuing at an ever-increasing pace the socialization of all groups until everybody feels they are all feeding alike in the common feed trough.

It is for that reason I have introduced House Joint Resolution 355 and will continue to press for favorable congressional action on a constitutional amendment which will repeal the 16th amendment together with another provision which will end, once and for all, that competition with its own citizens brought about by the Government corporation. The adoption of this amendment to the Constitution would mean that the Federal Government would no longer need the present vast sums derived from the individual income tax.

I would like, at this point, to quote from a radio broadcast which shows, in terms of statistics, just how this proposed constitutional amendment would work:

HOW TO STOP PAYING TAXES

The following informal discussion betwe Dan Smoot and Willis E. Stone was presente this week on the Dan Smoot radio broadca Willis E. Stone, president of the Americ Progress Foundation, 6413 Franklin Avenu Los Angeles, Calif., is one of the Nation foremost experts on the subject of taxation and on the subject of the unconstitution activities of the Federal Government:

"Mr. SMOOT. Bill, I have been looking ov a remarkable document which you pul lished: How To Stop Paying Taxes. That's catching title—at this time of year, particu larly.

"Mr. STONE. It is going to become mor catching as time goes on.

"Mr. SMOOT. Bill, this study of yours really one of the most startling things I've ever seen. Based on a review of the 19 budget and of the 1954 fiscal operations the Federal Government, it reveals that, the Government had stayed within the con stitutional limits of its power, in that on year, we could have avoided paying an personal income tax at all; and the Govern ment still would have come out with a debi of $674 million.

"Can you justify that claim?

"Mr. STONE. Yes, but let's correct a poin This debit you speak of—$674 million: that a black-ink balance. That is a profit to th Government. I wanted to make that ver clear.

"Mr. SMOOT. Let me review this. If th Government had operated constitutionall in 1954, according to your calculations, could have got by without collecting on penny of personal income tax, and coul have come out in the black $674 million?

"Mr. STONE. That is right. This is quit a story.

"Mr. SMOOT. Yes, go into it.

"Mr. STONE. Well, here is the point of de parture: The Government of the Unite States is operating over 500 Federal corpo rations. None of these have any constitu tional authority for existence at all.

"Mr. SMOOT. That sounds like the corpo rate state that Mussolini set up in Fascis Italy.

"Mr. STONE. Well, it is very close to it These Federal corporations have taken ove 40 percent of the land area and 20 percent o the industrial capacity of the United States.

"In their operations, they go into red ink on such a vast scale that to pay their losses and their hidden costs, they collect taxes, o they use tax dollars provided by individuals almost every one of them.

"That is why I am in favor of the proposed 23d amendment which would make it impossible for the Federal Government to operate all these agencies, or corporations, in competition with private citizens.

"Mr. SMOOT. Bill, you actually are the author of that proposed 23d amendment, aren't you?

"Mr. STONE. That's correct.

"Mr. SMOOT. Isn't it rather brief? Could you give us the wording of it?

"Mr. STONE. It is pending in Congress as House Joint Resolution 128, reintroduced into the 85th Congress by Congressman RALPH W. GWINN, of New York. It provides that the Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprise except as specified in the Constitution.

"Mr. SMOOT. That's the whole proposed amendment?

"Mr. STONE. There are some other implementing clauses, but that's the whole intent and purpose.

"Mr. SMOOT. And that's the thing you claim would save us some $33 billion or $35 billion a year or more?

"Mr. STONE. That's right. Now, this is the way it works: It would cause 40 percent of the land area, roughly, and 20 percent of the

industrial capacity to be sold back to the American people. They would pay for it with their Government bonds.

"This would cut the national debt over $50 billion. Now, it costs one and a quarter billion dollars to pay the interest on that portion of the national debt. It costs a billion and a quarter in taxes to pay the amortization charges against that portion of the national debt.

"But this amendment would stop the losses of these Federal corporations. And they lose—after operating all year long rent free, cost free, interest free, and tax free—they manage to lose over $10 billion a year.

"Mr. SMOOT. Now, wait a minute. The Federal corporations—you mean such things as TVA, the Small Business Administration—all lose an average of $10 billion a year on their operations?

"Mr. STONE. They lose in excess of $10 billion a year.

"Mr. SMOOT. Another figure: You say you anticipate that the Government would be required by your amendment to sell, to private individuals or private corporations or private enterprise, its holdings? You mean such things as Tennessee Valley Authority?

"Mr. STONE. That's right.

"Mr. SMOOT. And the Government could get a total of $50 billion?

"Mr. STONE. That is correct. The acquisition price, according to the Government's inventory, is somewhere around $200 billion. We're estimating that all of this property—which cost $200 billion—could be sold to private citizens and corporations for at least $50 billion.

"Mr. SMOOT. You've estimated it very conservatively, haven't you?

"Mr. STONE. We feel we have been ultraconservative in our estimates.

"Mr. SMOOT. You take $50 billion off the national debt by selling these properties which the Government never had any right to acquire in the first place. And you save $10 billion a year on what they are losing, then a billion dollars on what we are paying on $50 billion a year on the national debt——

"Mr. STONE. That is a billion and a quarter in interest and another billion and a quarter in amortization. Then there is $10 billion in losses that would be abolished because there is no place to lose it any more. And then you have another factor. On the general payroll—not the corporate payroll, but on the general payroll of the Federal Government—are approximately 1 million people who do nothing but service the Federal corporations, without any cost to the Federal corporations. Now they would go back into the fields of private enterprise and earn a living.

"Mr. SMOOT. You mean a million government employees——

"Mr. STONE. A million governmental employees——

"Mr. SMOOT. Doing a bookkeeping job for the Federal corporations?

"Mr. STONE. Well, doing a servicing job. They are providing printing, attorneys, research—all manner of services.

"Mr. SMOOT. A million government employees?

"Mr. STONE. That's right. With a payroll of about $4 billion a year and a cost in goods, facilities, and services of $12 billion a year.

"Mr. SMOOT. What all does that include? Such things as typewriters, buildings, and so on, which must be provided for those 1 million employees?

"Mr. STONE. Yes. It might be interesting for you to know, Dan, that there are three and one-half typewriters for every typist in the Federal Government.

"Mr. SMOOT. They have plenty, don't they?

"Mr. STONE. They are well equipped. Now, these five items—that is, interest, amortization, losses, payroll and goods, services and facilities aggregate $28½ billion at the 1954 level.

"That is what we, the taxpayers, are paying to maintain the competition of rent free, cost free, interest free, tax free, competition of the Federal agencies against our own enterprises.

"This is a dual proposition. There is no equity, no justice. This isn't a single standard. These Federal corporations are princes of privilege, and they represent a loss to the American taxpayer of $28,500,000,000 tax every year. This is on the 1954 level.

"The proposed 23d amendment would also outlaw this fantastic thing called the foreign aid program, which the American taxpayers are compelled to pay. At the 1954 level, $4,669,000,000 in 1 year was spent to maintain socialistic and communistic regimes in power in foreign nations. Now, the $4,669,000,000 in foreign aid that would be abolished, plus the abolition of the cost of operating the Federal corporations to the taxpayers ($28½ billion) means that we can cut the cost of Government by the proposed 23d amendment $33,169,000,000.

"In 1954 the total volume of income taxes collected from individuals (before refunds) was $32,495,000,000. So you see, in 1954, if the cost of the Government had been cut in compliance with the terms of the proposed 23d amendment, the Government would have been $674 million richer that year—without collecting 1 penny in individual income tax.

"Mr. SMOOT. Bill, if we should get this amendment that you propose—the Gwinn amendment, or the 23d amendment—adopted, and the Government had to sell all these facilities which you claim the Government has no constitutional right to be operating anyway (such as Tennessee Valley Authority and the big Bonneville Dam up on the Columbia River), what would those areas do for electrical power? Isn't it necessary for the Government to be in there producing power for those folks

"Mr. STONE. Not at all. In fact, the only two areas of real electrical power shortage in the United States are those areas where the Government maintains a monopoly: Bonneville and TVA.

"Mr. SMOOT. Those are the only two areas in the Nation where there is a power shortage?

"Mr. STONE. That's right. Private enterprise has never known an area of power shortage, because private enterprise is equipped to go ahead and build, and pay taxes on its investments, and enlist voluntary financial support to build needed projects. But the Government of the United States—not the Government as we usually think of it, but the governmental agencies that have captured the machinery of government—is in open warfare with private enterprise in the development of electrical projects. I point out to you the Niagara River project and the Hells Canyon project of the Idaho Power Co.

"Mr. SMOOT. What can we do about it?

"Mr. STONE. We can get the Government out of competition with its very own citizens.

"Mr. SMOOT. How can the citizens who are interested do anything about this constitutional amendment that you propose?

"Mr. STONE. There are two ways of getting this constitutional amendment, which would restore the basic faith of the Founding Fathers. One way is to get a two-thirds majority of both Houses of Congress to authorize the submission of the proposed 23d amendment to the State legislatures for ratification. But we don't have to wait for that.

"Mr. SMOOT. That's what Congressman RALPH GWINN is doing in introducing this resolution in the Congress; isn't it?

"Mr. STONE. That's correct. But the State legislatures themselves (according to the fifth article of the Constitution) can initiate this thing in a very simple sort of way. On the application of the legislatures of two-thirds of the several States, Congress shall call a convention for proposing amendments. Any amendment proposed at such a convention must then be submitted to the States. To be adopted, the amendment must be ratified by three-fourths of the States.

"The State of Illinois has already taken the lead in this action and has adopted a resolution requiring Congress either to submit this proposed amendment to the American people for ratification, or call a constitutional convention for that purpose.

"Mr. SMOOT. Have any of the other States done that?

"Mr. STONE. No; but it is now going before other State legislatures—Texas, California, Colorado, the Carolinas. Citizens in many States, I hope, will ask their legislatures to present this 23d amendment proposal in 1957."

Economy, Yes; but Not in the Treasury

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article, written by Sidney Weintraub, and which appeared in the June 3, 1957, issue of the New Republic. Mr. Weintraub is senior professor in the department of economics at the University of Pennsylvania and is the author of many books and articles. He is currently engaged in a study of monetary and debt-management problems.

ECONOMY, YES; BUT NOT IN THE TREASURY

(By Sidney Weintraub)

It is one of those paradoxes, of which these times are full, that the Secretary of the Treasury can appear to be the paragon of economy—in the management of other Cabinet departments—with hardly a glimmer of criticism in the public press for what might seem to others the rather bountiful management of the affairs of his own department.

One of the agencies showing continuous and consecutive increases in expenditures in recent years is the Treasury itself. And if a prophecy may be ventured, the ceiling is not yet in sight. What I refer to concerns the interest payments on the national debt. For the fiscal year ended June 1952, when the national debt total was about $9 billion less than its present size of $276 billion, the total annual interest payments amounted to $5.8 billion. In the following fiscal year, reflecting in part the tight money policy in the early days of this administration, the interest sum was $6.5 billion.

As a result of the 1953–54 business downturn, prompted in degree by the same tight money policy, the subsequent reversal to somewhat easier money and lower interest rates helped reduce the annual carrying charges on the national debt to approximately $6.4 billion in the fiscal years 1954 and 1955. The national debt was roughly at about $280 billion over this period.

Since then, annual interest payments have risen to $6.8 billion for the fiscal year 1956, and it is estimated for the current 1957 fiscal year they will total $7.2 billion. For 1958 the total is expected to go to $7.3 billion—which may be an understatement if present interest trends continue.

In fine, since the fiscal year 1954, the annual Treasury expenditure for interest payments on the national debt will have increased from about $6.4 billion to $7.2 billion, or an increase of 12.5 percent, despite a drop in the national debt of near $3 billion.

Curiously, over the same period the total of all Government expenditures, from the fiscal year ending June 1954 to the budget estimate for the year ending this June, rose from $67.8 billion to $68.9 billion. Of this $1.1 billion increase covering all Federal Government departments, the Secretary of the Treasury's own bailiwick, the Treasury Department itself, has on net balance been responsible for $800 million of the increase, or for over 75 percent of the net rise in Government outlays. Might not the other department heads, whose budgets Secretary Humphrey is so anxious to trim, turn to him and ask et tu?

When one ponders the results of the mounting Treasury expenditure for interest on the national debt, the facts become even more astonishing. For if the Federal Government were to spend $800 million additional for schools, or roads, or flood control, there would be some tangible outcome of the expenditure that could be expected to contribute to national well-being over the years. Likewise, in the hands of the military, it could buy more planes and missiles, or even contribute to higher standards overseas. But when interest payments are increased by the selfsame amount of $800 million the net effect, almost in toto, is to increase the earnings of commercial banks who hold most of the issues on which the interest payments are increased. There is also some rise in earnings of other investing institutions, such as savings banks and insurance companies, plus a much smaller part going to individual bondholders. The interest payments of the Treasury thus become what the economist is fond of terming a transfer payment, one which does not leave in its wake a corresponding flow of goods, as a road, a school building, courthouse, or an atom-powered submarine.

To criticisms of this nature, that the interest-payment increase serve little purpose except to swell the incomes of financial institutions—and this is not a criticism of the profits of these institutions, which are not excessive by prosperous business standards—the usual retort is that the higher rate of interest to which all borrowers are subject, including the Treasury, is necessary in order to curb inflation. Although the matter of inflation is a vast and intricate subject, as readers know, the main questions from the standpoint of Treasury debt management are not as difficult as some pretend. We can consider these briefly.

In the first place, interest rates constitute the price of money, the cost of borrowing. Thus, if there is too much money at work in the economy, then higher interest rates can discourage some borrowing, can restrain some overexpansion and take some of the steam out of the boom even though moderate measures are unable to clamp the lid down tightly. In this respect higher interest rates are like higher prices on commodities: if there is a tomato blight and consumers must cut their purchases, then a price rise serves to accomplish just this. If automobiles are in short supply, then a price rise can keep the queue from forming. This is the function of the price system, as those of us who believe in it see it: its job is to tailor demand down to the available supply.

But, note, demand must be cut down; some buyers must be compelled to abstain from purchasing. Here then is where a policy of debt management which involves higher interest rates to the Treasury fails in its purposes: it can never make the Treasury forgo borrowing when the purpose of the Treasury in entering the market is merely to renew its existing borrowing. As pointed out earlier, the national debt today is somewhat smaller than it was 3 years ago. With Treasury surpluses over the last 2 years, and a likely surplus next year, the Treasury is not borrowing to meet any new bills; instead it is repaying some of its debts. When the Treasury does borrow nowadays, its purpose is to get funds to pay off existing bondholders; substantially, the process of doing so involves selling them a new Treasury security in exchange for the old maturing one. As so much of the weekly maturing debt issues are the so-called Treasury bills and certificates of indebtedness held by the banking system, the banks effectively subscribe to the new issues by redeeming the old ones they have on hand. Considering that interest rates on these securities have risen from about 1 percent in 1954 to the current levels of 3.25 percent, it is clear that a bonanza (which to some financial minds is of minor importance and in other opinions is of major proportions) is being reaped.

This then constitutes one of the major issues in debt management and monetary policy today, even though its deeper significance has eluded discussion in most of our newspapers and financial journals. The question may be posed in this form—in the application of monetary policy to control the economic boom, ought there not be some mechanism to shelter the Treasury from the impact of tight money?

Because it must be accomplished whether interest rates are high or low, Treasury refinancing has nothing to do, either directly or indirectly, with inflationary demands for money. In order to restore monetary policy to its proper role of curbing or stimulating the demand of private industry for funds through changes in the interest rate while, at the same time, helping to insulate the refinancing needs of Government, the former and venerated Chairman of the Federal Reserve System, Marriner Eccles, suggested one such device in the 1940's. Briefly, the proposal envisaged that banks be required to hold a legal reserve in the form of Government securities, in addition to existing deposits with the Federal Reserve System. However, with the abatement of the inflationary pressures in the years just preceding the Korean action and in the face of the usual objections to new banking legislation, the proposal was dropped. Under the present Chairman of the Reserve System, neither this nor any alternative proposal has ever been seriously discussed; the entire question has been regarded as being almost frivolous.

Likewise, the Reserve System, under some self-imposed restrictions dating back to 1953, has refrained even from assisting the Treasury in maintaining the price of new issues during a period of refinancing—a matter which becomes more curious considering that any self-respecting investment banking syndicate underwriting a new issue regards it as essential to render such assistance. The Federal Reserve, despite its efforts to shed authority, is rightly the fiscal agent of the Treasury and ought in most cases to render it the same aid as private bond issues enjoy. Astonishingly, this handicap has had apparent Treasury approval; this Federal Reserve self-denial was responsible for the well-known fiasco surrounding the 3¼-percent 30-year bond issue in late April 1953. More recently the same decision was a contributing factor to the shock experienced by the Treasury in its financing of mid-May, when subscriptions to its refunding issues fell substantially short of its hopes. At that time 28 percent of the holders of some $4.2 billion of maturing securities—an unduly high rate of "attrition," as it is called—demanded cash in lieu of new security issues, despite being offered the highest interest rates on Treasury obligations in some 23 years.

It was hoped that the monetary commission recommended by President Eisenhower would, if created, give serious attention to these matters. For whether or not new techniques are adopted in the near future, the issue of monetary control and its impact on Treasury interest payments will go on plaguing us with a rise in Federal budget interest-payment outlays being occasioned whenever tight money is invoked unless new procedures are instituted. Perhaps it is only by sparing himself a concern with fundamentals in his own office that the Secretary of the Treasury has been able to plead for economy in Government—in spheres other than his own.

State Versus Federal Authority—Are We Witnessing the Beginning of the End of State Government in America?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, David Lawrence, regardless of personal views in the matter of school integration, has been fearlessly stating the basic issue involved in the present crisis in Arkansas. The question he raises is highly important to the future of the United States. He asks:

Are we witnessing the beginning of the end of State government in America?

Under leave to extend my remarks, I am including his article:

THE STATES AND FEDERAL AUTHORITY—DAMAGE TO COMMONWEALTH'S OBLIGATION TO KEEP ORDER FEARED IN ARKANSAS

(By David Lawrence)

Are we witnessing the beginning of the end of State government in America, and the emergence of a supreme dictatorship over the States by the Federal Government in Washington?

Does the silence of so many of the governors of the several States about the events of the last 10 days mean they already have been cowed into submissiveness as their sovereign rights are taken from them by an edict from Washington?

One governor—in Arkansas—calls out the troops to prevent bloodshed, and immediately the Federal Government undertakes to pass judgment upon his motives and his right to maintain order in a sovereign State.

Another governor—in Tennessee—says he must wait until an overt act occurs before he can call out the State troops. Now a school building has been blown up in Nashville. Might not vigilant action in advance have prevented such a tragedy?

If the Governor of Arkansas now withdraws the troops and lives are lost, will the Federal Government accept the responsibility for impairing the obligation of a State to maintain order within its own borders?

These are questions which have been generated by the arbitrary action of a single Federal official in Little Rock who has taken it upon himself to serve as judge, prosecutor, and jury to inquire into the motives and efficiency of the Governor of the State of Arkansas. The Department of Justice in Washington, at the direction of and with the approval of the President, has helped to prepare an injunction which conceivably can prevent the Governor of Arkansas from performing the duties of his office. This means the representative or republican system of government in one of the sovereign States would be suspended by the order of a Federal judge.

Never before in American history has the Constitution been so flagrantly defied and disregarded by the Executive. Article IV says:

"The United States shall guarantee to every State in this Union a republican form of government."

When the words "United States" are used in the Constitution, it means the executive branch of the Federal Government.

When the words "republican form of government" are used, it means that the people of Arkansas have the right to self-government—to expect the help when asked, and not the hindrance of Federal authorities in the course of the operations of the State government.

Only the people of Arkansas, acting under their own constitution, can decide whether their chief executive is efficient and whether he is complying in good faith with the requirements of State law as well as Federal law.

They can impeach him and remove him—but the Federal Government does not have any such power. For the Federal Government to attempt to interrupt the duties of the Governor of a State, even for 1 day, is to assume the right to remove the Governor for his entire term of office. There is no difference in principle.

The issue raised in the Arkansas case is whether the Governor, in calling out the State militia to prevent bloodshed, is acting in good faith. But even assuming that his judgment is open to question, where does a Federal judge get the right to try a State governor in a Federal court for malfeasance—for failure to do his duty?

There are lots of people who say offhand that, when there is a conflict between State authority and Federal law, the power of the Government at Washington must prevail. But there is no Federal law involved here. No law has been passed by Congress on the subject of integration.

Actually, the Federal court order banning segregation has been respected in at least three localities in Arkansas, with the cooperation of the Governor, himself. So he insists that the issue is not integration, but the preservation of order.

If these complex questions relating to integration can be handled by court order and without legislation by Congress, then it makes many observers here wonder why Congress felt it necessary last month to pass a law to assure voting rights to Negroes, instead of letting the Federal courts issue injunctions against local officials of the States who interfered with the registration of Negro voters.

The casualties in the cold war in the South are mounting. Impatience in Washington and the straitjacket imposed by the Supreme Court and the lower courts, with their confusing orders, are producing widespread resentment. The American people are not accustomed to government by injunction. They've seen it fail in labor disputes, and they are now witnessing an even worse debacle in trying to solve social questions through complicated court orders in which the rights of the States are ignored.

Monetary Policies and Problems (Record of House Actions on Proposed Investigation)

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. PATMAN. Mr. Speaker, in the previous Congress, and again in the present Congress, the House considered the question whether there should be an investigation and study of the Nation's monetary and credit system. These considerations grew out of resolutions introduced by me.

Consequently, I have received a number of letters asking questions about the history of this matter. Quite a few of these letters have come from college professors in political science and economics. One of the most frequent requests is for transcripts of the testimony of witnesses—including Hon. W. Randolph Burgess, Under Secretary of the Treasury—who appeared before the Rules Committee of the House earlier this year. Other letters have asked for such things as a chronology of events, a summary of the party votes, and a résumé of the issues.

The purpose of my remarks today is to try to supply these things.

As I have already pointed out, the testimony of the Under Secretary of the Treasury, and the testimony of the other witnesses about which inquiries are being made, was given before the Rules Committee of the House. The Rules Committee is, of course, an internal committee of the House. As a usual matter it does not hear outside witnesses—that is, witnesses other than Members of the House—and normally the committee does not print the record of its proceedings.

When the Rules Committee was considering a rule for House Resolution 85, however, the committee did invite, and hear, several outside witnesses. This was in February and March of this year. The outside witnesses, in addition to Mr. Burgess, were: Mr. Allan Sproul, former president of the Federal Reserve Bank of New York; Mr. Kenton R. Cravens, president of the Mercantile Trust Co. of St. Louis, Mo.; and Mr. Frazar B. Wilde, Chairman of the Research and Policy Committee, Committee for Economic Development, who is also president of the Connecticut General Life Insurance Co.

The transcript of these hearings has not been printed for the reasons I have already indicated. Manifestly, however, there is a proper public interest in this record, and in order to satisfy requests for copies of the testimony, I will ask to be inserted in the RECORD, following these remarks, those portions of the transcript covering the testimony of the outside witnesses, plus the transcript of my own statement.

Several other Members of the House also testified on this matter, but I have not consulted with these Members as to whether they would like their testimony included, and hence I will not ask that their testimony be inserted at this time.

As to the chronology of events, the votes and the issues, I will try to summarize these as clearly as the subject matter permits.

PARTY VOTES ON RESOLUTIONS TO INVESTIGATE

Both of the resolutions introduced by me would have provided—if they had been adopted—for the investigation to be made by the Committee on Banking and Currency of the House. They were as follows:

In the 84th Congress, the resolution was House Resolution 210, introduced April 8, 1955. This was considered by the House on June 15, 1955, and was rejected by a vote of 214 to 178. The debate may be found in the CONGRESSIONAL RECORD for that date.

In the 85th Congress, the resolution was House Resolution 85, introduced January 7, 1957. This was considered by the House on March 27, 1957, and rejected by a vote of 225 to 174. The debate may be found in the CONGRESSIONAL RECORD for that date.

In 1955, 177 Democrats voted for the resolution, and 29 voted against it; 1 Republican voted for the resolution, and 185 voted against it.

In 1957, 172 Democrats voted for the resolution, and 38 voted against it; 2 Republicans voted for the resolution, and 187 voted against it.

REASONS FOR INVESTIGATION

With respect to the considerations which weighed on the votes, these have been presented in a complex setting, but after a consideration of the record the issues will, I think, appear both clear and consistent.

As to the reasons why such an investigation should be made, the first and foremost reason, it has seemed to me is this: There has not been for many decades a thorough investigation of our monetary and credit system, undertaken with a view to a critical appraisal of the system itself, and with a view, possibly, to broadgage legislation for improving the system. In these decades, new kinds of financial institutions and new financial practices have come into being and these have become weighty factors in our economic system. The vastly expanded Federal debt has placed public debt management in a considerably different role, with a considerably different influence on the Nation's supply of money and credit, from anything experienced prior to the last two decades. Finally, the financing needs of industry, trade, and consumers have all changed in many important respects.

Furthermore, by mid-1953 it had become evident that the Treasury and the Federal Reserve System had embarked upon certain new policies for the managing of the Federal debt and for managing the Nation's money and credit affairs which would affect—for better or for worse—the Nation's whole economic life. Clearly these policies would affect the cost of carrying the Federal debt and affect both the cost and the success of a number of programs—including social, economic, and national defense programs—for which specific legislative enactments had been made over the preceding years.

CONGRESS HAS THE RESPONSIBILITY

Finally, as to the reasons why the investigation should be made by a committee of Congress, these are basic: The Constitution assigns to Congress the powers of issuing money and regulating the value thereof, as well as the power of borrowing money on the credit of the United States. It is for the reason of Congress' clear and undivided responsibility over monetary affairs that the Federal Reserve System functions by law as an arm of Congress, on a delegation

of legislative powers, with supposedly complete independence from executive control.

Manifestly, then, since Congress has the duty of framing legislation, it also has the duty of investigating and gaining a firsthand understanding of the matters on which it is to legislate. Needless to say, the Committees on Banking and Currency of the Senate and the House have been given jurisdiction over these matters, and it is through these committees that the respective Houses of Congress keep themselves informed on banking and currency matters.

OPPOSITION'S ARGUMENTS IN 1955

Arguments against the investigation, on the other hand, have been more varied and complex. The opposition, which includes first and foremost the Republican leadership and the big financial interests, have given different reasons for their opposition at different times.

In 1955, the principal arguments made against House Resolution 210 were (a) that the proposed investigation was not needed and (b) that such an investigation would be dangerous, in that it might upset the Nation's prosperity. For example, the gentleman from Illinois [Mr. ALLEN], who led the opposition's debate, likened the proposed investigation to our boyhood inclinations toward "meddling" with watches. He said:

When the watch was running well, we probably meddled with it, experimented and pulled it apart, and then it did not run. I think we have that same analogy here. (Vol. 1, pt. 6, CONGRESSIONAL RECORD, 84th Cong., 1st sess., p. 8311.)

In a similar vein, the gentleman from Michigan, Mr. Wolcott, painted a picture of increasing prosperity and he, too, saw, somehow, a danger that a study of money and credit matters might dampen the prosperity. He said:

We cannot afford to take any chances with that kind of prosperity.

* * * * *

This is a dangerous resolution, it is a dangerous study, and the resolution should be defeated. (Vol. 1, pt. 6, CONGRESSIONAL RECORD, 84th Cong., 1st sess, pp. 8312–8313.)

NEED FOR INVESTIGATION BECOMES RECOGNIZED

In the year and a half following the rejection of my resolution, however, the need for such an investigation became increasingly recognized. In this period the Treasury and the Federal Reserve intensified their application of the "tight" money and high-interest policies, with direct and recognizable effects upon large segments of the population. Many of these events were subject of comment by me and other Members in numbers of speeches which may be found in the CONGRESSIONAL RECORD over this period.

By late fall of 1956, protests were being voiced by State and local governments whose plans for building schools, building roads, and building other badly needed facilities were being disrupted. Complaints were being heard from farmers, from home builders, and from small business people in all lines. Even a few big businesses in Government-regulated fields were feeling the pinch. As a consequence, a subcommittee of the Joint Economic Committee of which I was then Chairman held hearings with the Federal Reserve Board and a number of prominent business leaders early in December of 1956. If it had not been clear before, these hearings left no doubt that a thoroughgoing investigation was in order, and in public demand.

NEW RESOLUTION IS COUNTERED BY A PRESIDENTIAL PROPOSAL

Consequently, when the new Congress convened I introduced House Resolution 85—on January 7—to authorize the Committee on Banking and Currency of the House to make an investigation.

By this time, the old arguments against such an investigation began to give way to a rather complicated series of maneuvers to head off the investigation.

When the President read his State-of-the-Union message on January 10, the Congress heard an unequivocal statement that "the time has come to conduct a broad national inquiry." This statement contained, however, a bright new idea as to how the inquiry should be made. Without reference to the proposed congressional investigation which was then pending, the President asked Congress to authorize him to appoint a commission of "qualified citizens" to make the investigation, saying that the administration would then "develop and present to Congress any legislative proposals that might be indicated." Specifically, the President's message said:

I believe the time has come to conduct a broad national inquiry into the nature, performance, and adequacy of our financial system, both in terms of its direct service to the whole economy and in terms of its function as the mechanism through which monetary and credit policy takes effect. I believe the Congress should authorize the creation of a commission of able and qualified citizens to undertake this vital inquiry. Out of their findings and recommendations the Administration would develop and present to the Congress any legislative proposals that might be indicated for the purpose of improving our financial machinery.

THE PRESS BECOMES CONFUSED

Whatever the merits or demerits of the President's proposal, it served to create considerable confusion in the public press, which is, of course, prone to become confused at times when such issues arise. A large segment of the press pictured the "Patman resolution" as something which had been inspired by the President's proposal and intended to thwart the administration's forward-looking program.

The way Business Week reported the matter in its March 2 issue was particularly interesting to me, as the distinguished editor of this magazine is a close student of the monetary issue and had testified at the hearing I conducted in the previous December. It said:

When President Eisenhower, in his state-of-the-Union message, asked for a monetary commission to study the adequacy of the Nation's financial institutions, congressional approval seemed inevitable.

Then came a resolution by Representative WRIGHT PATMAN, Texas Democrat, who has made a career in Congress of fighting big-money interests and Wall Street. He proposed a similar study by Congress.

To give another example, on March the day after the Rules Committee fina ly acted on my resolution, the Washin ton Post and Times Herald reported th event under the heading: "House Ur Rejects Ike Credit Study," saying:

The House Rules Committee recommend yesterday that the House Banking Comm tee make a "full and complete investigati and study" of national monetary and cred policies.

In doing so, it, in effect, rejected Preside Eisenhower's request that Congress autho ize him to appoint a commission to unde take such a study.

* * * * *

Representative WRIGHT PATMAN, Democr of Texas, author of the resolution to ke the probe in the hands of the Banking Co mittee, told the rules group the commissi study proposed by the executive could tu out to be a banker-guided study.

Finally, 10 days after my resoluti had been rejected by the House, the Ne York Journal of Commerce was st telling its readers—April 17—editorially

President Eisenhower originally propos a monetary investigation to be conducted a commission of private citizens. * * *

It isn't working out that way. First, Re resentative PATMAN, the arch enemy of s called "tight money," tried to put the inqui into the hands of the House Banking Co mittee.

HASTY BANKERS' BILLS FAILED TO "GRAB TH BALL"

Following the President's request f authority to appoint a commission of pr vate citizens, this request was quickly pu into the form of a bill and simultaneous introduced, on January 14, in both th Senate and the House, by the ranking mi nority member of the Senate Committe on Banking and Currency [Mr. CAPE HART], and the ranking minority membe of the House Committee on Banking an Currency [Mr. TALLE]. These are S 599 and H. R. 2891.

On hasty consideration the President request seemed to put the House in th tactical position of having to choose be tween his request and the resolution of Member of the House. Thus it seemed briefly, that should a vote come, th President's request would at least pro vide a rallying point on which the Mem bers of his own party could muster soli opposition to any congressional investi gation.

On more mature reflection, however, i became apparent that there were certain weaknesses in the President's proposa which might result in its failure to draw an issue. In the first place, it was a least highly doubtful whether the Presi dent needed any additional authority to appoint a commission of private citizens to make the study—he had previously ap pointed a variety of such commissions to make studies in other fields without re questing any authority for doing so. Furthermore, an investigation by a com mission made up of private bankers—as it was assumed the President's commis sion would be made up—seemed hardly to satisfy the congressional prerogatives and responsibilities imposed by the Con stitution.

REPUBLICANS OFFER MODIFIED BANKERS' BILL

Accordingly, the House author of the administration's bill made two separate

modifications to his original bill. The first provided for congressional representation on the proposed commission—a feature which clearly called for House action and was thus certain to involve House Resolution 85 in a popularity contest with the President. The second, made when passage of House Resolution 85 later came to seem both likely and imminent, extended the offer of congressional representation—to a point where such representation might pass for equal representation with the Executive branch.

Specifically, the first of the amended bills, H. R. 3660, was introduced on January 24. It provided for a Commission to consist of 9 citizens to be appointed by the President and, on the congressional side, to consist of the chairmen and the ranking minority members of both the Senate and the House Committees on Banking and Currency. It also provided that the President would designate the Chairman and the Vice Chairman. Thus, while this bill called for no more than 5 of the President's 9 citizens to be of the same political party, the bill would nevertheless have created a highly one-sided body—from the standpoint of Executive control—as well as, possibly, from the standpoint of party control.

"COMPROMISE" BILL OFFERED TO BLOCK INVESTIGATION

Next came H. R. 6332, which was introduced on March 25—after the Rules Committee had finally reported House Resolution 85. This was billed as a compromise plan, offered for the purpose of defeating House Resolution 85.

For example, the Wall Street Journal, on March 27, announced H. R. 6332 under the caption: "Administration Offers Compromise To Block House Monetary Study," saying:

The administration came up with a new compromise Monetary Commission proposal in a last-minute effort to defeat a proposed study by the House Banking Committee.

The administration compromise would give Congress a 50-percent representation on the proposed Commission.

The House heads into a showdown vote—probably late today—on a proposal by Representative PATMAN, Democrat, of Texas, to have the House Banking Committee conduct a far-reaching investigation of Federal monetary and credit policies. Both Republican and Democratic leaders concede the vote will be very close, splitting almost completely along party lines.

However, in a final attempt to win a few Democratic votes against the Patman proposals, the administration has modified its original proposal for an investigation by a group of private citizens appointed by the President.

The President and congressional Republican leaders at the weekly White House conference yesterday announced their support of the Talle bill.

The "compromise" bill not only seemed to provide an arguing point that congressional representation would be equal to the President's, on the commission which this bill proposed, but that party representation also might be equal. The bill called for 8 members to be appointed by the President "from private life"; 4 Members of the House, to be appointed by the Speaker of the House; and 4 Members of the Senate, to be appointed by the President of the Senate. But since the President was to appoint half of the members, and his Vice President was to appoint another fourth of the members, the bill hardly provided assurance that the commission would be of such independence as to investigate matters that might embarrass the administration or, as for that matter, to recommend legislation which leaders of the financial community might regard as distasteful.

The American Banker on March 27 was equally proud of the Administration's maneuvers to beat the proposed investigation. It said:

ADMINISTRATION ACTS TO BALK PATMAN RULE OF CREDIT PROBE—ASKS LARGER COMMISSION ON EVE OF HOUSE DEBATE

The administration plan came on the eve of House debate on Representative PATMAN'S strategy to have the House Banking Subcommittee * * *.

In President Eisenhower's weekly meeting with Republican leaders in Congress, House GOP Leader MARTIN and Senate GOP Chief KNOWLAND decided that the 12-member commission would better serve the public interest.

REPUBLICANS MADE INVESTIGATION A PARTY ISSUE

As already indicated, House Resolution 85 was in the hands of the Rules Committee from January 7, to March 20. It was during this period that the Rules Committee held hearings, off and on, and invited witnesses from the Executive branch and private banking circles. Business Week of March 2 reported that:

The Patman resolution has languished for 2 months in the Rules Committee, which decides what measures will be considered by the House. Three hearings have been held, but they have been 2 and 3 weeks apart.

Foes: The reason for stringing them out apparently is to provide time to work out a compromise suitable to both Congress and the President. Even with the backing of House Speaker SAM RAYBURN, PATMAN is probably bound to lose if the Republicans make it a partisan issue. And there is every indication that they will. On the thesis that it's the President's proposal against a Democratic proposal, they plan to go down the line against PATMAN, if his resolution reaches the floor. To their number you would have to add a smattering of conservative Democrats.

After the Rules Committee reported House Resolution 85 and it became apparent that the House would thus vote on the issue, the Wall Street Journal of March 20 reported on a meeting of the Republican Policy Committee of the House, the purpose of which was to solidify Republican opposition and also to set a meeting for the following Monday to "work up steam" against the resolution. The Wall Street Journal said:

HOUSE REPULICANS PLAN TO FIGHT CONGRESSIONAL MONETARY POLICY INQUIRY

WASHINGTON.—House Republicans lined up solidly in opposition to a Democratic proposal for a House Banking Committee investigation of Federal financial and monetary policy.

The House Republican policy committee at a meeting late yesterday endorsed instead an administration proposal for an investigation by a commission mostly of private citizens, with some Members of Congress on the commission. The policy committee called a conference of all House Republicans for Monday to work up steam against the Banking Committee investigation.

The investigation, proposed by Representative PATMAN, Democrat, of Texas, has been approved by the House Rules Committee and will probably come up for a House vote next week. Republicans are hopeful that their lines will hold fast and that they will pick up enough Democratic votes to defeat the Patman proposal.

The tenor of the argument against the resolution, both before the Rules Committee and in the debate in the House was (a) an investigation by the Banking and Currency Committee of the House—or any other single body—would not have sufficiently broad representation; (b) Congress ought to give the President what he had asked for; and (c) an investigation conducted by a subcommittee of which I would be chairman would not be objective. Before the Rules Committee there was also an argument that the Committee on Banking and Currency would not be able to obtain the assistance of experts, whereas the President's commission could do so; but this argument was dropped after I obtained telegrams from a large number of college professors who offered assurance that the academic community, at least, would cooperate with a committee of Congress.

The arguments, however, probably changed no votes.

THE ADMINISTRATION'S BEHIND-THE-SCENES EFFORT TO PREVENT PROBE

Clearly, big business, big bankers, and the administration did not want an investigation; and the reasons for opposing the investigation—whatever the reasons may have been—were so strong that an all-out drive was made to prevent an investigation.

Mr Thomas L. Stokes, in his syndicated column of March 7, said:

One of the most intriguing behind-the-scenes battles in years is now being waged by the Eisenhower administration to prevent a congressional investigation of monetary policy and Federal financial institutions.

* * * * *

But the administration, with the backing of powerful financial interests, did not let up; in fact, it redoubled its efforts.

The newspaper Labor, on March 16, reported:

Significant developments on the banking front reveal a struggle of vital importance to the pocketbooks of the American people. On one side are bankers, their big-business allies, and the Eisenhower administration; on the other, a group of Democratic Congressmen headed by WRIGHT PATMAN, of Texas. * * *

* * * * *

A few days ago, however, the (House Rules) Committee took the almost unprecedented step of listening to a high administration official, Under Secretary of the Treasury, W. Randolph Burgess. * * * He urged the committee to shelve a bill introduced by PATMAN. * * * Burgess said the administration is against the Patman bill and wants the study to be made by a private commission of "experts," whom Eisenhower would appoint.

Also, Senator ALEXANDER WILEY, Republican, of Wisconsin, revealed a number of letters he has received from big-business men, urging that Congress adopt the Eisenhower banking study plan. The letters were written by such men as Eugene Holman, chairman of Standard Oil of New Jersey; Presi-

dent C. G. Mortimer of the giant General Foods combine; high officials of a number of railroads; and many other heads of large corporations.

The New York Journal of Commerce—itself an opponent of the probe—said:

Weeks of behind-the-scenes effort to block a congressional investigation of monetary institutions will come out into the open on Capitol Hill. * * * The strategy is directed from the White House and is aimed at postponing a vote on the Patman investigation. * * * Therefore, the White House-directed plan is to keep all (Republican) members in line.

BANKERS LOBBIED TO DEFEAT INVESTIGATION

On April 9, the American Banker, considering what bankers' position should be toward a possible investigation by the Senate Finance Committee, thought the situation complicated, recalling that the financial community had thrown its full weight behind defeat of the resolution proposed by Representative WRIGHT PATMAN. It said:

SITUATION COMPLICATED

The situation for banking as respects this committee is complicated by the fact that the financial community threw its full weight behind the defeat of the resolution proposed by Representative WRIGHT PATMAN, who had sought to have a House subcommittee, which he heads, control a proposed monetary commission and its study of money and credit policies. (The full House Banking Committee approved it and sent it to the floor where it met defeat.)

The Machinist on April 11 said:

Defeat of the probe—called the most important issue facing this Congress—came after the Eisenhower administration and the Nation's banking interests put on the pressure. The administration said it wanted its own investigation by a 16-member commission—half appointed by the President. The bankers wanted no probe at all.

Shortly after House Resolution 85 was voted down in the House, Mr. Drew Pearson made a passing reference to the "bankers' lobby," in his syndicated column of March 30, saying:

BANKERS' LOBBY OPERATES

While the Senate rackets committee was getting the headlines, White House pressure was being put on congressional leaders regarding an investigation into something far more fundamental—the cost of living, tight money, and the extent of inflation.

* * * * *

Long-distance phone calls had gone out to bankers in southern cities nearest Washington to come to Washington immediately and switch Democratic votes. The bankers' lobby was successful.

Actually, it was my understanding that the American Bankers Association's drive to defeat House Resolution 85 went a great deal further than calling its members from Southern States to Washington. This drive—or so I was told—included a program of having at least one banker from each congressional district make a personal call on his Representative.

ABA SHARES CREDIT WITH "SUPERB PERFORMANCE" OF GOP LEADERSHIP

In any case, the magazine Banking, which is the journal of the American Bankers Association, came rather close to crediting the defeat of House Resolution 85 solely to its members' activities. For example, on page 40 of the May issue, Banking carries a headline "Bankers' Prestige," under which the editor first credits the defeat of the investigation to the bankers' "numerous telegrams, telephone calls, and letters," but then, as a second thought, shares the credit with the "superb performance" of the Republican leadership. It said:

Both in connection with Senate passage of the Robertson bill and House defeat of the Patman inquiry, Senators and Representatives reported that they received numerous telegrams, telephone calls, and letters from individual commercial bankers, emphasizing the effect of these matters upon commercial banking.

In the Senate, these communications resulted (coincidentally or otherwise) in greater attention and attendance by Senators to the debate on the Robertson bill than has occurred in a long time in the case of legislation lacking broad, public interest.

Sponsors of the Patman resolution credited these banker communications with the defeat of the subcommittee inquiry. Seasoned observers, however, would not evaluate this banker expression of sentiment as the decisive factor. President Eisenhower backed the broader-gauge financial inquiry. House GOP leadership under Representative JOE MARTIN, Republican, Massachusetts, and his assistant, Representative CHARLES HALLECK, Republican, Indiana, turned in a superb performance from the standpoint of a purely political operation. They lost only two Republican votes in the House.

G. O. P. FORGETS IT ASKED FOR PROBE

In conclusion, it seems fair to say that what the big bankers, the Republican leadership and the President wanted was no investigation, and not just an alternative method of investigation. Despite the glowing statement in the President's State-of-the-Union message as to the need for an investigation, Republican demands for such an investigation, since House Resolution 85 was voted down, have been faint—if at all audible. Recently the President has been expressing "disappointment" in the performance of this Congress, and the White House has been giving out lists of the "important" things which the President has asked for and did not get. The President's request for a monetary investigation has not been among the things listed. It would appear that either the Republican leadership has forgotten that it asked for such an investigation, or with House Resolution 85 out of the way, the President's request is no longer important.

TESTIMONY BEFORE THE RULES COMMITTEE OF THE HOUSE ON HOUSE RESOLUTION 85

As I indicated earlier in this statement, there have been a number of requests for copies of the testimony of Hon. W. Randolph Burgess, Under Secretary of the Treasury, and copies of the testimony which were given by some of the other outside witnesses who were heard by the Rules Committee on House Resolution 85, which was to authorize an investigation of monetary problems. Since this testimony has previously not been made public, and there is a proper public interest in it, I am inserting in the RECORD herewith the testimony of each of the outside witnesses, plus, in addition, my own testimony before the Rules Committee:

HEARINGS ON H. RES. 85, AUTHORIZING THE COMMITTEE ON BANKING AND CURRENCY TO CONDUCT STUDIES AND INVESTIGATIONS, AND TO MAKE INQUIRIES, RELATING TO THE OPERATION OF THE MONETARY AND CREDIT STRUCTURE OF THE UNITED STATES; AND H. R. 3660 TO ESTABLISH A NATIONAL MONETARY AND FINANCIAL COMMISSION

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RULES,
Washington, D. C., February 28, 1957.

The committee met at 10:37 a. m., pursuant to call, in room G–12 of the Capitol, Hon. HOWARD W. SMITH (chairman) presiding.

The CHAIRMAN. Mr. Wilde, we will hear you first.

STATEMENT OF FRAZAR B. WILDE, CHAIRMAN, RESEARCH AND POLICY COMMITTEE, COMMITTEE FOR ECONOMIC DEVELOPMENT, AND PRESIDENT, CONNECTICUT GENERAL LIFE INSURANCE CO.

Mr. WILDE. Mr. Chairman and gentlemen, I have a statement to make in behalf of the Research and Policy Committee of the Committee for Economic Development, of which I am the Chairman.

May I also identify myself as an insurance executive, and in that capacity I have to direct, through our committees, the investment of the company's funds. That is my principal activity.

I inject that thought to explain that this matter is one that I have dual interest in, both from the standpoint of CED and as a practicer in the markets, day in and day out.

May I read this to save the time of the committee?

The CHAIRMAN. Go right ahead, Mr. Wilde. Proceed in your own way.

Mr. WILDE. I am grateful for the opportunity you have afforded me to present the views of the Research and Policy Committee of the Committee for Economic Development on a proposed study of monetary and financial policy.

From the beginning of its studies 15 years ago, CED has believed that proper monetary and financial policy is essential for the health and vigor of our economy, and we have emphasized that broad understanding is essential for proper policy.

In a statement issued in 1953 we said of monetary policy:

"It permits the Government to exercise a major influence over the general conditions that create stability or instability without requiring or permitting the Government to direct the activities of individuals, businesses or banks; but, partly because of its indirectness, monetary policy is not as well understood by the public as its importance requires."

As long ago as 1948 CED recommended the establishment of a national commission to study monetary and financial policies. I quote our recommendation as then made:

"We believe that Federal financial policy can be carried out with existing knowledge and instruments in such a way as to make a major contribution to economic stability. In any case, we must do what we can now, with the knowledge and instruments we have. At the same time we should be considering how we can improve our instruments and policies for the future. It is now over 35 years since there has been an overall review of our financial structure and problems. In that period there have been drastic changes in our monetary and banking laws, in the size of our budget and debt, in the Government's role as a source of credit, and in America's position in the world economy. The committee recommends that a temporary commission be established to make a comprehensive study of the possibilities of improving the structure and policies of monetary, budgetary, and related institutions.

"In this recommendation the committee is suggesting a broadening of the scope of

inquiry beyond that indicated by many recent proposals for a national monetary commission. The monetary problem is inseparable from the problems of budgetary policy, debt management, and savings institutions. A comprehensive examination should also cover our international as well as our domestic financial policies. The whole field should be within the purview of the commission, and for this reason we suggest the term 'Commission on National Monetary and Financial Policy.'

"The commission should, we think, be established by act of Congress, in such manner that its recommendations, when arrived at, will have congressional support and the confidence of the public. It should be nonpartisan and include private as well as public members.

"It would be impossible and undesirable to try to spell out the agenda for such a commission fully at this time. It should have a broad charter, adequate staff, and time to pursue the problem of improving Federal financial policy, wherever it may lead."

May I recall again this is 1948. So we have been thinking about this for a long time.

Two months ago, on January 17, 1957, Mr. J. Cameron Thomson, Vice Chairman of CED, and I repeated this recommendation. We said, in part:

"No aspect of public policy is more important than financial policy to the growth and stability of a free economy. The use of monetary restraint as a major tool for preventing inflation in the past year has raised a number of questions about our financial policies and institutions.

"We are not suggesting that the criticisms implicit in these questions are well founded, but the continued existence of these questions indicates that the conditions which prompted our 1948 suggestion for the establishment of a commission still prevail.

"Either there are important deficiencies in our present financial system or there is widespread misunderstanding of the system. It is as important to correct the misunderstanding as to correct the deficiencies that might be found.

"We believe that a comprehensive and objective study by a national commission could make a major contribution to improving the system and understanding of it."

I have made copies of the 1948 and 1957 statements available to this committee.

May I now emphasize a few points:

1. Our recommendation for a study does not rest on the belief that there are or are not important deficiencies in our financial system. We believe that the study should start with an open mind on this question.

2. Our main need at the present time is study and public education. Even if the financial system were technically perfect, it would not operate well without public understanding. If changes are needed, they can only be achieved if public understanding is improved. This means, in my opinion, that the study should be undertaken with no mandate to produce recommendations for legislation.

3. The subject to be studied is broad, deep, and difficult. It will take a great deal of time. I can say this from experience. We have been working in this area in CED for many years. We have never found it easy or quick to reach conclusions. Moreover the time cannot be all staff time. The members of the commission will have to be prepared to devote much of their own time.

4. The main consideration governing the composition of the Commission is the one stated in our 1948 report. The Commission should be set up in such a way that its findings will have congressional support and the confidence of the public. This means that it should include some Members of Congress and some private citizens. The case for including Members of Congress is simply that there are some exceedingly well-qualified men in each House and that their participation would increase the acceptance of the study's findings in the Congress and in the country. The case for including private citizens is similar. There are in private life a number of men of great wisdom, experience and objectivity in the fields to be studied. They represent backgrounds and viewpoints not found in the Congress and would make a major contribution to the quality of the results. In view of the national importance of the subject, a number of outstanding private citizens would probably be willing to give their full time to this study. It is important that at least some members of the Commission be able to give full time to the study, and this could not be achieved if the Commission consisted entirely of Members of Congress.

Holding hearings would not be an adequate substitute for having a number of private members of the Commission. There is all the difference in the world between testifyinng before a congressional committee and serving as a responsible member of a group that must work through problems to reach a consensus.

May I call your attention to the discussion on this subject by Alfred C. Neal, President of CED, testifying before the Joint Economic Committee on February 1, 1957.

5. The terms of reference of the study should be stated broadly, to leave the Commission maximum freedom. The inquiry should cover the following subjects, among others:

(a) Has the growth of nonbank financial intermediaries, both private—such as savings and loan associations, finance companies, and insurance companies—and public, such as FNMA, impaired the effectiveness of Federal Reserve action to promote economic stability?

I append a list of some of the more important financial institutions.

(b) How is the impact of general monetary restriction distributed among different classes of borrowers and lenders? Is this distribution discrimatory, unfair, or bad for the economy in comparison to the alternatives, which may be inflation, higher taxes or selective controls? How could the distribution of the burden of preventing inflation be improved?

(c) What criteria should be followed by the Federal Reserve in deciding when to tighten or relax credit? What criteria should be used by the Federal Reserve in choosing among alternative techniques for controlling the supply of money and credit, such as changes in reserve requirements, changes in discount rates and open-market operations? Should the Federal Reserve restrict its open-market operations to short-term Federal securities?

(d) Should authority be delegated to a Federal agency to control the terms of consumer credit? Should similar authority be extended to other types of credit?

(e) Is the supply of savings adequate to meet the needs of our growing economy? If not, how should Federal policies with respect to financial institutions, taxation or other matters be modified to increase the supply of savings?

(f) In what proportion should reliance be placed on monetary and fiscal policies to achieve economic stability?

(g) Are the existing arrangements for coordinating monetary and credit policies and for assuring consistency of these policies with other economic policies of the Government satisfactory?

I hope that it will be the judgment of Congress that the best minds in the country, in and out of Congress, should be enlisted to give these and other fundamental questions about monetary and financial policy the thorough and objective study they deserve.

May I add, Mr. Chairman, that in the 1908 commission, composed entirely of Members of Congress, we were dealing with a relatively simple situation, almost entirely a matter of bank money, to make the system more flexible particularly for farmers and businessmen. Now we are dealing with an exceptionally complex and broad area, with this type of legislation that is indicated in this bill, and it is said by most people it is imperative to get a broad commission that can bring to Congress and the people the benefits of many broad points of view and many experiences. Such a commission might properly be large in order to get that comprehensive treatment and could work through subcommittees.

Now, that previous congressional group, you will recall, took 4 years to report, and I don't think the present temper of the people or the Congress wants to take too long a time; yet, this is an enormously complex subject.

There is a point made here which I would like to emphasize, as I think it is true of most of us: That holding hearings, bringing in experts before a group, isn't a substitute for the kind of forum that will give the most information to the Congress.

I am talking about private committee meetings where people spend a long time swapping views, fore and back, get to know each other by first name, Congress gets the benefit of knowing experts, businessmen, and vice versa. It is the way that the full truth and all the shades could be developed.

I would like to illustrate what I mean. I just wrote down types of economic areas that ought to be represented: Commercial banking, obviously; investment banking; savings and loans; the academic; and the long-term lenders, such as insurance companies—and, not by way of making nominations, but illustrating the type of people, such people as: Arthur Burns; Ned Brown, of Chicago; Randy Burgess; Sumner Slichter; Alan Sproul; Alan Kline; Robert Nathan.

I just do that to illustrate my thinking in these different areas and not to suggest that those are the only people available.

Gentlemen, I think that is the main burden of my story.

The CHAIRMAN. Mr. COLMER, have you any questions?

Mr. COLMER. Obviously not, Mr. Chairman, I just got in.

The CHAIRMAN. Mr. ALLEN.

Mr. ALLEN of Illinois. First of all, Mr. Wilde, I want to say I just got your splendid statement you just made and I agree with you 100 percent, especially with that part in which you indicate the things you say need to be done.

There are quite a number of things that you mention here that it is hoped to be accomplished, especially in regard to the men of wisdom and experience in the banking and business and commercial fields out in private industry.

I have checked the biographies of the members of Congress. Maybe they aren't all complete, but I find in the Members of Congress on the Banking and Currency Committee—and I don't know about Mr. HEALEY, of New York, or ANDERSON of Montana, or BREEDING, of Kansas, because their biographies are not in or are not available at this time, as far as I am concerned, and, although I don't mean to say the members of the Banking and Currency Committee aren't well qualified, nevertheless, I find—there are only 3 or 4 on the Banking and Currency Committee who have any experience in this field, and they are:

Mr. TALLE, of Iowa; he has been an educator in economics, political science teacher, lecturer.

Mr. KILBURN, of New York, vice president of the New York Trust Co.

Mr. BASS, of New Hampshire, trustee of the New Hampshire Savings Bank.

Mr. McVEY has been a lecturer in that field.

Outside of that, the biographies don't show any member of the Banking and Currency Committee has had any banking experience as has been connected with banks or any kind of commercial companies.

I think you have given us something to think about. Maybe we should bring a few in here to give this matter their full time, which the Members of Congress can't do.

Mr. PATMAN, who is here, is probably one of the hardest working Members in Congress He is a power on the Banking and Currency Committee. He is on the Joint Committee on the Economic Report. I believe he is vice chairman of that committee. He is also chairman of the Small Business Committee. He would probably, I think, if his resolution goes through, be chairman of this committee or commission.

So, I think you have given us something to think about and, inasmuch as there have been and are few on that Banking and Currency Committee, according to my observation, who have been in Congress a long while and who have the necessary experience, maybe it would be just as well to have a few outsiders, some who have devoted their lives to this field; and, after reading what you have to say, I think it should be investigated and studied.

Mr. WILDE. I have no intent to be in derogation of the Congress—I have great respect for it, and I think there are men in every field of our activity in the Congress who know much about it—but I think the time factor is terribly important and the opportunity, if that would be the judgment of the committee, to broaden it, to get great benefits from it, would be of great assistance to the Congress if they found legislation was needed. Certainly, such a commission isn't going to write the legislation. It is going to be done by the whole Congress, operating through its committees.

Mr. ALLEN. In other words, this is rather delicate and complex. It gets more complex and delicate to me every time I hear a witness. So, I am personally in hearty accord with what you have said.

That is all, Mr. Chairman.

Mr. WILDE. I have done a few minor things in this field, working in Washington and in this area, working for the Federal Reserve and on a few committees, and this particular field, considering all the time I have been in finance, is unbelievably complex today.

You can see from that list——

Mr. ALLEN. I think that old saying that there is no substitute for experience is certainly apropos, and I would say, everything being equal, those who have dealt in this field, given their full time and all their life to it, would be in a better position to know the answers than someone who could come in and just give part time to the proposition.

That is all, Mr. Chairan.

The CHAIRMAN. Mr. MADDEN, do you have any questions?

Mr. MADDEN. Mr. Wilde, with regard to this list on the back page, what are these institutions and what do they represent? Why were they attached to the statement?

Mr. WILDE. They were an attempt on my part to show the wide distribution of institutions that are in the business of either saving or loaning money, running all the way from commercial banks down to special instruments that the Congress has set up.

You see, for example, the Federal National Mortgage Association, which is colloquially called Fannie May. I believe the present budget has upward of $2 billion in it for their operation—a billion seven perhaps. That is a brandnew thing.

Most of these are brandnew.

At the time of the original inquiry, in 1908, I don't believe even the first group amounted to very much, and most of these others on the list didn't even exist. Government. through instrumentalities, wasn't in the business of collecting and loaning money.

So, the purpose was just to show—and it is probably not complete—the spread of financial life today.

Mr. MADDEN. That is all.

The CHAIRMAN. Mr. BROWN.

Mr. BROWN of Ohio. Mr. Wilde, I am sorry I wasn't here when you started your statement, but I have read it with considerable interest and I think you have made a pretty good point and a pretty good case.

The work that has to be done is so complex and involves so many different organizations and institutions that there is some doubt whether Congress itself, or a committee, could possibly do this spadework of getting the information that is necessary for Congress later on to make a base for any legislative action it might desire to take.

Ten years ago last month I introduced legislation in Congress, as a result of the general feeling during the war and before that our Government bureaucracy had spread all over the lot and something had to be done to bring it under control, for a joint congressional and civilian commission to be set up on a bipartisan basis to study the organization of the Government. That afterward became known as the first Hoover Commission, and the legislation was unanimously passed by both bodies, with the support of both parties, and that Committee called into service some 330 or 340 of the most distinguished Americans that it could find—from education and from labor and from business and industry—to assist the Committee or the Commission in task-force studies of these different problems, and then reports were made to the Congress, and recommendations, which were contained in some 25 volumes.

As a result of the work of that first Commission, between two and a half and three billion dollars a year have been saved in the operation costs.

The Congress took these reports and recommendations, as made by that bipartisan Commission, and used them as the basis for legislative action, the President using them as the basis for Executive orders and the agencies for administrative orders.

The reason why that Commission was created—and then the second Commission to go into matters a little more extensively was created—was because the Congress itself, through no committee, could do that kind of work. It was just too big and too comprehensive a job.

The two Commissions spent nearly 5 years, and the Congress is still working, considering many of the recommendations made by those two Commissions. The cost was very slight in comparison with the savings. I think the first Commission cost ran right at $2 million altogether.

It seems to me this problem is extremely important when you take into consideration the number of different institutions that will be affected——

Mr. WILDE. Yes.

Mr. BROWN of Ohio. And anything that we do in connection with the monetary and the credit structure of this country will affect every citizen of the United States, especially if we make any mistakes.

Mr. WILDE. Oh, yes.

Mr. BROWN of Ohio. So, it might be well to have checks and balances—first, the commission that will make these studies; then give the benefits of their findings and reports to the Congress, and then the congressional committees, in finality, will have to pass upon them and decide which are good or bad or what ought to be done in view of the conditions that the commission finds and reports as factual information and material.

I recall the first Hoover Commission found there was something like, I think, 93 different lending agencies within the Federal Government alone, and I think this list of yours, while it is very good. is not as comprehensive as it might be. I can think several myself—several different organi tions and institutions—that will be vit interested in anything that we might relative to the monetary system.

This just doesn't affect the Banking Currency Committee alone. For instance, have pending now in the Ways and Me Committee of the House legislation wh would take away from municipal and lo bonds and State bonds the exemption fr Federal taxation which we now have on interest paid, which would change entir the picture of floating necessary bond iss by the State and local governments for St and local construction, education, and forth, and so on.

What would be the effect of that on States and getting the schools that we ne and so forth, and so on, the highways t we must build, the city buildings and se ices we use these funds for?

There are just thousands of these sit tions that can arise, and I think the probl is of such proportions that it needs the b brains of the entire country, just not in C gress, although I do admit probably greatest brains in the country are cente right here in the Congress; but we can a little help from outside, in my opini Mr. Wilde.

That is what I am trying to drive at, I would hope that a little later on you mi be able to furnish us with an expanded as you give some thought to this problem

That is all, Mr. Chairman.

The CHAIRMAN. Mr. DELANEY.

Mr. DELANEY. No questions.

The CHAIRMAN. Mr. TRIMBLE.

Mr. TRIMBLE. I hesitate to ask questi because, as I said the other day, this is a a complicated question, where even a wh per can shake the foundations of our fin cial system. However, I know so little ab it that a whisper from me won't hurt, I thi

I represent a district in north Arkansa small farmers and small-business men. I on a farm myself. A 500-acre farm is a farm in our district, and a million-dollar vestment in business is big.

A lot of my constituents talk to me wh I am at home, and they write to me wh I am here. They are worried about the wh general situation. I don't know whet they are right or wrong but, on the the that my constituents are always right sympathize with them.

Now, with regard to this Commission, wh ever it is, that is set up, maybe one per would be better than a whole group to h the whole, vast panorama of this situat as it affects everybody and then hear peo from every affected group.

Now, about the interest rates: The peo in my district are disturbed to no end. T say that the larger businesses of the coun don't have to borrow money; they can go and expand without having to borrow mon So, the high-interest rates don't affect the They can just move out and expand wh ever they please. However, in my secti they have to borrow money, and the ra are up, it contracts the business expans of the—I don't want to say little busines small business, which is really the foun tion stone of our people.

I don't know whether that is true or n but I hope whatever is done in this busin will be done with full and complete int rity and with a lot of commonsense beca I want it to be made so plain that ever Congressman like me can understand it. I can understand it, then my 350,000 c stituents can understand it.

Mr. WILDE. May I comment, Mr. Congr man?

Mr. TRIMBLE. Yes.

Mr. WILDE. I think you are perhaps ill trating the point I am trying to make—t the wide diversity of interests needs to h people who understand it.

You are talking about largely agricultural credit and small-business credit.

Agricultural credit divides between capital for long-term improvement—buying land, and so forth—which we lend and other insurance companies—I think the supply of such capital, in combination with the land banks, has been quite adequate, at least up until the last year, and I haven't heard very much about stringency even then; I know we have continued to make loans, and we make them in your territory—and, on the other hand, the short-term loans of the bank to make a crop, and so forth, to hold some stock.

I want to add the rates have not been high. They have been running around 5 percent, which certainly is not an onerous rate and historically is a pretty normal rate.

The lowest agricultural mortgage rates that I know of were about 4 percent, and that would be some exceptionally strong land, say, in Illinois or some place like that that has what we call a community value.

I do not know what the bank rates are for short-run money. They may have gone up quite a bit.

There are those two things and, as I say, to me it illustrates the point that a commission ought to have an Alan Kline or someone else who understands the agricultural problem, which is interrelated, of course, with all the rest.

In the small-business field, which, of course, obtains throughout the country, you have a very involved situation from my point of view. You have the practical problem of enough equity so that lending institutions can afford, with safety, to lend their money because all of us are trustees of the other fellow's money. We just can't accept high credit risks.

One of the major problems of small business is they don't have equity; they don't have protection above it, the tax laws or the willingness of rich people to speculate because they don't have the money.

There is a great lack of equity money for small business. If that was there, then the various institutions would be able to loan more money in the primary position.

Mr. TRIMBLE. That is one thing about which I, of course, don't know what needs to be done.

Mr. WILDE. Yes.

Mr. TRIMBLE. I know what needs to be done, but I don't know how to do it.

Mr. WILDE. Yes.

Mr. TRIMBLE. The small farmers and the small-business men are having a rough go in my section. They are just having a devil of a time.

Mr. WILDE. You have some doing awfully well, Congressman. They have loans and they make prompt payments.

Mr. TRIMBLE. Yes. They manage, but they are having a tough time.

Twenty-one of the rural electric co-ops that serve us on our farms have 11,000 connections. As I left to come up here in December, 2,100 of those are idle. The people have left, moved out, and gone to another job where they can make ends meet.

That is too big a percentage of people having trouble.

The CHAIRMAN. Do you have any more questions, Judge?

Mr. TRIMBLE. No.

The CHAIRMAN. Mr. SCOTT.

Mr. SCOTT of Pennsylvania. No questions.

The CHAIRMAN. Mr. Thornberry.

Mr. THORNBERRY. As I understand, you are convinced this study ought to be made?

Mr. WILDE. Oh, yes; I am very much convinced of it, both in all the research we have done and my personal observation in the last 20 years.

Mr. THORNBERRY. And you have no fear that a study by a commisison such as you recommend would in any way have a harmful effect over the country?

Mr. WILDE. No. On the contrary, I think it would be constructive and would bring out for public scrutiny and discussion some of the involved elements that are in the picture.

Mr. THORNBERRY. But you don't think that Congress, which in the end is responsible to the people of the country, through a recognized committee, ought to make the study?

Mr. WILDE. Yes; I do. I think the Congress should make the study in combination with a business group.

I think it should be a mixed commission, if that is the proper term, because I think it is very desirable to have Congressmen putting in as much time as they can; but there are a good many thousand man-hours involved in this to do a thorough job, and I imagine the businessmen, the professors, and others might put in more hours than some of the congressional men might be able to put in.

I would like to see them both joined at the start, myself.

Mr. THORNBERRY. But you don't think that Congress, through a committee, should do it itself?

Mr. WILDE. I think that the Congress, operating strictly through its own committee, wouldn't get the result that the Congress, itself, needs and wants. I don't think it can put in enough full time, and I don't think—as I have said here, if you call in an expert, he is in a different status; but if you make him a part of the team and do like business does—sit around a table and yak-yak back and forth—that may have a colloquial connotation in it—you get more information and more balance out of it.

Mr. THORNBERRY. Would you say your approach in this regard is peculiar only to this field?

Mr. WILDE. No. I think it is becoming common in many fields. For example, I have just done this in a small way in Connecticut. Several of us in finance and several from the legislature, the senate, and the house, were asked to study road financing for Connecticut, and I think it was very useful to us who don't understand the political problems and was useful to the legislators who don't understand quite as well at times the business problems.

So, there is a minor illustration of just what I am saying. I am not talking here right from the book. I am talking from quite a bit of practical experience.

Mr. THORNBERRY. What I am asking is: Are you becoming more and more convinced from what you say that the legislative body or Congress is now in such a situation that it is not equipped or able to inquire into fields for which Congress is responsible to the people of the United States regardless of what the field is?

Mr. WILDE. No. I think there could be very specific, narrow areas where it is perfectly practical for a commission of Congress, and then to call in a few people.

I can't think of something offhand, but there must be such things.

This is terrifically involved and interrelated and complex.

The Congressman is trying to low rate himself in saying he doesn't understand it. None of us understand it too well. I am exceptionally humble myself about it and I have studied it and worked in it for more than 20 years.

Mr. THORNBERRY. You indicated a moment ago the type of people that you thought could well serve on the Commission and you referred to them as you were referring to your list, and I noticed that you referred to the commercial banks; secondly, the insurance companies, and I think one of the group.

Mr. WILDE. Investment.

Mr. THORNBERRY. I understand what you are doing. You are naming people and individuals.

I have a feeling, Mr. Wilde, as Mr. Trimble has indicated, a great many people in this country are deeply concerned about this type of thing. Even Congressmen and responsible people in government are not entirely willing to just trust to the people who are concerned about these other credit institutions to have anything to do with the inquiry.

Would you think you would be on sound ground if you would have people who were not directly affected by such an inquiry being members of the Commission?

Mr. WILDE. Of course, I wouldn't because, to me, the success of this country depends upon mutual understanding and cooperation between the various elements in the economy—agriculture, labor, business, and so forth—and the legislative branch, and I think our society has become so much more involved in all respects that the only way it can work to the best advantage is by joining forces in these types of things, and I don't think that there is anybody in this or in academic areas that is going to try to put something over on somebody else. They couldn't do it if they tried, and they wouldn't try, and a group like this would work cooperatively to try to arrive at the truth.

I have confidence in the people and in the Government, but I think we are asking our legislators—even at the State level, and certainly at the Federal level—to undertake an enormous chore under today's economy, where it is so involved and there is so much Government participation that I think it has got to work better if there is joint operations and not as though one stood over here and one over here and didn't trust the other.

I feel very strongly that way.

Mr. THORNBERRY. I believe that is all.

Thank you, Mr. Chairman.

The CHAIRMAN. Mr. BOLLING.

Mr. BOLLING. Mr. Wilde, Mr. Brown referred at some length to the operation of the Hoover Commission—the first Hoover Commission and the second.

I am much more familiar with the operations of the first Hoover Commission than I am of the second.

He also mentioned the fact there were in task forces of the Hoover Commission some three-hundred-odd highly qualified individuals in the specialized fields in which they worked.

It happens I know something of the technique being used by the Committee on Ways and Means. They have established advisory groups, advisory groups which, as I understand it, have the opportunity to sit back and, as you put it, yak-yak a great deal.

I am unable to see the remarkable gain in a commission which is composed of those who have the ultimate responsibility plus those who have the specialized operating knowledge when the Congress or a committee of the Congress has perfect opportunity to create all the circumstances that you suggest. It can have the staff, which presumably would be drawn from the highest qualified people in the country. It can have the interchange of views through the task-force technique, so well used by the Hoover Commission, and it can then exercise the responsibility that no commission, Hoover Commission or other commission, can take away from it of digesting, pulling together the best product of the best people in the United States.

This is what is going to happen ultimately. Inevitably, the legislation is going to be passed by the normal processes of congressional action.

Mr. WILDE. Sure.

Mr. BOLLING. It just seems to me what a mixed commission does—and I think this is very well illustrated by the comparative lack of success of implementation of the second Hoover Commission's reports—is, in effect, prolong the process. It has a study. The Congressman goes through the same study.

I believe this is historically accurate in relation to what happened before. There

were two sets of studies in 1907, and then, finally, there was a legislative committee study.

One of the things that disturbs me about the mixed commission is that I cannot see the advantages you ascribe to it, and I do see the disadvantage of additional time.

Would you comment on that?

Mr. WILDE. Well, of course, we are dealing in two different experiences. Yours is largely legislative, I take it. Mine is in business and partial exposure. It is a matter of opinion, of course, rather than a matter of absolute evidence and proof.

My own feeling, as I have said, is that we would move faster if there was a mixed commission where small units of it were exploring the different areas and putting it all together.

I cannot see that the Hoover Commission can be distinguished in its task forces because it was doing or trying to do things which affected the organization of Washington, and that involves a great many personal equations and settled habits, both of the legislative and of the executive.

This is dealing in a more impersonal field and with very complicated interrelationships of money, banking, and credit and financial structure, and I think it is quite a different type of animal and lends itself to this mixed-commission approach more efficiently and with more speed.

I think the evidence of the other commission, which took 4 years and, I presume, had able men on it and had a very much simpler problem than is confronting the country today, is an indication of what I am talking about; and I don't quite visualize the flow from any recommenaditons that might develop to the legislative hall would be delayed by this process. I would think they would be accelerated.

Mr. BOLLING. The point I am trying to make is that it seems to me the legislature, itself, if it undertakes the study, if it is determined that changes in the legislation are important, then it is fairly obvious the legislative committee is, in itself, in the best position to proceed. Having made the study, it has cut off a step.

I don't see where you cut out of the process any of the outside-of-Congress experts from all the different types of credit institutions.

It seems to me, actually, one can assure a broader look through a congressional study than through a mixed-commission study, because it is inevitable that a person from one kind of business is going to have, to a degree, not the prejudices, but the views of that particular kind of business.

Mr. WILDE. Sure.

Mr. BOLLING. How big do you envisage such a mixed commission—27 men—in order to get the point of view of all the different credit institutions?

How are you going to get real representation on a mixed commission unless you make it so large as to be clearly unwieldy?

It seems to me in any method of technique, in any technique that is used, you are going to have to use the task-force method, and I see no reason why the Congress can't do that as well as a mixed commission.

Mr. WILDE. Congressman, I would answer you to this extent: In numbers, I think 8 or 10 would cover the area, because you do it by type of business. Commercial banking might have 2 people; investment banking might have 1 or 2 people; insurance company only 1; savings and loan maybe 1, and the academic might have 2.

You can easily cover the economy with 8 or 10 people, and if there were .6, 8, or 10 from the 2 branches of the Congress, you wouldn't have a very large group, and you would have the advantage of working together to the extent that the Congressmen could.

If you use the experts and put them on a different status, file all their reports—I don't understand how you gentlemen in the Congress can read things, you're so loaded with every kind of a report. If you are participating in the thing, you would get some of it by osmosis as you went along.

Mr. BOLLING. I won't pursue it any further.

Mr. O'NEILL. No questions.

The CHAIRMAN. Did you finish, Mr. BOLLING?

Mr. BOLLING. Yes; I have.

The CHAIRMAN. Mr. O'NEILL, do you have any questions?

Mr. O'NEILL. No questions.

The CHAIRMAN. Thank you very much.

Mr. COLMER. Mr. Chairman.

The CHAIRMAN. Wait just a minute.

Mr. COLMER.

Mr. COLMER. As I stated a moment ago, I was unfortunately detained and didn't hear all of your statement, Mr. Wilde, but I have since glanced over it, and I have listened to the questions and answers. I just merely wanted to take this time to express my appreciation of your organization, that is, the Committee for Economic Development. I think it has done a splendid job, a great public service.

I have had occasion in the past, as a Member of Congress, to work with some of your people, notably one of your previous presidents, Marion Folsom, and who now is, of course, a member of the President's Cabinet.

I just wanted to take this opportunity to commend you and your organization for the splendid public service that you render, an unselfish service, except, I suspect, it is selfish in the extent that all of us are interested in maintaining and perpetuating the American system.

Thank you, Mr. Chairman.

Mr. WILDE. Thank you, Mr. Chairman and gentlemen, very much for giving me this opportunity to brag on CED a little bit.

The CHAIRMAN. We are very glad to have you with us this morning.

Mr. WILDE. Thank you.

The CHAIRMAN. We have with us Mr. Randolph Burgess, Under Secretary of the Treasury.

Mr. Burgess, we will be very happy to hear from you at this time.

STATEMENT OF HON. W. RANDOLPH BURGESS, UNDER SECRETARY OF THE TREASURY

Secretary BURGESS. Mr. Chairman, gentlemen: I have no written, prepared statement.

The CHAIRMAN. Proceed in your own way, then.

Secretary BURGESS. Thank you, sir.

I might first call to your attention what undoubtedly you have in mind—the position on this subject by the administration.

The President in his state of the Union message made a statement on that point.

Do you already have that in the record?

Would you care to have me read that?

It is very brief.

The CHAIRMAN. Go right ahead.

Secretary BURGESS. "Essential to the stable economic growth we seek is a system of well-adapted and efficient financial institutions. I believe the time has come to conduct a broad national inquiry into the nature, performance, and adequacy of our financial system, both in terms of its direct service to the whole economy and in terms of its function as the mechanism through which monetary and credit policy take effect.

"I believe the Congress should authorize the creation of a commission of able and qualified citizens to undertake this vital inquiry. Out of their findings and recommendations the administration would develop and present to the Congress any legislative proposals that might be indicated for the purpose of improving our financial machinery."

Then in the Economic Report that was just developed in just a little different language, but along the same line. May I quote that, under the heading "Improving Private Financial Facilities and Promoting Thrift":

"The exceptionally heavy demands which economic expansion is placing on credit and capital markets have directed attention increasingly to questions concerning the adequacy of our financial facilities and of the laws and regulations which govern their operation.

"Alert to these problems, the Senate Committee on Banking and Currency during the past year made an extensive and constructive investigation of Federal laws affecting financial institutions.

"The impact on the economy of monetary policies designed to restrain inflationary measures has also become increasingly a matter of public concern. There is need at this time of a thorough study of recent changes in our financial structure and practices covering the activities of public as well as private agencies and of the legislative and administrative steps needed to improve our facilities for meeting credit and capital requirements and for exercising appropriate controls over credit.

"The state of the Union message recommended that the Congress authorize a national monetary and financial commission to perform this important task. The commission should be composed of distinguished citizens of outstanding competence and experience in the range of questions to be studied."

In accordance with that recommendation there were bills introduced in the Congress by Senator CAPEHART and some of his associates in the Senate Banking Committee and Mr. TALLE in the House.

The administration is not wedded to any single method of doing this job.

I think the history of these investigations—I have had some connection with some of them—depends on the quality of the people and their breadth of background and understanding, their knowledge and experience that they bring to bear on this work.

There have been a good many forms of commission. During Mr. Wilde's testimony there was reference to the National Monetary Commission that did its work prior to the passage of the Federal Reserve Act. That was an outstanding job. That was, as I recall, composed of 9 Members of the House and 9 Members of the Senate. They associated with themselves a great many very competent people in subgroups, put out a bookshelf of some 20 volumes.

There have been down the years a great many studies—some of them good; some of them useless waste of time.

I was a member of the Harriman Commission on Foreign Economic Policy back in 1947. That was composed of citizens outside of the Congress. Its findings were considered very carefully by the Congress and resulted in the formation of the Marshall plan.

There is a great deal of experience abroad. I suppose the most famous commission on this subject is the Macmillan Commission in England. I just pulled that out the other day and was looking at it. That was a commission with some members of Parliament but mostly of distinguished citizens of one kind or another. I have the list of them here. There are 14 of them, and they put out a report which had very great influence on British policy over the succeeding years.

The objective is to get a number of people working at this thing of very great competence who can examine the question, examine witnesses, material, and so forth, who have time to devote to it and who will do a job for us in this difficult field. It hasn't been completely surveyed for a long time. We have had piecemeal shots at it.

I think that job that Senator ROBERTSON'S committee has done in the Senate is a extraordinarily able piece of work. He ha

had a group of consultants who have worked with him and has turned out a bill which differs in details. There is a great deal of valuable material in bringing up to date a number of our legislative laws. It hasn't attempted to deal with some of these broad policy matters, and it is those that we ought to get into and make a thorough study.

We have considered this very carefully and, among different members of the administration, our desire is there should be the most competent, broad, and able job done here.

Our thought, embodied in those first bills was that men who can be detached for this purpose for a couple of years, who weren't burdened with the routine of the Congress, could do the job most competently.

If, in your wisdom, you want to associate Members of the Congress with some outside people and can shape up a commission that you can get with some of the very best people, for it takes the best—this is not a matter of just hearing some witnesses and compiling a lot of information. Unless the people on the commission have experience and the judgment on the subject to weigh the evidence, impartially and ably, this isn't going to amount to anything. It is just going to take an enormous amount of time of busy people away from their work and not do the job.

So, our emphasis is on quality of people.

You have before the Congress at the present a number of bills. If some of these bills are passed, you would be having the House Committee on Banking and Currency conducting a separate investigation and at the same time have the Senate Banking Committee doing exactly the same thing, and those of us who will have to give a great deal of time preparing material for it will simply not be able to give it the attention—any one committee—that we ought to, and we will be running off in several directions and you won't get the same focus of attention and interest in the country that you would if you could get together a group that commanded the confidence all through the country and was able to get the time of the best people to serve as experts and come before it.

That, I believe, is the way I would state the principle, as I see it, Mr. Chairman.

I was interested in Mr. Wilde's testimony and am in very close agreement with that.

The CHAIRMAN. Thank you, Mr. Secretary.

Secretary BURGESS. I think that is all I have to say directly. I will be glad to try to answer questions that the gentlemen may have.

The CHAIRMAN. Mr. Colmer, do you have any questions?

Mr. COLMER. Just briefly, Mr. Chairman.

Mr. Secretary, do I understand you correctly, first, that you are of the opinion that such a study should be made?

Secretary BURGESS. Yes, sir; we are, very definitely.

Mr. COLMER. Then the only question that you have is how it is to be set up, the mechanics of it?

Secretary BURGESS. That is correct; yes, sir.

Mr. COLMER. And the personnel?

Secretary BURGESS. That is correct.

Mr. COLMER. Mr. Secretary, some of us who are not too familiar with this broad subject and the fiscal, monetary affairs of the country, and so on, are very concerned, as a result of the testimony of some of the witnesses here, that such an investigation and study might result in some unfavorable reaction upon our economy, upon our business, and so on, generally. You don't see that in such a proposal?

Secretary BURGESS. Well, sir, that would all depend on the character of the investigation. If this is done by impartial people, who approach it without preconceived opinions and don't make it a witch hunt, I don't see that it is going to do any damage.

We welcome, I think, a very careful and objective inquiry.

Mr. COLMER. Then, sir, third and finally, can you see any effect that this might have, one way or the other, upon the peril of inflation that is threatening us?

Secretary BURGESS. Well, sir, I would hope that might be one of the questions that this commission would consider—whether we have in our armament all the weapons that we need to combat inflation; whether the Federal Reserve fiscal and monetary policy acting alone are adequate; whether they need any form of supplement.

I think that is one of the things they might consider. It is a very, very important question, I am sure.

Mr. COLMER. Thank you, sir.

That is all, Mr. Chairman.

The CHAIRMAN. Mr. ALLEN.

Mr. ALLEN of Illinois. Yes.

Mr. Secretary, I am sorry you weren't here to hear as I did, Mr. Wilde, who is Chairman of the Research and Policy Committee of the Committee for Economic Development. He made an excellent statement.

First of all, I want to say I heartily agree with what you have said. I think we need some men of experience here, practical men, impartial men, people who have the confidence of the people throughout the country.

Many of us don't realize the problem in that field, and here we are getting into problems in a most complex and delicate field.

The thing that has occurred to me—and I know that the Members of Congress—all of us—are very busy people: If we wouldn't have this commission, we would have to turn it over to the Banking and Currency Committee and I believe much of the work would have to be done by the staff members.

Secretary BURGESS. That is right.

Mr. ALLEN of Illinois. I don't know the salaries of these staff men here and what they can pay them, but it is just a few thousand dollars a year and I, personally, wonder whether or not you can hire, with good experience, somebody in this field or that field at a few thousand dollars a year; and, after all, they would be the ones who, to a large measure, would be responsible for bringing forth properly the facts. In other words, these staff members have a great influence here. I have been here in Congress now going on 26 years, and I know that these staff members do have great influence on the Members. They have to rely on their judgment.

So, I repeat, it occurs to me whether you can get outstanding men, who know much about the credit of agriculture, small business or commercial loans, for that small compensation.

Secretary BURGESS. I'll tell you, Mr. Congressman, you can't.

Mr. ALLEN of Illinois. You can or can't?

Secretary BURGESS. You cannot.

I have had a great deal of experience——

Mr. ALLEN of Illinois. That is my judgment——

Secretary BURGESS. Yes.

Mr. ALLEN of Illinois. Since I have been around the Hill——

Secretary BURGESS. Yes.

Mr. ALLEN of Illinois. That it is nearly impossible to bring somebody down here for a few thousand dollars a year who is an expert in the particular field.

Secretary BURGESS. In the case of the Aldrich Commission, the National Monetary Commission, they were able to get some of the very best people in the country to contribute, men like Professor Sprague of Harvard—and I can't give you the names of all of them; but I have been over their volumes. It was a beautiful job.

They just wouldn't come and work for just one committee of Congress, doing a job like this, I can assure you.

Mr. ALLEN of Illinois. I know now, for instance, there are some bills here to raise some minor Federal workers, to raise their salaries, in minor jobs, some departments.

Secretary BURGESS. Yes.

Mr. ALLEN of Illinois. Because they aren't getting sufficient salaries to keep good men.

Secretary BURGESS. Yes.

Mr. ALLEN of Illinois. I doubt whether you can get at the present time anyone too well learned in the subject involved here.

That is one thought.

The next thought I have is about the size of the committee that my good friend, Mr. BOLLING, brought up.

It has been suggested here that this commission might be composed of 5 or 6 outsiders and 4 Members of Congress. That wouldn't be as unwieldy as this Banking and Currency Committee which, I believe, consists of 30 people—I think that is the number on the Banking and Currency Committee—and then you go into subcommittees. Then you bring in other members, other people in the various fields, who ought to be brought in.

So, it would be more unwieldy to have the 30 members of the Banking and Currency Committee, with different thoughts along those lines, than to bring in perhaps 5 or 6 different commission members and 2 members maybe on the Banking and Currency Committee from each side.

So, from that standpoint, I can't see that it would be any better than just having this commission at the moment.

Another thing I mentioned before you arrived was this: I looked over the biographies of the various members of the Banking and Currency Committee. Maybe they didn't include everything, but most of those do when we put our names down there. We tell all about ourselves, that is, the good things. However, I notice there are only about four on that committee who have had any experience on banking or who have been associated with any of these loans or banks or anything of that nature.

So, I think that factor, itself, as far as I am concerned, is very important.

Maybe it might be well to bring in a few outsiders.

I want to thank you. I, personally, appreciate your testimony.

Secretary BURGESS. Thank you, sir.

Mr. ALLEN of Illinois. I think probably this will be worked out all right.

That is all, Mr. Chairman.

The CHAIRMAN. Mr. MADDEN.

Mr. MADDEN. No questions.

The CHAIRMAN. Mr. BROWN.

Mr. BROWN of Ohio. Mr. Burgess, in reply to a question asked by Mr. COLMER, if I understood you correctly, you said a study of this kind could be very effective and very worthwhile if it is conducted in an unbiased, nonpartisan, or bipartisan, or nonprejudiced way.

Secretary BURGESS. Right.

Mr. BROWN of Ohio. However, you didn't give the other alternative. Suppose it should be conducted by individuals who had some bias and some prejudice and some preconceived convictions and ideas as to how to operate our monetary and financial system in this country; then, what would the situation be?

Secretary BURGESS. Mr. BROWN, I think, in the first place, it could not command the service and the interest of the people of the country who are in the best position to contribute to a very fine study.

In the second place, I think if it were biased there would be that danger that Representative COLMER has referred to—that is, if there were headlines which reflected a bias or which were accusatory of the way things had been administered, or handled in terms of a witch hunt, I think it could do a good deal of damage.

Mr. BROWN of Ohio. Is this economy of ours and our financial structure in such a delicate balance today that some ill-advised action or statement of someone in authority

in connection with such an investigation, could trigger off a progressively bad result?

Secretary BURGESS. I have great faith in our economy. I think it will take a lot, but I can assure you, Mr. Congressman, that it would shake the confidence of the people in the Congress if the Congress undertook to make this kind of an investigation in an inadequate and partial and biased manner.

Mr. BROWN of Ohio. I am not sure just how much confidence the people of the country have in the Congress to start with.

Secretary BURGESS. Well——

Mr. BROWN of Ohio. So, I am not particularly concerned with the confidence of the people in the Congress; but I am very much concerned as to whether or not we may do something here that will shake the confidence of the American people in the financial soundness and stability of not only our Government, but our entire monetary and fiscal systems clear down to the grassroots.

I have been through a few depressions myself and so-called panaceas and sometimes just the wrong word said or the wrong thing done has a bad effect.

Is that——

Secretary BURGESS. Let me put it this way: It occurs to me, Mr. BROWN, that if the investigations of this committee, whatever it was, appeared to be threatening the functions of the Federal Reserve System—I believe that could do great damage in the country.

The country has great faith at the moment in the integrity and honesty and courage of the fellows who are running the Federal Reserve System, and I think, if they got the impression that this inquiry was directed to undermining that, that that could really create difficulty in that direction.

Mr. BROWN of Ohio. You feel some such study as has been proposed by both the President and Mr. TALLE, and others on the Banking and Currency Committee—and I understand Mr. CAPEHART and others in the Senate—is in order, if properly conducted?

Secretary BURGESS. Yes, sir.

Mr. BROWN of Ohio. If it is to be done, if I understood your answers to the question, you feel that the best way would be through the commission-form of activity?

Secretary BURGESS. Yes, sir.

Mr. BROWN of Ohio. And then, next, if it would not take that form of investigation or study, do you think it should be a joint committee of Congress or just a committee from one branch or the other, or from both?

Secretary BURGESS. By all means joint because—I speak for the people who have got to furnish the information—if we are going to have two separate committees at work here, the difficulty about getting up suitable material and taking care of it is a terrific burden; but, more than all else, this Commission, both in terms of getting the right people to come as witnesses, in getting the right people to come as staff assistants, as aides to it, and its findings, if it is going to do any good, has got to command the confidence of the people of the country, and the joint commission that had on it both Senators and Representatives and people from private life of experience and reputation, would certainly command very much more of all those things than simply a single committee of the House or the Senate.

Mr. BROWN of Ohio. Of course, if there was any legislation found necessary to be put through the Congress, it would have to pass both Houses?

Secretary BURGESS. Certainly.

Mr. BROWN of Ohio. Both House and Senate?

Secretary BURGESS. Yes.

Mr. BROWN of Ohio. Both bodies?

Secretary BURGESS. Yes.

Mr. BROWN of Ohio. My good colleague from Missouri, Mr. BOLLING, was concerned over whether the naming of the Commission wouldn't result in delay.

It has been my experience on commissions that the commissions generally do spadework and get a lot of the roughage out of the way and bring up facts and information for the use, first, of the commission on which to base its report and recommendations, which are then made available to Congress, with all that testimony, so that the Congress doesn't have to go over all of it again but does have something to refer to; and in that respect I disagree with my friend and think that a commission operation is very helpful because it does save the time of Congress and the congressional committees.

I would like to comment on one other thing and ask one other question about something you said.

You expressed the opinion, as I recall and understand, that a single committee of the Congress could not get the type of assistants on its staff that a Federal or National commission could obtain, recognized as a servant of all the American people; is that correct?

Secretary BURGESS. I am sure that is correct, Mr. Congressman.

Mr. BROWN of Ohio. In that connection, I would just like to point out, from my own experience, the Hoover Commission—and I speak specifically of the first one—did obtain the services of about 330, as I recall, or a few more, of the topflight individuals in this country to assist on task-force services, assisting the commission, and practically all of them, outside of a few college officials or educators, were serving without compensation.

I recall very vividly how former President Hoover, as Chairman of that Commission, would call in men the Commission decided it would like to have to go into various problems—experts in that field—and he would say something to them like this: "You know, Mr. Burgess, this country has been good to you. You were raised on a farm out in Iowa, but you have come a long way and made a success in life, and you can afford to give 3 months or 6 months of time to your Government. Now you are drafted. We want you in here."

I recall distinctly on 1 task force, dealing with the insurance problem that confronted the Congress and the Nation—for veterans and for servicemen, we had 7 presidents of insurance corporations, the largest in the country, serve and give the benefit of their advice, and they brought in their own statisticians and their own experts, actuaries and all, to study the system that we had here and to go over it, and they brought in recommendations that have not only saved the American people a great deal of tax money, but have been of real benefit to the veterans of this country and helped them on their insurance problems.

Secretary BURGESS. That is true.

Mr. BROWN of Ohio. I recall we had presidents of railroads who dealt with some of the transportation problems that didn't affect them at all.

Is that your idea as to the type of men you ought to have on this commission and that they ought to be drafted into public service?

Secretary BURGESS. I think that is a very good illustration.

In this particular area, one would, of course, seek people who had both experience and objectivity.

I think you would have very much more chance of getting them with a distinguished commission, recognized as such, men of leadership and reputation who would work with the Members of the Congress.

Of course, I am enormously impressed with the workload the Members of Congress carry, and members of this House Banking Committee. It includes very many good friends of mine. I have been before the committee over the years a great many times. They are fine people, but they carry an enormous volume of work, and I don't think they c detach themselves for this kind of thing anything like the way that the task require

Mr. BROWN of Ohio. One other questio and I am through, Mr. Chairman.

Mr. Burgess, you have been around a lon long while, like some of the rest of us ol timers——

Secretary BURGESS. Much too long, I a afraid.

Mr. BROWN of Ohio. And you have se some of these commissions and read an studied their work over the years—the Ra dall Commission, the Harriman Commissio the Hoover Commission, the different one Have you ever heard or known of any these individuals who served on these var ous commissions being men who have do something that was against the interest the country or in the personal interest themselves?

Has there ever been any question as their integrity or their patriotism, to yo knowledge?

Secretary BURGESS. I don't recall any case Mr. Congressman.

Mr. BROWN of Ohio. I can't recall any.

That is all, Mr. Chairman.

The CHAIRMAN. Mr. DELANEY.

Mr. DELANEY. Just one question: Fro your remarks, Mr. Secretary, I gather a stud of this type would take considerable tim As a matter of fact, you mentioned it woul take many years.

Secretary BURGESS. I thought of 2 years the bill that Senator CAPEHART presented, an Mr. Talle.

I think 2 years is indicated, or approx mately 2 years. It is quite a chore.

Mr. DELANEY. Then, after the committ reported, we would have several bills u questionably and we would go through th same routine here in Congress, so that n action on this could be anticipated at th session of the Congress?

Secretary BURGESS. I would think that certainly true; yes.

Mr. DELANEY. Thank you.

That is all.

The CHAIRMAN. Mr. THORNBERRY.

Mr. THORNBERRY. I believe not at this time

The CHAIRMAN. I beg your pardon.

Mr. THORNBERRY. I believe not.

The CHAIRMAN. Mr. SCOTT.

Mr. SCOTT of Pennsylvania. Yes, Mr. Chai man.

Mr. Secretary, I have this concern, an that is that we have seen in the past som situations where staff members appear at th inception of a task of this kind with som fixed orientation arising perhaps from the former employment in or outside of the Gov ernment and, as compared with a Commi sion, such as in Mr. TALLE's bill, it seems t me that the Talle proposal would permit th interplay of a great many viewpoints, tha the conclusions would be hammered out a the level where the ultimate recommenda tion is to be made rather than evolved at staff level and then passed on to men wh are admittedly distinguished and competen but not experts in those fields, and I am won dering if that isn't one of the difficulties i asking Congress to pass on this kind of delicate question.

Secretary BURGESS. That is one of the ver great difficulties. Of course, we find it gen erally in all our work—how far you trus your staff people and how far you are abl to review the results yourselves and mak sure that they are absolutely correct.

Of course, it is a problem we have in ad ministration all the time, bridging that gap

The CHAIRMAN. Gentlemen, I have to go t the floor and handle a resolution. I won't be long, I hope. Mr. COLMER will take over.

Mr. SCOTT of Pennsylvania. I have 1 or brief questions.

I have served on four other committees o this House and, frankly, the recommenda tions of the staff are usually based on

much work and research which is not available to us or which it isn't possible for us to evaluate that there is certainly a great temptation to simply accept what the staff members suggest, and I am wondering if a congressional report coming out, let's say, with restrictions against the whole credit system as now constituted might not present, let's say, to the small-business man of the country, harassed by their own credit problems, a far more complicated and perhaps dangerous situation.

Someone has spoken of the kind of report which might trigger off an economic change here.

Don't you think that, should there be a report which represents perhaps, in its final result, the recommendations of staff members, such a report might have the effect, conceivably of triggering off an undesirable economic result?

Secretary BURGESS. Well, it could, Mr. Congressman.

I think there are two ways that could happen.

Gentlemen, if we do on this an inadequate job, recognized as such through the country, as not a good job, two things will happen: Either they will simply ignore it—it will be just pure waste of energy for everybody who takes part—or else it may do some real damage.

Mr. SCOTT of Pennsylvania. Thank you.

That is all.

Mr. COLMER (presiding). Mr. BOLLING.

Mr. BOLLING. Mr. Secretary, you are familiar with the work in a rather more limited field—2 subcommittees of the Joint Economic Committee, 1, I think in the 81st Congress and 1 in the 82d Congress, on the subject.

Secretary BURGESS. The Douglas committee and the Patman committee; yes, sir.

Mr. BOLLING. Recognizing these were more limited inquiries than that proposed, what was your opinion of the competence and objectivity of those two inquiries?

Secretary BURGESS. I thought the first committee, the Douglas subcommittee, did a first-class job. They had extended hearings. There was a great deal of hard work done. It was a joint group. Members of both Houses attended. They had an extremely competent staff man, Lester Chandler of Princeton, who took that job, and the report was, I think, a very helpful job. I think it made possible the accord between the Federal Reserve and the Treasury that followed.

The second report, I think, accomplished nothing.

Mr. BOLLING. As to the objectivity of the conduct of the second——

Secretary BURGESS. I think it was just pretty good.

Mr. BOLLING. Just pretty good?

Secretary BURGESS. Just pretty good.

Mr. BOLLING. In that you would disagree, then, I take it, with most of the editorial writers of the banking journals and others who almost universally praised the objectivity of the second?

Secretary BURGESS. Well, I think the chairman conducted the hearings in a statesmanlike fashion, but I think when it came to the report that the report lacked objectivity on a number of points.

Mr. BOLLING. I take it, Mr. Burgess, you don't object to people having opinions?

Secretary BURGESS. Not at all. That is fine. I even have some myself, even after serving 4 years in the Treasury.

Mr. BOLLING. So, your concern is not with the opinion of individuals?

Secretary BURGESS. No; not at all.

Mr. BOLLING. You mentioned several times in your original testimony that we would have to have the best people, and impartial people, on this commission. I take it the original concept of the administration was not to have a mixed commission?

The recommendation, as I understood it, was for a commission of citizens, and the original legislation first proposed, I take it, at the request of the administration, was for a citizens' commission?

Secretary BURGESS. That would be our No. 1 choice because we thought in that way the work would march forward most promptly, that you would have the least, shall we say, political overtones—they sometimes do get into these things—and the job would go forward best; and we recognize the Congress is very busy, and would be busy passing immediately on bills in this area, on which they have to take a position, while at the same time the subject is being discussed by the commission objectively.

I think that was found to be the case in the Randall Commission. That was a mixed commission, and it was discovered, I think, the Members of Congress on it had difficulty in harmonizing the positions they had to take, which were partly political positions, in the Congress at the same time they were sitting on this other commission objectively as individuals.

It is a very difficult thing to harmonize sometimes.

Mr. BOLLING. Mr. Burgess, you speak of the best people and impartial people.

Secretary BURGESS. Yes, sir.

Mr. BOLLING. Not citing any names necessarily, could you give me an example of what, in your idea, would constitute the best people and impartial people to serve on this commission—by kind, if not by name?

Secretary BURGESS. Well, by kind, a man like Alan Sproul, who was a public servant all his life and is now retired from the Federal Reserve System. So, he has no obligations to anybody. I think he would be a very good member of this commission.

I think a man like the witness you had just before me would make a very good member of the commission, Frazar Wilde. He is connected with an insurance company, not one of the big five. He has worked with the CED people. He has had broad experience. I think he would make a good member of such a commission.

One could go on. We are rich in good people in this country.

Mr. BOLLING. Do I gather, then, your idea would be that the people who should be members of the commission would be those who had had vast experience in one of the savings and lending fields?

Secretary BURGESS. I think it should include some one of that sort, but I think it should also include people from the academic field.

I mentioned Lester Chandler, who was the expert for the Douglas committee, who was professor at Princeton, who has had no connections with, had no money, no eleemosynary return from serving private industry. I think he is now director of the Federal Reserve Bank of Philadelphia, but a thoroughly able and competent student.

There should be other men from the academic field, I think.

You might find somewhere a college president who—well, I'll give you a man—Harold Dodd who has just retired as president of Princeton, who is an historian, a very able, balanced person, great public devotion.

Mr. BOLLING. And these people, the academic people, you feel would give to the commission the noninstitutional representation?

Secretary BURGESS. Yes. I'd try to balance it off. I'd certainly try to get someone who had experience in the field of labor and who knew that area, somebody who knew the farm field.

You certainly would want somebody who knew rural credit. The problem of rural credit is one of the real problems here.

I think somebody ought to take a look at all the agencies that make loans to farmers. There are more agencies making loans to farmers than you can count on your fingers and toes.

Another is the point—somebody raised the question—of small business and the capital supply for small business. Somebody ought to take a look at that, and I would try to find a man, businessman, who served small business as one of this group.

Mr. BOLLING. So, you envisaged a really balanced commission in which most of the economic interests of the country, both financial and otherwise, would be somewhat represented?

Secretary BURGESS. Yes; represented.

I think you have to be very careful in trying to get people who are not special pleaders for their own particular field, and you can find such people. Of course, the danger is you get people who are.

That is one of the difficulties about a mixed commission.

To get representation from this group will take 9, 12, to 15 people, and to add to that your Members of Congress involves you, perhaps, in a pretty big commission; but that is one of the details.

Mr. BOLLING. You aren't particularly concerned about the number of people on the commission?

What would be the largest number?

Secretary BURGESS. It shouldn't get too big. I think nine would be an ideal number. Fifteen would be suitable. I am a little afraid if it ran very much over that, but that is a matter of judgment.

You might manage 17, 19, but to get really first-class people, it would be easier to ask them to be members of a 9-man commission than 15 because a person is diluted a good deal. He thinks, "Well, this isn't so much. I am just 1 of 21."

It is a little harder to get him to do the job that way than if it is a smaller group.

Mr. BOLLING. Thank you, sir.

Mr. COLMER. Mr. O'Neill.

Mr. O'NEILL. Mr. Burgess, recently Mr. Hoover was a prophet of doom and gloom, and immediately the stock market went down a few points.

With inflation the way it is, what effect do you believe a study, either by the Congress or by a joint committee, would have on the economy of the Nation today?

Secretary BURGESS. I heard Mr. Hoover speak.

If I might say, Mr. Chairman, I think the difficulty we encounter frequently here is you can't put the subjunctive into a newspaper headline.

What Mr. Hoover said was: If we violate economic laws long enough, they are going to turn around and bite us; but, of course, the headlines never get the "if."

The effects of this commission on business and on sentiment, I think, all depends on how it is done.

If you have the kind of commission that we have been talking about and I think you people want, I don't worry about its disturbing sentiment.

If you have unbiased and objective people who examine these things carefully, I think it will add to confidence rather than the reverse.

Mr. O'NEILL. One other thing, Mr. Burgess: Here we are supposedly the world's greatest legislative body.

Secretary BURGESS. We are.

Mr. O'NEILL. We are.

You haven't enough confidence that this body could get dedicated men to do a job without bringing in substantial businessmen?

Secretary BURGESS. It is conceivable; yes. I think it is.

Mr. O'NEILL. How about these men you mentioned that you would like to see working in the committee?

They are dedicated men, and wouldn't they work as part of a task force?

Secretary BURGESS. My judgment, Mr. Congressman, is they would not agree to serve with an investigation simply committed by one committee of this body. They wouldn't think it was good enough.

Mr. O'NEILL. That is all.

STATEMENT OF KENTON R. CRAVENS, PRESIDENT OF MERCANTILE TRUST CO., ST. LOUIS, MO., MARCH 6, 1957.

Mr. CRAVENS. I have a brief statement, Mr. Chairman, and it might be well to read, to begin with.

I am Kenton R. Cravens, president of Mercantile Trust Co., St. Louis, Mo. I have asked for this opportunity to comment on H. R. 85 because of my strong personal interest in its general subject matter.

As Chairman of the Advisory Committee to the Senate Committee on Banking and Currency for the Study of Federal Statutes Governing Financial Institutions and Credit, I have had opportunity to study the need, possible scope, and best means of conducting a study of the Nation's monetary and credit structure. There seems to be general agreement as to the need for such a study and reasonable agreement as to its scope. Apparently a real difference of opinion exists, however, as to who is going to do the job.

Possibly the best way to resolve this question would be to review the scope of such a study so as to more accurately appraise the necessary qualifications of those who should be charged with the responsibility.

The advisory committee recommendation on this subject reflects largely my own thinking. That committee recommendation reads in part, as follows:

"The establishment of a commission for the purpose of making an objective study and appraisal of the use of monetary controls to stabilize the Nation's economy and the impact of such controls upon the American system of free enterprise, and of the adequacy and responsibility of all financial institutions as custodians of the Nation's savings, to provide, individually and collectively under existing laws, the State and National financial needs for the continuing growth of our dynamic economy, giving appropriate consideration to deposit and savings insurance programs, the essentiality of Government lending and investing, and the tax burden on debtors, creditors, and equity owners."

Thus, the study would be one of existing financial institutions. I emphasize that it is not the role of such a commission to conduct a continuous review of current monetary policies. To the extent of the need therefor, such reviews have been and will be made by the appropriate committees of the Congress. Nor would it be the purpose of a study to criticize such reviews or to supplant them. The monetary system is a creation of the Government and appropriate legislative committees and the executive branch should review its functions whenever they deem it necessary. The problem to which a national monetary and financial institutions study would address itself is far more basic in that it would study the financial systems themselves.

As you can see, a study of the character which I have in mind is in the nature of a fact-gathering undertaking. Such study will require much work by students of the problems under the guidance of practical men of broad experience and perspective. There is no need for self-serving arguments at this time. If the study is to be conducted with an air of objectivity, it must be outlined and guided by the best and most capable students of the problems. This must be the fundamental objective. Upon completion, the study must be as impartial and factual as possible.

The Advisory Committee believed that these objectives could best be achieved by submitting the direction of the study to men who are extraordinarily well informed about the problems. Such men can properly be drawn with some degree of preponderance from the financial field and other fields of economic endeavor. It goes without saying that the men must be able to see the problems of all industries as well as the problems confronting their own industry.

To assure this objective, the Advisory Committee recommended the composition of the Commission as follows:

(a) That it must be composed of not less than 12 and not more than 17 members.

(b) That the legislative branch of the Government be represented thereon by not less than 4 and not more than 6 members, consisting of the chairmen and the ranking members of the Banking and Currency Committees of the House of Representatives and of the Senate.

(c) That the remaining members of the Commission be appointed by the President of the United States without regard to their place of residence, their occupation, or whether they are members of the majority or the minority party of the Congress, but with regard only to the fact that each shall be an outstanding American citizen; and, lastly,

(d) That the President of the United States appoint from among the members of the Commission a Chairman thereof.

I think congressional representation on such a Commission is both desirable and necessary. The results of the study undoubtedly will be the basis of some new legislation, or at least will receive the scrutiny of the Congress. It is thus necessary that the legislative point of view should be kept in mind at all times; but a commission composed of just one committee of one House of the Congress is far too restrictive and cannot hope to achieve beneficial results. One reason for this is that an urgency exists, both as to getting the study underway and completing it promptly, and the Congress is already literally snowed under with work. The urgency to which I refer is the fact that no one knows yet whether or not we have brought business cycles under control. Thus, we need an answer to that question without delay.

This is not exactly what I mean. What I do mean to state is that we need to study the problem, study it as carefully as we can, and it would be a tragic mistake to find out later that a careful study would have helped us to avoid some tragedy.

To reiterate, we are not advocating, nor is anyone advocating, this is the time to legislate about existing problems. This study should be a truly national one and only if it is conducted on the broadest kind of basis can it command complete public confidence, the necessity for which is apparent to all. The adoption of H. R. 85 would preclude this kind of a study. So, I respectfully urge, with the greatest emphasis at my command, that this committee and the Congress consider with approval a broader approach to the problem than is contemplated by H. R. 85.

The CHAIRMAN. Thank you, Mr. Cravens.

Do you wish to add anything to your statement?

Mr. CRAVENS. No. I think that summarizes my own strong personal views about the problem. I realize it is an area that can provide many different opinions. Anything more I would say would simply reemphasize that which I have said.

The CHAIRMAN. Mr. COLMER, do you have any questions?

Mr. COLMER. I don't think I have any questions at this time.

The CHAIRMAN. Do you have any questions, Mr. ALLEN?

Mr. ALLEN. I certainly want to compliment you, Mr. CRAVENS. I think you have said a lot in a few words, and I certainly agree with you a hundred percent.

Do I understand that you say this Commission—you recommend the Commission—should consist of perhaps an agricultural authority, an insurance authority, maybe a labor authority, and so on, with representation from all fields? That is what I understand you to mean. Is that true?

Mr. CRAVENS. My own thinking on that would be that the President would try to get—and get—the required number of public representatives and screen them on the basis of their basic qualifications, and not have them represent any particular interest.

I think it would be a mistake to have one man dedicated to representing labor, one man dedicated to representing capital, one man dedicated to representing agriculture. I think he would want to screen them as to their basic qualifications, their ability to be objective, and, above all, to see that they had no affiliations or had no direct representations.

I think we would get a better job on that kind of a basis.

Mr. ALLEN. Then, of course, you would want authorities in all the various fields?

Mr. CRAVENS. That is correct.

Mr. ALLEN. That is one of the objections many of us have in regard to H. R. 85.

We know that you can't get men of too much learning to come in. We know about the important part that a staff plays. We know that you can't get experts, generally speaking, for the small compensation that the staff would receive.

That is the reason, perhaps, it would be better to have some people with a background of long experience instead of perhaps staff people, coming in at a low salary, who aren't experienced in the field and with probably the things this committee or commission would cope with.

That is all.

The CHAIRMAN. Mr. MADDEN.

Mr. MADDEN. No questions.

The CHAIRMAN. Mr. DELANEY.

Mr. DELANEY. Mr. Cravens, you have considered this subject for a considerable time; you have studied this problem for a considerable time; have you not?

Mr. CRAVENS. The focusing of this has been done since all of us in our group started tackling the problem; and, of course, when you start getting into one of those situations, you get into it far more deeply than you would normally.

Mr. DELANEY. You state here: "As chairman of the advisory committee to the Senate Committee on Banking and Currency," and so on.

Mr. CRAVENS. Yes, sir.

Mr. DELANEY. As of necessity, you must have given considerably more thought to the subject than you would under normal circumstances.

Mr. CRAVENS. That is correct.

Mr. DELANEY. We have had other experts here who have also had some opinions and have made a great deal of study in this regard.

Do you think something can be gained by putting all those people together and arriving at probably some agreement on and some arbitration of, the problems we have confronting us?

Do you think the members of the Banking and Currency Committee could evaluate the testimony of such men as yourself? When we get all through, they have got to sell the idea to the entire Congress in order to put it over.

Mr. CRAVENS. Sure.

Mr. DELANEY. You have some definite views, I presume.

Mr. CRAVENS. Yes. I told you this kind of problem has a lot of room for many views.

I have never seen a time when qualified people got around the table that something

good didn't come out of it, if that is your question.

Mr. DELANEY. Yes. That is substantially it.

There are other groups, chairmen of other groups, who have studied this problem, and who have also testified here, and I presume they have arrived at some definite ideas.

Now, the Congress eventually has to pass on it. I don't know who could be better qualified to pass on it than someone who listens days in and day out, over a long period of time, because they eventually have to make the recommendations to the Congress.

Many of the groups that have made studies must have come to some conclusions. Isn't that so?

Mr. CRAVENS. Yes; that is correct.

The conclusions that I came to and my group came to I have stated in this statement.

Mr. DELANEY. It should be studied; further studied.

Could you tell us just what the problems are, the immediate, pressing problems, at this time?

Mr. CRAVENS. I wonder if I might answer that question with a worksheet of mine which spells out perhaps in more detail the very summarized objective I have put in.

Would you like me to?

Mr. DELANEY. I would be glad to hear it.

Mr. CRAVENS. There are six paragraphs.

As I look upon the scope and the work of some kind of a group that you put together on this, in more detail they would follow something like this:

Area 1: The matters of chartering, examining, and supervising all financial institutions in the United States which are custodians of the savings and other funds of the people, and as the same are respectively related to the needs of the public in our present-day economy, and the question of the advisability of continuing the existence of the present dual system of banking as compared with creating a federally chartered branch banking system.

Let me stop right there. Now, all that means is that we ought to see whether or not our present banking system and our present financial institutions are supplying the credit with even balance over the country that our economy needs.

We have a different type of economy than 10 years ago and 20 years ago.

Area 2: The question of whether financial institutions can adequately service the credit needs—that is, the need for equity funds as well as debt funds—of the present-day economy and the problem of defining the fields in which each type of financial institution can best contribute to those needs.

It was not many years ago that the banking system supplied only 90-day, short-term credit. Today we find it in all kinds of hybrid types of credit—term loans of 10, 12, 15 years; 3-to-5-year consumer-credit loans; mortgage credit up to 30 years, and so forth.

I think that is a great area that we need to study.

Who is going to supply the various types of credit and equity to keep this economy of ours going?

Area 3: The matter of overall tax burden—State, local, as well as Federal—on financial institutions, including the tax position of governmental lending agencies, and the relationship which the tax burden of a particular type financial institution has to the availability of investment capital for its own account and to its contribution in supplying the credit needs of our present-day economy, and the question of whether or not the present tax laws are disproportionately responsible for the increasing demand for loans from financial institutions.

An example: Under the present tax laws, the burden is all on debt rather than equity. A corporation can deduct the interest on its debt, but it can't deduct the dividends on its stock.

So now we have created a tremendous debt load on corporations—possibly too great. I don't know, but that is an area we ought to study.

Area 4: The problem of what constitutes appropriate protection to the depositors and account holders of financial institutions by means of Federal or State insurance programs, and the matter of the adequacy, feasibility, and insurability, if you please, of such protection, with particular reference to the practical cost for the protection, on whom the burden of the cost should fall, and the manner in which the protection should be represented to the people.

For example, there we represent to the people that every deposit up to $1,000 and every share account up to $1,000 in savings and loans is fully protected. I just can't believe there are enough resources to do it if we had a tremendous economic collapse. Yes, under most conditions, they are protected; but to represent to the people that in any event they are protected, to me, is immoral.

That is an area that ought to be studied.

Area 5: The matter of existing programs for insuring a financial institution is a question of what conditions such programs are intended to provide insurance against, the problem of whether or not the present level of the accumulated reserves is or is not adequate, and so forth.

Area 6: The matter of a complete review of our central banking system, as related to its responsibility in the field of monetary and credit controls, to determine the adequacy of its present powers and the impact which the exercise of particular powers has upon our present economy, and the different types of financial institutions; the matter of reserve requirements of member banks of the Federal Reserve System; the question of the value of such reserves as monetary control measures; the problem of the impact which the use of such reserves makes upon the banking system generally; the matter of the Federal Reserve System's control generally over the banking system and in fields other than monetary and credit control; the matter of comparative value of selective as against quantitative controls, and the effectiveness of each on the monetary and credit management, each different type of financial institution and the public generally; the problems existing in the area of monetary and credit management as a result of the Government's activities in investing and lending fields and in the money market; and, last, and I think probably equally important for this group to consider, the matter of Government lending and credit, and the laws under which their activities are conducted, with particular regard to:

(a) What is and what is not essential to the common good;

(b) The long-range effects on the Nation's economy;

(c) Achieving better coordination among the many Government lending agencies; and

(d) The question of whether or not such activities are eroding the private enterprise system by, in effect, subsidizing inefficient management at the expense of efficient management.

Now, those are just a few of the things and, if you sit and dig and dig and dig, you can see how broad the scope becomes.

Mr. DELANEY. You could go very far afield there. For example, you could go into taxation, which wouldn't come within the scope of this committee either, that is, the taking of credit for debt and interest payments, while you are not permitted to take your dividend credit. That would go into another field and another avenue.

That pretty well answers my question.

The CHAIRMAN. Mr. Trimble, do you have any questions?

Mr. TRIMBLE. No questions.

The CHAIRMAN. Mr. Thornberry.

Mr. THORNBERRY. Mr. Cravens, I have been impressed with your statement. I think you have tried to state—and have done so—briefly the objectives in mind.

I have been a little concerned about some of the statements that have been made about some fear of a depression if Congress, through a regularly recognized committee, were to go into the problems for which Congress is responsible. I don't believe you express that fear, recognizing the Congress has the responsibility.

I am impressed by 1 part of your statement where you say a study by just 1 committee of 1 House of Congress cannot hope to achieve beneficial results.

Now, I note from what you have said here, you have been chairman of an advisory committee to a committee of the other body. You wouldn't say that study did not achieve any beneficial results; would you?

Mr. CRAVENS. If it had been in the area of a monetary study, it would have achieved no beneficial results, although that isn't a good choice of words.

Obviously, any group, conscientiously working on a problem, regardless of how limited it may be, does produce a lot of valuable things; but my concept of this problem is that it would have such a broad national base that, to the ultimate, major objective, it would not produce any major beneficial results.

Mr. THORNBERRY. I understand that—and I am not quarreling with you in the idea, from what you have said from your worksheet, that with the study you have in mind what you are trying to do is have a broad scope—but what I am concerned about is, regardless of personalities, which I think have entered into some of this, and which I think is unfortunate, ultimately—and you recognize it in your statement, even though you go ahead and later say it can't achieve beneficial results; you must know from your service—it must have been a valuable service from what you said in your statement—that what the Senate committee has done did at least achieve one result in your mind, regardless of what somebody else may say, that you needed a broader study of the monetary system—a committee of Congress does have a responsibility to the Congress and ultimately to the people who send us here for certain objectives, and you wouldn't say a committee of Congress should be prevented from inquiring in the field; would you?

Mr. CRAVENS. Let's take the answer to your question in two parts.

The first part was that the committee I represented did not have on it any Members of Congress. It was a 27-man group, and the job that was put before it was a very small and narrow one compared to this kind of a job; but, even in that particular case, it made its findings, and did its work, and it came up with its conclusions, independently of Congress, so that in effect it was an outside group, and then it made its very point to Congress, which is entirely what I envisage in a proper monetary commission—that it does its work over its allotted time, and then prepares its report to Congress for its action, scrutiny, or whatever it pleases.

Now, I go a step further, and I say it is much better to have a partnership, have the most experienced Members of Congress in that field in partnership with students of the problem, and I think you will achieve better results, even better than we achieve without any partnership.

Mr. THORNBERRY. I think whatever I would say would be argumentative, but I don't believe you did respond to the second part, and that is ultimately the Congress, through its committees, and——

Mr. CRAVENS. Oh, yes.

Mr. THORNBERRY. Having the determination for what should be done.

Mr. CRAVENS. I made that point.

Mr. THORNBERRY. I think that is right, and I just wanted to point that out.

The CHAIRMAN. Mr. Brown just came in.

Mr. BROWN. I have no questions.

The CHAIRMAN. Mr. Bolling.

Mr. BOLLING. Mr. Cravens, this point that Mr. Thornberry was making is one that concerns me a great deal.

I don't quite follow the thinking that recognizes that Congress has these responsibilities, and if there should be any legislative recommendations, ultimately must act, and yet, at the same time, the implication of your statement that the Congress is incompetent to do the work that leads up to its action.

Mr. CRAVENS. I would have to take issue with you. I would like you to show me any word or any sentence in my statement that in any way indicted the competency of any Member of Congress or any committee thereof.

Mr. BOLLING. I didn't say you said any individual was incompetent, but the burden of the statement and the burden of the approach is that it is not a good idea to have either the full committee or a subcommittee of the full committee charged, under our rules, with the responsibility for this area of legislation do the whole job for which it is responsible.

It seems to me the very technique that was used in the advisory committee of which you were chairman demonstrates very clearly that the Congress and a committee of the Congress, of a single part of the Congress, of the Senate, can get the most competent advisers to sit down and do the most thorough job of advising the congressional committee as to what its decisions might be.

It seems to me the very committee of which you were the chairman demonstrates how easy it is for Congress to get good people to work out these things.

Mr. CRAVENS. Well, you are missing a very important step there. Yes, the responsibility rests with the Congress; yes, there are undoubtedly many students and technical people who can do a fine job in research work and other factfinding undertakings, but it seems to me that Congress should be the first one to want in between them and this fact gathering, shall we say, professional staff, as you are talking about, a group of men——

Mr. BOLLING. That is'nt what I was talking about, if I may interrupt. I was talking about the kind of group you served on.

Mr. CRAVENS. Well——

Mr. BOLLING. I am not talking about the staff in this case. I am talking about the capacity.

Mr. CRAVENS. You have got exactly the same thing there, and it would be exactly the same thing between the staff of the committee of Congress, of the Senate, and the supervising agencies. They developed all the technical data. They did the fact gathering, and this committee did nothing but screen it, appraise it, fit it, and come up with a package that the Senate committee could look at.

That is exactly what you have got in this type of monetary Commission I have got. That is what they would do, and you have done a tremendous job for Congress and for the Nation, it seems to me.

Then you have got one other point: You want—and must have—the broadest kind of public confidence in this.

I have a feeling you will command more confidence if you spread it, than you will if you keep it in either one of the committees of the Congress. I think a joint undertaking is a better way.

The CHAIRMAN. Thank you very much, Mr. Cravens. We are glad to have had you with us this morning.

Mr. CRAVENS. Thank you very much.

The CHAIRMAN. Mr. Allan Sproul, formerly President of the Federal Reserve Bank of New York, is listed as our next witness.

Mr. Sproul, we are happy to have you with us, and we will be glad to hear from you.

You may proceed in your own way.

STATEMENT OF ALLAN SPROUL, FORMER PRESIDENT OF THE FEDERAL RESERVE BANK OF NEW YORK, MARCH 6, 1957

Mr. SPROUL. Thank you.

Mr. Chairman, as you said, I am a former President of the Federal Reserve Bank of New York. I am now a resident of California and director of the American Trust Co. in San Francisco, a director of the Kaiser Aluminum & Chemical Corporation of Oakland, and a part-time worker in my own mental and spiritual garden.

I have here a brief statement I would like to read.

I have sought and I appreciate this opportunity to be heard by your committee on the question of how an inquiry into the nature, performance, and adequacy of our financial system might best be conducted in the interests of the people of the United States, having due regard for the nature and organization of our political institutions.

I am assuming that we are all now pretty well agreed that it is time for such an inquiry. This does not mean ,necessarily, that there are such serious defects in the present workings of our financial system as to require major changes and adjustments. Nor does it mean that we have overlooked the dangers of tampering with the sensitive mechanism of a money economy. It reflects, rather, the coming together of a number of suggestions from various sources that, despite the hazards, it is time for a broad, fundamental study to improve our knowledge of the workings of our present system, to see if there are ways in which our performance can be improved, and to increase that public understanding of the operations of the system which is necessary if it is to work most effectively, no matter how it is organized and operated.

My own views are that the best way to proceed with such a study is as the President suggested in his state-of-the-Union message, and as is contemplated in one of the pairs of bills, H. R. 2891 and S. 599, which have been introduced in the Congress. I suggest that it is preferable to proceed in this way, with a small commission of competent citizens, rather than with a mixed congressional-citizen committee or directly through committees or subcommittees of the Congress, for the following reasons:

1. There are two major kinds of inquiries into the workings of our financial system, and into the methods and administration of monetary and credit policy. One is the continuing scrutiny of performance and the examination of those responsible for that performance, which is clearly the function of congressional committees or subcommittees. The other is the periodic survey, at relatively long intervals, of the development of our financial system over time, the appraisal of its performance, and the means of its possible improvement. Such a study should be divorced as far as possible from a preoccupation with specific current problems which may warp judgment and prejudice opinion.

2. What is now contemplated, I assume is the second kind of inquiry. It will require the uninterrupted and uninhibited attention of those who undertake it, over a long period of time. I cannot see how Members of the Congress, with the hundreds of demands which have a proper call on their time and attention, can possibly devote themselves to this one subject in the way I conceive to be necessary. Here is no question of relative competence, but a real question of the best use of available resources.

3. An inquiry of such special character and of such fundamental and long-range significance should be able to command services of an outstanding staff; of pe who have been willing to abandon c more permanent pursuits in order to pa ipate in this undertaking. I think th will be possible to recruit such a staff if this inquiry is set apart, by its chara and by the composition of the membe of the commission, from the continuing of inquiries which are undertaken by c mittees of the Congress. It must ha special prestige which will make the people in the country willing to inter their regular careers in order to serve a staff.

4. One seeming solution of this proble mixed congressional-citizen commis seems to me to have a special disadvant It introduces into the proposed commis men who have a prior obligation to the gress to which they were elected and to committees of the Congress to which have been appointed. They really ca commit themselves fully to anything be it comes before them in their legislative pacity, and they certainly should not cannot commit their colleagues on com tees or in the Congress.

5. The job now to be done, as I see one to be completed in steps. The first would be a broad survey of the whole te by a commission of competent, obje civilians, divorced from partisan public special private interests, and shielded a as possible from the pressures and the of what may be current controversy. second step would be the sifting of the ings of this commission by the executive legislative branches of the Government, the consideration of possible legislatio the appropriate committees of the Cong And the third step would be action by Congress on whatever proposals grow o this study and this sifting. There is no question of prerogatives or jurisdiction and final responsibility will rest with Congress, of course. The real questio how best to get the job done in the p interest.

I submit that a study by a citizen mission is most likely to start us on the to this ultimate objective. In the word Woodrow Wilson, the study should be un taken "in the spirit of those who que their own wisdom and seek counsel knowledge, not shallow self-satisfactio the excitement of excursions whither cannot tell."

The CHAIRMAN. Mr. Sproul, would you to add anything to your statement?

Mr. SPROUL. No; I have nothing to add Chairman.

The CHAIRMAN. Mr. Colmer, do you any questions to ask of Mr. Sproul?

Mr. COLMER. Yes, Mr. Chairman.

Mr. Sproul, in the language of Woo Wilson, my knowledge is so shallow on whole subject that I approach it with humility and timidity.

As I understood from the reading of statement, you don't exactly approv either of the proposed bills, that you there should be a commission set up posed of citizens generally rather than bers of Congress?

Mr. SPROUL. Yes; that is right.

Mr. COLMER. And you would have resentatives on that commisison from various segments of our economy?

Mr. SPROUL. No. I have no candidate such a commission. That is a job fo appointive power with all the resources sit at its command for combing the co and drafting the men best suited for th but I can say that I do not conceive o commission as being dominated by special interest, and certainly not ba dominated, nor dominated by any s group or made up of representatives of s groups.

I conceive of it as a commission made up of men who by reason of the breadth of their experience and the quality of their judgment would be competent to study and evaluate the opinion of others and the work of an expert staff and to reach sound conclusions in the public interest.

I find it just as repugnant to believe that there are not such citizens as to believe that Members of Congress are swayed by private interests in legislating for the public weal.

Mr. COLMER. I think I could comment on that, sir, but I don't know that it would add anything.

I find that Members of Congress sometimes——

Mr. BROWN. Are pretty human.

Mr. COLMER. Are rather human, amenable to pressures, as well as sometimes citizens concerned about their own interests which are involved; but, as I say, that does not add anything to the statement.

Mr. Sproul, you have had a great deal of experience in this field. You are not apprehensive right now, with the situation being what it is in our economy, that a study might have some rather serious results affecting the stock market, et cetera?

Mr. SPROUL. No, I am not. A study such as we are discussing here—I think a long-range study lasting over perhaps 2 years, of fundamental aspects of our financial institutions and their operations—I don't think would have such adverse effects, or possible adverse effects. It comes perhaps at a fortunate time, when we are not faced with the collapse, the imminent collapse, of any of our financial institutions, and when we are not trying to remedy a serious, current, or immediate situation.

Mr. COLMER. I am sure how I feel about it—and maybe I shouldn't say I am sure you agree with that, but I am sure in my own mind—that the threat of inflation, continued inflation, is a rather serious one, is it not?

Mr. SPROUL. Well, I think there are forces in our economy which constantly create upward pressures on prices and, insofar as that can be called inflation, I think there is a continuing threat of inflation; but at the moment it is not so serious a threat as, again I say, to cause a study, a long-range study, such as this to be interpreted as an attempt to meet a present and critical situation.

Mr. COLMER. Do I understand from that statement, sir, that you are of the opinion that the inflationary trend is not serious?

Mr. SPROUL. No. I say I think there are forces in the economy which constantly raise and create the threat of inflationary pressures. There are other forces which combat that, and there are some weapons and measures in the hands of the monetary authorities and the fiscal authorities which can combat those pressures.

I do not see that the threat of inflation at the moment is a critical and urgent one which needs a study such as this to head it off, and, therefore, I don't see that a study such as this would be interpreted as an attempt to meet a critical, emergency situation.

Mr. COLMER. Just along that line—incidentally, I am a baby in the woods in this thing, as I told you, to start with.

Mr. SPROUL. Yes.

Mr. COLMER. Just what is it that demands such a study now, in just a brief sentence, if you will, please?

Mr. SPROUL. Yes. I think it is a necessity for informing ourselves better of the nature and character and functioning of all of our financial institutions, public and private; the necessity of informing ourselves better than we are now informed as to how those financial institutions have their contact with the money market of the country; the necessity of informing ourselves better how the monetary authorities reach through to those financial institutions by way of the money market, and the necessity of informing ourselves better how fiscal and monetary actions may be used to preserve the stability of the dollar while promoting stable economic growth in the country.

Mr. COLMER. Then do I understand it would be largely educational?

Mr. SPROUL. No. I think it might well lead, after this phase process which I have suggested, to the consideration of legislation; but I certainly think it would be impossible now to prejudge and forecast what such legislation might be. I think that it would be wholly foreign to the whole idea of the study, which is to go at it, as far as possible, without preconceptions of what legislative ends you might ultimately reach.

Mr. COLMER. Do you agree with Mr. Cravens, as I got the import of his statement, along that line, that in the selection of these people, these experts, and so on, the personnel of the commission, the question of political alignment shouldn't be considered, but they should be selected purely upon their qualifications?

Mr. SPROUL. Yes. In the first phase, as I conceive it, they should be selected on the basis of their broad qualifications of experience and demonstrated wisdom and judgment, and not even experts, necessarily. The experts would be the staff who would be selected by them to do the spade work and make the studies for them.

Mr. COLMER. Of course, as you know—if you don't, I will educate you a little bit—the system in the political field is to make the selections upon a basis of political alignment, not less than so many from the party in the majority and not less than so many from the minority.

I quite agree with both of you on that. I don't think that is material.

Mr. Chairman, I can't contribute anything to this matter.

The CHAIRMAN. Mr. ALLEN.

Mr. ALLEN. No. I don't have any questions.

The CHAIRMAN. Mr. MADDEN?

Mr. BROWN?

Mr. BROWN. As I understood your statement, Mr. Sproul, and as I interpret it myself, you would have the feeling, whether it be a civilian commission responsible to the President and the Congress, or a joint committee of the Congress, or a committee from one branch of the Congress, that the membership of that committee should be made up of men who do not have any preconceived ideas and viewpoints that they have expressed publicly or any criticisms against this or that activity or this or that function of the Government, so as to be entirely free, at least in the public mind, regardless of how they might attempt to be impartial, and so that in the public mind there would be confidence that this was an impartial investigation and not an investigation to put over any particular idea as to how to handle our banking system and our national economy generally?

Mr. SPROUL. That is right. I think as far as possible these men should not be grinding any particular axes or promoting any particular point of view in the studies of this commission.

Mr. BROWN. Regardless of whether it is a commission or a committee of the Congress, do you feel it would be possible to find men of that type who would be so objective that even their past experiences or their own experiences or interests or views wouldn't creep into the action of this group?

Mr. SPROUL. I think it should be possible to find a small civilian commission which would qualify under those specifications.

You would know better than I whether it would be possible within the ranks of Congress to find a similar group. I do think, however, the Members of the Congress are called upon, by their daily labors, to take positions on various current and prospective problems which perhaps would lessen the chance of finding such men there to make such a study as is suggested here.

Mr. BROWN. It has been my experience with public officials—and that includes Members of Congress—that they are just a little reluctant to admit they are wrong on something or other they have done.

We, here in Congress, generally try to defend our votes and our positions on public issues, and we, of course, unlike private individuals, are on public record where we have more or less committed ourselves to certain philosophies or programs, so that it is pretty difficult at times to disassociate ourselves from this or that stand, even if you are convinced in your own mind and soul that you made a mistake before.

Would that also apply to civilians?

Mr. SPROUL. It would apply to some extent to civilians. I think we are all, to the extent we have expressed ourselves publicly, reluctant to backtrack; but civilians don't have to express themselves publicly as often as Congressmen do, and it would be less apt to have a record, past record, which would color current and future thinking.

Mr. BROWN. I make the honest part of my living, as I said here before, out of the newspaper business, and, despite my attempts to disassociate myself from the newspaper business, when I consider different pieces of legislation coming before this Congress, I do have confronting me—and I realize and I do appreciate—the fact that I understand or believe I understand the problems of a publisher, and I do sort of have a bit of prejudice in that direction.

I sometimes think that Mr. Allen, for instance, doesn't understand the problems of the newspaper business like I do, and he doesn't appreciate the difficulties that confront us. So that leads me to this question: You have been head of the Federal Reserve Bank of New York, and you know its workings and you understand the banking business. If you were on this Commission, do you think you could set that aside completely and not particularly have the viewpoint of the Federal Reserve System, based on your experience and knowledge of it, and maybe be in the same position that I am with Mr. Allen and say, "Well, you are just a little stupid; you don't understand the problem like I do"?

Mr. SPROUL. Of course, if I were on such a commission, my views would be somewhat influenced by my experience in the Federal Reserve System; but I can say this: A career in the Federal Reserve System is a career, as I have experienced it and as I believe it to be, in the public service, which would not interfere with an objective approach to problems of this sort.

I think that may be a very special case—that you are not serving private interests in the Federal Reserve System; you are not serving banking interests; you are in the public service while you are in the Federal Reserve System, and it would be an easy step from there to the work of such a committee as this.

Mr. BROWN. Of course, you have made the point—and I think it is a very good point—that the man who has spent his life in the banking business or in the investment field or in Federal Reserve work, or this or that, has a greater experience and is in a better position to investigate and study all of these problems than those of us of Congress who have not been connected with financial and monetary activities, and I think you have also made a very good point, Mr. Sproul, and it certainly has been my experience in 20 years here, that Members of Congress, as individuals, do not have time to go out and do the spadework that is necessary to get the information and the material upon which they should base their judgment, using their own commonsense, as representatives of the people, in determining what

legislative action or anything should be taken.

I have watched these committees of Congress work for a good many years, and before that in the legislature of my own State, and usually the work of a committee depends not only upon the intelligence and the ability of the members of that committee, and the soundness of a suggestion, but upon the type of staff and the type of information they are able to obtain, and they usually have to lean on someone else to get that information and factual data or they don't function well.

I have seen some committees and, if I might be a little disrespectful, I have seen some chairmen of committees—not in this body, of course, but in another legislative body—who have gained great credit in the public mind despite the fact they didn't have anything to do with it. The work was done by somebody else who helped them, and all they did was come out and act as a mouthpiece to give it to the public and to the Congress.

I think you have made two very good points this morning, and I think you have had a very logical as well as a short presentation of the problem. It concerns all of us greatly because I am convinced there isn't any Member of Congress but what wants to do the best thing in connection with seeing to it that we have a stable, proper, monetary system, and something that will help perhaps prevent inflation and also prevent deflation.

The credit system of this country right now is in a situation where I think it deserves a great deal of study, and it must have it. I am a little worried, to be frank about it, about some of the situations that now exist.

That is all, Mr. Chairman.

The CHAIRMAN. Mr. DELANEY.

Mr. DELANEY. Just one question: I believe you stated it would take at least 2 years to make a study of the scope you have in mind. That means we couldn't anticipate any action in the present Congress?

Mr. SPROUL. That is right.

Mr. DELANEY. Thank you.

The CHAIRMAN. Mr. THORNBERRY.

Mr. THORNBERRY. I have no questions.

The CHAIRMAN. Mr. SCOTT.

Mr. SCOTT. No questions.

The CHAIRMAN. Mr. BOLLING.

Mr. BOLLING. Mr. Sproul, in your statement you had a very powerful paragraph dealing with the necessity for having absolute objectivity—it was much better stated than this—with no self-interest, and so on. Over the years, in all the administrations, there has been a great many Presidential commissions. Do you know of a single Presidential commission that has come up with a recommendation which was contrary to the opinion of that administration?

Mr. SPROUL. No, but that doesn't mean there haven't been any. It just reflects possibly my ignorance of the findings of all of the Presidential commissions; but, as I understand the present situation, the executive branch of the present administration has not announced any views or opinions with respect to our financial institutions and their workings, so that there wouldn't be that question. You wouldn't have to face that question in the commission, as to whether it was differing with, or agreeing with, or compromising with, an executive view.

Certainly, for my part, I think such a commission could and should differ with the executive view if the evidence brought before the study may indicate the necessity or desirability of such difference.

Mr. BOLLING. Thank you, Mr. Sproul.

The CHAIRMAN. Mr. O'NEILL.

Mr. O'NEILL. No questions, Mr. Chairman.

The CHAIRMAN. Thank you very much, Mr. Sproul. We appreciate your coming in.

Mr. SPROUL. Thank you for giving me the opportunity to come in.

HEARINGS ON HOUSE RESOLUTION 85, INVESTIGATION OF MONETARY PROBLEMS

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RULES,
Washington, D. C., March 13, 1957.

The committee met, pursuant to notice, at 10:40 a. m., in room G–12, United States Capitol. Hon. HOWARD W. SMITH (chairman) presiding.

Present: Representatives SMITH (presiding), COLMER, MADDEN, DELANEY, TRIMBLE, THORNBERRY, BOLLING, O'NEILL, ALLEN, BROWN, LATHAM, and SCOTT.

The CHAIRMAN. Mr. PATMAN, I'm sorry that I didn't know we were going to meet at 11 o'clock.

Mr. PATMAN. If you can give me 15 minutes, I will get through.

The CHAIRMAN. That will be fine. Does anybody else want to be heard any further on this Patman resolution?

Go ahead, Mr. PATMAN.

STATEMENT OF HON. WRIGHT PATMAN, REPRESENTATIVE IN CONGRESS FROM THE FIRST DISTRICT, STATE OF TEXAS

Mr. PATMAN. With your permission we have here and will have distributed a copy of my statement and a copy of an article from the Review of Economics and Statistics, published by Harvard University Press, concerning an investigation that was conducted by me as chairman in 1952, which, of course, is, I think, very fine from the viewpoint of the committee and the chairman.

I want to thank the committee for this opportunity to appear before you. I know it has required a great deal of patience on the part of the members to sit here and listen to extensive testimony on this resolution.

It is apparent, however, from the distinguished witnesses who have asked to appear before you and testify on House Resolution 85 that the subject matter of the resolution is considered to have more than just passing significance.

If there were any doubts at the start of this hearing about the intense national interest in our monetary policies, the state of our financial structure and institutions, the Government's lending and insuring agencies, and the Government's role in monetary affairs, then those doubts should be resolved by now.

Therefore, I am not going to take up the time of the committee today in restating the reasons for this study or the matters that need looking into.

However, I do want to put into the record the statement I sent to the members following my earlier appearance before the committee which covered those points.

May I have that permission, Mr. Chairman?

The CHAIRMAN. Yes.

(The document referred to is as follows:)

"STATEMENT BY WRIGHT PATMAN, MEMBER OF CONGRESS, CONCERNING HOUSE RESOLUTION 85, FEBRUARY 20, 1957

"Mr. Chairman and members of the committee, at the last meeting of the Rules Committee, I explained why I believe a full and complete study of our national monetary and credit policies and the adequacy of our financial facilities is needed. I also gave the reasons why I felt that Congress rather than the executive or outsiders named in part by the executive should conduct this study.

"Following my presentation, it became clear from the questioning that your committee wanted to know what specific objectives I had in mind in offering this resolution; what specific areas did I feel ought to be looked into.

"Let me say first, in answer to the chairman's question as to whether I think the Banking Act of 1935—the Glass-Steag Act—should be amended, that it will depe upon the findings that the committee mak after it has looked into the functioning our financial facilities. If it is found th any changes in the laws and regulations go erning their operation are needed to impro our ability to meet the credit and capit requirements of an expanding economy a to preserve our competitive enterprise sy tem, then amendments may be suggested strengthen existing banking laws, includi the Glass-Steagall Act.

"Another question by Representati COLMER was directed toward the problem inflation control. This unquestionab should be an important part of the stu One of the things that has impressed me that rather severe monetary restraints ha been imposed—six increases in the red count rate in 1 year—and interest rates ha been forced up clear across the board wit out visibly curbing important price i creases. It is also evident that general cre controls impose excessive burdens upon sc groups in the economy who scarcely aff inflationary trends while other groups th exercise an important role in the inflation spiral are scarcely touched by general cre controls.

"So the study should very definitely l into the effectiveness and adequacy of F eral Reserve techniques for fighting in tion. Of course, in this whole question what constitutes inflation, we should w to look into the distinctions between norm and necessary expansion and an inflation trend. And, similarly, in fighting inflat with monetary weapons, we will want make sure that we don't promote monop and keep postponing urgent school constr tion and housing. So we will have to f ways and means of permitting certain pu programs to move ahead and small busin to get the credit it needs.

"These are only a few of the questions t would be covered by the study. There many others. Let me mention briefly s others I think will need careful study:

"1. The question of required reserves member banks needs looking into, parti larly the level of reserve requirements differential reserve requirements.

"2. When first conceived by Carter Gl the Reserve System was supposed to be sentially a system of regional banks desig to assure that credit would flow in nee amounts to the different regions of the co try. The regional system was supplan by a central bank in 1935. Now we f that chronic deficits in credit are being perienced by some regions while credit plentiful in others. I note, for example, t FNMA will buy mortgages at 95 in some gions and say 91 or 88 in others. In ot words, this is a reflection that money is m accessible in some places than others. study should find out the extent of th variations; what causes them; and how t can be overcome.

"3. Many new and greatly expanded sou of credit have developed in the last 20 ye that are out of reach of monetary contr Institutions that compete for savings make credit available are subject to dif ent regulations and laws. We need to l at the laws and regulations governing public and private institutions.

"4. Finally, there is this question of status and responsibility of the Federal serve System.

"Let me point out several things we n to consider. There are no vacuums. nature abhors a vacuum, so does poli The question of control of the Federal serve is a very vital question that affects lives of every single American. It affects free-enterprise system.

"It is contended that the Federal serve should be kept free from poli pressures. But what about other kind

private pressure and influence? What safeguards or controls does the public have to assure that such influences are not being exerted?

"Well, it is said that the Federal Reserve is responsible to Congress and that this affords the protection the people need. But how responsible is the Federal Reserve to Congress? I have here in my hand correspondence between the Chairman of the Federal Reserve, the Chairman of the House Government Operations Committee and the Controller of the General Accounting Office. The correspondence discloses that the Chairman of the Federal Reserve refused to allow the Controller of the GAO to conduct an audit in accordance with instructions from the chairman of the House Government Operations Committee. This was a case of the agent refusing to make an accounting to the principal..

"Let me show you what is involved here.

"Many Members complain about waste and uncontrolled expenditures of taxpayers' funds. I have yet to hear a single Member complain that he has no way of controlling a single penny that is spent by the Federal Reserve, which gets is funds from the taxpayers and is a public agency of the Congress.

"Here are some figures that may interest you.

"From 1946 to 1956, the 12 Federal Reserve banks received interest on United States Government securities and profit from sales of such securities amounting to a total of $4,002,588,985. Their net current expenses, excluding outlays for which they were reimbursed by other public agencies with public funds, totaled $1,008,041,364. In other words, the interest they received from the Treasury made it unnecessary for them to come to Congress to ask for appropriations and thus Congress could not control or review expenditures of public funds.

"Let me point out that the powerful New York Federal Reserve Bank received nearly $1 billion from the Treasury in interest and from profit on sales of United States securities in the same period. Again, it spent $216 million for net current expenses out of public funds over which Congress had no control and no power to review or audit.

"So it seems to me that an important area for study by the committee will of necessity be the question of responsibility and accountability of the Federal Reserve."

Mr. PATMAN. I have asked to be heard briefly at this time so that I might have the opportunity to respond to some of the objections that have been raised against a single congressional committee conducting the proposed monetary study.

You have heard the witness for the administration, Dr. Burgess, state quite unequivocally that he was certain no single committee of the Congress could command the services of the very best experts and technicians needed to help do this job, while a commission appointed by the President would have no difficulty getting them to serve.

When I heard Dr. Burgess make that statement, I was shocked. I just did not believe that our fine economists, monetary experts, and other technicians would refuse to cooperate with a single congressional committee.

So I sent a telegram out to a group of outstanding economists at the universities and in private research organizations.

I asked them whether Congress could count on nonpartisan expert assistance, such as their own, in the event a congressional study went forward. Here are the replies I received.

I will read one of them. I sent out about 35, Mr. Chairman, and I got about 30 replies back. I think that is pretty good. I never had that percentage before on anything else that I sent out.

Dr. Galbraith, professor of economics of Harvard University, said this in his telegram, and here are the telegrams that I received—every one of them.

"You can certainly count on every assistance. There is a tradition of candid and friendly cooperation between congressional committees and economic experts, and you have done much to foster it yourself. A congressional study, which in the nature of the case, will be broadly based and conscious of all people and points of view, would be far more attractive to independent scholars than a commission dominated by the administration. The latter would be handicapped for obvious reasons in examining present policies including those affecting farmers and small-business men as well as the reasons for the failure to control living costs. As a result there would be overwhelming temptation to bury the important issues in generalities and words. Am not being critical. This is usual result when an interested body, whatever the party, examines itself.

That is signed by Dr. Galbraith. We had similar telegrams pledging academic assistance—telegrams from Dr. Clark, professor of economics, Columbia University; Dr. Heller, professor of economics; John H. Kareken, and Harlan M. Smith, University of Minnesota; Dr. Seymour E. Harris, professor of economics and chairman of department of economics, Harvard University; Dr. Paul M. O'Leary, professor of economics, Cornell University; Dr. Alvin H. Hansen, Harvard University; Prof. Everett E. Hagen, MIT; Benjamin Higgins, professor of economics, Massachusetts Institute of Technology; William H. Miernyk, director, bureau of business research, North Eastern University; Dr. Sidney Rolfe, economist, Commercial Investment Trust, Financial Corp., New York; Dr. V. Lewis Bassie, director, bureau of business research, University of Illinois; Arthur R. Burns, Columbia University; and Leon H. Keyserling. You know who he is here.

H. Christian Sonne, chairman, board of trustees, National Planning Association; Richard A. Lester, chairman, department of economics, Princeton University; Prof. Paul A. Samuelson, MIT; Prof. Lorie Tarshis, Stanford University.

Prof. Edwin E. Witte, chairman of the department of economics, University of Wisconsin; William Haber, professor of economics, University of Michigan; Howard R. Bowen, president, Grinnell College; Jesse Burkhead, professor of economics, Syracuse University; Prof. James Tobin, Yale University; Robert R. Nathan Associates, Inc., here in town.

Dr. Gerhard Colm, director of research, National Planning Association; Prof. Ben W. Lewis, Oberlin College; and others that have come in since this was mimeographed.

I don't think you could have had a better response than that. I think it shows conclusively that Dr. Burgess was wrong as was Mr. Cravens, of St. Louis. Mr. Cravens said something to the effect that a single committee of a single House couldn't do the job, but in responding to Mr. THORNBERRY's question, he said he was chairman of a group working with a single committee on the Senate side, so that contradicts that on its face.

These telegrams should remove any doubts about whether a single congressional committee, can get objective, unbiased, outstanding experts from private life and from our great universities to serve and assist on the proposed monetary study.

In addition to the objection that a single committee might not be able to recruit a staff of sufficient standing to help do an effective job, some witnesses expressed the fear that a study undertaken by a congressional committee might be limited in its usefulness; since Congressmen have to take public positions on the issues.

Mr. PATMAN. There were some statements made that probably the study would not be an objective one or something like that and too much bias. The truth is, I am probably the least biased person that has appeared on this, because I know so much less than these fellows like Mr. Sproul and Mr. Burgess. They have more bias because they have more things to be biased on.

It was stated that great harm could result from a study undertaken by members who appeared to have preconceived ideas and prejudices toward current monetary policies and the regulation of financial institutions.

I am certain that if a congressional monetary study goes forward, it will be conducted as others have been in the past, in an impartial, objective manner,

It should be obvious, however, that in a field as controversial as this one, the experts in the field and those who have studied it over the years would have to be pretty unusual not to have a point of view.

In this connection, when Dr. Burgess testified, he mentioned three outstanding persons whom he felt would be qualified to serve on the proposed Commission. I have a very high regard for their objectivity and expertness in the field, but I would like to point out that they definitely have expressed themselves publicly on important questions which a monetary commission would consider.

For example, Dr. Burgess mentioned Prof. Lester Chandler of Princeton, whom I respect and have known for many years, as someone he would like to see on the Commission.

Yet he did not seem to think that Professor Chandler's role in the congressional hearings leading to the 1951 accord between the Treasury and Federal Reserve indicated he had any preconceived ideas or would necessarily be prejudiced on the subject of the independence of the Federal Reserve.

Dr. Burgess also proposed Mr. Allan Sproul, whom I admire and respect too, as a prospective candidate for the Commission. I do not say that Mr. Sproul's long association with the Federal Reserve Bank of New York and his service as vice chairman of the Open Market Committee should render him ineligible. But I do say that after 30 years of service with the Federal Reserve, Mr. Sproul has a point of view.

Mr. Sproul has on many public occasions clearly expressed himself on important questions that will come up in this study. For example, Mr. Sproul is on record in favor of direct Federal Reserve authority to regulate consumer and mortgage credit financing.

Mr. Sproul has also stated publicly that he is opposed to having the expenditures of the Federal Reserve banks brought under the budgetary control of Congress and subsequent review by the General Accounting Office.

These represent substantial issues, which should be considered in any monetary study. Clearly, Mr. Sproul has preconceived ideas on these subjects.

Dr. Burgess suggested that Mr. Frazar Wilde would make a fine member of the proposed Commission, and I do not doubt it. But it is equally true that Mr. Wilde has certain notions and ideas about the role of monetary policy in our economy.

As Chairman of the Research and Policy Committee, of the Committee for Economic Development, Mr. Wilde has expressed his views on many of the issues which will be covered by the proposed monetary study.

As president of the Connecticut General Life Insurance Co., Mr. Wilde has to look at questions of monetary policy from the practical business point of view. This is not to say, however, that Mr. Wilde would lend his support to policies which he did not believe were in the public interest.

The point I am making is that intelligent, observant individuals have points of view and they cannot shut them out from their thinking just because they are called upon to sit upon a commission and study questions that will affect public policy.

It would be foolish for me, too, to deny that I do not have firm convictions on important issues of monetary policy, I was chairman of a congressional subcommitte which conducted hearings and issued a report on general credit and debt-management problems. Dr. Burgess praised those hearings in a speech he made December 29, 1953, at a joint meeting of the American Economic Association and the American Finance Association here in Washington at the Statler Hotel.

Referring to what he called "a milestone perhaps in the history of finance in this country," he said, "was the fact of the Douglas and Patman reports." "These reports," he added, "built up a volume on this whole subject of money that is most impressive. And the reports as they came out educated public opinion."

I might mention, too, that those hearings and the report of the subcommittee were characterized as highly valuable and completely objective by newspapers and magazines, including the banking magazines, which at the start of the hearings voiced doubts about the chairman's desire to give all the interested parties a fair and impartial hearing. I would like to offer for the record some of those evaluations of the Patman subcommittee's 1952 study.

I would like to put them in the record, Mr. Chairman, if you please. This is one I called to your attention a while ago, and you have a copy before you now, from the Harvard University Press.

(The documents referred to appear at the end of Mr. PATMAN's testimony.)

Mr. PATMAN. I want to say a word now about the analogy drawn by Representative BROWN frequently during these hearings, between the Hoover Commission and the type of body that would be best suited to conduct the proposed monetary and financial institutions study.

As Representative BROWN knows, the Hoover Commission was established to deal with the reorganization of the entire executive branch. No single committee of Congress was authorized to do the job. Every committee of the Congress would have had to be called in. More important, the function of the Hoover Commission was to make reorganization plan recommendations. Under the Reorganization Act, the writing of reorganization plans was expressly made an Executive responsibility. Congress could not initiate them. Congress cannot even change a reorganization plan which the Executive submits. If the Congress fails to act, the plan becomes law.

That is why it was not improper for the Executive to take the leading responsibility for the Hoover Commission study and why the executive-appointed-commission approach was logical as furnishing a basis for a reorganization plan.

The initiative and responsibility in the field of reorganization of the executive branch was clearly the Executive's under the Reorganization Act of 1946.

But does it necessarily follow that the Hoover Commission approach should be applied to an inquiry into national monetary policy and our financial institutions which will provide the basis for congressional legislation and policy determination in this field?

The answer is "No." Indeed, just the reverse is true.

At the very beginning of the Constitution, article I, section 8, the Congress is given the inescapable constitutional responsibility for determining monetary policy. The Executive clearly does not have any responsibility, other than the responsibility to administer the policy we determine.

The issue as between a National Monetary Commission, a majority of whose members would be appointed by the President, with a mandate to make studies and recommendations for monetary legislation, and a congressional committee study, clearly involves a constitutional question.

In the monetary field, Congress must write the entire legislation by itself. The Executive has no authority whatsoever in this field, other than to sign or veto the bills, which Congress initiates, and carry out the provisions of such bills as become law. The Executive cannot and should not be permitted to intrude into the monetary field, unless Congress desires to abdicate its constitutional responsibility.

If the Congress is to carry out its constitutional duty, it—and not the Executive—must assume the leading responsibility for any study or studies directed toward implementing its own clear constitutional obligation.

I insist that the proposal to authorize a national monetary commission, such as is envisaged under H. R. 3660, with a majority of its appointees, and its chairman and vice chairman named by the President places in the Executive the leading responsibility for a study directed toward helping Congress implement its constitutional obligation to determine monetary policy, and thus is violative of the separation of powers provided by the Constitution.

You have heard it argued that experts should be on the Commission to aid the Members of Congress. Regarding this, the administration bill provides for more experts than it does Members of Congress.

The President is authorized under H. R. 3660 to appoint 9 private citizens, while only 4 members are to be appointed from the Congress. This is putting the experts on top, not on tap.

Who will the experts be? It is clear they will come from the field of private banking. Otherwise, then what is the reason for section 2 (e) of H. R. 3660 which is designed to exempt the President's appointees from provisions of the Code which are applicable to cases of conflict of interest?

I am afraid that under the guise of seeking to aid Members of Congress, the Commission study proposed by the Executive could turn out to be a banker-guided study.

Surely Congress would not want itself placed in the position of appearing to favor a banker-guided study of monetary policy over a congressional committee study.

If expert assistance is needed, then it is the responsibility of the Congress to designate the experts it needs and keep them on tap—not on top.

For the Executive to be given authority to name the experts to assist Congress in carrying out its constitutional responsibility in the monetary field is just as inappropriate as it would be for Congress to appoint the Director of the Bureau of the Budget to help the President discharge his constitutional responsibilities.

Furthermore, Congress is being asked by the Executive to participate in the anomalous spectacle of authorizing the President to take primary responsibility in appointing a group, whose ultimate function will be to advise the Congress on how to legislate in the monetary field.

Time and time again in recent years, the Congress has been urged to turn over its legislative responsibilities to the Executive.

Congress sooner or later—and I hope it is soon—will have to face up to the question of performing its responsibilities under the Constitution and of carrying out the duties directly entrusted to it by the people who elected us.

If we abdicate our responsibility; if we say that the problems of Government have grown too complicated and too complex for us; if we agree that the Executive and his appointed experts should, in the words of Repres tive BROWN, "bring up facts and inform * * * and recommendations for us" so "the Congress doesn't have to go all it again," then we are deceiving the p who elected us.

We are, in effect, admitting that we ar able to do the job the people elected do. Moreover, we are admitting that present system of government doesn't when we say that Congress can't work out the President assuming part of its lative responsibility.

In conclusion, let me say this. The mittee on Rules of the House of Repre tives has a unique opportunity here. If these hearings, the Committee on Rule jects the National Monetary Commission posed in H. R. 3660 and other varia thereof designed to bypass a congress study and approves House Resolution will not only have made it unequivo clear that it has confidence in a comm of the House to perform its duties co tently and without bias in an area withi jurisdiction but, more than that, it will rejected an attempt at Executive usurp and obstruction of congressional inves tive power.

By approving House Resolution 85, Rules Committee will be reaffirming the of Congress to act in a field in whi has clear constitutional responsibility, out awaiting the pleasure and process o Executive.

It will help restore public confidence i Congress.

Members of the Banking and Cur Committee are not so overburdened that cannot find time to devote to this highl portant problem of monetary policy.

And we reject the view that the hi and best judgment in this field is that o experts. On a matter which affects the fare of every citizen—affects the whole omy of the United States—I say the hi and best judgment is the congress judgment, rather than expert judgment, cisely because our judgment is a ge judgment. It is representative of, and lar to, public judgment.

That is the essence of our democratic, resentative government.

Thank you, Mr. Chairman.

The CHAIRMAN. Any questions?

Mr. ALLEN. I have a question.

The CHAIRMAN. Did you have any?

Mr. MADDEN. No. I asked Mr. PATMAN other day when he was up here. I am much for your resolution and want to mend you on your statement here.

Mr. PATMAN. Thank you, sir.

Mr. ALLEN. At the bottom of page 1, say you sent this telegram. Do you ha copy of that telegram?

Mr. PATMAN. Yes, sir. I thought I ha the telegram. This is the third stateme have gotten up for this committee.

Mr. ALLEN. Will you read the telegram

Mr. PATMAN. I will put it in the record

Mr. ALLEN. Do you have the telegram self?

Mr. PATMAN. I am trying to shorten it, I left it out of this statement, but I qu what it contained.

Mr. ALLEN. I would like to have you it to me now.

Mr. PATMAN. I don't have it now.

Mr. ALLEN. Do one of your assistants it now?

Mr. PATMAN. I am asking him to look it Wait just a minute.

This is Washington, D. C., March 1, "Those opposing congressional study of m etary policy and financial institutions w ing that unless guided by banking comm ties there will be no hope of getting level expert assistance. Can Congress c on effective nonpartisan assistance suc your own in event congressional study forward? This, of course, implies no

sonal commitment to serve, but expressions of your own attitude."

Mr. ALLEN. Will you read that again, please?

Mr. PATMAN. This is addressed like to Dr. Galbraith and all the different ones here.

Mr. ALLEN. What was the telegram? Read it slowly.

Mr. PATMAN. Those opposing congressional study of monetary policy and financial institutions warning that unless guided by banking community there will be no hope of getting high level expert assistance.

of getting high-level expert assistance.

Can Congress count on effective nonpartisan assistance such as your own in event congressional study goes forward? This, of course, implies no personal commitment to serve but expressions of your own attitude.

Mr. ALLEN. I don't recall any evidence when they said there was hope of getting any.

Mr. O'NEILL. A flat statement by Burgess when I asked him.

Mr. BOLLING. Absolutely flat statement.

Mr. ALLEN. No hope of getting any?

Mr. PATMAN. Yes.

Mr. O'NEILL. I said to Mr. Burgess, I recall, "We are supposedly the world's greatest legislative body." He says, "No supposedly, you are."

I said, "Do you mean to tell me, in your opinion that we, as this great legislative body, couldn't get competent help unless we put it into the hands of the President or put it into the hands of a bipartisan committee, as you say. I mean a committee of Congress and members outside of Congress?" He said, "Very definitely you couldn't."

Mr. ALLEN. No hope.

Mr. O'NEILL. You must have the transcript here.

Mr. PATMAN. I have it quoted here. May I read it?

"Secretary Burgess. By all means joint because—I speak for the people who have got to furnish the information—if we are going to have two separate committees at work here, the difficulty about getting up suitable material and taking care of it is a terrific burden; but, more than all else, this commission, both in terms of getting the right people to come as witnesses, in getting the right people to come as staff assistants, as aides to it, and in its findings, if it is going to do any good, has got to command the confidence of the people of the country, and the joint commission that had on it both Senators and Representatives and people from private life of experience and reputation, would certainly command very much more of all those things than simply a single committee of the House or the Senate.

Mr. O'NEILL. One other thing, Mr. Burgess: here we are supposedly the world's greatest legislative body.

Secretary BURGESS. We are.

Mr. O'NEILL. We are.

You haven't enough confidence that this body could get dedicated men to do a job without bringing in substantial businessmen?

Secretary BURGESS. It is conceivable; yes. I think it is.

Mr. O'NEILL. How about these men you mentioned that you would like to see working in the committee?

They are dedicated men, and wouldn't they work as part of a task force?

Secretary BURGESS. My judgment, Mr. Congressman, is they would not agree to serve with an investigation simply conducted by one committee of this body. They wouldn't think it was good enough.

They say that is a reflection upon our system of government.

Mr. ALLEN. If you take out that one sentence, yes. You are asking this group of people—what did you say about nonpartisan?

Mr. PATMAN. Let me read you what Burgess said before so as to also make it more enlightening to you.

You are probably forgetting something he said. Dr. Burgess said: "You have before the Congress at the present a number of bills. If some of these bills are passed, you would be having the House Committee on Banking and Currency conducting a separate investigation and at the same time have the Senate Banking Committee doing exactly the same thing, and those of us who will have to give a great deal of time preparing material for it will simply not be able to give it the attention—any one committee—that we ought to, and we will be running off in several directions and you won't get the same focus of attention and interest in the country that you would if you could get together a group that commanded the confidence all through the country and was able to get the time of the best people to serve as experts and come before it."

Now let me read you the telegram I sent out.

Mr. ALLEN. About the nonpartisan.

Mr. PATMAN. "Those opposing congressional study of monetary policy and financial institutions warning that unless guided by banking communities there will be no hope of getting high level expert assistance. Can Congress count on effective nonpartisan assistance such as your own in event congressional study goes forward? This, of course, implies no personal commitment to serve, but expressions of your own attitude."

Mr. ALLEN. What would any nonpartisan American, how else could he answer the telegram? I am reading the answer from J. M. Clark, professor of economics, Columbia University.

"I am not a financial expert; am sure experts willing to cooperate in proposed inquiry."

That is one. They couldn't do anything but answer the way you write the telegram. Could they say "No," the people wouldn't be willing to give the advice to a congressional committee? Would it be possible to get a different answer? Here is a couple of more of them from Prof. Ben W. Lewis, Oberlin College.

"Congress can always count on high level expert assistance from economics profession whether for congressional committees or presidential committees authorized by Congress."

How else can they answer those things? How would any American answer if you get a letter, can we count on you to help a congressional committee?

Mr. PATMAN. Mr. Burgess answered it differently. He said we wouldn't.

He said our House wasn't big enough. That is an attack on the system of government.

Mr. ALLEN. The way the telegram is worded you couldn't expect some American college professor to write back, "You can't count on us."

Sure, they are compelled to answer your telegram that way. Here is one:

"I am confident that expert nonpartisan assistance will be available for any dispassionate inquiry into monetary policy.

"Prof. JAMES TOBIN,
"Yale University."

What else could a person answer but come back with those kinds of replies?

Mr. PATMAN. It answers Dr. Burgess. He said we couldn't get the right kind of people.

Mr. ALLEN. Robert Nathan & Associaties says:

"Responding your wire wish to assure you that we would certainly be prepared to assist any group authorized by the Congress to study monetary policies and financial institutions."

How else could an individual American answer a telegram as you have worded it there? Could he write back saying, "No, you can't depend upon people not to cooperate with the congressional committee any more than if they ask you to start beating the wife."

Mr. O'NEILL. They can answer it as Seymour Harris answered it:

"Badly need investigation of the monetary problems; this investigation should be undertaken by the Congress not by the administration."

They all have the same opportunity.

The CHAIRMAN. I have to remind you there is a quorum call on.

Mr. ALLEN. That's the only question. I couldn't conceive of any American writing back differently saying that for nonpartisan advice and assistance.

Mr. PATMAN. I couldn't conceive of Dr. Burgess making up such a statement.

Mr. LATHAM. I have a few questions and Mr. SCOTT has a few.

The CHAIRMAN. Mr. SCOTT is not here.

Mr. LATHAM. He went to answer the quorum call. I suggest that we answer the quorum call and ask the witness to come back.

The CHAIRMAN. Do you want to come back a little later?

Mr. DELANEY. I think we could try to finish up with this witness.

The CHAIRMAN. Let's come back after the quorum call.

(Recess.)

The CHAIRMAN. Any further questions of Mr. PATMAN?

Mr. SCOTT?

Mr. SCOTT. Mr. LATHAM has some questions.

The CHAIRMAN. Mr. LATHAM said Mr. SCOTT wanted to ask a question.

Mr. ALLEN. Let them go ahead.

Mr. LATHAM. Mr. PATMAN, I think that reading the telegrams which you sent out I can understand why you got the answers that you did. I think that you have in the telegram, you assume or state certain things which are not the fact. For instance, you say, "Those opposing congressional study of monetary policy" and then later on "Can Congress count on effective," and so on. Actually what you propose with your resolution is really a subcommittee study; isn't it? It is not the whole Congress.

Mr. PATMAN. It is the committee that has jurisdiction of the subject, the Banking and Currency Committee.

Mr. LATHAM. It would be a subcommittee of the full committee?

Mr. PATMAN. The whole committee or a subcommittee.

Mr. LATHAM. I think that destroys the whole basis of your attack on the statements of Mr. Burgess who was here. Because his thought was directed, his thought that it would be difficult to get some of these prominent people to lend their full assistance to an inquiry was directed to the idea that this was going to be carried on by a subcommittee of the full committee of the Congress and not by the Congress itself.

It would be different in the whole Congress, if this were a full congressional proposition.

Mr. PATMAN. The whole House would be doing it if the House passed a resolution the House would be backing it.

Mr. LATHAM. That is what you say in this telegram and that is why you got those replies. But actually it is a subcommittee investigation.

Mr. PATMAN. I don't agree with you. It is the House of Representatives investigation.

Mr. LATHAM. It is, in a sense, but actually it is going to be done by a subcommittee and that was certainly what Mr. Burgess was directing his remarks at in my humble opinion.

Mr. PATMAN. May I invite your attention to the fact that he used the phrase, "A single congressional committee"?

Mr. LATHAM. The telegram doesn't say that, it speaks about Congress.

Mr. PATMAN. We are talking about different things.

Mr. LATHAM. Of course, people will cooperate with Congress. I believe there is another statement in your telegram.

Mr. PATMAN. What is it?

Mr. LATHAM. Isn't this untrue? You say here, "Those opposing congressional study warn that unless guided by banking community."

Mr. PATMAN. That's right.

Mr. LATHAM. Who has suggested that this study as proposed by Mr. Talle would be guided by a banking community? I haven't Heard that, I don't think.

Mr. PATMAN. I am sure the gentleman knows that Mr. Burgess' recommendation would be looked upon favorably by the President to select the ones who know more about this than anybody else. I don't think anybody doubts that.

Mr. LATHAM. My recollection is that Mr. Wilde specifically stated that we should have some banking representation, from academic thinkers, Members of Congress—he suggested labor. You put a completely false assumption in that telegram.

Mr. PATMAN. I dont' agree with you.

Mr. LATHAM. When you say you "warn," that it is going to be "guided by the banking community."

Mr. PATMAN. That's right.

Mr. LATHAM. That wasn't what I heard around this table.

Mr. PATMAN. Now listen to this: Mr. Burgess even says if you will read this language carefully in effect, that he is going to have to write the speeches and he can't afford, he doesn't have the time to write speeches for both sides. You read his statement now.

Mr. LATHAM. I don't recall any testimony in that sense.

Mr. PATMAN. It is pretty far reaching.

Mr. LATHAM. I have a pretty clear recollection that most of these men who testified said that it should be broad, it should be representative of all the phases of governmental life and financial life and certainly not limited as you say in this telegram to being guided by banking interests.

Mr. PATMAN. I think that is the issue. That is my opinion of the issue. Whether we will have a banker study or by the Congress.

Mr. ALLEN. Will you yield, Mr. LATHAM?

Mr. LATHAM. Yes.

Mr. ALLEN. Why didn't you put this telegram in your statement when you put the replies in? Isn't that natural when you receive letters back?

Mr. PATMAN. Let me answer that.

Mr. ALLEN. Isn't that a natural thing to do?

Mr. PATMAN. This is the third mimeographed statement I got up. Every time it looked like I would have less time. The first two I had it in there. I sent over to the office to get copies. I kept trying to reduce it in size.

Mr. ALLEN. When you have 11 pages, isn't it natural when you send out a telegram——

Mr. PATMAN. That's why I put it in the first time. I put it in. But you kept putting me off and putting me off. I had to change it and reduce it in size and I was reducing it in size.

Mr. ALLEN. It was just 7 lines out of 11 pages.

Mr. LATHAM. Do you think that Congress ought to do its constitutional duty to study that thing?

Mr. PATMAN. I certainly do.

Mr. LATHAM. Did you vote for the resolution yesterday passing the buck to the President on the budget?

Mr. PATMAN. That wasn't passing the buck. If he didn't say something in his message about it, I wouldn't have voted for that resolution.

The CHAIRMAN. The resolution yesterday took a full day, so let's not get into that.

Mr. SCOTT. Mr. Chairman?

Mr. PATMAN. I could ask you for the same thing.

The CHAIRMAN. If you get started on that, you will be here all day and I want to go.

Mr. SCOTT?

Mr. SCOTT. Mr. PATMAN, your telegram does not state that it is an expression of opinion on your part as you indicated a moment ago. It states, it uses the very ancient technique of "they" or "those" meaning some dangerous or sinister—that you, I don't know why I lost that word—that some sinister element is behind it. This is an ancient technique in Washington. They are those that would destroy your liberty. They would do you harm. You start this telegram off by saying, without identifying and without evidence here which I have heard to support it, that "Those opposing a congressional study of monetary policy"—may I point out first of all that "those" are not identified; they are made to appear sinister; that the references to a congressional study of monetary policy, which many economists who may not carefully follow all the proceedings of the Congress and reports in the press would be justified in assuming could also refer to the administration proposal, which is a proposal to include Members of Congress in a study and therefore is in part a congressional study of monetary policy, and I ask you if the use of the words "congressional study of monetary policy" and the use of the vague word "those" did not prevent you from securing a fair and adequate reply from these economists?

Mr. PATMAN. I don't think so. If I had sent that telegram to Mr. Sproul, he would have replied "No"; or to Mr. Wilde, he would have said "No"; or Mr. Cravens, he would have said "No."

Mr. SCOTT. Then you knew who not to send the telegram to?

Mr. PATMAN. Some didn't reply. Those who replied preferred a congressional study. And everybody knows that Congress acts through committees.

Mr. SCOTT. Did anybody, in so many words, ever in any part of his testimony warn that unless Congress was guided by the banking community, using that phrase, that you couldn't get expert assistance?

Mr. PATMAN. Mr. Burgess said that.

Mr. SCOTT. Did he use the phrase "banking community"?

Mr. PATMAN. He went further than that. He reflected on you, Mr. SCOTT.

Mr. SCOTT. Will you show me where he said that?

Mr. PATMAN. He reflected on you and the House of Representatives. He said we just couldn't do the job. We thought we were big enough to do the job.

Mr. SCOTT. He never used the phrase "banking community."

Mr. PATMAN. I am using that as an interpretation of what he is trying to do. I don't think any of us believe anything else.

Mr. SCOTT. If you had said in this telegram, "In my opinion," there are certain people including Mr. Burgess who oppose a congressional study of monetary policy, what do you think of that, would you have gotten the same telegram?

Mr. PATMAN. I sent the telegram and I had the right to fix it up the way I wanted.

Mr. SCOTT. I agree on the fixing. I have analyzed the replies you received. They made no sense to me until I saw the telegram. There are 25 replies and, even on the basis of a heavily double-barreled loaded wire, you only draw 4 replies which stoutly favor a "congressional study," even in the broad sense of the term; one specifically states that he favors a coordinate study—incidentally, the only man replying who seems to understand what this is all about. One reserves his opinion as to which course to pursue. And 19 definitely do not comment as to which course is preferable; that is, the administration bill or your committee study.

Mr. BROWN. He should have asked which they wanted.

Mr. SCOTT. That is my point. You should have given them a choice if it was to be an objective report as to whether they preferred the administration proposal or your proposal. But my point is even where you did not give them the choice, even with a loaded telegram, 19 of these 25 economists are too smart to come back and say that they favor what you want in your wire. I will read you the gentlemen who did.

Mr. PATMAN. You have criticized the word "they."

Mr. SCOTT. Yes.

Mr. PATMAN. The newspapers over the country generally refer to "they"—Cravens, Wilde, Sproul, and Burgess—as opposing a congressional study. "They"—that word is used by the newspapers all over the country. It was well understood when I say "they."

Mr. SCOTT. I don't believe the average busy economist would assume by the word "they" exactly what you assumed by that. Nor would all the people in this room draw that assumption. Out of the 4 people who favor the congressional study, you have quoted 3 on your first page. They are Galbraith, Heller, Harris, and on the next page, Mr. Miernyk, whereas even Leon Keyserling does not give you an affirmative answer. He simply says he will be glad to help a congressional study.

Mr. PATMAN. May I invite your attention to one point that is being overlooked in your questioning? I asked them one specific question. Let me read that question.

"Can Congress count on effective nonpartisan assistance such as your own in the event congressional study goes forward?" That is the question I asked.

Mr. SCOTT. Your question is not quite that. Your question says, "Can Congress count on effective nonpartisan assistance such as your own in event congressional study goes forward?" Relating then back, however, to the fact that there are some sinister sources who oppose any congressional study which in turn would indicate that these same people have no confidence in the Members of Congress who would be chosen on the administration proposal.

Mr. PATMAN. But may I suggest too that Dr. Burgess has said they wouldn't serve and this was to find out if they would serve and every one of them said they would serve or at least said we could get support.

Mr. SCOTT. Would you be willing to trust your judgment on the opinion of economists here by sending a telegram to all of the economists in all of the colleges of the country, the head economist in each college and university, a simple telegram saying, "Do you favor the administration proposal or the Patman proposal?"

Would you be willing to rely on the judgment that you got back from them?

Mr. PATMAN. I am not doing that. You can do it if you want to. I am satisfied with the answers I got.

Mr. SCOTT. One other thing, Mr. PATMAN, and that is you expressed some concern about the fact that some of the people who were suggested by Mr. Burgess would not be, could not be objective in this committee.

Mr. PATMAN. I didn't say they couldn't be objective. I said they had a point of view.

Mr. SCOTT. I said you implied they could not be objective because you said they had a point of view.

Mr. PATMAN. That doesn't mean they can't be objective. I have a point of view and I can be objective and my record in Congress is convincing that I can be objective and

ve been objective although I have a point view.

Mr. SCOTT. In developing the theory of nobjectivity——

Mr. PATMAN. I didn't use that word.

Mr. SCOTT. In developing the theory of nobjectivity, you use the words—if you low me you will notice that as a former ofessor I try to use very exact language. I id you used the words "clearly Mr. Sproul s preconceived ideas on these subjects." it wrong to have a preconceived idea on ese subjects?

Mr. PATMAN. That is not wrong. I am deding that right.

Mr. SCOTT. Why was it necessary to go into e point of view and preconceived ideas?

Mr. PATMAN. They were attacking me beuse I have a point of view.

Mr. SCOTT. You see no harm in these people ving because they have a point of view.

Mr. PATMAN. Not on that account.

Mr. SCOTT. I think that is all.

Mr. LATHAM. Will the gentleman yield?

Mr. SCOTT. Yes.

Mr. LATHAM. I think this is kind of imrtant.

Mr. PATMAN. Since he brought that out, I ust read what I said: "I have a very high gard for their objectivity and expert comtence in the field but I would like to point t they definitely have expressed themves publicly on monetary questions which e monetary commission would consider."

Mr. SCOTT. Have you not expressed yourself so, Mr. PATMAN?

Mr. PATMAN. Certainly I have. I don't ow of anybody interested in Government at hasn't expressed himself.

Mr. SCOTT. If you have a point of view and meone else has a contrary point of view, uldn't it be advisable to have both of you a committee so we can hammer out some nclusions on it and have debate?

Mr. PATMAN. They should not necessarily on the Commission but they should be ard and considered.

Mr. SCOTT. Then it would be better to have e people with your point of view on top d the people with the different point of ew on tap.

Mr. PATMAN. I have demonstrated that I n conduct an objective investigation and prefer that kind of an investigation.

Mr. LATHAM. You answered a moment ago answer to a question by Mr. SCOTT that Those opposing"—those words in the teleram referred to the witnesses who were re, including Sproul, Burgess, and Wilde.

Mr. PATMAN. Cravens.

Mr. LATHAM. Yes. You say in the telegram further, "Warning that unless guided the banking community." Can you point to a statement by any of those witnesses at unless guided by a banking community ey would be against this proposal?

Mr. PATMAN. The President in appointing e Commission will leave monetary matrs to Mr. Burgess. That is the reason he brought down from New York with four ther directors of the Federal Reserve bank have control of monetary policy. You now and I know that the President would ppoint whoever Mr. Burgess wanted that ould be a banker-guided group.

Mr. LATHAM. Wait a minute now.

Mr. PATMAN. That is my belief. I doubt you have a different view.

Mr. LATHAM. I know that is my belief. an you point to any testimony of any one those men who warned that unless guided the banking community they would be gainst this proposal?

Mr. PATMAN. Well, Mr. Burgess is, No. 1, a anker community man. He has demonrated that many times and he told us that e couldn't do the job. The House of Repsentatives couldn't do the job. We were oo small.

Mr. LATHAM. I know, but you cannot point to any slightest scintilla of evidence in the testimony.

Mr. PATMAN. That is right there. Mr. Burgess said we want an administration group, an Eisenhower-appointed group.

Mr. LATHAM. He didn't say that.

Mr. PATMAN. He testified to it. I will strike out the word "Eisenhower." A group appointed by the President. I know who he would appoint and I doubt if you have any contrary opinion. You know who he would appoint. He would appoint the people that Mr. Burgess wanted appointed.

Mr. LATHAM. They proposed to appoint somebody, someone from labor.

Mr. PATMAN. One witness might have said that, but Mr. Burgess didn't say that.

Mr. LATHAM. That's all, Mr. Chairman.

The CHAIRMAN. Thank you, gentlemen.

Any further questions?

Mr. SCOTT. Could I ask one question? I noticed the reference to New York here. Is there anything per se evil in the banking community of New York that leads you to say that?

Mr. PATMAN. Oh, no. I don't hate New York just because there are a few selfish, greedy fellows up there. You have them in every town in the country.

Mr. ALLEN. May I ask one question? I can't find it here. When Mr. MULTER testified, he said something about the big banks lobbying and gobbling up the little banks. I can't find that in this testimony now, where I asked you those questions but in your statement I don't see it here.

Mr. MULTER. Are you referring to my testimony?

Mr. ALLEN. Yes.

Mr. MULTER. It was handed to me this morning and I haven't had a chance to review it.

Mr. ALLEN. I can't find in this transcript where you said that; I know you said it here.

I know I asked you about that question and requested you, if you would, reconsider it. I don't find it in the official transcript where you said that.

Mr. MULTER. I have not read the transcript and I have made no changes or corrections in that yet. You and I did have a considerable discussion about the big banks gobbling up the little banks.

Mr. ALLEN. I have the part where I asked you, but I can't locate your statement. It is in here where I ask you this question, "Don't you want to reconsider about the banks gobbling up the small people," and I had you reconsider it, but in your statement here I can't find where you said that.

Mr. MULTER. Somebody has edited what I said, because, Mr. ALLEN, I did say what you say.

Mr. ALLEN. I asked you if you didn't want to reconsider it. I can't find where you said it here in this transcript.

Mr. MULTER. May I suggest, Mr. ALLEN, that I have thought about what you and I were discussing. I have no desire to change what I said about the big banks gobbling up the small banks. I think even Attorney General Brownell agrees with me in that statement, if not in that exact language; in substance he agrees with me, so far as lobbying is concerned, may I say the banks have every right to lobby as any other American citizen has and to that extent I think you are right, that has no place in this record.

Mr. ALLEN. It is out of that unless I can't find it.

Mr. PATMAN. May I briefly comment on one statement the gentleman from Pennsylvania made, Mr. SCOTT, and that is that every point of view should be on the Commission and I said, No., they should be heard but they shouldn't necessarily be on the Commission. The reason for that is that Members of Congress bet their political lives every day when they vote on questions.

They have more at stake than anybody else because they have everything, their whole record and their future at stake. They are going to do their very best to arrive at the right decision on these questions. A committee composed of Members of Congress, they have reasons to do exactly the right thing, whereas a commission composed of people outside of Congress who are not elected, they have nothing to lose and this resolution proposing the presidential study even exempts them from the conflict of interest and from all criminal prosecutions in the even they do not protect the public interest.

So there is a big difference. And a person sitting on that committee who has his political life at stake and who is elected to serve the people and one who is not elected to serve the people and who is exempt from any prosecutions.

Mr. SCOTT. Would the gentleman permit a comment there? In reference to the fact that we in Congress are always betting our political lives and that we have something to lose if we don't do the right thing, let's look at the other side of the shield. If we are on a congressional committee, is it not also true that perhaps politically we may have something to gain if we reach certain conclusions?

Mr. PATMAN. If we do the right thing.

Mr. SCOTT. According to our views. If we come to certain conclusions, we as Congress also induced by the lure of gain as well as restrained by the threat of loss.

Mr. PATMAN. By doing the right thing.

Mr. SCOTT. According to our lights.

Mr. PATMAN. The only way to remain in politics and stay winning is to do the right thing.

Mr. COLMER. While we are getting into this academic discussion, may I suggest off the record——

(Discussion off the record.)

The CHAIRMAN. Is that all, gentlemen? Thank you very much.

Mr. PATMAN. Thank you, sir.

SUBCOMMITTEE ON GENERAL CREDIT CONTROL AND DEBT MANAGEMENT; JOINT COMMITTEE ON THE ECONOMIC REPORT

(Speech of Hon. WRIGHT PATMAN, of TEXAS, in the House of Representatives, Saturday, June 28, 1952)

Mr. PATMAN. Mr. Speaker, a little over a year ago, Senator O'MAHONEY, chairman of the Joint Committee on the Economic Report, appointed a Subcommittee on General Credit Control and Debt Management. I am chairman of this subcommittee; the other members are Mr. Bolling and Mr. Wolcott, of this House, and Senators Douglas and Flanders.

As many of you may remember, there was a great deal of criticism of this subcommittee, particularly in the financial press, by persons who were misinformed concerning our intentions. These criticisms had no effect on the members of the subcommittee, as we knew that we had no intention other than to conduct a thorough and objective inquiry, and we had confidence in one another.

In the early summer of 1951 the subcommittee secured the services of Dr. Henry C. Murphy as economist. Dr. Murphy has had a long and distinguished career as a public servant. For 13 years, from 1935 to 1948, he was attached to the Office of the Secretary of the Treasury, after 1939 holding the position as assistant director of research and statistics. Since September 1949 he has been Chief of the Finance Division in the Research Department of the International Monetary Fund, from which position he was borrowed by the subcommittee. For a number of years prior to 1935 he was in private business in Detroit. He holds degrees from

several colleges and universities, including a doctor's degree from Brown University. He is the author of a well-known text, "The National Debt in War and Transition." A large part of the credit for organizing and directing this inquiry must be given to Dr. Murphy. His work has been characterized by a high proficiency, forcefulness, and above all fairness. The subcommittee was extremely fortunate to obtain a man of his caliber as directing economist.

In addition to Dr. Murphy, Dr. Grover Ensley, staff director of the Joint Committee on the Economic Report, has been particularly helpful. Indeed the entire staff of the committee should be commended. Without their assistance this inquiry could never have been made.

During the summer and early fall Dr. Murphy prepared a searching series of questions addressed to various classes of respondents, the questions for each being tailored in accordance with their interests and special sources of information. In preparing these questions, Dr. Murphy had the close cooperation of the Federal Reserve System, the Treasury, and many members of the financial and academic communities. The questions were released to the public in the form of a pamphlet published by the subcommittee last October.

The response, both inside and outside the Government, and especially from the Treasury and the Federal Reserve System, was magnificent. The answers of all respondents were published by the subcommittee in February of this year in a two-volume document entitled "Monetary Policy and the Management of the Public Debt; Their Role in Achieving Price Stability and High-Level Employment." This document has been widely acclaimed as the most valuable sourcebook of material on monetary policy and debt management which has been published in many years. Originally issued as a joint committee print, it has since been reprinted as a public document by resolution of the Senate.

The subcommittee held hearings from March 10 through March 31. We heard witnesses representing all phases of opinion, including both public officials and leaders of the financial and academic communities. In the course of these hearings we built up a record which I know will be of use to Congress and its committees and to the public generally for many years to come.

The printed record of the subcommittee's hearings was released to the public recently, and the subcommittee has now prepared and will soon issue its report. I think this time is opportune, therefore, to place in the RECORD some clippings from newspapers, magazines, and financial services and some extracts from comments made by witnesses at the hearings which bear on the significance of the task undertaken by the subcommittee and the way in which it has addressed itself to this task.

This material is as follows:

"[From the Washington Post of March 7, 1952]

"PATMAN TO EVALUATE SNYDER'S DEBT POLICY

"(By J. A. Livingston)

"The hearings scheduled to start on Monday before Representative WRIGHT PATMAN'S Subcommittee on General Credit Control and Debt Management will not lead immediately to new legislation. They're primarily explorative. Yet they have special significance. They will help to determine the place of John W. Snyder among the great, near-great, or not-so-great American Secretaries of the Treasury.

"For this Snyder has a sympathetic committee chairman. Snyder has favored a low-interest policy to keep down the cost of carrying the Federal debt. And PATMAN, a Democrat from Texas, has long been partial to low interest rates on Government securities.

"Nevertheless, in the questionnaires sent out by PATMAN to the Treasury, the Federal Reserve, the Council of Economic Advisers, and other Government agencies his low-interest bias has been imperceptible. The document is a landmark in monetary history. The replies have been well documented, carefully reasoned, and are unusually complete. Henry C. Murphy, the committee economist, who drafted the questions and 'nursed' the replies, has provided reading matter for monetary experts, college professors, and students for years to come.

"For the first time, Snyder has bared the events, from the Treasury viewpoint, which led up to the accord with the Federal Reserve Board a year ago. He goes into great detail, in 189 pages, to explain the pros and cons of Treasury policy. His answers to a similar questionnaire from a subcommittee on money and credit headed by Senator PAUL H. DOUGLAS in 1949 were brief and took less than 20 pages. DOUGLAS has been an outspoken critic of the Treasury's policy. He objected to the policy of pegging Government bond prices.

"Both the Douglas and Patman subcommittees are divisions of the Joint Committee on the Economic Report, with no power over legislation. Thus, DOUGLAS got nowhere in sponsoring a resolution to protect the Federal Reserve from Treasury domination. Legislation on money and credit originates in the Banking and Currency Committees, headed by Senator Burnet R. Maybank, Democrat, of South Carolina, and Representative BRENT SPENCE, Democrat, of Kentucky.

"One measure of the success of a Secretary of the Treasury is the cost of the debt. And Snyder, throughout his term of office, has tried to keep the cost down. That's why he resisted the efforts of the Federal Reserve Board to reduce supporting prices for Government bonds. If prices of Government bonds drop, interest rates rise.

"There's another measure of a Secretary of the Treasury: Has he kept his financial house in order?

"When Snyder took office, at the end of June 1946, the total debt was $268 billion. Today it is down to $257 billion. But the composition of the debt has changed radically. The amount of nonmarketable United States securities has increased from 30 percent to 45 percent, largely because large investors, such as insurance companies and individuals, have not been attracted to long-term Treasuries at a 2½-percent rate.

"As a consequence, Snyder has used short-term obligations to pay off long-term issues. Thus, half of the marketable issues outstanding today are due or callable in 1 year or less, as against 33 percent when he took office, as the following table shows:

	June 1946	Today
	Percent	*Percent*
Under 1 year	33	50
1 to 5 years	18	20
Over 5 years	49	30

"It won't be easy for Snyder to float large long-term bond issues in the near future, say, for 6 months. Just as such bonds were not easily salable when large investors feared depegging, now long-terms are not readily salable because large investors want the market to be thoroughly tested after the depegging.

"Snyder may have time to rearrange the composition of the debt if the Democrats win the election and he continues in office. But if the Republicans are victorious in November, he will turn over to his successor a big job of housekeeping. The new Secretary of the Treasury will have to refund what Snyder has unfunded.

"Snyder has compromised. To reduce cost of carrying the debt he has reduced maturity. The Patman questionnaire hearings will help to determine the wisdom of that compromise. But time will be necessary to fix Snyder's place in tory: Will the 2½-percent long-term ra ultimately validated by the market?"

"[From the Washington Post of March 1952]

"PATMAN IN THE CHAIR

"Only in one country, so far as we k is credit policy debated on the front and that is Sweden. In this the Sw have a true sense of values. For the agement of the supply of bank credit (w is by far the bulk of the money in cir tion) has, obviously, all-important repe sions on the people's livelihood. Here, ever, the subjects gets attention mainly the financial pages—though the flare-u year ago between the Federal Reserve Sy and the Treasury, both of which have cr creating powers, became public prop The flareup occurred when the Federal serve wanted to tighten credit availa and the Treasury to keep it easy. The rel was composed by an accord last Mar which went some way in meeting the Fe Reserve point of view.

"Now the subject has been reopened b investigation by a five-man subcommitte the Joint Committee on the Economic Re under Representative WRIGHT PAT Nearly a year ago, Mr. PATMAN annou the investigation. In the meantime he been assailed as a money crank and an money addict who would not listen to re and who wanted to rub out the independ of the Federal Reserve System. Exactly contrary has proved to be the case. chairman could be more judicial-min none more willing to allow the argum pro and con to be heard. Indeed, yest he acknowledged the enlightenment had been forthcoming in the colloquie tween Senator DOUGLAS and Federal Re and Government witnesses, particularly Keyserling.

"The investigation arm at its best

"Senator DOUGLAS wants to turn the ac of last March into a statutory enactm and to strengthen it in behalf of Fe Reserve independence. He wants the Fe Reserve authorized to assume primary sponsibility for regulating the supply cost of credit. Thus the Treasury would to play second fiddle in this respect to Federal Reserve. When these proposals made, this newspaper felt they were inad able. We still think they are. At the time we welcome the thorough airing w the problem is getting. Senator Dou has an acute and highly informed mind this as on a score of other problems of ernment, and the rubbing of it against minds of the money experts in Federal serve and Government service is produ testimony of the utmost value in for opinion and policy. Here is the investig arm at its best."

"[From the New York Herald Tribune February 29, 1952]

"MONETARY POLICY BATTLE IS SPARKED UNITED STATES POLL—TOP FEDERAL, FI EXPERTS ROLL OUT GUNS

"(By Edwin L. Dale, Jr.)

"WASHINGTON, February 28.—The Trea the Federal Reserve Board, and Reserve presidents, President Truman's Counc Economic Advisers, and several hundred vate experts rolled out their heavy art today to fight the battle of monetary icy—the question of the effectiveness sirability, and safety of a general tight of credit and rise in interest rates to pr inflation.

At the end of 1,302 pages, the field was
wn with wounded arguments and, de-
e agreement on many points and a will-
ness to cooperate, the issue was still very
ch in question.
The battle of words was fought in the
n of detailed and lengthy replies to a
estionnaire sent out last fall by a sub-
mittee of the congressional Joint Eco-
ic Committee, headed by Representative
IGHT PATMAN, Democrat, of Texas. The
lies made public today covered a wide
ge of subjects, but by far the greatest
ce was devoted to monetary policy. The
wers are believed to be the most com-
e review of the subject in a generation
more.
The official and unofficial experts dis-
eed on:
1. What is likely to happen after the Re-
e Board clamps down on credit and the
ation of deposit money by squeezing bank
erves.
2. The effect of a credit tightening move
Treasury borrowing and the public debt.
3. The meaning of what actually hap-
ed in this field between the end of World
r II and the present.

"All agree on inflation peril

And they implied disagreement on what
ht to be done in the near future, when
lationary forces (they all agreed) will be
sent and the Treasury will have to borrow
to $10 billion in the market.
Ranged on one side was the Federal Re-
ve, whose hardest hitting arguments were
sented not by the Board itself but in the
t replies of the presidents of the 12
deral Reserve banks. The Federal Reserve
lieves strongly in monetary policy and,
ile accepting other responsibilities such as
isting in Treasury financing, has few
ubts that credit tightening is a good in-
ument in almost any inflationary circum-
nce.
On the other side was the Treasury, whose
ws were presented by Secretary John W.
yder. Mr. Snyder accepted the proposi-
n than expansion of the money supply is
desirable in inflationary conditions, but
argument left little doubt that he be-
ves monetary policy is overrated in its ef-
tiveness and must be used with caution.
In the middle, but leaning toward the
easury viewpoint, was the Council of Eco-
mic Advisers. One member of the Coun-
, John D. Clark, didn't participate.

"Four hundred private experts reply

And up and down the spectrum of opinion
re the 400 private economists, bankers,
urance company executives, and Govern-
nt security dealers who answered the
estionnaire. The published replies revealed
t frequently 2 experts in the same special-
were 180° apart in their judgment of a
tail of policy or of its entirety.
The disagreement in theory and practice
ended down, in some instances, to the
st minute detail. For example:
The Treasury and CEA contended that
effectiveness of monetary policy in curb-
expansion of bank loans (and thus the
ney supply) is limited by the fact that
nks, in the present period of a huge public
bt, can always replenish their funds by
owing maturing short-term Treasury se-
rities to 'run off'—that is, accept cash for
em.
The Reserve bank presidents called this an
parent, but not an actual, loophole' and
d the device is possible for an individual
nk but not all lenders unless the 'System
rchases enough of the refunding issues to
pply the Treasury with the cash to pay off
lders of maturing securities.'
The disagreements between the Federal
serve and Treasury began soon after the
r, the compendium reveals. In their dis-
sions of such an issue as removal of the
referential discount rate' in 1945, the an-
swers show, in Mr. Snyder's words, this difference of emphasis:

"'The most important economic question that confronted the country (we felt) as the war ended was how to expedite the reconversion process and maintain a high level of employment and production * * *. The Federal Reserve expressed concern mainly about the inflationary aspects of the reconversion period.'

"Disagreement after Korea

"But the real disagreement, and the striking difference of analysis in what happened, came after Korea. Mr. Snyder described a Treasury refunding operation announced on August 18, 'identical with the terms of the issues offered in connection with the last previous refunding operation—the refunding of the issues which had matured on June 1 and July 1.'

"The Reserve, he said, promptly took action to raise the rediscount rate, allowed short-term rates on Government securities to fall, and the result 'was a significant financing failure for the Federal Government.' A side result, he said, were forced purchases of securities by the Reserve with a net inflationary, not deflationary, effect. A comparable situation, he added, developed in November.

"The Reserve saw the same events entirely differently. Mr. Snyder's offering, according to the bank presidents, was 'unfortunate' in having the same terms as a pre-Korea issue. The System's 'only course' was to try to restrain credit expansion by allowing a falling off in the short-term market while still offering to buy the Treasury's maturing issues.

"The Reserve Board's chief concern before the 'accord' of last March was the unloading of Government bonds by institutional investors through sales to the 'Reserve in a pegged market, with consequent expansion of bank reserves.'

"Snyder ignores point

"Mr. Snyder did not even mention the point, merely pointing out, acidly, that 'the net result of Federal Reserve open market operations from August 21, 1950, through the end of the year was an increase in the System's open market account of over $2,500,000,000.' This, he said, 'was debt monetization'—just what the Reserve was trying to prevent.

"In three different places the Reserve Board's reply indicates that its monetary operations, particularly after the 'accord,' were a major factor in the halt in inflationary pressures in the last 9 months of last year. Mr. Snyder scarcely touches on the subject. The Council of Economic Advisers gives other factors far more credit.

"The basic disagreement over policy, to be described tomorrow, is summed up this way.

"Council of Economic Advisers: 'Restraint in the management of open market policy (the chief instrument of monetary policy, as all sides agree) will probably become more important during the next stage of the mobilization period.'

"Reserve bank president: 'We believe that in an inflationary period general credit and monetary policies should be directed toward restraining inflationary pressures, whether or not the Treasury is expected to have to carry out large borrowing or refunding operations in the foreseeable future."

"[From the New York Herald Tribune of March 16, 1952]

"PATMAN PROBE NO HEADLINER, BUT ITS VITAL—GROUP WELL POSTED ON TOUGH MONETARY ISSUES

"(By Edwin L. Dale, Jr.)

"WASHINGTON, March 15.—In a week that saw congressional committees investigating such matters as the Institute of Pacific Relations and ship transactions get into table-pounding, angry denunciation of witnesses (and vice versa), another committee—with far fewer potentialities for headlines—was quietly and calmly inquiring this week into a matter of ultimately far greater importance.

"The five members of the Subcommittee on Monetary and Debt Management Problems of the Joint Committee on the Economic Report, headed by Representative WRIGHT PATMAN, Democrat, of Texas, wanted to know how to stop the seemingly continuing decline in the value of the dollar. They wanted to know how much the support operations of the Federal Reserve System in the Government security market after Korea contributed to the inflation of that time.

"They wanted to know about the Government debt, and the creation of bank reserves, and the money supply and equally arcane matters. And what's more, they did not come into the matter cold; they had done some homework, and they moved around familiarly in the difficult field.

"On a high plane

"What's more, individual members often disagreed sharply with the viewpoints expressed by the witnesses present; but, except for some vitriol in the exchanges between Senator PAUL H. DOUGLAS, Democrat, of Illinois, and Secretary of the Treasury John W. Snyder, the week's hearings were conducted entirely on a plane of high debate and never of political or emotional argument.

"Perhaps typical of the atmosphere was the phrase used by Senator DOUGLAS after a long, intense colloquy with Chairman Leon H. Keyserling, of the President's Council of Economic Advisers. The two had disagreed right down the line, after a great deal of preliminary sparring to get their respective viewpoints clearly stated.

"Senator DOUGLAS, without a note of criticism or sarcasm, finally remarked: 'The issue is clearly joined.'

"Chairman PATMAN, who is viewed with alarm by defenders of the Federal Reserve System, conducted the hearings with studied impartiality. His own questions indicated he still has many of the ideas that his critics worry about, but there was—this week at least—no effort to do more than get a little further elaboration of those ideas from the witnesses.

"Got little encouragement

"Significantly, he got little encouragement on any of them, even from witnesses who might be expected to share his viewpoint on many phases of the monetary problem.

"The other members of the committee are Representative Jesse P. Wolcott, Republican, Michigan, generally regarded as a sort of senior spokesman of conservative Republicans on economic matters in the House; Senator RALPH FLANDERS, Republican, Vermont, the slow-speaking, bushy-mustached businessman from New England, whose questions are often sparkled with dry wit and were invariably brief and penetrating, and Representative RICHARD BOLLING, Democrat, Missouri, the 'youngster' on the committee and clearly a 'liberal,' who admits, 'I am there to learn,' but whose careful queries impressed many observers with how quickly the learning process has taken place.

"One of the surprises of the hearings was the number of spectators. Day after day their number approached or passed the 100 mark, though far more exciting things were going on on Capitol Hill. It's a fairly safe bet that few of them were disappointed at the performance—despite the lack of fireworks."

"[From the Wall Street Journal of February 29, 1952]

"FISCAL FORUM—PATMAN MAKES PUBLIC THE ANSWERS TO QUESTIONS ON MONETARY POLICY

"(By George E. Cruikshank)

"WASHINGTON. — Representative PATMAN, Democrat, of Texas, made public what the Nation's leading economic and fiscal ex-

perts—both in and out of Government—think of this country's monetary policies and the management of the public debt.

"The information comes in the form of answers to a questionnaire sent out by Mr. PATMAN last fall. He heads a committee which is investigating the Government's postwar monetary policies. On one important point—Federal Reserve Board support of the Government bond market—some observers here think the answers show that the Reserve Board and the Treasury have finally buried the hatchet and agreed that there should be limited support of Government bonds. Other observers think the answers leave the feud essentially where it was, with the Treasury still hankering for stronger Federal Reserve support of the bonds.

"Hearings start March 10

"The answers to Mr. PATMAN's questions fill 2 volumes and cover some 1,300 pages. They will serve as a basis for hearings which are scheduled to begin on March 10. Any doubts as to the proper interpretation of the answers are expected to be dispelled at those hearings when the individuals come up for direct questioning by the committee members.

"Secretary Snyder's answers to the questions dwelled at length on the market for Government securities. Time and again, the Secretary cited the need for a sound market for Government securities, but he made it clear that rigidly fixed prices were neither necessary nor desirable.

"At another point he emphasized: 'I consider the term "stable market" as we think of it in the Treasury as a market in which prices and yields fluctuate within a moderate range over a considerable period, but without exhibiting any pronounced upward or downward trend.

"'I do not consider it to mean a pegged market in which fluctuations are prevented by means of fairly rigid support operations on the part of the Federal Reserve.'

"Prior to the Secretary's statement, it was widely held that the Treasury wanted the Federal Reserve to support Government bond prices at par or above by buying the securities whenever they were offered for sale. Mr. Snyder, in coming out for a stable market, did not say whether the Federal Reserve should keep the security market stable at prices above or below par. This was taken by some to mean that the Reserve System's new policy has been accepted by the Treasury. Other observers noted, however, that Mr. Snyder urged the postwar period as an example of stability, and that is precisely the time during which all the feuding has been going on.

"Answers from CEA

"Those who thought the Secretary's statements showed administration acceptance of the Reserve Board's policy of limited support for Government bonds, got further encouragement from the answers sent in by the President's Council of Economic Advisers.

"The Council, too, came out for a stable market for Government bonds and opposed a rigid pegged market. However, the Council's answers were submitted by only 2 of the 3-man body. Leon Keyserling and Roy Blough submitted answers to the Patman questionnaires, while John Clark—the third member—did not contribute. This was taken to mean by some that Mr. Clark did not agree with his colleagues on limited bond support.

"Another hot issue—White House control of the Federal Reserve Board—received considerable attention by the Treasury, the FRB, and the CEA in their answers.

"Representative PATMAN, a known advocate of putting the Reserve Board under the thumb of the Chief Executive, will get no support from the Board and, apparently, no direct support from the Treasury or the CEA.

"In answer to question 9—What provision, if any, is there for resolving policy conflicts between the Treasury (or other agencies of the executive branch) and the Federal Reserve System? Do you believe that this power should lie with the President (or already does under the Constitution)?—Secretary Snyder replied:

"'There is no doubt that the Federal Reserve System could conceivably impede, if not actually obstruct, Government policies which the President has announced and, indeed, on which he may have been actually elected or reelected to office. The President has complete power over the Secretary of the Treasury. He has no such powers over the members of the Board of Governors. Hence, since the President does not have the power of removal, it would appear to me that he is without power effectively to direct.

"'I do not recommend that it be changed.'

"No authority to solve conflicts

"Secretary Snyder, later on in his answer to the same question, said the biggest disvantage to the present arrangement was that no specific authority existed to resolve any 'irreconcilable' conflicts between the President and Treasury and the Federal Reserve.

"He listed the present methods for ironing out policy conflicts as: The give and take resulting from discussion around the conference table; the force of public opinion; congressional action.

"'I do not suggest that the President should be given any powers which he does not now have to resolve such disputes,' the Secretary emphasized.

"Secretary Snyder urged the creation of a small consultative and discussion group within the Government to consist of the Secretary of the Treasury, the chairman of the Federal Reserve Board, the Director of the Budget, the chairman of the Council of Economic Advisers and the Chairman of the Securities and Exchange Commission. This group would act as a top advisory group to the President on broad questions of monetary and fiscal policy. It would meet with the President for informal discussions as often as desired.

"'In other words' the Secretary replied, 'I recommend to the committee no drastic changes in order to resolve disputes.'

"Federal Reserve Board Chairman William McChesney Martin's answers to the Patman question about executive control over the Federal Reserve proved no surprise. A stanch advocate of an independent board, Mr. Martin answered:

"'It is essential to the effective performance of the system's unique function that the independence of the judgment reposed by Congress in the board and the open market committee be preserved'."

"[From the Wall Street Journal of March 3, 1952]

"SNYDER TO LEAD OFF HEARINGS ON POSTWAR UNITED STATES MONETARY POLICIES—PATMAN GROUP INQUIRY TO BEGIN NEXT MONDAY; AT LEAST 26 WITNESSES SCHEDULED TO TESTIFY

"WASHINGTON.—Treasury Secretary John Snyder will be lead-off witness in the long-planned congressional hearings on the Nation's postwar monetary policies.

"Representative WRIGHT PATMAN, Democrat, of Texas, chairman of a subcommittee of the Joint Committee on the Economic Report, said his group would hear from at least 26 witnesses during the course of its investigation which is scheduled to begin March 10.

"The committee will delve into recent developments and appropriate future policy in the fields of money, banking and credit, management of the Nation's public debt, and the adequacy of the country's banking system to serve the needs of depositors and borrowers.

"William McChesney Martin, Jr., Chair... of the Federal Reserve Board, is slated to ... pear March 11. Leon Keyserling and ... Blough, of the President's Council of ... nomic Advisers, testify the following day.

"A. L. M. Wiggins, chairman of the At... Coast Line Railroad Co. and former U... Secretary of the Treasury, is schedule... come before the committee on Friday, M... 14, along with Preston Delano, Compt... of the Currency.

"Late last week the Patman subcomm... released a 1,300-page compendium of m... rial on monetary policy and manageme... the public debt. The information was in... form of answers to questionnaires sen... more than 1,000 financial experts in are... of Government. Those answers will ser... a basis for the hearings."

"[From the New York Journal of Com... of February 29, 1952]

"SNYDER, RESERVE STILL SPLIT ON CREDIT ICY—REPLIES TO JOINT CONGRESS UNIT S... BASIC DIFFERENCES—TREASURY HEAD IS ... TRUSTFUL OF TRADITIONAL RESTRAINT ... BACKED BY MARTIN

"(By Joseph R. Slevin)

"WASHINGTON, February 28.—The Tre... and the Federal Reserve Board, which ... ciled their immediate differences over ... and monetary policy in a full accord ... last March, still hold widely divergent ... on how they can best work for a stable ... omy now and under various hypoth... conditions in the future.

"The Federal Reserve Board believes ... as it did last March that substantial re... should be placed on the traditional me... of achieving general credit restraint th... open-market operations, rediscounting ... manipulating reserve requirements.

"Snyder is cautious

"Secretary of the Treasury John S... still distrusts these techniques and is ... posed to anything more than an ultr... tious use of them, because he fears that ... eral restraints might upset the Govern... bond market and make it difficult, if no... possible, for him to carry out Govern... financing operations.

"These conclusions emerge from the n... that Snyder and Federal Reserve ... Chairman William McC. Martin, Jr., ... submitted in answer to questions from ... subcommittee on general credit contro... debt management of the congressional ... Economic Committee.

"The congressional group publishe... Snyder and Martin answers in a 1,30... compendium today, along with resp... from the Federal Reserve bank presi... Council of Economic Advisers, three ... Federal agencies, State bank super... bank and life-insurance-company execu... economists, and Government bond d...

"The subcommittee, under the chair... ship of Representative WRIGHT PATMAN, ... ocrat, of Texas, is investigating fiscal ... monetary policies and relationships be... the Reserve System and the Treasur... plans to hold public hearings beginning ... day, March 10.

"Two types of questions

"Declaring that the subject matter ... the group is immense, Mr. PATMAN sai... foreword to the compendium that two ... of questions stand out as focal points ... committee's investigations. He named ... as (1) the proper machinery for the for... tion of monetary policy and (2) the ... content of monetary policy.

"The compendium is notable for the ... prehensive nature of the answers it co... and for the manner in which it has ... ceeded in airing the varying Federal R... and Treasury views. Mr. PATMAN char... ized the volumes as by far the best s... book of materials on general credit c...

d debt management which has been assem-
d in our generation.

"Mr. Snyder's and Mr. Martin's answers
monstrate that the Treasury and the Fed-
l Reserve achieved a modus vivendi last
rch but did not reach philosophical agree-
nt on the monetary and fiscal policies that
uld be employed to stem inflation.

"At the same time, their responses strongly
ggest that a complete philosophical recon-
iation of the theories of the two agen-
s is not likely and that no more be an-
ipated than the negotiation of effective
rking agreements to deal with specific
uations.

"Have different goals

"This is so because the Treasury, on the
e hand, appears to be primarily concerned
at monetary restraints be used in such a
y that its financing activities can be suc-
ssfully carried out in a Government bond
rket that is permitted only modest fluc-
ations.

"The Federal Reserve, on the other hand,
s monetary restraint as its primary objec-
e and apparently believes that Treasury
nancing should be subordinated to eco-
mic stability and effected in a market that
attuned to the requirements of the na-
nal economy rather than to those of Treas-
y Department management officials.

"These divergent theories resulted in a vio-
nt disagreement between the two agencies
at was reconciled—in the Federal Reserve's
vor—in the accord of last March.

"The accord covered a number of points.
s chief consequence, however, was that it
eed the Federal Reserve from its obligation
support the long-term Government bond
rket.

"The Federal Reserve had supported the
ng-term market since early in World
ar II. This policy had resulted in its pour-
g large quantities of cash into the spend-
g stream as it sought to prevent a decline
the prices of Governments by buying
nds from banks and insurance companies
hich were making investments elsewhere.

"Continued after Korea

"This policy was continued in the months
ter Korea because Secretary Snyder, faced
th enormous rearmament financing prob-
ms, wanted the assurance of a stable
nd market. In January of 1951 Snyder
blicly announced that Treasury financing
uld be carried out within the 2½-percent
ng-term rate pattern that the Reserve had
en maintaining.

"However, in February the Reserve advised
nyder that it could no longer go along with
is policy. Then, on March 8, the accord
as negotiated.

"Government bonds have since fallen be-
w par, and the going market rate now is in
he neighborhood of 2.7.

"Credit seen tightened

"Mr. Martin's answers make it clear that
he Board believes this action helped last
pring to break the inflationary spiral. The
hairman contends that letting the prices
f Governments fall tightens credit for a
umber of reasons, chief among them being
he reluctance of institutional investors to
ell their securities at a loss.

"The sharpest cleavage between Secretary
nyder and Mr. Martin appears in their dis-
ussions of the effectiveness of open-market
perations and the Federal Reserve bank dis-
ount rate. The Board's position is that
pen-market operations not only can directly
estrain credit expansion by making in-
estors reluctant to dispose of their Gov-
rnments but also make the discount rate
ffective, since investors will seek to obtain
heir commercial paper at the Reserve banks
nce the selling of Governments has been
ade less attractive.

"Secretary Snyder contends that changes
n the structure of commercial bank port-
olios makes these traditional monetary con-
tol weapons much less effective than they
once were. Pointing out that banks now
hold much larger proportions of Government
securities than they did 20 or 40 years ago, he
maintains that Federal Reserve efforts at
credit restraint are 'more likely' to result in
banks attempting to liquidate their Govern-
ments than in their curtailing their loan ex-
pansion.

"Fears bond dumping

"At the same time, Secretary Snyder ex-
pressed grave concern that falling prices of
Governments might result in nonbank in-
vestors, such as insurance companies, dump-
ing their holdings. He emphasizes that 'no
precise forecast' can be made of the probable
results of general credit restraint on bank
and nonbank holders.

" 'The impossibility under present condi-
tions of measuring in advance the effects of
a general restrictive credit policy,' he says,
'means that sudden and severe declines in
the market prices of Government securities
may be produced by what was intended to be
a moderate degree of credit restriction. This
provides a strong reason for caution.

" 'Sudden and severe declines in the mar-
ket prices of Government securities,' he con-
tinues, 'might be shocking to public confi-
dence. They might be embarrassing to many
financial institutions owning large portfolios
of Government and other high-grade securi-
ties, particularly those with small amounts
of stockholder capital relative to their total
assets.

" 'Such declines,' the Secretary stresses,
'would complicate the Treasury's financing
problems.'

"Backs orderly markets

"Against this view, Mr. Martin says, in his
only direct discussion of market stability,
that the Reserve System believes in 'orderly
markets.' He defines these as markets that
are not subject to erratic movements but
that 'do not preclude broad movements that
reflect changes in basic underlying forces.'

"Mr. Martain says, referring pointedlly to
Secretary Snyder's reluctance to see the in-
terest rate rise that 'if Government securities
are available on terms that make them at-
tractive to the market, they will not require
open-market operations in a volume that
would be in conflict with the credit and
monetary objectives appropriate to the
period.'

"As for Secretary Snyder's fear that in-
vestors will sell their Governments and get
all the cash they need if prices go down,
Mr. Martin argues at length that: (1) If the
Federal Reserve does not buy them there
will be no increase in inflationary bank re-
serves; (2) as prices go down the yields will
make the securities more attractive to in-
vestors; (3) banks will become increasingly
reluctant to sell and take losses as prices go
down, and (4) bank sales and bank redemp-
tions of maturing issues will be limited by
the need of banks to maintain the liquidity
of their portfolios.

"A similar psychology, Mr. Martin says,
governs life-insurance firms and mutual sav-
ings banks."

October 17, 1951]

"POWER-POLICY FIGHT

"(By Sylvia F. Porter)

"The power-policy conflict which has
smoldered between our National Treasury
and our central bank for almost 39 years is
breaking into the open again.

"This week, a congressional subcommittee,
headed by Representative WRIGHT PATMAN,
Democrat, of Texas, is quietly launching an
intensive probe into the operations of these
two fiscal giants of America—to determine
what and how close should be their relation-
ship, who should settle their feuds when they
explode, whether in this critical era it is
possible to have an independent central
bank or whether you and I must take the
risks inherent in giving our President more
authority over our banking system.

"This has been the key fiscal debate of our
century—the relationship between our
Treasury and Federal Reserve System.

"For Congress has given to the Federal Re-
serve System (our central bank) the author-
ity to smooth out economic peaks and panics
through regulating the supply of money and
credit in our land.

"When the Reserve clamps down on our
supply of money and credit—as it did last
spring, for instance—it can seriously hurt
you, as a businessman or builder, home buy-
er or user of installment credit. Yet when
it clamps down, it is fighting inflation at its
source.

"At the same time, Congress has given to
the Treasury the authority to manage the
public debt. The Treasury now has a $255
billion debt to manage; it has to borrow
billions every few weeks; it has to have a
receptive market when it borrows. It can be
as badly hurt by a Reserve move to tighten
credit as you or I can be.

"When the Reserve tightened the money
screws last spring, the Treasury was put on
a spot; it was forced to pay much more
interest on its loans, to add to the already
staggering cost of our debt.

"It's a constant dilemma, a basic conflict.
Those who want to give more power to the
Treasury fear that the Reserve, in its zeal to
curb inflation, could really send us spinning
from boom to bust.

"Those who want to maintain a truly in-
dependent central bank fear that the
Treasury, in its zeal to manage the debt,
could really send us into an even more dan-
gerous inflation. And they warn that all
nations going socialistic have first taken
over their banking systems and they point to
the lesson of England.

"This is a measure of the issues at stake in
this probe. They make most other investi-
gations seem superficial in the extreme.

"The conflict crashed the front pages last
spring—but after a few awful weeks, the
Reserve won and major credit-tightening
steps were taken. Then Reserve Board
Chairman McCabe resigned; William Mc-
Chesney Martin moved over from a Treasury
undersecretaryship to chairmanship of the
Reserve Board; Snyder and Martin were and
are friends; the general outside belief was
that all was serene.

"But not so. This fight goes far beyond
personalities. So now PATMAN is reviving
the debate, is sending tough, detailed ques-
tionnaires to Martin, to Snyder, to the pres-
idents of the 12 Reserve banks, to the 48
State banking supervisors, to key bankers,
etc.

"The answers to the questionnaires should
be back by the year end. Public hearings
are scheduled for early 1952. This story will
be front-page news again in a couple of
months.

"And the debate is more significant than
ever. More significant even than in 1913
when our Federal Reserve System was
created. More significant even than in 1935
when that System was overhauled to meet
the banking crises of the depression thirties.

"For how this conflict finally is resolved
will have a direct impact on the life of every
American. It is no exaggeration to say it
actually could help decide the ultimate eco-
nomic fate, the financial strength of Amer-
ica itself."

"[From the Philadelphia Inquirer of
February 29, 1952]

"MONETARY ISSUES AIRED BY OFFICIALS

"WASHINGTON, February 28.—Secretary of
the Treasury John W. Snyder called for a new
top-level council of Government officials to
nip in the bud conflicts between Federal
agencies over key monetary issues.

"Chairman William M. Martin of the Federal Reserve Board indicated he would go along with such a proposal.

"Their views were expressed in answer to a long list of questions on how best to promote national welfare through monetary and credit policies and avoid the booms and busts that have marked America's economy in the past.

"Replies released

"The questions were submitted to Government officials and more than 1,000 private bankers, brokers, and businessmen by a joint congressional subcommittee on monetary policy.

"More than 400 replies, covering 1,300 printed pages, were released today. Representative WRIGHT PATMAN, Democrat, of Texas, subcommittee chairman, said they made up the best symposium on such issues in our generation.

"The subcommittee will start hearings on the issues March 10.

"In the background was a sharp dispute over basic policy between the Treasury and Federal Reserve Board which stirred financial circles last year.

"Accord reached

"The question was whether the Reserve Board should go on supporting the prices of Government securities, thereby keeping interest rates low. The controversy ended in an accord under which the Board buys only enough securities to keep an orderly market. It has let interest rates rise and prices on Government bonds fall.

"This raises the cost of carrying the huge national debt, but the Board contends it saves the Government money in the long run by curbing inflation.

"The conflict brought demands from some legislators that the Reserve Board be put under control of the White House, which already directly controls the Treasury.

"Change opposed

"Both Snyder and Martin agreed today that under present laws the Reserve Board is independent of the President. In fact, Snyder noted, it is possible that the Board could impede, if not actually obstruct, policies proclaimed by the President.

"But they both opposed changing this setup. They emphasized that the Treasury and Reserve Board have now reached an accord which is working well."

"[From the Dallas News of March 23, 1952]

"OPINIONS VARY ON HOW TO STOP BIG DEPRESSION

"WASHINGTON, March 22.—Two weeks of congressional digging into Federal monetary policy and how best to steer clear of inflation or depression have made it clear the Nation's top experts are sharply divided on many broad, basic, and vital issues.

"A Senate-House subcommittee so far has heard from 19 Government officials, private economists, and university professors. More than a dozen others will be heard in 10 days to 2 weeks more of hearings.

"All of the witnesses thus far have agreed that monetary policy—the Government's program for regulating the supply of money—can be one of the keys to preventing or softening the booms and busts that have pockmarked America's economy in the past.

"But beyond that the authorities have split. Representative PATMAN, Democrat, of Texas, subcommittee chairman, told a reporter today the lawmakers will wait until all views are in and then consider specific recommendations.

"There is growing talk of a possible resolution expressing the views of Congress on issues which at times have brought conflict between the Government's chief financial agencies—the Treasury and the Federal Reserve System.

"One issue is whether the Federal Reserve System should keep its independent position as 'the Supreme Court of Finance,' as some witnesses called it.

"In tightening the money supply to restrain inflation, the Federal Reserve Board tends to make it harder—and more costly—for the Government to borrow money. This has brought the Board into conflict with the White House and the Treasury in the past, although the agencies are working harmoniously on the surface right now."

"[From the Odessa (TEX.) American of March 23, 1952]

"CONGRESSMEN OPEN DEBATE ON MONDAY

"WASHINGTON.—Congressmen puzzling over the basic monetary policy of the United States enter the open-debate phase of their study Monday.

"In the past 2 weeks the Patman subcommittee of the Senate-House Economic Committee has quizzed 19 Government and private experts about Government borrowing, management of the $259 billion national debt, and control of the Nation's supply of money.

"For the coming week Subcommittee Chairman WRIGHT PATMAN, Democrat, of Texas, has planned 4 free-for-all round-table debates by a new set of 22 keymen from the United States economic world.

"By June PATMAN'S five-man subcommittee hopes to piece together a complete analysis of monetary policy and debt management. It is expected to couple this with a set of recommendations for change, or no change, in the present situation.

"Three central questions confront the investigators:

"How important is it to the economy as a whole that the Government have a certain monetary policy?

"What is present policy and is it correct?

"Who should direct it—the White House, the Treasury, the Federal Reserve System, or all three?

"Witnesses' opinions have split 50–50 on all three problems, and PATMAN refused Saturday to predict his group's final conclusions.

"The Patman inquiry was inspired by a policy 'accord' reached by the Treasury and the Federal Reserve Board of Governors just 1 year ago, after months of wrangling over who did what to the Government bond market.

"Government borrowing is done by selling bonds and other Government securities. The Reserve had a policy of buying these securities on the open market when public demand was low in order to keep their prices at par or higher. The accord recognized the abandonment of that policy, and since then prices of Government securities have fallen.

"For example, 2¼-percent bonds maturing in 1962 sold at 100.20 before the accord and now are 97.28."

"[From the American Banker (the only daily banking newspaper) of February 29, 1952]

"PATMAN REPORT REVEALS SNYDER BACKING FEDERAL RESERVE BOARD INDEPENDENCE

"WASHINGTON, February 28.—The much-discussed report of the special subcommittee of the Joint Economic Committee of Congress, under the chairmanship of Representative WRIGHT PATMAN, of Texas, was made public today. One volume of the two-volume report comprised the views of the Secretary of the Treasury on problems of debt management, monetary policy, and credit, and those of the Chairman of the Federal Reserve Board on these and related topics.

"Of significance is the fact that the report reveals the Secretary of the Treasury recommending against any change in the independent status of the Federal Reserve Board.

"As was expected, the history of the recent 'accord' over debt management was featured especially in the replies to questions [illegible] mally asked of the Secretary of the Treas[illegible] The Chairman of the Federal Reserve Bo[illegible] devoted relatively less space to the subj[illegible]

"As has been frequently recorded in [illegible] American Banker, despite other news repo[illegible] no important differences now exist betw[illegible] the two agencies.

"Important in the questions and their [illegible] plies is the underlying thesis of Represen[illegible] tive PATMAN, namely, the advisability of [illegible] executive branch of the Government exer[illegible] ing greater control over the 'independ[illegible] Federal Reserve System.

"In the formal replies from the Secret[illegible] of the Treasury and the Federal Reserve [illegible] support is found for greater Presidential c[illegible] trol over the Federal Reserve.

"The latter, however, admits that it is [illegible] regularly clearing major communications [illegible] Congress and plans for requesting new le[illegible] lation through the Bureau of the Bud[illegible] The Bureau is, in effect, a part of the Wh[illegible] House. It operates directly under the dir[illegible] tion of the President.

"Secretary of the Treasury John W. Sny[illegible] pointed out that the President cannot, eve[illegible] he wished, remove a Reserve Board Gover[illegible]

"'Since the President does not have [illegible] power of removal, it would appear to me,' [illegible] says, 'that he is without power effectively [illegible] direct the Board.'

"As to a change, the Secretary add[illegible] 'Whether or not this situation should [illegible] changed is a matter for the Congress [illegible] decide. I do not recommend that it [illegible] changed.'

"Suggests discussion group

"In a discussion of the differences [illegible] grew over debt-management policy betw[illegible] the Federal Reserve under the chairmans[illegible] first of Marriner S. Eccles and then un[illegible] Thomas B. McCabe, the Secretary saw no[illegible] ing wrong in efforts of the President to [illegible] to have the differences composed by dis[illegible] sions around a table.

"Mr. Snyder suggested 'the creation [illegible] small consultation and discussion group [illegible] set up within the Government. This w[illegible] be composed of the Chairman of the Res[illegible] Board, the Secretary of the Treasury, [illegible] Director of the Budget, the Chairman of [illegible] Council of Economic Advisers, and the Ch[illegible] man of the Securities and Exchange C[illegible] mission.

"'I would have this group meet inform[illegible] but regularly and frequently for the purp[illegible] of discussing domestic monetary and fi[illegible] matters with each other,' he said.

"He would have this group call in head[illegible] the lending agencies, when matters rela[illegible] to their activities were under discussion.

"Secretary Snyder said the proposal wa[illegible] adaptation of one of the reports of [illegible] Hoover Commission designed to coordi[illegible] financial operations of the Government.

"What it would do

"The Secretary believed that such a g[illegible] would serve two major purposes:

"1. 'By regular and periodic meeting [illegible] discussion * * * differences of opinion [illegible] become less likely to develop. It is so m[illegible] easier to settle any prospective differe[illegible] of opinion around a table before they bec[illegible] fixed in mind or before they have been p[illegible] licly announced.'

"2. 'The group would act as a top-l[illegible] advisory group to the President on b[illegible] questions of monetary and fiscal policy. [illegible] could meet with him for informal dis[illegible] sions, and could report to him preferably [illegible] an informal and confidential basis as o[illegible] as desired.'

"The Secretary added after making [illegible] proposal:

"'As you see, I recommend no dr[illegible] changes in order to resolve disputes. I t[illegible] that they will be resolved as most disp[illegible]

e if discussion and negotiation are encouraged and facilitated.'

"That there was a sharp division of meth-ds and means for meeting economic changes casioned just prior to and immediately llowing the affair in Korea, is detailed in e Treasury's reply to the Patman committe.

"Difference in methods

"In perspective as afforded in the replies both Secretary Snyder and Chairman artin, the differences lay largely in meth-ds of achieving a common objective. hairman Martin appraised the differences: "'The differences that arose reflected dif-rences in judgment as to evaluation of the o objectives and as to the effectiveness d consequences of measures that might be ken.'

"There is no doubt, however, that before e publicized 'accord' was reached, the reasury had difficulties. Secretary Snyder dicated considerable concern as a result the Korean war. He sought to avoid arp fluctuations in Government securities. "He said he found that, despite all argu-ents, the Federal Reserve 'wanted to raise ort-term interest rates.' The Treasury d earlier gone along. However, at that me, the Secretary feared more world in-olvement than he did inflation. He said was not unaware of the latter for he d asked Congress for sharply higher taxes. "The Federal Reserve, however, was placing eat reliance on 'traditional measures of eneral credit restraint which involved a de-ining securities market and increases in terest rates. It was in this specific area at disagreements between the Treasury d the Federal Reserve arose.'

"'Financing failures'

"The Secretary told of 'financing failures' Treasury financing, despite, in one case, hen he said the Treasury sought to follow eserve proposals.

"However, the answers of the Federal Re-rve and the Treasury were the same on e present 'accord,' apparently indicating ll cooperation though the Treasury is re-ealed as much less impressed with the ar-ument that higher interest rates are es-ecially effective of themselves as instru-ents of credit control than is the Federal eserve.

"A large portion of the volume is given er to discussion of interest rates in rela-on to credit controls and to statistics and harts.

"The second volume of the two-volume re-ort includes the replies received from omptroller of the Currency, the President's ouncil of Economic Advisers, the Chairman f the Federal Deposit Insurance Corpo-ation, about half of the State supervisors, overnment bond market specialists, life-surance officials, and others. These con-ern chiefly subjects more closely related to heir specialized activities.

"Patman's philosophy

"Open hearings are scheduled by March 10 hen officials will be questioned on the basis f their replies.

"The philosophy back of the questions sked by Representative PATMAN is revealed n his foreword to the 1,300-page report.

"After crediting the replies by saying this compendium constitutes in my judgment y far the best sourcebook of materials on eneral credit control and debt management' ver attempted, he pointed out that present overnmental machinery is based chiefly on iscretion.

"Mr. PATMAN added that the Reserve Sys-em is answerable only to Congress presuma-ly. However, Congress is not constituted or more than overall directions. He argues hat it might thus be better for the execu-tive agencies to participate as creatures of Congress.

"Mr. PATMAN said it is 'of the utmost importance to insure the continuation of the participation of business and agriculture (and possibly labor) in the formulation of monetary policy.'

"The coming hearings, he said, would be for the purpose of sifting arguments pro and con on this and on various proposed means of credit controls, such as special Reserve requirements.

"Committee Chairman PATMAN admitted no easy solution to problems which he labels as immense. He added that 'only one result' of the present deliberations 'can be confidently predicted: That is, that the fundamental issues involved will be found vastly too complex to permit of facile generalization.'"

"[From Banking (the official journal of the American Bankers Association) of May 1952]

"THE PATMAN HEARINGS HIGHLIGHT A PERMANENT PROBLEM

"(By Raymond Rodgers)

"In the 46th verse of the 1st chapter of the Gospel according to St. John, the categorical question, 'Can anything good come out of Nazareth?' is asked, and the answer is, 'Come and see.' It is with such a spirit that bankers should study the hearings of the Patman Subcommittee on General Credit Control and Debt Management of the Joint Committee on the Economic Report, to gage their probable consequences to banking and business.

"The importance of these hearings can hardly be overemphasized. Their importance and basic scope is indicated by the title of the two volumes giving the replies and excerpts from the replies to the questionnaires sent out last October; Monetary Policy and the Management of the Public Debt—Their Role in Achieving Price Stability and High Level Employment. The 1,302 pages of formal testimony contained in these 2 volumes might well be made required reading for all bankers and advanced banking students.

"The committee

"To say that the results, so far, at least, have been a pleasant surprise to those in banking is indeed an understatement. The same ground had been covered 2 years earlier by Senator DOUGLAS and his subcommittee, Dr. Henry C. Murphy, the economist to the present subcommittee, who largely determined the witnesses and character of the hearing, had been identified with the Treasury. And most disquieting of all, the chairman, Representative WRIGHT PATMAN, had, through long years of earnest effort, achieved a reputation, second to none, as an inflationist. In fact, his reputation as an inflationist was so well-established that many could think of him only in the terms which Emerson once used when he said of another, 'What you are * * * thunders so that I cannot hear what you say.'

"Despite the fears, the conduct of the chairman has been, in the words of observers, impeccable. He has not tried to force his opinions on the subcommittee but has been willing to let the witnesses be heard. Whether this is because he has been subdued by the unanimity of the public opposition to chaining the Federal Reserve to the Treasury chariot, or is from some other reason, the fact is that a hearing and not an investigation is being conducted. Dr. Murphy and the staff, likewise, are to be congratulated. They have done a searching, comprehensive, competent, and fair job. Senator DOUGLAS and the other members of the subcommittee who have special competence and experience in the field of banking and credit may be expected to make the most of the wealth of material presented."

"[From Banking (the official journal of the American Bankers Association) of May 1952]

"WASHINGTON

"(A monthly column reviewing Washington developments of interest to bankers)

"(By Lawrence Stafford)

"Whether or not the Patman committee proposes to change any of the rules of debt and credit management, this Capital generally appraises the operation of that committee as constructively useful.

"Sometime this month the Patman group will attempt to draft a report and possible recommendations for the congressional Joint Committee on the Economic Report, of which it is a subcommittee.

"Supplementing the similar background covered some time ago by the Douglas committee, the Patman committee has illuminated the current monetary picture with a wealth of authoritative background. That background has included both facts and opinions. The opinions have been those of the outstanding governmental and financial leaders of the land.

"This inquiry well planned

"What is said to make this committee's inquiry especially valuable is its technique of operation, devised by Dr. Henry C. Murphy, chief of staff, and Representative PATMAN. They designed questionnaires especially adapted to bringing out the viewpoints of various persons and occupations—Federal debt managers, Federal monetary managers, bank supervisors, bankers, insurance men, Government bond dealers, and so on.

"The questions were pointed—almost to the stage of embarrassment. Yet the persons questioned were given considerable time to order their thinking on these controversial issues. This remarkable technique appeared to be adapted to the complex subject matter. In the more usual case, persons called into public hearings, even on an inquiry mission of the sort the Patman committee undertook, must almost improvise their answers on the spot.

"So the public hearings were taken after the written answers were filed, and hence on further, more mature reflection.

"Basic harmony found to exist

"Fundamentally, the oral hearings made no basic, or even important modification from the underlying situation as reported on the written questionnaire, detailed in the April issue of Banking. That basic situation is that there exists, after the ordeal of trial by experience and questionnaire, a basic harmony among monetary managers, and in particular between the Treasury and Federal Reserve Board.

"The Board's return to orthodox thinking and toward reliance on such orthodox monetary mechanisms as open-market operations and the discount rate was further confirmed. So was the Board's abandonment of its predilection for the pegged-market days, to embrace new, novel, and untried monetary mechanisms.

"During the hearings the only important difference between the Reserve Board and the Treasury was whether there should be established a domestic advisory council of leading officials on monetary matters, somewhat similar to the National Advisory Council on International Monetary and Financial Problems.

"Secretary Snyder definitely thought this would be helpful in effecting a greater coordination among all Federal officials on credit and monetary control. The Board was fearful of it, particularly that the Reserve might be overweighted in such a council.

"Committee work was educational process

"As Senator RALPH E. FLANDERS, Republican, of Vermont, said, the committee's opera-

tions gave everybody an education, not merely the professionals in money management and debt operations, but the general public as well.

" 'The chief value of the inquiry has been to remove the veils of mystery and misconception that have obscured the real nature and purpose of the Federal Reserve from public understanding,' he said.

"Thus, the committee adduced ample testimony to point up the limitations of monetary policy as an instrument for achieving wonders in controlling inflation or deflation.

"Handling public debt an art

"Witnesses, such as A. Lee M. Wiggins, former president of the ABA, and former Under Secretary of the Treasury, made it clear that the business of handling the public debt and operating monetary controls was something beyond a tight mechanistic concept and something of an art, even if Mr. Wiggins did not quite express it that way.

"Other witnesses freely criticized the Government, and accused the administration of devising numerous programs which made for inflation, regardless of what steps were taken ostensibly to control inflation.

"For this liberality, freedom, and diversity of testimony, Chairman PATMAN is freely given large credit. Mr. PATMAN is said to have refused no single witness a chance to testify. Although he had given the impression of hostility to the Federal Reserve prior to the course of hearings, the Representative's conduct impressed observers as something between that of a fair judge who wanted to hear everyone completely out, and an earnest student anxious to learn every side of each controversial issue.

"Patman modifies views

" 'I am highly pleased with the job which was done by the Federal Reserve and the Treasury at these hearings,' said Mr. PATMAN.

" 'What pleased me was that these official witnesses supported the Employment Act of 1946 as national policy proclaimed by Congress, an act of which I was the author in the House.

" 'This act sets forth a good policy, although I'll admit it could be strengthened. I think perhaps it gives too much emphasis upon the inflationary side of Government action, and does not emphasize sufficiently the necessity at times of deflationary action and the further need for protecting a sound dollar.'

"Mr. PATMAN for a long time had favored having the Federal Reserve banks, in gradual stages, absorb about half the Federal debt so as to save the payment of interest. 'I still think this could be done, and save the payment of $3 billion annually of interest, but I am not going to advocate it. I am not going to advocate it at the present time because I am frankly afraid to trust Congress. The Congress is inclined to take the easy way.'

"The Texas Representative noted that, when Congress refuses to raise taxes and provide for tough price control, it is not a time to lessen the burden of the Federal debt.

"Wolcott comments

" 'For the first time there has been outlined in one place, for the benefit of those who care to read about it, the whole panoply of moves which the Roosevelt and Truman administrations have sponsored over nearly two decades to promote—to consciously promote—inflation in the United States,' said Representative JESSE P. WOLCOTT, Republican, Michigan, another member of this committee.

" 'One of the benefits of the Patman committee hearings is that some highly credible testimony has at last been brought to bear on this point. I think that the committee's inquiry has been useful on that score in showing that the administration has been more concerned with deflecting from itself and placing upon this or that element of the economy, the bankers or others, blame for the inflation it has caused. This has been the administration's true aim, rather than one of dealing effectively with inflation'."

"[From the Burroughs Clearing House (House organ of the Burroughs Adding Machine Co.) of April 1952]

"A VERITABLE 'BRITANNICA OF BANKING'—THE PATMAN HEARINGS—THEY LAY THE GROUNDWORK FOR A CONGRESSIONAL REVIEW OF THE ENTIRE BODY OF FINANCIAL AND MONETARY LEGISLATION

"(By John H. Donoghue)

"When the Hatfields and the McCoys put away their muskets and struck up an agreement to live together in peace, it was natural for folks to wonder why they ever took to feudin' in the first place.

"The Congress of the United States reacted with similar curiosity when the Treasury Department and the Federal Reserve Board jointly announced, on March 4, 1951, that they had reached an accord, bringing to an end the dispute that lay between them.

"Why was an accord necessary? The question has weighed heavily on the minds of the key legislators who are responsible for writing the laws of banking and finance. Both the Treasury and the Federal Reserve Systems are creatures of Congress; both operate under its laws. If these two great institutions are found working at cross purposes and publicly disputing about it, does not the fault lie with the Congress itself for writing one law for the Treasury and a contrary one for the Federal Reserve?

"The product of these questions was the investigation conducted in March 1952, a year after the accord, by a subcommittee of the Joint Committee on the Economic Report. Beginning on March 10 and continuing daily throughout the remainder of the month, the hearings became popularly known as the Patman hearings since the chairmanship of the five-man bipartisan panel of Senators and Representatives was held by Congressman WRIGHT PATMAN, Democrat, of TEXAS. This title has helped to distinguish the present set of hearings from those conducted by the same subcommittee in 1951, during the chairmanship of Senator PAUL H. DOUGLAS, Democrat, of Illinois.

"The Patman hearings were by no means confined to a rehash of the Douglas committee's output. In fact, the real importance of the investigation is the groundwork which it has laid for a painstaking review of the entire body of fiscal and monetary legislation by Congress.

"The immensity of the task undertaken by Mr. PATMAN and his colleagues almost eludes comprehension. And the value of the record now compiled is likely to increase with the passage of years, for it serves as a background pattern of the Nation's foremost economic opinion, into which future monetary proposals and actions should be made to fit. It will be hard for anybody to offer a theory or scheme affecting public debt or private credit without finding the arguments for and against it already set forth in the Patman record.

"Therein lies the true value of the Patman research. It did not settle the variance of attitudes between the Treasury and the Federal Reserve, and nobody really expected that. But the investigation did assemble a very great number of competent judgments on the relative importance of various factors that affect the economic welfare of the people, and also a large variety of informed guesses as to what will be the outcome when this or that policy is adopted in the face of several hypothetical situations that may arise in the Nation's economy.

"Appropriately, the first witnesses who peared before the committee were the principal fiscal and monetary officials of United States. John W. Snyder, Secret of the Treasury, and William McChes Martin, Jr., Chairman of the Board of G ernors of the Federal Reserve System, the key managers whose policies were un scrutiny—one managing debt, the ot credit. The importance attached to the timony of these two key witnesses is obvi from a glance at the two-volume compe dium of questionnaire replies issued by committee shortly before the hearings beg Volume No. 1 of 600 pages is devoted to views expressed by these 2 men. Volu No. 2, also 600 pages, is given over to other 1,000 persons, including Federal serve bank presidents and the Presiden Council of Economic Advisers, to whom committee addressed opinion-seeking qu tionnaires.

"The major message of the hearings the fore, was expressed on March 10 and 11 wh Secretary Snyder and Reserve Chairm Martin occupied the witness chair in ornate, marble-lined Senate caucus roo Both of these sessions lasted full days they set the pitch for the remaining 3 we of hearings.

"Confronting Secretary Snyder and Boa Chairman Martin was a panel of five season interrogators. The one they kept their e on, however, was Subcommittee Chairm PATMAN, a debater of great skill. It was PATMAN who vocally declined to join chorus of congratulations when the Tre ury and the Federal Reserve announced burial of the hatchet.

"Four of the members were repeaters fr the former Douglas subcommittee: Mr. P man, Senator Douglas, Senator Ralph Flanders, Republican, of Vermont, and Re resentative Jesse P. Wolcott, Republican Michigan. The fifth subcommittee mem was Representative RICHARD BOLLING, Dem crat, of Missouri, taking the place of deceased Representative Frank Buchanan.

"Sharing the spotlight with Chairman P MAN was Senator DOUGLAS. He came to hearings not to learn but to teach, and this respect he differed markedly from Cha man PATMAN. Mr. DOUGLAS is a confirm believer in the efficacy of traditional mon tary measures in controlling the cycli movements of the economy.

"Before the hearings began the Illin Senator had it all worked out that reason for the price inflation following Korean outbreak was the timidity of Federal Reserve Open Market Committ His doggedly held position is that the Fe eral Reserve could and should have refus to purchase the $3,500,000,000 of Gover ment securities that it actually acquir during the 8 months between the Kore outbreak and the March 4, 1951, agreeme with the Treasury. To be sure, Mr. Doug has not flatly declared that a cutoff Federal Reserve purchases would have fo stalled the damage done to the value of United States dollar during those mont But he does stand firmly on the ground th the Federal Reserve, by continuing its sec rity buying to the tune of $3,500,000,0 must accept a goodly share of the respon bility for permitting the inflation to t place, for it was this $3,500,000,000 of Fe eral Reserve credit that turned up in jump from $16 billion to $19 billion of me ber bank reserves during the same peri It was a short leap for the Illinois Sena from this $3 billion increase of bank reser to the $10 billion increase of bank loa Thus, briefly, runs the Douglas theory what happened in the inflationary mon following Korea.

"Senator DOUGLAS spared no effort to m Secretary Snyder and Reserve Board Cha man Martin become converts to his theory

post-Korean inflation. At one time when Secretary Snyder was on the witness stand, the Illinois Senator began dumping glassful after glassful of water into a tumbler before him, shouting for more water and generally inundating the hearing room, to illustrate the proposition that an increase of money and credit supply is disastrous.

"Secretary Snyder refused to acknowledge that he had ever insisted that the Federal Reserve support the market for Government securities. Even under the most persistent questioning, he would go no further than to acknowledge that a stable market is desirable for Government financing. As for conflicts of objectives with the Federal Reserve, he insisted that these could be worked out by cooperation.

"Mr. Snyder added one proposal to his testimony, possibly for the purpose of giving the subcommittee something to chew on, in a suggested money and credit advisory board which would assist the heads of the Treasury and the Federal Reserve in their efforts to cooperate. He was careful to specify that the advisory board would have no power but to advise.

"Chairman Martin, of the Federal Reserve, warmly defended the March 1951 accord. He had a personal feeling in the matter, for he was the Assistant Secretary of the Treasury who spent weeks of day-and-night toil in the negotiations that led up to the agreement.

"It became apparent during the Martin testimony that some fairly sharp exchanges of opinions took place between the Federal Reserve Board and a number of the Nation's leading bankers prior to March 1951. Senator DOUGLAS called upon Reserve Chairman Martin to produce a number of letters from bankers and others urging the Federal Reserve Board to increase interest rates long before it was actually done. When Mr. Martin protested, the five subcommittee members agreed to look over the letters in private.

"The importance of the bankers' letters is that they support the Douglas estimation of the effectiveness of monetary restraint as the traditional and legally intended method of regulating the relation of money supply to demand. He needed this support because he was not getting very much from the two top witnesses, Snyder and Martin. It was obvious that a majority of the Federal Reserve Board, during the months immediately after Korea, did not agree with the bankers and economists who insisted that interest rates be moved upward—and promptly.

"Thus, it was the theory of monetary controls that was on trial. As witness after witness came to the stand, additional new attitudes and appraisals came to light. But there was full agreement on one thing—that Senator DOUGLAS had accurately pinpointed the issue by asserting, and inviting denials, that inflation would have been materially lessened if the Treasury-Federal Reserve accord had taken place many months earlier."

"[From the Commercial and Financial Chronicle of April 10, 1952]

"WASHINGTON AND YOU

"WASHINGTON, D. C.—Now that the Patman committee has concluded its hearings about the Federal Reserve System and Treasury financing, there is a unanimous agreement that Representative WRIGHT PATMAN, Democrat, Texas, was the greatest surprise of the entire hearing.

"Mr. PATMAN had long advocated a shifting of about half the Treasury debt to the Federal Reserve to save interest, and he was an advocate of subordinating the Federal Reserve to the national administration.

"The Congressman is unlikely to renew these recommendations, and his long study particularly is not expected to result in even a proposal to directly subordinate the Federal Reserve to the Treasury or the administration. He may propose some ideas about greater supervision and liaison which will be unpalatable to the Federal Reserve, but he is expected to stop short considerably of submerging the independence of the Federal Reserve in making monetary policy.

"Actually, Representative PATMAN gave the clear impression of having definitely learned something by the hearings, and of having profited by what he learned in modifying his views. Mr. PATMAN has become a more mellow man.

"What has pleased witnesses before the Patman hearings, however, has been the liberality with which he listened to views contrary to those he was alleged to hold. The chairman of this special committee took pains to let any and all advocates of all points of view have their full say, and he did not decline a hearing to a single individual who asked to appear. Far from turning the hearing into a drumhead court for 'funny money,' Representative PATMAN appeared to most witnesses as a rather mature, subdued, and considerate judge who wanted to hear all parties out."

"REPORTING ON GOVERNMENTS

"(A weekly news service on U. S. Government securities)

"NEW YORK CITY,
"February 23, 1952.

"DEAR SIR: The Patman subcommittee's public hearings on debt management and fiscal policies—past, present, and future—will open March 10. Top Government and Federal Reserve officials, leading bankers, economists, life insurance company executives, etc., are slated to testify, to answer the most searching questions on credit policy and Reserve-Treasury relationships publicly. The hearings are scheduled to last about 3 weeks. The program calls for a report by the subcommittee to the full Joint Committee on the Economic Report by May. In the words of Dr. Henry C. Murphy, economist to the Patman subcommittee, 'This will be the biggest inquiry into our monetary system since 1911—the inquiry 41 years ago which led to the creation of the Federal Reserve System.' In the words of another Washington official who has been intimately connected with the subcommittee's preparations, 'This will be quite a show and in its more serious and fundamental way, will rival any of the congressional probes we've seen in the last couple of years.' And every effort will be made to focus attention on the debates and issues involved, to alert the public to the probe's importance.

"On October 12, the subcommittee sent its questions on general credit control and debt management to about 1,100 sources. For weeks, a staff has been processing the answers and within a few days a compendium will be published—including the answers from Federal Government and Reserve officials in full and summaries and extracts of the others.

"The book will run about 1,500 pages. The Reserve's answers alone are sufficient to fill an ordinary-sized book.

"This in itself is a monumental piece of work. One official who has studied the answers goes so far as to state, 'After this book is available, every textbook on debt management and fiscal policy will need rewriting for this is history as it is being made.'

"You who are reading this bulletin are the men to whom this inquiry is addressed. You are the participants in this financial drama; you are the audience, too. A large number of you received and answered the subcommittee's questionnaire. And while few of you probably will read the 1,500-page compendium and few of you will be able to attend the public hearings, you are and will be vitally involved in what is going and will go on.

"Thus, this letter is written as a preliminary report to give you the background and to outline the issues before the public hearings start. There has been some attempt to minimize the significance of the subcommittee because of the likelihood that no legislation will result from its hearings. This is akin to missing the forest because of the trees. We repeat again the opening lines of our letter of September 1, 1951: 'The power-policy conflict that raged between our Treasury and Central Bank during the first half of this year has a counterpart in virtually every country of the Western World. Few investors realize that they have been—and still are—in the middle of one of the great fiscal debates of the century. Nevertheless, this is a hard, sharp fact. The final word on the Treasury-Central Bank controversy in our country has not been written.'

"Those words hold today as they held then. Within this framework of reference, we submit in this letter (a) quick facts about the subcommittee and the questionnaire to help you avoid confusion; (b) an analysis of the two great questions involved; (c) a preview of the debate expected between supporters of the Reserve and supporters of the Treasury; (d) observations and forecasts.

"Quick facts about the subcommittee

"This is the second full-dress inquiry into fiscal and debt management policies and problems in less than 3 years. The first inquiry was managed by a subcommittee headed by Senator PAUL H. DOUGLAS, of Illinois, and resulted in the now-famous call by DOUGLAS for a reaffirmation of the Reserve's independence regardless of the dislocations that would follow. There is no question that the Douglas subcommittee's report played an important part in influencing Reserve psychology in late 1950 and early 1951.

"Now this inquiry takes place after the unpegging. An entirely different atmosphere exists. This is a period of remobilization. This is the start of a phase of deficit financing. In 1949, those testifying in favor of an unpegged market could only guess what might happen. Now they have a record to which to point.

"This subcommittee consists of: Representative Wright Patman, Democrat, of Texas, as chairman; and Senator Douglas, of Illinois; Senator Flanders, of Vermont; Representative Bolling, of Missouri; Representative Wolcott, of Michigan.

"Because of the makeup of the committee, both a majority and a minority report may result. It's improbable that DOUGLAS and PATMAN could compromise their own viewpoints to the extent permitting a report which both could sign with satisfaction.

"As important to you as the hearings will be the 1,500-page compendium of answers to the Patman questionnaire. Printed in full will be the answers of the Treasury Secretary, the Reserve Board Chairman, the Council of Economic Advisers, and other Government officials. There will be summaries and extracts of the rest. The Douglas subcommittee had nothing as complete as this with which to work. We've never had anything like it either.

"The two great issues at stake

"There has been much emphasis in newspaper and magazine editorials in recent months on PATMAN's bias for the Treasury, his supposed hate for the Federal Reserve, his oft-expressed inclination toward cheap and ample money. There also has been considerable sniping at his choice of Murphy as economist, for Murphy was a top economist for the Treasury through the war years and the angle mentioned is that Murphy's sympathies would incline toward the Treasury.

"This is awfully superficial stuff, though. Neither PATMAN nor Murphy could—even if they would—stop those testifying from stating their beliefs and highlighting the conflicts and issues at stake. Digging beneath the superficialities, here are the two great

questions which will be brought out at the hearings and which are of such deep concern to you:

"(1) How shall monetary policy in this country be formulated? There are various factions—such as the Treasury, the Federal Reserve Board, the President's Economic Council, groups of private bankers and insurance company executives, and the inclinations of each often differ, often are in obvious conflict.

"Who, then, shall be dominant? Why? What shall be the relationship among them, how shall it be defined, how shall it be maintained, and in times of conflict particularly, where shall the ultimate control lie?

"This truly is basic. And for many of you, the question itself is relatively new. There was a long period, for instance, during which private bankers pretty much called the tune ('Wall Street settled it'). There was a period during which the New York Reserve Bank seemed more powerful than the Federal Reserve Board in Washington. There was a prolonged era during which the Treasury was completely dominant (you lived through this one). There was the period during which insurance companies were liquidating ineligibles on so gigantic a scale that one might even tag that the phase of insurance-company control. Now there's a so-called accord, and the question is surrounded by obscurities. Who? How? Why?

"If by chance you consider this theoretical, just ponder for an instant the practical applications. Were the Treasury in control today, 2½ percent would be the long-term rate, par would be the bottom price, 4 percent VA mortgages hardly would be going begging, your entire investment policy would be different. If the conflict between the two fiscal giants flares up again—and it very well may—your portfolio policy would be directly involved.

"It would be a near miracle if the Patman subcommittee's hearings were to result in any real settlement of this problem. But they surely will highlight the issue and by so doing, give us needed guidance.

"(2) And second, what shall be the policy now? Neutrality on the part of the Reserve, permitting prices to fluctuate in a wide range, and the market to decide the trend of interest rates? Greater recognition of the Treasury's financing-refunding problems and a modification of the Reserves program? Should the Treasury go out and compete for long-term funds, regardless of cost? Should it continue emphasizing short-term financing despite the dangers?

"As participants in the market, you understandably might be more interested in the anwers to this question. Throughout World War II, your problem as far as the Government market was concerned, was of kindergarten proportions: rates were set, huge bank financing was the rule, you simply played the pattern of rates. Now you're playing in the postgraduate league, and you realize that whatever answers are made to the second question will affect your actions in every other high grade market, and your income-profits position down the line.

"The debate between the Treasury and Reserve

"We have been amazed when we have heard presumably informed investors speak of the March 1951 accord as settling the power-policy conflict between the two fiscal agencies. The accord decided very little; it met the short-term but not the long-term issues; in military parlance, it was an armed truce, not a peace. At the very top level, Secretary Snyder and Reserve Board Chairman Martin are friendly, but Snyder, as we have reported to you, is not convinced that what was done was right and is not resigned to the changes. At the lower technical and staff levels, the experts are in frequent consultation, and thus there is better understanding of the problems on each side, but understanding is far from a synonym for agreement.

"The answers of the Reserve to the Patman questions will be an exhaustive argument for an independent Federal Reserve System able to pursue alternative programs of restraint, neutrality, and ease as economic conditions dictate. And the Reserve will urge understanding of the fact that such programs must affect interest rates for the Government as well as for private lenders, and when the Treasury borrows, it must compete for and hold its place in the market.

"The answers of the Treasury to the Patman questions will be an exhaustive argument for a system under which the Reserve cooperates with the Treasury to maintain confidence in the Government market and in Government credit. And the Treasury will urge understanding of the fact that it is charged with the tremendous responsibility of financing and refunding in multibillion-dollar terms, and every tiny interest rate rise adds tens of millions to debt costs.

"This will be just a starter. And the opinions we've seen run all the way from a castigation of the Reserve to a denunciation of the Treasury—with every shading in between. The debate, we repeat, is in its infancy.

"Observations and forecasts

"It's most improbable that there will be any legislative results; this isn't a legislative committee, and that is not an objective. But the impact of the debate will be deep and will grow with time, we believe.

"From what we have read and heard, we would anticipate considerable clarification of the present situation and probable actions just from the discussions and the answers to the questionnaire. We hope to submit digests of the important answers after we have had time study the 1,500-page book.

"Today, the accord is working—not excellently, but fairly well. Compromises are to be expected in the near future, too, so the real test of the relationships may be postponed for a while.

"But a real test will come. It certainly will come if there is a recession followed by another manufactured inflationary upsurge, and then the Reserve must meet what it deems its responsibilities while the Treasury is financing a deficit. Then issue (1) will be on the table for all to see. And that's why we so strongly recommend that you follow these hearings, that's why we believe this inquiry will turn over of great importance.

"Yours very truly,

"S. F. PORTER."

"[A news service on U. S. Government securities]

"THE GOLDSMITH WASHINGTON SERVICE,
"March 15, 1952.

"First week of Patman subcommittee hearings most interesting in my 15 years of reporting. Testimony covered 553 typewritten pages—open hearings will last 2 and maybe 3 weeks longer. Write Joint Economic Committee for schedule, anybody may attend. We hope to hook up important testimony last week with that in coming weeks.

"Chairman PATMAN was praised Monday by committee members and Snyder and Tuesday by Martin for excellent work of Henry Murphy in working on and cooperating with Federal Reserve and Treasury and preparation of such fair answers to questionnairs. And PATMAN has been praised by all witnesses so far for judicial conduct of hearings—but there are 3 to 4 or 5 weeks to go—some question motives and think conduct could change to free-for-all—which might have market influence particularly if general news is dull and daily press coverage more complete.

"This week Senator DOUGLAS carried the ball and pressed Secretary Snyder—Federal Reserve Chairman Martin—and Council of Economic Advisers Chairman Keyserling to answer whether (1) Federal Reserve purchases of $3,500,000,000 Government securities in the 8 months following Korea—potential basis for $18 billion commercial bank loan expansion and the actual increase of $10 billion commercial bank deposits were materially responsible for the 18½ percent increase in prices. (2) Conversely whether failure of the Federal Reserve to purchase Government's on balance since the accord has been a major factor for inflationary lull since accord was adopted on March 5 and Government securities market unpegged.

"At the beginning of the hearings Monday morning Senator DOUGLAS said Snyder's answers were entirely unsatisfactory, but in the afternoon Snyder conceded that he hoped 'that we can avoid any situation like that in the future.' Felix Belair's story summarized that hearing more fully in New York Times, March 11.

"DOUGLAS also criticized Snyder for pages 72, 73, and 74 in part I of Treasury answers to the questionnaire, which he said impugned the integrity of former Chairmen Thomas McCabe and Marriner Eccles, and asked PATMAN that they both be asked to appear before the committee. See paragraph 5, page 3, or last letter. PATMAN invited them, reporter later that the time allotted them was satisfactory—but had not received unqualified acceptance. They may not be heard till end of scheduled hearings and McCabe and Eccles could prolong hearings for several days, and then Snyder and Martin might ask time for rebuttal—unlikely. Meanwhile pressures will be brought to bear to have them testify or withhold testimony.

"On Tuesday morning Martin had excellent prepared statement—only 5 pages—with supplementary brief of important answers 7 pages. Write Elliott Thurston, Federal Reserve Board, for copies of each."

"MARCH 29, 1952.

"Last week I heard the greatest debate of my lifetime between Senator PAUL H. DOUGLAS and the Chairman of the Council of Economic Advisers. They debated the fundamentals of economic policy. Involved was the difference between socialism and capitalism—the question of whether to control the economic system by monetary controls or so-called overall shotgun controls as opposed to direct controls was raised."

"[Excerpts from statements made in the hearings]

"HON JOHN W. SNYDER, SECRETARY OF THE TREASURY

"The hearings which are beginning this morning represent the culmination of a number of months of intensive study and preparation of replies to the questions raised by your subcommittee. Anyone who has worked on this complex project cannot help but be impressed with the scope and searching nature of the questions which were asked. In our already heavy work schedules it was not easy to find the time to set down the pros and cons of the many issues presented for generalized discussion in the questionnaire. In view of the importance of the study, however, we felt that time must be found; and I am very glad that we were able to give full and considered replies to all of the questions submitted to us.

"I believe that everyone who reads the written replies received by the subcommittee will feel, as I do, that the body of material which you have assembled will be of great value in the field of debt management and monetary policy for many years to come. Not one point of view, but many points of view—I am almost tempted to say all points of view—seem to have been elicited by the subcommittee in the written answers to the

various questionnaires which were sent out. A policy record, in the most fundamental sense, is not only a record of decisions made and actions taken—it is a record of appraisals, of conclusions, and of judgments. Those who replied to the subcommittee's questionnaires, it seems to me, have attempted to be fully responsive in this fundamental sense.

"I want to say here, Mr. Chairman, that I do hope that these 1,300 pages will be read with a great deal of care, and carefully digested by all people who are charged with any part of the preparation of the studies and the formulations of decisions in connection with debt management and monetary policies.

"I want to add my words to those of your colleagues who have addressed their remarks previously to the complimentary appreciation of what has gone ahead in laying the groundwork for these hearings. I think that we could well say that this has been the most carefully and most studiously prepared hearing on this subject that we have experienced. I am extremely hopeful that out of this fine foundation will grow discussions and studies that will be extremely helpful in the great problems we have in the future (hearings, pp. 7–8)."

"HON WILLIAM M'C. MARTIN, JR., CHAIRMAN, BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

"In coming before you today I should like to express what I know has been in the minds of all of us in the Federal Reserve System in preparing the answers to your questionnaire. We have welcomed this opportunity to put down on paper our concepts of what our function is in the governmental structure and in the economy. You gave us a heavy load of homework and we have all profited by it. I know that for me it has been more than a refresher course—it has been a liberal education in what I prefer to call reserve banking, rather than central banking operations. The task of preparing answers to the comprehensive and searching questions has been formidable and I will not pretend that I approached it without some reluctance. Now that the task is done and the results are published I realize how worth while has been the time and effort expended not only by those of us in the System but by the many others to whom you addressed questionnaires. Irrespective of the conclusions you may reach as a committee, you have assembled a body of information that I think will prove to be invaluable for a long time to all who are interested in the special problems of general credit control and debt management.

"Beyond that, however, we have all genuinely welcomed this inquiry. The Federal Reserve System is a servant of the Congress and, through you, of the people of the United States. You created it, you can abolish or change it. Our task is to carry out your will and it is our duty to lay before you all the facts at our command for which you ask and to give you our best judgment on these important matters (hearings, pp. 73–74)."

"A. L. M. WIGGINS, CHAIRMAN OF THE BOARD OF DIRECTORS OF THE ATLANTIC COAST LINE RAILROAD CO. AND THE LOUISVILLE & NASHVILLE RAILROAD CO.; FORMERLY UNDER SECRETARY OF THE TREASURY; FORMERLY PRESIDENT OF THE AMERICAN BANKERS ASSOCIATION

"The questionnaires and the answers that were sent out and received, in my opinion, constitute the most valuable collection of thinking in the field of money, in money management, problems of debt management, and other collateral questions that I have found anywhere.

"I have read the entire 1,300 pages of this report since it was published about—since I got a copy about 10 days ago, and it is very instructive and illuminating and I congratulate the committee on the character of the questions (hearings, p. 220)."

"MARION B. FOLSOM, TREASURER OF THE EASTMAN KODAK CO.; CHAIRMAN, BOARD OF TRUSTEES, COMMITTEE FOR ECONOMIC DEVELOPMENT

"Forward steps in money and debt policy during the past year have been due to improved appreciation of the fundamental issues. The investigation conducted by the subcommittee under Senator DOUGLAS made a major contribution to this improvement. We are confident that the present investigation will make a similarly important contribution to better understanding and thereby to better policy (hearings, p. 296.)"

"J. CAMERON THOMSON, PRESIDENT, NORTHWEST BANCORPORATION; CHAIRMAN, COMMITTEE ON MONETARY, FISCAL, AND DEBT POLICY, COMMITTEE FOR ECONOMIC DEVELOPMENT

"We have found the problems of monetary policy exceedingly difficult. The materials you have already published have demonstrated that the work of your committee will contribute a great deal to our study, and we are happy to participate in your investigation.

* * * * *

"We are confident that the work of your subcommittee, like the work of its predecessor subcommittee under the chairmanship of Senator DOUGLAS, will be a major step in the development of a successful program for the avoidance of serious inflation or depression.

* * * * *

"We were talking, before the hearing started, about how available these reports are going to be made. I think along the lines you are talking about these reports ought to get very wideapread circulation. I am going to get some for each officer in our corporation. They put together a lot of valuable information and you have drawn out answers from people that have not been had in recent years. The record of the two hearings is the best source of information as to the developing monetary policies of the country and the value of these powers, and I believe they should get as wide a circulation as possible (hearings, pp. 296, 305, 315).

"AUBREY G. LANSTON, PRESIDENT, AUBREY G. LANSTON & CO., UNITED STATES GOVERNMENT SECURITY DEALERS

"Many have commented on the public service rendered by the committee's publication of two volumes on the subjects of debt and money management and on the exceptional work of the staff headed by Dr. Murphy and on the high quality of the replies. It is a real achievement (hearings, p. 389)."

"DONALD B. WOODWARD, SECOND VICE PRESIDENT, THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK

"I want to congratulate this committee and its staff director most warmly on the invaluable information you have collected and published. Your two volumes are a classic, and they and the hearings enrich the literature immeasurably. Everyone is in your debt. I am deeply honored to be asked to appear before a body that has so distinguished itself (hearings, p. 602)."

"WESLEY LINDOW, VICE PRESIDENT, IRVING TRUST CO., NEW YORK CITY

"You have made a fine contribution in publishing the two volumes based on the answers to your questionnaires on monetary policy and the management of the public debt (hearings, p. 629)."

"ROY L. REIERSON, VICE PRESIDENT, BANKERS TRUST CO., NEW YORK CITY

"The questions posed by this committee in its questionnaires were excellently designed to point up the issues encountered in the difficult task of determining debt management and credit policies under inflationary conditions, and the answers will be an invaluable source book of material in this field for many years to come. The full and free exchange of ideas at these hearings is helping to illuminate some areas not wholly covered in the questionnaire and to discuss problems raised by some of the answers received. It is a privilege to be here (hearings, pp. 636–637)."

"H. CHRISTIAN SONNE, CHAIRMAN OF THE BOARD, AMSINCK, SONNE & CO., CHAIRMAN, BOARD OF TRUSTEES, NATIONAL PLANNING ASSOCIATION

"I welcome the broad-gaged examination of the problem, undertaken by this subcommittee. The material published in the background volumes in itself is a treasure of information and is very valuable for every student of the subject.

"At the request of the Joint Committee on the Economic Report, the NPA sponsored a meeting on fiscal policy of a group of prominent economists from all over the country in September 1949. In October 1951 we had a similar meeting on monetary policy. Each of these meetings resulted in a statement on which the majority of the participants agreed. I was pleased to note that the statement resulting from NPA's October 1951 conference is included in one of the background volumes published by this subcommittee (hearings, p. 844)."

"MONETARY POLICY AND THE MANAGEMENT OF THE PUBLIC DEBT; THE PATMAN INQUIRY[1]

(From the Review of Economics and Statistics, May 1953—Harvard University Press)

"(By James Tobin, professor of economics, Yale University)

"The documents produced by the Patman inquiry are a remarkable contribution to monetary literature. The first title, 'Compendium' for short, consists of replies to questions propounded by the committee. The first volume of the compendium contains the careful answers of the Treasury and the Board of Governors of the Federal Reserve System to the lengthy questionnaires submitted to them. The second volume includes replies from the presidents of Federal Reserve banks, the Council of Economic Advisers, Federal and State bank-examining authorities, the Reconstruction Finance Corporation, economists, bankers, life-insurance executives, and dealers in United States Government securities. The questionnaires varied with the respondent and were designed to obtain both factual information and expressions of opinion. The answers provide a wealth of legal, institutional, statistical, and historical information. Whether you wish, for example, a complete chronology of Federal Reserve policy actions since 1914, a summary of the reserve requirements of nonmember banks, a world survey of Treasury-central bank relationships, or a study of

---

[1] Monetary Policy and the Management of the Public Debt: Their Role in Achieving Price Stability and High-Level Employment.

1. Replies to Questions and Other Material for the Use of the Subcommittee on General Credit Control and Debt Management, Joint Committee on the Economic Report, 82d Cong., 2d sess. Washington: U. S. Government Printing Office; 1952; two parts. Pt. 1, pp. xvii+632. Pt. 2, pp. vii+633–1302.

2. Hearings before the Subcommittee on General Credit Control and Debt Management, Joint Committee on the Economic Report, 82d Cong., 2d sess., March 10–31, 1952. Washington: U. S. Government Printing Office; 1952; pp. v+993.

3. Report of the Subcommittee on General Credit Control and Debt Management, Joint Committee on the Economic Report, 82d Cong., 2d sess. Washington: U. S. Government Printing Office; 1952; pp. vi+80.

the density of banking offices relative to population in the several States, the Patman compendium is your source. The replies also provide a variety of opinion, comment, and theory concerning the role of monetary policy in the postwar United States economy.

"The second title, 'Hearings' for short, reports oral testimony on these same subjects and includes also numerous documents and written statements submitted to the committee. The committee heard testimony from the principal contributors to the compendium and from many others; the witnesses represented a wide variety of experience, interest, and viewpoint. The hearings include four panel discussions on aspects of monetary policy. Two of these, 'How should our moneatry and debt-management policy be determined?' (pp. 747 ff.) and 'What should our monetary and debt management policy be?' (pp. 685 ff.), are especially deserving of the attention of the reader who can only hit the high spots of these volumes.

"The third title, 'Report' for short, gives the findings and recommendations of the committee majority, with dissenting observations by Senator DOUGLAS. The report is an admirable review of the events investigated by the committee; and its findings on the issues discussed in the compendium and hearings are, in my opinion, well balanced and moderate. For this report, and indeed for the skillful design of the whole inquiry, there can be no doubt that Henry C. Murphy, the committee's economist, deserves tremendous credit.

"It is patently impossible for a review to do justice to the masses of material in these three documents. I hope I have given some idea of their scope. For the rest, I shall confine myself to three major topics of the committee's inquiry: (1) the Treasury-Federal Reserve conflict, (2) the theory of the operation of monetary controls, (3) the place of monetary restriction in an anti-inflationary program.

"Drama: The Treasury-Federal Reserve conflict

"The struggle between the Treasury and the Federal Reserve gave to monetary theory and policy a dramatic interest which economic issues seldom achieve. The drama is now over. The accord of March 1951 and the Patman inquiry were its concluding acts. The advent of new leadership in the Treasury makes it unlikely that the struggle will be resumed.

"As the last act of the drama, the Patman inquiry was anticlimactic. The Douglas committee, which investigated the same subject in 1949, had strongly criticized the Treasury and had recommended Federal Reserve independence in the formation of credit policy. This token of congressional sentiment, even though the mandate to the two agencies favored by Senator DOUGLAS was never passed, may well have stiffened the Federal Reserve in the subsequent conflict. (See hearings, p. 535.) The Patman investigation, it was widely predicted and feared, was to be the Treasury's day of revenge and a challenge to the independence of the Federal Reserve. Nothing of the sort happened. The inquiry only consolidated the victory the Federal Reserve had already won in March 1951. Representative PATMAN conducted the inquiry, so far as a reader can discern, with the utmost fairness and impartiality. Although he was widely regarded beforehand as an "easy money" man, he gave no sign of dissatisfaction with the accord. He proved to be less interested in issues of monetary policy—except for selective credit controls, of which he strongly disapproved—than in emphasizing that the Federal Reserve System is a public agency responsible to Congress, not a chain of bankers' banks. Some of the organizational recommendations in the report reflect this concern, but none would significantly weaken the autonomy of the Federal Reserve.

"The extent of the Federal Reserve victory is indicated by changes in Federal Reserve attitudes on two proposals: one for an advisory council on monetary policy and one for granting the Board of Governors discretion to impose supplementary reserve requirements. In the days of its weakness the Federal Reserve had supported similar proposals. Now its spokesmen opposed them.

"In 1949 Chairman McCabe, of the Board of Governors, and the presidents of the Reserve banks indorsed the Hoover Commission recommendation for a national monetary and credit council to facilitate consultation among the Treasury, the Federal Reserve, and the major Federal credit agencies.[3] Such a council was one of the recommendations of the Douglas committee. In the Patman investigation, Secretary Snyder, who had given the plan only lukewarm support in 1949, revived the proposal. The Federal Reserve was now cool to the proposal, and Senator DOUGLAS even colder. Formerly the council was considered an opportunity for increasing Federal Reserve influence with executive agencies; now it was viewed as a threat to Federal Reserve independence. The Patman committee majority nevertheless recommended the establishment of a council by Executive order as an experiment.

"The shift of attitude on supplementary reserves is of greater importance. In 1947 the Board of Governors sought powers to require supplementary bank reserves in Government securities, as a step toward insulating the public debt from the interest rate fluctuations incident to a flexible monetary policy. As late as May 1951, 2 months after the accord, the report of the President's Four-Member Committee on this problem (Defense Mobilizer Wilson, Secretary Snyder, Chairman Martin of the Board of Governors, and Chairman Keyserling of the Council of Economic Advisers) stated, "Within a few days the Board of Governors will ask the Congress to consider definitive legislation providing for supplementary (reserve) requirements" (hearings, p. 132). The request was never made. By the time of the Patman inquiry, the Board of Governors had apparently been won over to the view of President Sproul of the New York Bank, who had always opposed the scheme. Federal Reserve spokesman were extremely cool to any innovation in reserve requirements. Practical difficulties which had not seemed insurmountable before seemed so now. Having waged and won a fight on the moral principle that you cannot have your cake and eat it too, the Federal Reserve was in no mood to look with favor on devices for reconciling flexibility of monetary policy and stability of Government securities prices. The committee majority did not agree. Representative BOLLING repeatedly inquired why the Board should not have supplementary powers over reserves as a standby even if they were not immediately needed, and he never got a good answer. The report favored granting such powers and pointed out that the time to provide them is precisely when they are not needed. But in the absence of a specific proposal by the Federal Reserve, this recommendation is certain to remain an expression of sentiment rather than a basis for legislation. Since the Federal Reserve was riding as high in the sympathy and esteem of Congress and the public as it is ever likely to be, its unreceptiveness to additional power may in future prove to be unfortunate. It is all very well to say there is no need for insulation when, under the Board's monetary policy, long-term Governments fall no lower than 95. But if it becomes necessary to let them fall to, say, 80, the old dilemma will recur and the Board might again wish for a way out.[5] For there is no evidence that the Federal Reserve has either the disposition or the political strength to heed the extremists who would have it hew to the monetary line, letting bonds fall where they may.

"The Patman inquiry was not only the last act of the Treasury-Federal Reserve drama. It was a revival of the whole play for the benefit of a wider audience, and it provided most of us with a much better view of the preceding acts than we had originally. Both the Treasury (compendium, pp. 50–74) and the Board of Governors (compendium, pp. 346–363) provided narratives of the events from the end of the war to the accord. The Treasury's account is both more informative and more combative, although their newfound friendship put both agencies under restraint in discussing their past differences.[4] The Federal Reserve reply is really given by President Sproul's testimony (hearings, pp. 519–523, 541–543) on the period from August 1950 on, a narrative to which two other key Federal Reserve figures, Mr. Eccles and Mr. McCabe, signified their concurrence. Further light on the history of the struggle is shed by the confidential correspondence between the two agencies from June 1950 to March 1951 (hearings, pp. 942–966), published by the committee over the cogent objection of Mr. Martin concerning the effects of this practice on the public service. Finally, the historically minded reader should not omit the account by Aubrey Lanston (compendium, pp. 1253–1265) of the market's day-by-day reactions to the pulling and hauling between the agencies.

The report itself (pp. 25–28) provides an excellent and judicious summary of these events. On the evidence, there is no reason to doubt the committee's conclusion that the record shows principally the actions of men of good will trying to work out the solution for an exceedingly complex problem. Nor is the record a history of Treasury domination of an unwilling Federal Reserve, suddenly ended in 1950–51 by an abrupt turn of the worm. Ever since the war, beginning with the question of termination of the preferential discount rate, the Federal Reserve has been pecking away at the structure of interest rates inherited from the war. The Treasury has resisted and delayed each step, but eventually the Treasury has always yielded. (Almost invariably the initial Treasury view is that any change in the status quo is risky—depression or war may be coming—or unnecessary or both.) Throughout the period the Federal Reserve has influenced not only the structure of rates but the types and maturities of Treasury issues. Only once, in the refunding operation in the fall of 1950, did the struggle ex-

[5] A supplementary reserve requirement such as the Board proposed in 1947 would not eliminate the possibility of declines in long-term bond prices. But it would, even if indirectly, remove some of the pressure on the long-term market. To the extent that short-term debt was locked in the banks, the supply of short-terms to other investors would be diminished. The resulting rate structure would increase the willingness of these investors to hold long-terms. Or the Treasury and Federal Reserve could, without expanding bank reserves, reduce the outstanding supply of long terms and satisfy the needs of nonbank investors for short-term obligations.

[4] Compare the preaccord letter of the Treasury General Counsel to the Joint Committee on the Economic Report, General Credit Control, Debt Management, and Economic Stabilization, pp. 38–40.

plode into openly conflicting actions by the two agencies. The Treasury learned its lesson, and its next refunding followed Federal Reserve recommendations. Ultimately, in early 1951, the Federal Reserve had nothing left to peck at except the 2½-percent long-term rate itself. Once again, in spite of some public verbal combat and the enlistment of the President on the Treasury side, the Federal Reserve prevailed. The accord came only 1 month after it was proposed to the Treasury by the Open Market Committee and only 2 months after the first intimation that the Federal Reserve had its eyes on the long-term rate. As in previous instances, the Treasury followed Federal Reserve advice regarding types and maturities of securities to issue.

"Naturally the spheres of decision of the two agencies and their relationships with each other were problems of great concern to the committee. Both agencies took the attitude that the status quo, vague and informal though it may be, was satisfactory. Leave us alone, they said in effect, and we can work things out in cooperation and harmony. Skeptical outsiders were more worried about defining formally the spheres and powers of the two agencies. Most respondents were for asserting and safeguarding the independence of the Federal Reserve from the executive, and there was considerable support for a mandate of the kind advocated by Senator DOUGLAS. Others held that "independence" is an unrealistic slogan, because monetary policy neither can nor should be made in a compartment separate from the other economic policies of the Government. In the panel discussion on this subject (hearings, pp. 747 ff.) G. L. Bach and Harold Stein were persuasive advocates of this viewpoint, arguing that it is more important to enhance the influence of the Federal Reserve in the administration than to attempt to increase its independence. Some of the recommendations of the committee majority were directed to this end: in particular, the proposal that the Chairman of the Board of Governors have cabinet rank and be designated, from the membership of the Board,[5] for a 4-year term concurrent with that of the President; and the proposal for a consultative and advisory council on monetary problems.

"Theory: Operation of monetary controls

"The Patman inquiry inspired, both in written replies and in oral testimony, numerous expositions of the theory of monetary control. A large majority of the respondents assigned to general monetary controls considerable influence on the level of economic activity. Only a few voiced the skepticism of their effectiveness so common 5 or 10 years ago. These volumes are impressive evidence of the rediscovery of money, as Howard Ellis has called this reversal in economic fashion.

"The fluctuation of economic thought on the importance of the money supply is an interesting phenomenon in itself. Like the rise and fall of other fashions in the social sciences, it does little credit to our science. Neither the initial skepticism about money nor its recent rediscovery has been solidly grounded on empirical evidence. Skepticism arose from the apparent impotence of monetary measures from 1929 on, received intellectual support from the Keynesian revolution,[6] and acquired reinforcement from an uncritical exaggeration of the importance and relevance of empirical findings that businessmen assign interest rates a low rank among factors influencing investment decisions. To some extent, skepticism grounded in the inadequacy of monetary measures to stimulate recovery from depression was applied to the opposite problem of preventing inflation. The reversal of fashion has had perhaps an even thinner empirical foundation. No new evidence has been adduced to prove the importance of monetary factors,[7] or to reverse previous impressions of the insensitivity of businessmen and other spenders to interest rates. The new confidence in the power of monetary weapons has been acquired just by giving the matter further thought—often, one suspects, wishful thought. Absence is said to make the heart grow fonder, and to monetary policy has been attributed power to avoid the evils which flourished during its suspension in the interests of debt management. If the performance of the economy in response to monetary controls between the wars was an inadequate basis for pessimism about their efficacy, the performance of the economy since the war in the absence of monetary controls is surely an inadequate basis for optimism.

"The important varieties of monetary theory espoused to the committee may be, with some violence to the individualities of some respondents, classified into three schools. One group, whose intellectual headquarters is Chicago, believes that aggregate spending is sensitive enough to the rate of interest, and hoarding insensitive enough, to make the quantity theory a good approximation. A second group agrees that the issue hinges on the sensitivity of spenders and hoarders to interest rates. But this group is skeptical about the interest-elasticity of spending and is impressed more with the variability than with the constancy of monetary velocity. These two schools fit easily into the traditional framework of monetary discussion. Their disagreement, although it contributes to a marked difference in policy recommendations, is less a difference of theory than of empirical judgment. In the panel discussion (hearings, pp. 685 ff.) Milton Friedman and Paul Samuelson represented ably these two points of view.

"The third school, however, sets forth a new theory of monetary control which claims that both of the old schools are asking the wrong questions. Under the leadership of Robert V. Roosa[8] and others, the new theory has developed and spread rapidly in recent years. It has been inspired by postwar Federal Reserve policy, before and after the accord; the theory, in turn, inspires the policy. The Federal Reserve replies in the Compendium indicate that it is the official rationale of current policy. Because of its intellectual interest and its evident practical importance, the new theory deserves careful examination. In the Patman inquiry only Professor Samuelson and Whittlesey (hearings, pp. 691–710, 736–743) gave it the critical attention which it merits.

"According to this theory, monetary controls work much more through restricting the availability of credit than through increasing its cost, much more through restraints on lenders than through reactions of borrowers. It is possible, according to the theory, to curtail spending significantly by limiting the availability of bank reserves, without raising significantly market rates of interest. Some upward pressure on rates there is bound to be. But this is largely incidental, and one cannot judge the impact of a monetary restriction by the height to which it pushes interest rates. There are evidently two related parts to this proposition. The first is that it is possible to restrict reserves without raising interest rates appreciably. The second is that such restriction will curtail aggregate demand. Thus the new theory provides an answer to those of the other two schools who question the importance of fractional increases in interest rates. The significance of the new doctrine may be most clearly appreciated from the fact that it implies that monetary restriction will curtail aggregate demand even if the most extreme skepticism about the interest-elasticity of borrowing and spending were justified.

"To put the theory in an over-formal but nonetheless perhaps an illuminating way, the substance of it is that an increasing yield on Government bonds is an extremely good substitute for a high yield. At a given interest rate, the demand to hold Government bonds, relative to other assets, will be higher if the interest rate is increasing or has recently increased than if it is stable. This is due to a combination of factors neglected in the older theories: first and most important, imperfections in the money markets which prevent the yields on other assets from adjusting to compensate for the increased attractiveness of Government bonds; second, irrational and conventional behavior by financial institutions, so that portfolio decisions are not based wholly on yield comparisons but partly on considerations such as a reluctance to realize capital losses; third, uncertainties and expectations associated with increases in bond yields, which may make both borrowers and lenders appraise the economic future with more caution. Against these factors works the more familiar speculative effect: expectations and fears that interest rates will continue to rise tend to reduce the demand for bonds. But the new theory contends that if the favorable factors are skillfully exploited by the central bank, they will more than offset the speculative effect.

"The consequences of a restriction of bank reserves are, according to the theory, as follows: The central bank restricts reserves by selling Government securities or by lowering the price at which it will buy them. In either case there is some increase in their yield. This increase in yield deters banks and other lending institutions from selling Government securities to make alternative loans and investments. It deters them for two principal reasons. First, they do not like to take a capital loss on Government securities, even if an alternative asset offers a higher yield.[9] Second, and more important, the increase in yield makes Government securities more attractive relative to alternative investments

[5] Board members, according to the majority report, should have terms of 6 instead of 14 years, be eligible for reappointment, be reduced in number from 7 to 5, be chosen without geographical restraints, and receive increased salaries.

[6] Formally Keynes' theory justifies skepticism about monetary policy only in special circumstances. But Keynes himself and many Keynesians believed these circumstances to be typical of modern economies.

[7] Milton Friedman has presented figures showing a fairly close correspondence between the monetary expansions and the price inflations associated with three wars (Price, Income, and Monetary Changes in Three Wartime Periods, American Economic Review, 42 (Proceedings, 1952), pp. 612–625). Even accepting an interpretation of these data favorable to the quantity theory, it remains quite possible that over shorter spans of time the relationship between money and prices is loose.

[8] See his essay, Interest Rates and the Central Bank, Money, Trade, and Economic Growth, pp. 270–295. For the development of the doctrine, beginning with prewar writings, see pp. 275–276 of this essay and the works there cited.

[9] The replies of insurance executives (Compendium, pp. 1234–1244) do not provide unequivocal support to the view that they are irrationally "pinned in" to Government securities by capital losses. (Neither do the figures on changes in insurance company portfolios since the accord.) Several executives explicitly denied that such losses were of any concern if higher yielding investments were available. Others consider losses a deterrent, but it is not clear that they meant anything more than that higher yields on Governments make them more competitive with other assets.

because the rates on other assets are kept from rising by institutional rigidities in the market. Lenders will, therefore, ration credit to private borrowers, and some willing borrowers will simply not be accommodated. For example, convention will keep the rate charged by banks to their commercial customers from rising; loan applications, which previously would have been accepted, will be refused. Again, the rate on mortgages will be sticky, in part because of Government regulations; fewer mortgages will be bought. Similarly, corporations and State and local governments will find it impossible to float bond issues to finance investment projects. In all of these cases, it is argued, the disappointed borrower and spender does not have open to him in the market the alternative of offering a higher rate and obtaining the funds. Hence, even if borrowers are not likely to be deterred by higher interest charges, even if it is true that spending is insensitive to interest-rate levels, monetary restriction is effective in curtailing spending.

"This argument relies, as Professor Samuelson pointed out, on an increase in the imperfection of the market as a consequence of the initial rise in bond yields. There must be more rationing of credit than there was before. The importance of the argument depends on the persistence of the increase in imperfection. If the rates available to private borrowers are fixed for a long period, the theory uncovers important new potentialities for monetary control. If these rates are within a short time free to adjust upward to compensate for the increased yield and attractiveness of Government securities, the contribution of the new theory is more modest. It points out some dynamic effects, neglected by the older theories, which temporarily enhance the influence of a monetary restriction. But as these effects wear off, the lasting influence of the restriction depends on the answer to the questions the older theories ask: How interest-elastic are the demands for the alternatives to bonds, goods, and cash? As the transient effects die, lenders will satisfy the needs of borrowers who are willing to pay higher rates. In order to do so, they will shift out of Government securities; and given the volume of bank reserves, security yields will rise. To the extent that the increase in bond yields induces corporations and individuals to hold securities rather than cash reserves, lenders are provided with funds to satify the needs of borrowers who were previously rationed out of the market. In the ultimate equilibrium, rates on different assets will stand in a normal relationship to each other; the former degree of market imperfection will be restored; and the effect on spending will depend on what the monetary restriction has done to the level of interest rates and how borrowers and spenders react to that. Even so, the transient effects may be exceedingly useful to a central bank which wishes to dampen spending without raising interest rates much, or fears that demand is in any case not very responsive to the level of rates. If the inflationary pressure which the central bank wishes to oppose is itself temporary, the transient effects may be enough to do the job. Otherwise it would be necessary to administer successive doses of the medicine until the level of interest rates is pushed high enough to handle the situation.

"The strength and persistency of these availability effects are empirical questions crucial to the new monetary theory. Inferences on the subject are drawn from events following the accord. But this should be done with great caution. Certainly the general economic stability of 1951 and 1952, compared with 1950, cannot be considered proof of the effectiveness of monetary policy, any more than it can be considered proof of the effectiveness of the direct controls introduced in 1951. Many other explanations of this phenomenon are at hand. But even if more specific evidence indicated that monetary policy should receive substantial credit for halting the inflation, the accord had unique characteristics which limit its usefulness as a basis for generalization. It was a departure from a policy and a rate to which the market had long been accustomed. It was natural for the market to react with confusion and imperfection and to transmit the change only slowly to the rates on private credit. Once the market is again accustomed to flexibility of basic rates, it may adjust with more speed. The first dose of the new medicine is likely to be the most effective, and it can only be administered once.

"The evidence that the accord produced substantial effects of the kind envisaged by the new theory is not, in any case, impressive. (See testimony of Professor Whittlesey, hearings, pp. 698–710.) Bank loans continued to grow. Insurance companies continued to dispose of Government securities in favor of other assets, even though by 1951 they had reduced Governments to something like a normal proportion of their portfolios. Although some new bond issues may have been postponed following the accord, the statistics of new issues suggest that it was not long before it was possible to place issues at rates acceptable to the market. (Professor Whittlesey argued also that anticipation of the accord greatly increased security offerings in the first quarter of 1951.)

"In assessing the inflexibility of lending rates in the face of monetary restriction, it is essential to remember that lenders have at their disposal a number of devices for raising the effective rate of interest to the borrower while the nominal quoted rate remains the same. Bankers, for example, can be more insistent that borrowers keep certain amounts on deposit. Their replies to the committee (compendium, pp. 1133–46) indicate that in many cases this was in fact their reaction to monetary tightness in 1950 and 1951.

"It is easy to understand why the new theory of monetary control should be eagerly seized as the rationale of Federal Reserve policy. For it offers the hope that monetary policy can be effective without the large fluctuations of interest rates which used to be considered essential. And even now, for better or for worse, the Federal Reserve is not realistically free to pursue a policy which disregards the prices of Government bonds. A great deal of Federal Reserve and Treasury effort must still, as ever since the war, be devoted to increasing private investors' willingness to hold Government securities by measures other than increasing their yields.[10] The new theory reaches the cheerful conclusion that these measures will also be an effective curb on private spending, because they reduce the availability of credit to private borrowers.

"Such a policy does not imply that rates must never rise; indeed occasional small changes in rates are, according to the theory, necessary to bring into play the effects on which the policy relies. It does require that, at any given level of rates, private willingness to hold Government securities be as large as possible and, consequently, the supply of bank reserves and of money as small as possible. To this end the Treasury and Federal Reserve have available many devices; for example, judicious adjustment both of the types and maturities of public debt instruments and of the composition, in distinction to the size, of the Federal Reserve's Government portfolio; "moral suasion" to prevent holders of Government securities from selling—this went to extremes in 1950, and the Open Market Committee has now penitently forsworn its use (see compendium, pp. 630–632, 1253–1256, and hearings, pp. 398–400); setting the rediscount rate in such relation to the short-term government rate as to induce banks in need of reserves to borrow them, so that both the traditional distaste of bankers for indebtedness and the Federal Reserve's discretionary powers in respect to the privilege of rediscounting may be exploited; "pinning in" private bond holdings by penalizing sales, redemptions, or conversions before maturity with capital losses; manipulation of market uncertainties and expectations about future rates. Experience with this kind of policy has led to increased awareness of lags, imperfections, and institutional conventions in the money markets. These the policy seeks to exploit to make monetary measures effective, at least temporarily. As the market adapts itself to one measure, the ingenuity of the monetary authorities may be taxed to find another.

"Only the future will tell whether this kind of monetary policy will do the job to the satisfaction of the monetary authorities themselves, or whether in the end they will conclude that monetary control can only be successful through the more pronounced changes in interest rates on which central banks traditionally relied in the past.

"Policy: Monetary restriction in an anti-inflationary program

"Concerning the wisdom of the accord, the Patman inquiry disclosed virtually no dissent. Many thought that par support should have been abandoned earlier; almost no one, except an occasional banker, thought it should have been perpetuated. Concerning the importance of the accord, there was considerable disagreement. Senator DOUGLAS and Professor Friedman were inclined to blame the 1950 inflation on the failure of the Federal Reserve to cease support at that time, and to attribute the stability of 1951 and 1952 to the new policy. Most others, including Federal Reserve spokesmen, were more modest in their claims for monetary measures. At the opposite extreme, Mr. Keyserling thought monetary policy a relatively insignificant factor both before and after the accord. But even he did not suggest that the accord was bad policy.

"There was, however, substantial division of opinion on how far monetary policy should be pushed. At one extreme is Professor Friedman's position that it should be pushed as far as necessary to remove any inflationary pressure which fiscal policy does not remove, regardless of the consequences in the Government securities markets. At the other—if we leave aside the bizarre views of Mr. John D. Clark (compendium, p. 892)—Mr. Keyserling found so many disadvantages in higher interest rates that he would rely on direct controls instead of monetary restriction to supplement fiscal policy and would indeed prefer moderate inflation to the consequences of higher interest rates. In between, most respondents found some reasons for placing limits on monetary restriction, though their limits would be less confining than Mr. Keyserling's.

"Reasons for limiting reliance on monetary restriction fall into two classes: those connected with the public debt, and those which would have force even if the public debt did not exist or were insulated. For the most part, the reasons offered of the first class will not survive rational examination. Long ago Paul Samuelson demonstrated that the solvency of banks and other financial institutions is not threatened by a decline in Government bond prices.[11] As for the higher in-

[10] And evidently by means other than compulsion. As noted above, the Federal Reserve is now not interested in supplementary reserve proposals designed to "insulate" part of the debt.

[11] The Effect of Interest Rate Increases on the Banking System, American Economic Review, 35 (1945), pp. 16–27.

terest charges to the Treasury, the issue is essentially the same as in the old controversy on the burden of the debt. It may seem strange to hear "after all, we owe it to ourselves" from financiers pleading for higher interest rates rather than from Harvard professors dispelling alarm over the size of the debt. But the substantial truth of the argument holds in either context. The only objection to a rise in debt charges is the friction and possible injury to incentives involved in taxing to pay the interest without unwelcome distributional consequences.[12]

"More weight must be assigned the second class of reasons for limiting monetary policy. Prevention of inflation is not the only national economic objective. There are several instruments available for preventing inflation, and they can be combined in varying proportions. Among the several combinations which can do the anti-inflationary job, the optimum mix of policy instruments is the one most favorable to other social objectives. The Patman inquiry inspired surprisingly little discussion of this problem. The prevalent assumption seemed to be that, since an adequate anti-inflationary program is unlikely to be adopted, the best tactic is to urge stronger measures all around. This may be a realistic view, but is it the proper attitude to take in advising a committee of Congress? Congress, after all, has the authority to decide how much use shall be made of all anti-inflationary weapons. Should one say to Congress, in effect: We know you fellows haven't the guts to raise taxes, so you'd better go all out for monetary restriction? Or should one offer some guidance on the relative degrees to which Congress should rely on tax policy, monetary restriction, and direct controls?

"One formula which often seems implicit [13] in discussions of the problem is that the budget should be balanced and any remaining inflationary pressure removed by monetary means. Although this prescription has the practical appeal that a balanced budget may be the best one can expect from Congress, it is not consistent with the countercyclical fiscal policy, including surpluses in boom times, which economists have been educating the public to accept. Moreover, should the formula apply regardless of the size of the budget? A large balanced budget would put more of a burden on monetary measures than a small one.

"The choice between monetary restriction and tax increases is largely a choice between consumption and investment. (It is not entirely so, both because taxes may deter investment as well as consumption, and because monetary restriction, even excluding selective credit controls, may curtail consumption as well as investment.) Mr. Keyserling's objection to heavy reliance on general credit control was that he preferred to obtain resources for defense from consumption rather than from investment. Furthermore, given a decision that investment must bear a certain share of the burden, what lines of investment should be curtailed? General monetary restriction will result in one pattern; direct controls in another. Mr. Keyserling was not sure he would like the pattern of private investment produced by general monetary restriction. Professor Friedman and other exponents of the free market were sure they would not like a pattern produced by direct controls. Incidentally, if the description of the money market given by the new monetary theory is correct, the choice is less between a pattern produced by the price system and one produced by direct controls than between a pattern produced by decentralized rationing of credit and one produced by governmental controls of materials allocations and prices. These issues are, much more than the charges on the national debt, the ones to consider in judging the extent to which inflation should be fought by monetary weapons.

"Another relevant consideration is the expected duration of the inflationary pressure and the economic forecast after it subsides. Experience with high and variable rates of interest during a period of inflationary pressure may well decrease the demand for bonds in the future and make it more difficult to achieve the lower rates suitable to a deflationary economic climate. Therefore, it can reasonably be argued (see report, p. 35, and statement of Roy Blough, hearings, p. 253), a temporary inflationary storm should be fought by measures which can be more easily put into reverse. But the importance of this consideration should not be exaggerated, even if the assumption that normal economic weather is deflationary is accepted. Just as there are other ways of dealing with inflation, so there are other ways of coping with deflation; indeed it is widely agreed that monetary measures are less effective against deflation than against inflation. The economy will not be doomed to depression just because the monetary authorities find it takes time to undo the uncertainties and expectations about interest rates created by their previous anti-inflationary moves. If the long-run economic outlook is really deflationary, the central bank will be able in time to bring rates back down to their preinflation levels both by monetary expansion and by gradually reducing investors' rate expectations and uncertainties.

"In recent years the subject of monetary policy has excited emotion as well as analysis. The end of the Treasury-Federal Reserve conflict has made the subject one of less absorbing interest, but also one which can be approached with less passion and more perspective. The volumes produced by the Patman inquiry will contribute to the serious study of monetary problems for a long time to come."

---

[12] On the other hand, objections to insulation devices designed to save interest charges on the Treasury without hamstringing the Federal Reserve seem equally insubstantial. A rise in the interest rates the Treasury pays may do little harm, but neither is it a good thing in itself. The argument, frequently encountered in these volumes, that the Government should be as subject to the discipline of the capital market as any other borrower is inconsistent with the argument that higher interest charges do not matter. If the transfer of interest from taxpayer to bondholder is properly of little concern to the Government, why should a high market rate deter the Government from spending? It is true, of course, that resources should be diverted from private investment to public investment only if they have as high a marginal social productivity in public use as in private. But the connection between this principle of rational allocation and the interest rate the Treasury has to pay to borrow is surely extremely tenuous.

[13] For fairly explicit statements of this formula, see the reply of Milton Friedman (compendium, p. 1069), and the statement of Lester V. Chandler in General Credit Control, Debt Management, and Economic Mobilization (Joint Committee on the Economic Report, 82d Cong., 1st sess.), p. 65.

Questionable Business With Tito

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, a recent issue of Newsweek magazine contained the following brief news item. Under leave to extend my remarks, I am including it at this point in the RECORD:

RED RASH

BELGRADE.—President Tito came to a momentous unannounced agreement with Khrushchev at their meeting in Rumania. It was a pact to expedite transshipment of Soviet-trained Egyptian and Syrian officers across Yugoslavia. Tito also agreed that Soviet-sponsored military equipment could move through his country under wraps to hamper western intelligence.

Arkansas Already Uses Method Now in Congress Bill

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most illuminating news article about natural gas price regulation from the Arkansas Recorder of July 12, 1957, under the heading "Arkansas Already Uses Method Now in Congress Bill."

Members of Congress who are deeply concerned about the possible effects on consumers of the new Harris bill, H. R. 6790, to amend the Natural Gas Act, will find this article most informative. It reports the effect given by the State public service commission to a recent State law substituting field price for the former cost basis of regulation of natural-gas prices within the State. This is a change which is very similar to the proposed "reasonable market price" formula of H. R. 6790.

The article reveals that on this field-price basis the State commission increased the rate-base value of the Arkansas-Louisiana Gas Co.'s producing properties by adding $32 million to the figure that had previously been $10 million. A Louisiana commission ruling is also reported to the effect that such an increase netted the company $4 million more than a fair return.

I hope Members will carefully review the facts in this situation as revealed by an Arkansas paper as they seek to determine the probable impact of the Harris bill on consumers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARKANSAS ALREADY USES METHOD NOW IN CONGRESS BILL—FIELD PRICE OF GAS TO BE FIXED

If Congress will look this way, it can see for itself what the field price (sometimes called commodity value) approach to natural gas rates does to consumers and for stockholders and producers. Costs of producing gas are disregarded in determining field price, which is the estimated price at which the gas might be bought from others.

The identical ratemaking method prescribed in the Harris-O'Hara bill which the House Interstate Commerce Committee approved by a 15–13 vote on Tuesday has been applied in Arkansas directly or indirectly by 3 companies, in 2 of which W. R. Stephens,

of Little Rock, is vitally interested. He is Arkansas Louisiana Gas Co.'s board chairman and owner of the Fort Smith Gas Corp.

Also he is the owner of the wells from which the Fort Smith Gas Corp. buys most of its supply, and is the owner or part owner of many wells selling to Ark-La.

Both Ark-La and Fort Smith Gas have applied the field price to their production, insofar as Arkansas is concerned. Both have some customers in one or more other States, but the bulk of their revenue comes from Arkansas.

A third utility, Arkansas Western Gas Co., headquartered at Fayetteville, is a beneficiary of the field price because the PSC could not very well deny it the same treatment accorded to Mr. Stephens' companies.

ANOTHER STUDY

A month after the Louisiana Public Service Commission ruled that Arkansas Louisiana Gas Co. is netting over $4 million more than a fair return on investment, the Arkansas Public Service Commission moved to impede any step that might be taken to reduce rates. It directed its staff this week to determine the field price of gas produced by Arkansas utilities.

It is in Arkansas that Ark-La is amassing the earnings that the Louisiana Public Service Commission deemed excessive and that were cited by it in turning down a request from Ark-La for higher rates in the Shreveport area.

Two rate increases in Arkansas where only one was granted in Louisiana after the acquisition of Ark-La control by W. R. Stephens, Little Rock bond broker and political-campaign-fund specialist, late in 1954 were responsible for the huge gain in revenues that has pushed the utility's share from $12.50 per $5 par value share to $32.50 for an equivalent 1954 share (now 1.21 shares).

The gas-producing industry has been trying for years to wriggle off the rate-regulation hook. For a time, it was thought that only that part of the production owned by utilities was subject to regulation, by States only, but the United States Supreme Court ruled that prices of gas moving interstate should be fixed by the Federal Power Commission.

In the interim prior to the Court's decision, gas utilities looked for ways and means of spinning off their production to nonregulated ownership from which the utilities would buy the gas for resale to customers.

That is exactly what the Fort Smith Gas Corp. did in the course of purchase and dissolution of Arkansas-Oklahoma Gas Corp. in 1953 and 1954. The wells the latter company owned were spun off to Stephens Production Co., over which the State has no jurisdiction. Hence, Stephens can charge his Fort Smith utility whatever he pleases, unless the FPC interferes.

Some of the Fort Smith industrial customers are asking the FPC to do just that.

WHO'S OUT OF STEP?

After the United States Supreme Court dumped gas-rate regulation back into the lap of the FPC, gas utilities sought to bring about adoption of the field-price method of ratemaking. They failed in a test that; after the FPC had sanctioned field price, went all the way to the Supreme Court.

In Arkansas, however, where the public service commission is more amenable to Mr. Stephens' persuasion than is Louisiana's PSC, field price has been adopted and been made to stick. The Arkansas Supreme Court ruled that it was a violation of the trustee relationship that should exist between a public utility with its guaranty of reasonable profit and the customers who patronize the monopoly.

That part of the Court's opinion was ignored by the General Assembly which, within 4 days, after the decision was rendered, passed act 175 of 1957. It directs the public service commission to use field price in fixing gas rates. Stephens went to bat personally, and mobilized Arkansas-Louisiana stockholders and employees and other utilities to ride herd on the legislators.

The bill does not—as the public service commission states in its order issued this week for its own determination of field price—require the commission to establish the price. It merely provides that, when it comes time to measure earnings the utility shall be permitted to deduct a fictitious expense item—field price—instead of actual cost of producing gas from its own wells.

TWO-HUNDRED-PERCENT WRITEUP

The new act does not apply to the rate case remanded to the public service commission when the Court reversed the November 1955 approval of the field price method of fixing Arkansas-Louisiana rates; but the commission nonetheless added $32 million to the rate-base value of Arkansas-Louisiana's production properties that previously had been accorded a $10 million value in the rate base detailed in the 1955 order. That was the difference between cost and field price—200 percent—as the public service commission saw it.

By that time the industries that had fought Stephens and Arkansas-Louisiana through the courts and won an empty victory evidently concluded they had been wasting their time. They signed up at the higher rates and did not protest the reapproval of the rates they had opposed—rates that are responsible for the $4 million excess in earnings to which the Louisiana public service commission pointed.

But the Secretary of the Army did protest, and filed a motion for an appeal, but the public service commission—as was reported first in the Recorder 2 weeks ago—denied the motion. It remains to be seen whether the United States Government also will withdraw its resistance to one of the most far-reaching and successful utility stock promotion programs since the boom market just prior to the start of the depression, effects of which have never worn off.

The Federal Securities and Exchange Commission has aided and abetted the promotion step by step, a circumstance that no doubt will be called to the attention of the Secretary of the Army who must ultimately say whether the Pulaski circuit court shall be asked to force the public service commission to send up the record for an appeal.

Press reports of the public service commission order for the field price ascertainment quoted Stephens as promising that the inflated valuation would not bring higher domestic rates. That isn't his problem at the moment. What Arkansas-Louisiana wants is public service commission action that will avert a rate reduction such the Louisiana Commission in effect said appeared to be called for.

Little Rock and Civil Rights—Does This Mean the End of States Rights?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. David Lawrence which appeared in a recent issue of the Washington Star. As usual, Mr. Lawrence pinpoints the vital question involved in the present controversy:

LITTLE ROCK AND CIVIL RIGHTS—DISPUTE SEEN PROVING PREDICTION THAT BILL IS BLOW TO DUAL GOVERNMENT IN UNITED STATES

Every governor, every sheriff, every mayor, and every local official who has anything to do with the administration of State or city laws can be hauled into Federal court on any pretext now and charged with alleged interference with a Federal court order. This can happen, no matter how earnestly and conscientiously the official may be performing the duties of his own office.

Such is the situation which confronts the American people today as they note the unprecedented action of a Federal judge in summoning the governor of a sovereign State so that the court may pass judgment on his executive ability, his efficiency and his good faith in discharging the duties of his office.

If the Governor of Arkansas should perchance differ with the terms of an injunction that may be issued by the Federal judge after the September 20 hearing and continue to keep troops on guard, in accordance with his conscientious belief that he is fulfilling his duty as the chief executive of his State in preventing bloodshed and disorder, he can be charged with civil contempt and put in jail. Under existing Federal law, he will not even have the benefit of a jury trial.

If the troops are withdrawn and bloodshed follows, there is no way to hold the arbitrary-minded Federal judge responsible for the death of any citizen.

How easy it would be for impassioned opinion to uphold a dictator in America today if he attempted overnight to transform the American system of government into an irresponsible government—judging by the widespread indifference to what is happening in Arkansas.

Many persons say frankly in conversations with their neighbors that the Governor ought to be jailed, but the average citizen today knows little about our dual system of government. Lack of education in the schools on the constitutional rights of the States, plus the steady whittling away of those rights by a usurping Federal Government, aided by a usurping Supreme Court, has persuaded many citizens that, of course, anything the Federal Government does is right in all controversies with the States.

"Why don't you remove the Wisconsin Senator from office?" wrote many citizens to President Eisenhower in 1955. They didn't seem to realize that there is a guaranty of freedom of speech in the Constitution. Nor did they know apparently that the States are supposed to be sovereign. But now a governor is to be interrupted in his duties and perhaps removed by a Federal court and put in jail.

Nor do the people generally understand that a governor can be tried now without a jury and sentenced to jail by the same judge who makes the charge and acts as prosecuting attorney, judge, and jury. Congress debated this very issue recently in connection with the civil-rights bill but surrendered to the concept of a Federal dictatorship. There are no jury trials in civil-contempt cases.

This correspondent made a memorandum for himself on Saturday, August 31, apropos the passage of the civil-rights legislation by Congress and put it in his files to be read a year hence. The memorandum read as follows:

"The damage done to constitutional government by a majority at the session of Congress just ended is epochal. It is the worst blow to the dual system of government inflicted in the history of the Republic.

"For the States have been placed in the role of subordinate satellites of the Federal Government. Their governors, their justices, their mayors, and their sheriffs now can be court-martialed at any time by Federal injunction. They no longer are independent, self-governing units.

"Only a patriotic and impartial-minded Supreme Court of the United States can strike down this usurpation of power by Congress. The membership of the present Court, itself recently guilty of usurpation, affords however, little hope of saying the constitutional system.

"The legislators call the new measure, for instance, a law on civil rights. They have made millions of persons believe that only the right-to-vote issue is involved. Actually, the new law is a condemnation of State government in America, its capacity to rule. This deprives the States of their historic right to determine for themselves what the qualifications of voters shall be and whether State, county, and city officials are properly enforcing such State laws. This opens the way at any time for the central government to break down the authority of State governments on any question by further use of the same principle of Federal authority now written into the civil-rights legislation."

Only 4 days later the prediction in that memorandum came true. There is chaos today in the relations between the States and the Federal Government. Footnote for history: In this tragic hour, the President and the Congress and the Supreme Court of the United States are away from Washington on vacation.

Socialism and the Federal Estate and Gift Tax

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. GWINN. Mr. Speaker, one of the most vicious devices by which this country is being driven down the road toward socialism is the Federal estate and gift tax. Not only are the rates excessive and confiscatory, but the whole principle is wrong.

It is for this reason that I have introduced in this Congress a bill—H. R. 9435—which would repeal these taxes, and a proposed constitutional amendment—House Joint Resolution 461—which would prohibit the Federal Government from ever reimposing such taxes in the future.

At this point I want to quote from a truly worthwhile study of this subject from the point of view of the harm it does to our country, and its destructive effect in terms of preventing an essential expansion of industry:

SOCIALISM AND THE FEDERAL ESTATE AND GIFT TAXES

(By Robert B. Dresser)

In this article, I propose to discuss the harmful effects of Federal estate and gift taxes, and the advantage of leaving such taxes exclusively to the States.

Under existing laws the estate tax runs to a high of 77 percent and the gift tax to 57¾ percent. The gift tax is imposed as an essential aid to the estate tax to prevent evasion of the latter.

The rates of these taxes are manifestly confiscatory, and they have very harmful economic effects. They not only seriously impair the incentive to work, save and invest, but they are extremely destructive of capital and will in the long run destroy the accumulations of capital that are so necessary for industrial activity and expansion with the resulting beneficial effects on our economy and the people as a whole.

In its report on the tax problems of small business, published in June 1953, the Select Committee on Small Business of the United States Senate makes the following statement regarding estate taxes (pp. 21–23):

"Your committee is deeply concerned with those forces which lessen competition and compromise the free enterprise nature of our economy. Testimony which was given to the Taxation Subcommittee lent credence to reports that estate taxes often lead to the disappearance of small or medium-size independent businesses or their merger with the dominant segment of an industry."

The report quotes the following testimony of a witness:

"Since little companies are generally individually owned, death inevitably forces a substantial cash inheritance-tax demand on any small company owner's estate. Then the small organization that had managed to survive competition and income taxes must raise the cash to meet this tax, or be liquidated by sale or merger, which is happening at an alarming rate.

"The effect, then, of the present system of taxation is to accentuate the trend toward concentration of economic power in the hands of a few, while the Department of Justice spends great effort prosecuting the monopolies that are forced into existence by our tax system."

In its findings and recommendations the committee says:

"The impact of death levies on many privately held small businesses all too often results in forced sales to competing firms in the same industry. Furthermore, the threat of inheritance and estate taxes provides a strong inducement for the principal owners of any such corporation to "hedge" against the possibility of death through such sellouts."

Moreover, the heavy taxation of large estates compels the rich to seek comparatively safe, liquid investments in order to provide for the heavy taxes that will be imposed upon their estates at death, thus further reducing the capital available for hazardous business ventures which have done so much to improve the lot of the American people.

It should be realized that rich men, such, for example, as the late Henry Ford, play a very important part in our economy. They and their families can personally consume and enjoy but a trivial part of their wealth. The balance is in effect held by them as trustees for the public. It is this wealth that has supplied in the past much of the venture or risk capital required by new and hazardous enterprises, such as the railroads, the automobile industry, the aircraft industry, and many others, as well as for the expansion of existing enterprises. By this means jobs and good wages have been provided for millions of workers. The automobile industry furnishes an excellent illustration. Based upon 1957 reports, the number of jobs created directly and indirectly by the automobile industry, which is only about 60 years old, is over 10 million. This is 1 out of every 7 persons now employed in all classes of employment in the United States.

Such enterprises, however, are risky. Many of them fail and the investor loses his investment. Hence, he must have funds that he can afford to risk. Most people do not have such funds, and such holders of capital as banks and trust estates are not permitted to make such hazardous investments. High death as well as high income taxes destroy the incentive and the ability to incur such risks.

Does anyone doubt that the wealth of Mr. Henry Ford was of far greater benefit to the people of this country in his hands than it would have been in the hands of the Federal Government? He used it to develop a great industry which has given employment at good wages, directly and indirectly, to hundreds of thousands of people. In the hands of the Federal Government the money would soon have been dissipated in the construction of nonproductive post offices and other Government buildings and in paying the costs of an unduly expanded bureaucracy.

RULE AGAINST PERPETUITIES BREAKS UP LARGE ESTATES

There should be no fear that the absence of a heavy Federal estate tax would lead to an undue concentration of wealth in the hands of a few. The rule against perpetuities, inherited by us from the common law of England, forbids tying up the ownership of property for a longer period than a life or lives in being and 21 years. In other words, an estate must be divided among the heirs or beneficiaries in the second succeeding generation. From that time on the estate will be subject to a further subdivision with each generation, if it should happen that there is any of it left to be divided. If the large estates are to be broken up, it is obviously better that this should be done by natural forces than by taxation. In the first case the capital continues in the hands of individuals. In the second it is taken by the Government.

REVENUE FROM DEATH AND GIFT TAXES SMALL

Assuredly, the harm done to the economy by the present high rates of death and gift taxes is out of all proportion to the revenue produced, and cannot be justified by any argument based on fiscal needs. Even with the very high rates now in force, the revenue from these taxes is comparatively trivial. It is only about 1½ percent of the total budget—enough to pay the Government's expenses for about 5 days.

STATES ALSO IMPOSE DEATH TAXES

The imposition of death taxes is not confined to the Federal Government. The individual States as well impose either estate or legacy taxes on death. The duplication of taxes by the State and Federal Governments has become a matter of grave concern, and it is important that steps be taken to end it. The field of death taxes should be assigned to the States, the laws of which determine the right to dispose of property on death and the rights of inheritance.

The gift tax is merely auxiliary to the estate tax, and both should be dealt with alike.

REASON FOR IMPOSING SUCH TAXES

If these taxes have such a harmful effect and produce so little revenue, why are they imposed?

An examination of the speeches, articles, and books on the subject during the past 35 or 40 years furnishes the answer.

The manifest purpose is to redistribute wealth. An approach to an equality of wealth for all was to be effected by means of taxation. And some even went so far as to advocate an outright abolition of the right of inheritance as proposed in the Communist Manifesto of Karl Marx.

Even the president of one of our great universities, in a magazine article published 14 years ago, expressed sympathy with the suggestion that the Government confiscate, by constitutional methods, all property once in a generation.

The ultimate result of this, of course, would be the ownership of all property by the Government, the objective of the Communists as expressly stated in the Communist Manifesto of Karl Marx.

In some of the literature during this period the view was expressed that large wealth cannot be fairly and honestly acquired, and that as a matter of simple justice it should be taken by the Government at death. This, it was said, would do away, among other things, with the revolting spectacle of an offspring of a rich parent enjoying the benefits of wealth which he did nothing to accumulate.

One book, written 17 years ago, discusses this whole subject at great length, and gives the history of the movement to impose these taxes. Never have I read a more bitter, scathing attack on those who have acquired fortunes. It is a veritable hymn of hate.

At the bottom of the attack on the right of inheritance is undoubtedly the human vice of envy—envy that someone else is rich while I am not.

If there is a single economic justification for a heavy death tax, I have not been able to discover it. On the contrary, as I have pointed out, it has very harmful economic effects, and in the case of the present Federal estate tax, it produces with the gift tax comparatively little revenue.

RESULTS OF REDISTRIBUTION OF WEALTH

Moreover, the results of the redistribution of existing wealth would, I think, be most disappointing to those who advocate it.

Based upon figures taken from a report of former Secretary of the Treasury Snyder to the Ways and Means Committee on February 5, 1951:

1. If the total taxable income, before taxes, in the income-tax brackets over $6,000 were divided equally among the 155 million people in the country at that time, each person would receive $80.

2. If the total taxable income, before taxes, in the brackets over $10,000 were so distributed, each person would receive $50.

3. If the total taxable income, before taxes, in the brackets over $20,000 were so distributed, each person would receive $25.

LESSON TO BE LEARNED

The lesson to be learned from this is that what is needed in order to improve the lot of the less fortunate is not a redistribution of existing wealth, but the production of more wealth. This can be accomplished only by providing a proper incentive for people to work, save, and invest in productive enterprises. It is the incentive furnished by the right to acquire and own property and to dispose of it during life and at death, and the right to make and keep a reasonable profit for one's labor and the use of his property that makes possible the increased production of wealth and the resulting improvement in the general scale of living. It is this incentive which is the mainspring of the private enterprise system without which it will not work. The removal, or partial removal, of this incentive by excessive income and death taxes leads to the production of less wealth and defeats the objective of improving the lot of the average citizen.

Our astounding economic progress and our high scale of living have been due to our American system of private enterprise and our system of constitutional government which have given the individual freedom and provided him with the incentive to work, save and invest in productive enterprises.

IMPORTANCE OF MACHINERY

Over 90 percent of the work in American industry is done by machinery. It is this machinery that has made the high wages and high scale of living possible.

The capital required to provide this machinery has come from the savings of corporations and individuals. The great bulk of the new capital supplied by individuals which is needed for this machinery and the expansion of industry comes from those having the larger incomes and the greater wealth. Excessive taxation not only discourages the investment of capital in industry but it also reduces the source of supply by the amount of the excessive tax.

IMPORTANCE OF OUR INDUSTRIAL LEADERS

Largely responsible for our marvelous economic progress are the great industrial leaders and inventors—such men as Henry Ford, Thomas Edison, and many others—who have provided the ideas and leadership that have made this wonderful achievement possible. That many of them made large fortunes is not a reason for condemning them. The price thus paid has been trivial compared with the benefits received by the people as a whole.

That there may have been some knaves among those who acquired large fortunes is no reason for a blanket condemnation of them all. To forbid the transmission of such fortunes on death would largely destroy the incentive to do the things that have so greatly benefited the American people. It would be like burning down the barn to get rid of the rats.

WIDE DISTRIBUTION OF WEALTH IN UNITED STATES

The large fortunes constitute but a small part of the wealth of the country. According to a study by Dr. Williford I. King, on July 1, 1936, there were about 9,000 families in the United States having wealth of $1 million or over, and their wealth in the aggregate amounted to approximately $22 billion. This was slightly less than 7 percent of the total value of private property in the country at that time, which Dr. King estimated at about $321 billion.

Despite frequent assertions to the contrary, the fact is that never in all history has there been such a wide distribution of wealth among the people as in the United States.

CONCLUSION

By way of summary, the Federal estate tax is the least defensible of any of the taxes levied by the Federal Government. It is a direct levy on capital, its economic effects are exceedingly harmful, it produces but little revenue, and it invades a field of taxation already being used by the States.

I, therefore, submit that the levying of such taxes should be abandoned by the Federal Government, and this means of taxation left exclusively to the States, where competition would tend to keep the rates within reasonable bounds.

The gift tax is merely auxiliary to the estate tax, and both should be dealt with alike.

To accomplish this objective a bill should be promptly passed repealing the death and gift taxes, and in addition an amendment to the Constitution of the United States should be adopted prohibiting the levying of such taxes by the Federal Government in the future. A bill (H. R. 9435) repealing these taxes has recently been introduced in the House by Congressman RALPH W. GWINN, and joint resolutions proposing such a constitutional amendment have been introduced in the present Congress by Senator DIRKSEN and Congressman GWINN (S. J. Res. 25, H. J. Res. 141, and H. J. Res. 461).

PROVIDENCE, R. I., *August 26, 1957.*

Consumer Has a Side

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful editorial from the Austin Statesman of July 8, 1957, under the heading "Consumer Has a Side."

It may be surprising to some, but it should be gratifying to many, that out of Texas, the State which is our largest natural-gas producer, a voice should be raised in behalf of the consumer.

Members of Congress considering the Harris bill, H. R. 6790, would do well to ponder the concluding appeal of the editorial:

It is equally clear that no injustice should be permitted on millions of gas users who, if this bill passes in its present form, will have no check on price rises which may get underway almost immediately after it becomes law.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONSUMER HAS A SIDE

Last year President Eisenhower vetoed the measure passed by Congress which freed natural-gas producers from Federal price control. He did so, he said, because of the arrogant lobbying by the bill's supporters. At the time, however, he said he favored the general purposes of the measure.

Now he has withdrawn from the view that an amendment should protect the rights of the consumer, feeling, apparently, that the bill does not jeopardize the consumers' rights. And he sees no need for the Federal Power Commission to look into the costs of production.

Many billions are at stake in this legislation. It would seem, in all fairness, that the President find out first just what the circumstances and facts are so that it will be fair both to the gas industry and to the consumers.

It still is not very clear how it can be that an unregulated industry is to the interest of the consumer who is dependent on its product.

No one wants to see an injustice committed on the gas industry. On the other hand, it is equally clear that no injustice should be permitted on millions of gas users who, if this bill passes in its present form, will have no check on price rises which may get under way almost immediately after it becomes law.

The Labor Movement Serves Education

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address given by Prof. Philip Taft, of Brown University, a member of the American Federation of Teachers, at the annual banquet of the federation, held in Chicago, Ill., on August 22, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS GIVEN BY PROF. PHILIP TAFT, OF BROWN UNIVERSITY, A MEMBER OF THE AMERICAN FEDERATION OF TEACHERS, AT THE ANNUAL BANQUET OF THE FEDERATION, AUGUST 22, CHICAGO

The general labor movement has influenced education and the school system in several ways—some directly, and others, perhaps of equal importance, indirectly. From its beginning, the labor movement of the United States, and of other countries as well, has sought to expand the opportunities of

the average man and woman who depends on the sale of his services for his income. The labor movement has sought also from its inception to shorten the hours of labor. In fact, as we recall the first demands made by the emerging trade unions of the late 18th and early 19th centuries, we find that the demands for higher wages and shorter hours were almost always bound together in one package. It may properly be asked how do the demands for higher wages and shorter hours affect the educational institutions of the country. My answer would be: very directly and significantly, for it is only by raising the wages of adults—the real wages, I mean—that the family is enabled to provide for the schooling of its children. The first requisite for a general and broad education of all the people is adequate income for the family so that it can afford to keep the child in school rather than to send it to the mine or factory at a tender age to help raise the family income. Indirectly, therefore, the trade unions, by insisting that a greater share of the national income be paid to wage earners, were, in fact, asking that the working child be given the opportunity for an education. Let us bear in mind that only as the family ceases to depend upon the income of the young wage earner is it possible to force a withdrawal of the child from industry.

Consequently, the trade unions were among the first groups in our society to recognize and fight against the evil of child labor. They were among the first groups to insist on raising the school age, and on the establishment of systems of supervision which prevented the evasion of the laws regulating the employment of children and prohibiting the employment of those below a stipulated age. By insisting that the child's place was in the school and not in the factory, or the counting house or the mine—fortunately our generation does not know of the employment of children of tender age as breaker boys in the coal mines—the labor movement stimulated and enlarged the role of the school system in our society and in our communities. The relationship between the level of real income and the demand for education can be seen today by the increased enrollments in the secondary schools and colleges and universities as the levels of real income have risen.

Shorter hours have been, as has already been noted, one of the earliest demands of organized labor. As a matter of fact, the first labor movement organized on the North American Continent was established to promote the shorter workweek—the 10-hour day. That is one reason why the Mechanics Union of Trade Associations, the first labor movement in our country, was brought into being in Philadelphia in 1827. From that time on, and as a matter of fact, in the single union before that time, the labor movement has always placed the demand for shorter hours high on its list. Thus, the trade unions in the 1830's demanded the 10-hour day. In the years immediately following the Civil War the unions started to agitate and demand the 8-hour day; this was followed by an effort to establish the 44-hour week, so that the workers would have a greater span for leisure-time activities, including education. The next demand for shorter hours took the form of a plea and insistence upon a 5-day week, and this schedule of work was in many places established by the trade unions before it was recognized as desirable in the law of the land.

The relation between shorter hours and education was recognized by the trade-union pioneers in the United States and other countries. The men who founded the trade-union movement to which we are affiliated were men of character and vision who sought a better life for their fellow men. They did not regard the labor movement as a business, but as the instrument by which men and women could attain a better and fuller life. It was a Boston machinist, Ira Steward, who argued that when a worker is forced to work long hours he becomes a mere machine, a beast of burden with few wants and interests. He therefore believed that by reducing the hours of labor, man's wants and interests inevitably expanded. Where formerly he was satisfied with a mere animal subsistence, a shorter workday, by giving him time to think and reflect, would automatically open new horizons for him. Time to think leads to greater curiosity which can be satisfied only with a knowledge of the arts and of the sciences. Steward saw in shorter hours the basic requisite for raising the educational level of our working people.

But we must never forget that the early movement was not established by believers in mere bread-and-butter organizations. They, of course, stressed the primary need for the organizations of labor to win better wages and working conditions, but they saw in more favorable conditions of employment the means for enlarging the understanding and activities of the average men and women whom they zealously served.

So far I have attempted to show the contributions of organized labor in the expansion of educational opportunities for our people. These have been great, even though frequently unrecognized. Organized labor has, moreover, always shown a more direct and pervasive interest in education; labor has always supported the school and the teacher. Before dealing with the school system, labor has noticed the teacher. In my opinion, the teacher, working with the pupil, is the most important member of the school system. A school could be operated without auditoria or athletic fields or even buildings; it is possible to run a school in the fields or even in private homes. The one indispensable individual in a school working with the child is the teacher, a simple fact not always recognized by school committees, superintendents, and even the parents of schoolchildren. The labor movement, in contrast, has always recognized the primary importance of the teacher, not only because of his contribution to the education of the youth of America, but because the labor movement has insisted that those who made a contribution to the welfare of the community, those who provide a useful and necessary service should be accorded all the rights enjoyed by other citizens and be given the opportunity to share in the fruits of economic progress. The classroom teacher should not be the forgotten man in our society. The labor movement has always fought for the right of the teacher to enjoy the freedoms accorded to all other citizens, and has insisted that freedom of speech and freedom of organization and the right to organize be accorded to the teacher as well as those in other occupations. The labor movement has actively opposed the efforts of some school authorities to deprive teachers of rights possessed by other citizens and has defended, and even more, insisted, on the necessity of teachers organizing so that excessive burdens would not be forced on them. But labor has not neglected to recognize that effective teaching and devoted teachers should be properly rewarded. We must neither underestimate nor overstress the altruism of teachers.

So far, I have dealt with the influence of the labor movement in promoting education and educational opportunities indirectly through the creation of a political and economic climate which increases the educational opportunities for the average man and woman, and enables the teacher to protect himself against certain kinds of abuses. But the labor movement has long been also the direct and faithful friend of the teacher and the school system.

Let us now turn to more direct activity on behalf of education. From its first organization, the labor movement aided directly in the campaigns for the establishment of adequate schools, for the children of America. In fact one of the grievances most complained of by labor in the first decades of the last century was the absence of free public education. It was recognition of the need for free public education which helped stimulate the scattered local unions of Philadelphia to combine into what we would today call a city central federation for common action in behalf of free education. All Americans, including those who send their children to private schools, are proud at least of the principle of free public schooling for every child.

Even though labor had little organization and few resources, much of the early effort went into campaigns for free public education. The arguments against free public education were not lacking and some folks were convinced that such a system would only be a waste of the taxpayer's funds and would give the Government an opportunity to control the child and even the parent. Some believed that the worker's children should attend the charity schools then in operation in many communities. But the first organizations of labor believed, as we do today, that a democracy is not possible unless every child is given the opportunity to an education without the stigma of charity or inferiority. The worker's organizations of the 1830's declared education to be "the rock on which the temple of moral freedom and independence is founded; any other foundation than this, will prove inadequate to the protection of our liberties, and our republican institutions. In order to support the superstructure, the foundation must be broad. Our Government is republican; our education should be equally so."

The quotation expresses the view of the labor movement of the pre-Civil War period. No less friendly was the attitude of the labor movement which followed the Civil War. Education was from the beginning, high on the list of demands of the American Federation of Labor, and the first convention of the A. F. of L, came out for compulsory education of the children of America. In addition, the A. F. of L. soon thereafter went on record that textbooks and supplies be furnished free for every pupil attending a public school.

The attitude of the labor movement has always been that educational opportunities should be sufficiently diverse to take account of the varying talents and capacities of individuals. Therefore, it has recognized the need for vocational education. Actually, the labor movement was largely instrumental in the enactment of the first Federal law providing for grants-in-aid to States for the promotion of vocational education. The first draft of the Smith-Hughes Act was written in the office of A. F. of L. President Samuel Gompers. The labor movement has watched these developments with sympathy and understanding and has sought to have programs developed which would serve the individual, the school, and industry, but which would not be utilized as a means for giving advantage to special private firms. The labor movement has urged the adoption of night-school programs where young people and adults might resume their schooling shortened by the need to enter the labor market. Favoring equal opportunity for all, the labor movement has persistently supported the establishment and enlargement of the public college and university so that educational opportunity would not be rationed on the basis of income.

Quite early in its history, the general labor movement recognized the desirability of teachers forming organizations which would be able to protect the standards of the profession and, at the same time, defend the salary scales and the working conditions of the teacher. Of course, there are always those who question the propriety of teachers

joining a labor organization; others are not happy about affiliating with federations composed largely of manual workers. Even from the narrow point of view of self-interest, the teacher gains a great deal from his affiliation with the general labor movement.

Surely no group in our society has more loyally and consistently fought for the extension of education and the rights of the teacher than has the labor movement of the United States. What better forum is available to the teacher than the millions of citizens anxious to be told of the needs and achievements of our schools? Where else could the teacher find an audience as sympathetic to his problems and as anxious to solve them as can be found within the labor movement?

As teachers we recognize certain facts. In dealing with the level of salaries we are inevitably aware that the Government which employs us also provides other services for the community. Schooling, while of major importance, is only one of a number of services provided by modern government. Frequently the services compete for the tax dollar, and those employees who are not in a good bargaining position are likely to have their needs overlooked. The teachers must have a spokesman because the employing units of the teacher are frequently facing demands from other groups also. It is, moreover, a true if unfortunate fact that many school committees, administrators, and even parents, are more impressed by eye-catching buildings and expensive athletic plants than with good teaching and efficient teachers. It is true also, however, that good and comfortable buildings and athletic plants and effective teaching are not mutually exclusive. They go very well together, and teachers appreciate clean and comfortable schoolrooms as much if not more than anyone else. The error lies in judging merely by externals and remaining satisfied if the facilities are modern and attractive. Facilities are only instruments used by the teacher and the level of teaching is determined by the person who directs the class and not by modern lighting or buildings even though the latter may be helpful teaching aids and highly desirable. What we must insist upon is that good schools are the result of good teachers and that neglecting the teacher will ultimately destroy the school system.

Because of the competition for the tax dollar by many groups and services and because laymen frequently confuse externals with what is essential, teachers must organize so as to effectually present claims for a fair share of the tax revenue. The general labor movement as represented by the American Federation of Labor, and subsequently also by the CIO, recognized the needs of the teacher and that they could not efficiently be met by the individual. The A. F. of L. welcomed the first organized groups into its midst. The first local unions of teachers were warmly greeted and their support urged upon the affiliates. At first, as is customary in all crafts, professions, and industries, the local unions were affiliated directly to the American Federation of Labor, but by 1916 there was a sufficient number of local units of teachers organized for the A. F. of L. to grant them a national charter—and the American Federation of Teachers was established. The advantage of the affiliation with labor was the A. F. of L. could give the teachers support in seeking to rectify their grievances; it could make known to a wider audience the claims and rights of teachers and mobilize the membership of the trade unions in their behalf. The significance of the national union organization of teachers was that for the first time teachers acquired an experienced central body which could aid local groups and give them the benefit of experience gained in organizing and negotiating with the school authorities.

Organizing the unorganized has never been an easy task. In some periods it is less difficult than in others, but fear and inertia are always to some extent present. Newly organized workers have in the past frequently faced the danger of discrimination and loss of employment if they tried, but were not successful, in establishing a union. Even today, when labor is protected by legislation in its right to organize, discrimination is not unknown. Far more serious and widespread were the obstacles of the past, before the great expansions of trade-union membership in the 1930's and 1940's. Teachers who joined a union then faced not only the economic hurdles of all the other unions; they had to overcome even greater obstacles than manual workers. As Government employees they were frequently prohibited from combining with their colleagues in order to rectify injustice and secure equitable treatment.

Yet the pioneers who laid the groundwork for the American Federation of Teachers persisted in their tasks. They have been able to convince, cajole, or force school authorities in many communities to recognize that a teacher has the right to join a protective organization to defend his economic and professional status. But the American Federation of Teachers has been more than a mere agent for handling grievances. It has foreseen many of the problems facing school systems of America and has found ways through which they might be intelligently met. Because its views are primarily influenced by the needs of the children and those who have the primary responsibility for their formal training, the teachers, the American Federation of Teachers, has been able to warn against the successive crises that have faced and are facing our educational system. The views of the AFT are not those of the school administrators; its views are not formulated with a view of serving a selfish special interest, but they are devised to serve the interests of all the people, and of the future generations. The American Federation of Teachers as an integral part of the AFL–CIO can bring educational problems to the great forum of labor's convention and there mobilize sentiment for a proper public policy.

The depression of the 1930's led to a serious crisis in our economy and in our schools. Local governments, harried by falling revenue and rising costs of their relief budgets, began reducing the amounts allocated for schools. The AFT and the AFL both directed their efforts toward not only halting this dangerous trend but reversing it. At the depths of the depression, the conventions of the AFL warned of the need to increase school appropriations. The depression years brought with them a serious attack upon the schools, caused largely by the breakdown of sources of revenue, and the demand for economy which was an outgrowth of the depressed state of business. It took the form of sharp budget cutting and, in some instances, of which Chicago is the outstanding example, local governments were unable to pay teachers out of their reduced tax income. At its convention in 1933, the A. F. of L. noted this danger to continued existence of the free public school which organized labor had long fought to establish. It called upon the Federal Government to aid the States to maintain their educational plants and activities. The convention recognized that the primary responsibility for the education of children rested upon the local community and the State, but it also recognized that the breakdown of the educational system in any State, and the disastrous effect such a breakdown inevitably exercises, is a potential problem for the citizens of all States.

In 1936 the convention of the A. F. of L. endorsed pending bills in Congress which sought to provide Federal aid to States for education. The shifts in population occasioned by World War II and its continuance up to now, the great increases in school enrollment and the still greater increases expected, raised the question of school financing again. The labor movement, as represented by the two federations—the American Federation of Labor and the Congress of Industrial Organizations—and since the merger by the existing federation, has spoken out continuously for Federal aid to education, so that children in areas with low-tax resources would not be denied adequate educational opportunities.

As one examines the record, he finds that the most consistent friend of the school system has been the organized-labor movement. Labor has, over the years, fought for the expansion of the school system so that every child would have an opportunity for a free education through college and the university. Labor has recognized, as perhaps few groups in our society have, the significance of the teacher in the educational system. Because the labor movement has always fought for the protection of civil rights for all the people of America, it has demanded that the teacher be treated in like manner and be allowed all the rights and privileges of other citizens. Because it recognized that the teaching profession has a just claim for its fair share of the national income, it has fought for adequate salaries for the teachers.

The labor movement has, moreover, recognized that the payment of adequate salaries is not only a measure of justice, but that, if the teaching profession is to recruit the able and devoted men and women who have staffed our public schools, their remuneration must be sufficiently attractive to encourage young people to take up the career of teaching. Unless we want a continuing steady deterioration in the quality of teaching, the teaching profession must not be neglected. The men and women who have devoted years of effort are perhaps too committed to change their professions; but death and retirement as well as the withdrawal of younger members from a profession which has failed to retain its position on the income scale make the raising of the pay of teachers imperative. It will not profit the community to have the finest plant and equipment that money can buy, if it is not manned with competent teachers.

These conditions have long been recognized by the general labor movement and by our own American Federation of Teachers. Because of their primary interest in the schoolchild and the schoolteacher, the American Federation of Teachers, and the general labor movement of which it is a part, have concentrated their major efforts in improving the school system, in promoting the enlargement and enrichment of the curriculum so that every need, as far as possible, is filled; in protecting the teacher as a citizen, and as an employee. The campaign waged by the A. F. of L. is never lost, and, for that matter, never permanently won. Because of the continuing need, the teacher requires an independent spokesman and the sympathetic interest and support of a large body of citizens whose only demand upon the school is that it serve the children of America effectively.

Questionnaire Submitted to the People of the 12th Congressional District of New York

---

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. DORN of New York. Mr. Speaker, each year it has been my custom to sub-

mit to the people of the 12th Congressional District of New York, whom I have the honor to serve, a questionnaire setting forth various questions which will be considered by the Congress of the United States in its deliberations.

I appreciate the fine response to the questionnaire and am gratified to say that the people of the 12th Congressional District of New York are intensely interested in their Government and are willing to take time to participate in it by expressing their opinions and advice to their Representative in the Congress.

The following is the questionnaire and the results in percentages:

	Percent		
	Yes	No	No opinion
1. To promote the cause of world peace, President Eisenhower has said he believes it may be necessary for him to meet from time to time with foreign heads of state with whom he may not always agree. Do you favor such meetings between the President and foreign leaders?	84	14	2
2. Do you approve of President Eisenhower's general foreign policy?	52	43	5
Do you favor—			
(a) Continuing foreign military aid?	51	44	5
(b) Continuing foreign economic aid?	51	45	4
3. Do you approve of Congress authorizing the admission of a greater number of immigrants from all countries?	42	52	6
4. Do you approve the sale of farm surpluses to Communist nations?	32	63	5
5. Do you favor reduction of the Federal debt before reducing taxes?	64	34	2
6. Do you approve Federal legislation to ease the supply of housing credit, including greater Federal support of the mortgage market?	58	39	3
7. Do you approve the Federal Government's encouragement of more liberal credit and lower interest rates for small business?	83	15	2
8. Do you approve controls by the Federal Government of rents, wages, and prices in peacetime?	47	51	2
9. The administration has proposed extending the present $1 an hour Federal minimum wage to groups not presently covered, mainly retail and service employees. Do you favor this proposal?	84	15	01
10. Do you favor requiring registration of pension and welfare funds of labor unions and disclosure of financial transactions involving them?	91	06	03
11. To put the Post Office Department on a pay-as-you-go basis, do you favor increasing postage rates, including a boost in the 1st-class mail from 3 to 4 cents, as proposed by the administration?	69	29	02
12. Do you approve direct Federal grants to States for education?	60	38	02
13. Do you favor Federal plans for reinsuring privately run voluntary hospitalization and surgical insurance?	52	46	02
14. Do you favor further reduction in the age at which persons shall be eligible for social security?	62	36	02
15. Do you favor the enactment of a strong civil rights program to enforce the voting rights of all citizens?	80	18	02

The response to the questionnaire by thousands of residents of our district has been of great assistance to me in carrying out their wishes. Many persons who answered the questions also submitted comments on other issues and suggestions for solutions to some of the problems of the day.

They are the people who elected me to represent them in the Congress of the United States. If there is any way in which I can be of service to them I hope they will not hesitate to call upon me. During recess both my Washington and Brooklyn offices remain open. I have a competent staff and my services and theirs are available to my constituents. I want them to know that even when Congress is not in session I am on the job.

Address by Walter Reuther to the Annual Convention of the American Federation of Teachers

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the thought-provoking speech on some of our most pressing national problems by Mr. Walter Reuther, president of the United Automobile Workers, CIO, to the Convention of the American Federation of Teachers in Chicago on August 22, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY WALTER P. REUTHER TO THE ANNUAL CONVENTION OF THE AMERICAN FEDERATION OF TEACHERS, CHICAGO, ILL., AUGUST 22, 1957

My good friend Carl, distinguished guests, delegates to the American Federation of Teachers convention, and friends, it is a privilege and great pleasure to be with you tonight. I have looked forward to this opportunity because I feel at home among teachers. I always tell my wife: "You know, I get many, many invitations to speak and from all sorts of groups, but I have the least resistance when the teachers ask me to come because I have a great affection for the teachers."

Further, I also think that my credentials are in order because I don't think that I could have demonstrated my affection in a more tangible way than by marrying a teacher—and, of course, that is precisely how I demonstrated my affection. [Applause.] My good wife is a very attractive young lady, but then she was much more attractive to me—some 22 years ago when we were married—becauses, in her purse, she carried a membership card in the American Federation of Teachers. [Applause.] She not only carried a card in your union but was also a very active member of the American Federation of Teachers.

Now, I did not come with a learned and prepared text as did our good friend Dr. Taft here. However, I would rather like to think out loud with you concerning some of the problems that I have been thinking about and that I also know that you have been thinking about.

You know, if H. G. Wells had written that potent line about history being a race between education and chaos today, he would have been much more accurate than he was at the time he wrote it, because you and I and the people of the world are living in the most difficult, the most challenging period in human history.

I would like to talk about that problem as it relates to education because, in a broad sense, what you and I and the millions of people who make up the family of man do with the problem, the kind of solution we will find for it and how we can exploit the opportunities that are on the other side of the coin, in a large measure, depend upon what we do with the development of human resources of the world.

We are in a crisis in the world. The crisis is not economic, political or military in character. Essentially we are living in a moral crisis which is reflected in man's growing immorality to himself—of man's growing abuse of himself—which finds its most terrifying expression in the total destructive power of the H-bomb, which, in our place in history, has made peace an absolute condition of human survival.

Now, just as the world is in a crisis because of this moral problem, the plaguing domestic problems of America are essentially moral in character. The civil rights question which has been debated for so many weeks in Washington—that is not a political question—that is esentially a moral question of how Americans must learn to live with others, regardless of race, creed or color. This happens to be, I think, perhaps America's most challenging problem as it relates to providing leadership to the free world in the growing struggle for the hearts and minds of people everywhere; in the contest between freedom and the forces of communism and communistic tyranny.

Go to Asia, as I did, into the villages of northern India, and they will ask you about Montgomery, Ala., and they will want to know all of the details because they are looking at America—and they will judge us not by our productive indexes, not by the brightness of chrome on the new Chevrolets and Cadillacs, not by the millions of tons of steel that we have the capacity to produce, even though, of course, they are impressed by these statistics—but they will judge us by the only true measurements of the greatness of civilization—not our material wealth, but how do we demonstrate the social and moral responsibilities essential to translate material wealth into basic human values.

They will ask us: "What about your double standards in America?"

We need to work hard at finding a practical way to overcome the moral gap between America's noble policies and its ugly practices in the field of civil rights.

The second most important challenge in America is education, a condition that becomes more threatening and more serious each day as classrooms become more and more antiquated and more children demand the right of education as members of our free society and as teachers get less and less compensation in terms of their equity of the gross national product.

Of course, here again the crisis in education is not economic. We have the material resources essential to overcoming this basic educational deficit. We have the know-how in terms of teachers and techniques—what we lack is the moral courage and the good sense to commit a large enough portion of our economic resources necessary to overcome this basic deficit.

While we are talking about moral crises, I just want to say in passing that the labor movement has a moral crisis on its hands—that essentially the corruption and the gangsterism which have penetrated certain unions in the American labor movement is a reflection of our culture. It comes out of the fact that we have placed too great an empha-

sis in our society upon the sheer acquisition of material wealth as being the only symbol of success and that this kind of almost total dedication to material values tends to corrupt, and, of course, it corrupts labor leaders as well as other members of our society.

Therefore, I am proud to be part of the team in the American Federation of Labor and Congress of Industrial Organizations who are engaged in the practical and somewhat painful task of applying our newly devised ethical codes to our labor movement. [Applause.]

I want to assure you that it may be painful, but that we are determined to drive out of the leadership of the American labor movement every crook and racketeer, because we believe that neither crooks nor Communists ought to be in the leadership of a free labor movement. [Applause.]

Now, the crisis in education is one that cannot be overcome as a deficit in the production of automobiles might be overcome. If there is a demand for more cars than Chevrolet may be producing, then all that you do is to put on a second or third shift, and very shortly you begin to overcome the deficit.

However, in education you have got to back way up, because you are dealing here with human elements. That is the great tragedy of America—that we are developing many problems and, essentially, they grow out of this cultural lag between the progress that we make as a free people in the physical sciences, in the art of working with machines and materials and our failure to make comparable progress in the human and social sciences—in the art and know-how of working with people, developing human resources. Education, of course, essentially is that kind of a task—the finding of a way within the framework of our free society to facilitate the maximum growth of every human being.

The American labor movement can be proud of the history that Dr. Taft referred to. We were in the front ranks fighting for education for all because we shared the belief that every child is made in the image of God and that every child should have the kind of educational opportunities, so that each child can be given the opportunity of engaging in and developing that spark of genius which God put into each of us—some more or some less—but to give that spark an opportunity to grow and develop and flourish so that every child can grow to his maximum stature intellectually, culturally, and spiritually—not limited by the fact that the schoolhouse where he went to school was antiquated and inadequate, that the school classroom had 45 students and a harassed and underpaid teacher—but the right of that child to grow should be limited only by its capacity to grow in response to that kind of educational opportunity that every child's nature calls for.

Therefore, we are not Johnny-come-latelys in this struggle to enable every child to have that sacred right of individual maximum growth. This is what we have been talking about.

We have failed to understand this problem because we have failed to comprehend the new dimensions of the forces that are working in the world in which the atom has been split. This is not the problem of yesterday. The tools of today, the problems of today cannot be solved with yesterday's tools or yesterday's concepts. We need new tools and new concepts in order to meet the new challenge and then translate these opportunities into practical fulfillment.

There is much noble talk about education. Yes, you hear eloquent orations on the public platforms around election time about how our children are our most precious national asset and yet, after all is said and done, we treat them as though they were unimportant. What we need is less pious talk and more practical and positive action on the educational front of America. [Applause.]

This is not only a matter of individual growth—the right of every child to grow to his fullest. Of course, that in itself ought to be sufficient motivation to get us off of dead center—but if that is not enough, then the people who look at education and pinch every penny out of it ought to realize that education is the key to national survival.

We are fighting wicked, powerful, and evil forces in the world. We are the strongest of the free nations of the world and because we are the strongest in riches, blessed with more resources than any other country in the world, we must assume corresponding responsibilities in the struggle to make freedom survive in the world. Therefore, education is both a matter of individual growth and a matter of national survival.

Just look and see what the Russians have been doing. You know, I served for a year on a panel established by the Joint Congressional Committee on Atomic Energy, to explore into the peaceful applications of the atom. When we went into the fields of medicine, agriculture, basic research, the field of atomic energy, into its industrial uses—in every field, the limiting factor, the thing that prevents our making maximum progress in harnessing the atom for the peaceful needs of man was not a shortage of ingredients or facilities, but a shortage of trained manpower.

Of course, as you look at the other aspects of American life you will also find that this same problem exists.

Now then, what are the Russians doing while we quibble about our educational needs and fail to meet them? They are forging ahead. In 1920 the Soviet Union, 2 years out of revolution, where they overthrew the Czar, had 41,000 graduate engineers, scientists, and people in related fields. In 1920, we had 215,000. In 1954, the Soviet Union had 54,000 and we had roughly, 500,000. In 1956 they had 120,000 engineers and scientists and related technicians and we had graduated 70,000.

I asked the dean of one of the leading engineering schools in the East whether the Russians were just doing a better quantitative job, sacrificing quality for mass education, and he replied that it would be a sad mistake for us to think that is what they were doing—that in many cases a 4-year engineering or scientific degree in a leading technical university in the Soviet Union was equivalent to a master's degree here. They are advancing because they are really working on education and the many things in relation thereto.

We find that the high schools and preparatory schools in America, because of budgetary problems, begin to cut out the essential courses, and, of course, as a result, problems accumulate. Therefore, as I said, you just cannot overcome these problems by putting on a third shift as we do in the Chevrolet plants, and so that is the reason we are in trouble.

When you look at the fact that more than 50 percent of our high school students who have greater potential growth do not go to higher schools of learning, that they go to work—that then, when you add all of these things together, you can see why we are in trouble. We are in trouble because we seem more concerned with the condition of our finances than with the adequacy of our educational system.

I say that the society that is more concerned about other things than for the growth of its children is going to be in deeper and deeper trouble as we go down the road in history.

Take an automobile worker or a sweeper, for instance, the lowest paid classification that we have in our automobile industry. Last year the statistics indicated that half of the elementary schoolteachers of America received less income than a sweeper in an automobile factory. Now, our sweepers are not getting too much but the teachers are getting too little.

Yet, why is this? It is because somehow we have not gotten our values into proper focus—we have not worked out our list of priorities based upon their true values.

Teachers are entitled to the kind of compensation commensurate to the training needed to teach and to the responsibilities associated with the teaching of our children. However, they continue yet to occupy second class economic citizenship.

You must remember that there is also this problem of growth—for the birthrate is not marking time just because we are looking the other way. [Laughter.] Somehow these unborn children will not postpone their birthdays just because men of little faith have not measured up to the economic needs of an educational system in crisis.

That is why we need to begin to do something about it. Those people who opposed Federal aid to education dressed it up. They are really opposed to Federal aid for education, they tell us, because they do not want Federal control. Of course, they know that you can have Federal aid with local control, but yet these same people are willing to take millions for all kinds of subsidies—for industry, for highways and so on. You have never, I am sure, heard one of these fellows, fighting to get $50 billion for highways, talking about the danger of federally controlled highways. This is really a convenient excuse to hide behind.

We are for Federal aid but we are for local control because we believe that education ought to be close to the people and ought to be controlled at the lowest level of democratic government. However, we also know that realistically the budget of State and local governments cannot carry the excessive burden associated with overcoming a deficit accumulated during the war years, when we could not build schools and we also could not do other things and that, therefore, the Federal Government, of necessity, has to assist in overcoming this tremendously large educational deficit. However, as you can see, because we have our values out of focus, people get mixed up.

I can remember that the Chairman of the White House Conference on Education (and I believe the gentleman's name was McElroy) was asked, at a press conference, "Why do you think that this discussion on education is so controversial?" He explained, it's really simple, for, whenever you mix up two of your most important values, you get explosions and, of course, education mixes up our pocketbook and our children."

Therefore, whenever you equate your pocketbook with your children, then your values are out of focus, because you should never mention your children as a value in the same sentence with your pocketbook for the reason that they do not belong in the same class. However, this is precisely what we do—we always equate human values and somehow they always come out a little bit below the material value.

I say that it is about time that America had the moral courage and the good sense to put our children and their future on top of the list and our pocketbooks down further on the list of priorities. [Applause.]

Now, we worked hard in Washington to get a bill—the Kelly bill. It was only a small step in the right direction, totally inadequate when measured by the dimensions of the deficit. However, even at that we could not get support. The administration had a bill even less adequate. Finally the people decided that maybe the best chance of getting some legislation was to support the

administration's bill, even though that was less adequate than the Kelly bill.

Now, then, when the effort was made in the last hours of that fight on Federal education what happened? Well, we had an * * * alliance led by Mr. HOWARD SMITH * * * and Mr. CHARLES HALLECK * * *, who together, pulled off a nice, cute, parliamentary maneuver and killed the whole bill. Unfortunately, we did not get the kind of aggressive leadership from any branch of the Government that we wanted and, further, the White House was also very quiet on that particular day.

Now then, what happened? Well, 112 Democrats voted for the administration's inadequate educational bill and only 57 Republicans followed their leader, and this in spite of the fact that this was the bill that they had talked about all these many weeks and that this was the bill that they had promised that they would telescope—that instead of taking 5 years that they would do it in 4 year—and yet the bill sponsored by the President was voted against by 139 Republicans, with only 57 voting for it. That is the kind of political immorality that we are faced with.

If the politicians don't believe in Federal aid to education, then they ought not to campaign on that. But when they campaign on supporting Federal aid to education and then go down and vote against it, I say that is hypocrisy and that they should, on election day, be called to an accounting with regard to it. Yes, that is precisely what happened.

Now then, while we worked to try to get that bill through Congress, because we felt that even that bill was a step in the right direction, we did not fool ourselves into believing that it was an adequate bill. What we need to do is to raise our sights—get this question of education up here (indicating eye level) in terms of these new dimensions in which freedom and tyranny are waging this contest of survival; up into the dimensions of the atom, automation and the progress that is being made in the physical sciences.

The President's bill provided for, roughly, $300 million a year for 4 years. How much is $300 million a year? Well, everything is relative. Compared to what we spent in connection with waging the last war, it is peanuts. Three hundred million dollars a year is less than what we paid for waging 8 hours of war during the last war.

I ask you this question—isn't there something basically wrong with the moral fiber of a free people if they have the courage and the collective will, through the instruments of Government which they control and through the exercise of the right to vote—when they do not have the courage, the will and the determination to spend (especially when they spend billions and billions for war for the purpose of training our young people to die on the battlefields) the small amount of money necessary in order to train our people to live in peace?

What do you think that it costs to train a jet pilot or pursuit bomber pilot? You can train many teachers, doctors, and engineers and also scientists for what it costs to train one jet pilot and, of course, the minute he is trained, then his term is quickly over, he retires, and then they again commence to train another fellow. You know, when you train a doctor or an engineer, they are in those professions for a long time, and, of course, that is equally true of the teacher. However, we spend millions to train young people how to die but then we just do not seem to have the good sense to spend millions to train people how to live in peace.

This is the problem, the moral problem that I am speaking of and where our values are out of focus. Therefore, what I have been attempting to do is to get people to realize that we need to raise our sights—to get all of these values into the framework of these new dimensions that I have been talking about.

I have been proposing a Federal-aid-to-education budget for a 5-year period equal to 1½ or 2 percent of our gross national product. Just think of that—1½ to 2 percent of our gross national product as a Federal-aid-to-education budget for 5 years in order to overcome our deficits. Well, when I proposed this all sorts of brickbats started coming in my direction. They say this is fantastic, impossible, inconceivable, unrealistic, that it is from six to eight billion dollars a year. Well, that amount is less than we paid to wage the last war for 1 week.

Aren't we willing, as a free people, to spend in 1 year to help overcome the educational deficits what we were willing to spend in 1 week of winning the war or are people only capable of fighting in terms and sacrificing in terms of their common fears and their common hatreds in the negative pursuits of war?

I share the belief that free people will fight and work for their common hopes and their common dreams and aspirations, if they have the leadership. Why can't we work and fight for the things that we believe in as well as the things that we are opposed to?

Yet, because these things are really all relative, you have always got to measure a budget in terms of your resources. What is six to eight billions of dollars a year in terms of the American economy? It is a small amount of money relatively speaking.

The other day I read in the paper that they are going to build the first atomic aircraft carrier at a cost of $340 million—costing $40 million more than the aid to education bill for a whole year which they had defeated. However, they will just not defeat anything in connection with aircraft carriers. They will wave the flag and most everyone will be for that.

That is the problem and, of course, as I stated, we need to find a way to overcome this problem or we are in trouble as a people and a Nation. I am pointing out that 1½ to 2 percent of our gross national product, measured against what we are losing in the American economy because we are failing to mobilize its full productive capacity, its full potential, is a small amount of money compared to what we are losing.

If you take the years from 1950 through 1953 and measure the economic growth of the American economy in that period as compared to what happened in the last 4 years, compare it to what happened in the last 4-year period, you will find that if the American economy had expanded the last 4 years at the same relative growth as it expanded in the previous 4 years, starting with 1953, that the American economy would have yielded $67 billion greater gross national product and, of course, out of that we could have met the cost of a six-to-eight-billion-dollar Federal aid-to-education bill; that we could have raised the salaries of teachers to where they ought to be; we could have built 300,000 new schoolrooms; we could have built 400,000 hospital rooms, fully equipped; we could have doubled the social-security payment of 11 million people who are on social-security retirement and we could also have done many other things with that money—something which we failed to create because we were not realizing the maximum growth in our economy.

The great tragedy today, you see, is that there are some of these people in high places who are men of little faith and little vision, who are so accustomed to getting their share of the economics of scarcity that they have never fully comprehended the economics of abundance.

We can meet the educational deficits only within the framework of the economics of abundance; only as we realize this potential that is now going to waste and gear that potential to these basic needs. Only as we pound away at this problem will we get more people to understand it and, of course, out of that greater understanding you will get action.

Now then, when you talk economics people ultimately get around to saying, "Well, if we spend that much more money won't that be feeding the fires of inflation?" Well, you know, we have a peculiar kind of inflation in America, it is completely cockeyed. [Laughter.] If you take into consideration what all of the economists have said (and, of course, Dr. Taft here is an economist and so I am sure he will support me in this) you will find that they have explained inflation as the result of a situation in which the demands exceed the capacity of industry to supply the things that people are competing for. In our situation, of course, there are no shortages of basic commodities. The automotive industry can make more than the 2 million cars that they will make this year; the steel industry can roll more steel; the appliance industry is operating at around 70 percent of capacity; the textile industry is even lower than 70 percent. The problem with regard to these industries that I have mentioned is that all of them have a shortage of consumers. These people who make all of these various things make more of them than there are customers with the purchasing power prepared to pay the price and, so, of course, we have a rigged inflation.

This is not the result of the pressure of demands upon limited supply but it is based upon the fact that in many of America's basic industries the control of a few giant corporations is so dominant that they can artificially and arbitrarily rig the price, unrelated to the laws of supply and demand. That is what is feeding the fires of inflation. However, that is something that they would also like to blame on the wage earners. Of course, there is one thing about all of this and that is that they cannot blame it upon the schoolteachers for the reason that you are already so far behind. [Applause.]

However, if you look at the figures you will find that from 1953 through 1956 wages were up 20 percent; dividend income take-home pay was up 33 percent; interest income (payoff on hard-money policy—the bankers' paradise) up 54 percent. You can take consolation from one fact, that there is one group in America who is worse off than the teachers and that is the American farmers. Their income went down 22 percent during that period. You are somewhere between the average wage earner and the farmer. [Laughter.] Of course, you yourselves can figure out whether you are on either the low or the high side.

Of course, the automobile industry, the other day, being very much concerned with the problem of inflation and the higher cost of living, which keeps mounting—it is again going up today and reaching an alltime high, with, however, the automobile workers being protected from this through an escalator clause but also being concerned about the wage earners, the schoolteachers, and millions of other families who do not have these escalator clauses and also with the retired people living on fixed incomes—had a proposal made to it by us the other day. Of course, here I have reference to the General Motors Corp., who, with Ford and Chrysler, make about 97 percent of all of the automobiles.

We proposed to them that together we make a small beginning toward creating the climate in connection with which we could reverse the inflationary measures and pressures and trends and so we proposed that they reduce the price of their 1958 models (instead of raising them, which they had contemplated doing) $100, which, of course, would mean a reduction of $140 at the dealer level. We made this proposal in all good faith and in the sincere hope that they

would accept it. We further said that if they would make that contribution that we would sit down at the bargaining table and that we would negotiate within the framework of the economics that would flow from this hundred-dollar price reduction.

Well, they pondered this proposal for several days and when I arrived at the Chicago airport, I was paged, found that my office was on the phone, and was informed that the president of General Motors, Mr. Curtice, had replied to my letter. Well, it was the longest "no" in history and it took six pages to say it. [Laughter.]

Of course, Mr. Curtice attempts to twist the proposal and to make it look as though this is a propaganda matter, that this is a fancy public-relations maneuver. I can assure Mr. Curtice and the American people that this is not a public-relations maneuver because all that they have to do is to say "yes" and we will translate that into a practical proposal, where, together, labor and management can both contribute to checking inflation in America and protecting the American consumers against high prices. [Applause.]

I think that General Motors stockholders are entitled to a fair return on their investment. I also think that American wage-earners and automobile workers are entitled to a fair wage for their contribution in creation of economic wealth. I think that the American consumer is entitled to share with the stockholder and the wage-earner in the fruits of our advancing technology, and I contend that a corporation like General Motors is keeping a disproportionately large share of the fruits of our advancing technology. [Applause.]

In 1955 the General Motors Corp. made over $2½ billion in profits in 1 year. That is, of course, fantastic but it is true. This is before taxes but then you figure wages and prices before taxes and not after taxes.

Well, what did they make per worker per hour worked? Listen to this—for every hour worked by every hourly rated General Motors worker (and there were over 400,000 of them) General Motors, in the first 9 months of 1955, made a profit per hour worked by every worker of $2.93. We received a 20-cent an hour wage package and they could have paid that out of their profits and still have made a profit of $2.73 an hour per worker. However, they didn't. They raised the price of cars 4½ percent on the 1956 model and then they came back on the 1957 model with a 6½-percent price increase.

Well, they had a bad year in 1957. [Laughter.] It is true that their production dropped, in the first quarter, 25 percent below the level of 1955. Volume is the key in the auto industry, because they put roughly $600 million into tooling, and so volume has to retire that, and then it goes on and profits skyrocket. However, despite the fact that their volume went down 26 percent in the first quarter of 1957, they still make a profit of $2.78 per hour for every hourly rated General Motors employee.

That is why we say that it is about time that the American consumer got his share, and I say that Mr. Curtice, when he turned down our proposal, was shortchanging the American consumer and that the General Motors Corp. is keeping the consumer's share of the fruits of advancing technology.

I could give you many other facts, but then I do not have the time. However, I would merely like to say that these fantastic profits are possible because of the new technology.

You ought to see what is happening in these automobile plants. This is only the beginning, and we are just on the threshold of the second phase of the industrial revolution.

I went to work at Ford back in 1927. I fell out of a green apple tree down at Wheeling, W. Va., and came to Detroit. I went to work for Ford when they were making the final model T's. Those were very simple machines and pieces of mechanism. In those days it took some thirty-odd hours of independent operation by thousands of workers to put together these machines. However, today we have a new plant in Cleveland, built in 1951, where they make the V-8 Ford engines. A rough casting is fed into the automatic machine operation, and without a human hand touching it, and 14.6 minutes later, it comes out the other end fully machined.

Is that good or bad? Well, that depends upon what we do with it. This is not a decision which an engineer with a slide rule is going to make. This is a decision in the human and social sciences—of finding a way to equate this great technical progress with human progress.

Last year, when they had a model change, they scrapped 75 percent of the machines in that plant because they were already obsolete. They now have a way to even do it faster; and that, of course, is more fantastic.

When I went through that plant I was asked: "Aren't you worried about not being able to collect union dues from all of these machines?" I replied: "Well, I hadn't thought of that—that isn't what bothers me—but how are you going to sell Ford cars to all of these machines?" [Laughter.]

These are the areas in which freedom is going to win or lose the struggle over tyranny. The H-bomb is essential, but that is a negative instrument. It is an attempt to maintain a kind of stalemate balance in the world with the hope that if we have the H-bomb that nobody will dare use one against us or anyone else. Of course, freedom cannot win merely by making a bigger bomb because, when that happens, then our enemies will come up with a still bigger one and the rat race will continue on. These bombs are merely the holding operation. Positive, affirmative leadership must be provided in the areas that touch upon the basic well-being of human beings. It is in the area of education, civil rights, the kinds of economic and social policies that motivate and direct, the utilization of the new tools of abundance that science and technology has given us, each tying into a new framework, that we see our future. Yesterday will not solve tomorrow's problems.

These are the things that we are thinking about. We in America have an opportunity for world leadership because we are blessed with all of the resources, both human and material; we have a rich heritage as a free people, democracy has deep roots in America and the respect for human freedom and human values is deeply ingrained in our people. We have everything that it takes to provide the kind of positive leadership against which the forces of immorality and communism cannot prevail provided, of course, that we lead; provided that we fashion this leadership in the image of our own hopes and aspirations and not in the image of our fears and hatreds; provided that we begin to mobilize the great spiritual power of a free people so that they can work and build and sacrifice because they do share common ideals, common faith in the fatherhood of God and brotherhood of man.

That is the great challenge and we shall not be equal to that challenge so long as our educational system is deficient, so long as our classrooms are inadequate, so long as our teachers are inadequately compensated and treated as second-class citizens.

It is a great challenge. I have unlimited faith, however, in the capacity of free people. I believe that somehow we can find a way to commit America's resources to these challenges and to meet them successfully. On this kind of occasion, when you gather in your convention to draw inspiration from one another and leave with a resolve to go back into your respective communities and work harder, I hope that the whole labor movement can help you in organizing teachers, in getting them together to fight the good fight for education and the good fight for first-class economic citizenship.

I think that together we can do this. Together, as the labor movement has demonstrated, we can move mountains.

I would like to say to you that it has been a real privilege to be with you. Go home and carry on the good fight knowing, of course, that there are millions with you in your struggle.

I am confident that though the challenge be difficult and the road may be rough that, together, we can build that better tomorrow and fashion it in the image of peace, in the image of human freedom, in the image of social justice, and in the image of human brotherhood.

Thank you, and may God bless all of you. [Rising applause ensued.]

Review of the First Session

EXTENSION OF REMARKS
OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BAILEY. Mr. Speaker, as the 1st session of the 85th Congress closes, we can, I believe, look back upon it and its accomplishments with a degree of pride.

It is true that it had some disappointing features, but that could be said of each of its 84 predecessors.

The late adjournment date is evidence that it was a hard-working Congress.

The enactment of the civil-rights bill was an example of the American legislative process functioning in the highest order. In our deliberations the Congress sought and discovered the areas within which it could come to an agreement and concentrated upon those issues. While it is true that the bill, as enacted, may have disappointed some—and I will admit that I would have personally preferred the extension of the jury-trial processes to include all cases of criminal contempt—I firmly believe that we have strengthened the right of all citizens to vote and we have buttressed our judicial system.

On the debit side I was keenly disappointed when the President backed away from the school-construction program which was defeated in the House by the narrowest of margins.

I was also disappointed that various proposals to protect some of our domestic industries were not reported by committees and enacted by the Congress.

I think we can all be proud of the economies made in President Eisenhower's swollen budget. I trust we may be able to follow through in the next session with some tax relief for all the people.

It is good to realize that while we were curtailing Federal expenses, we provided sufficient funds to enable the continuation of some programs vital to the people.

Some examples of these include the provision of sufficient money to enable Hill-Burton grants to several hospitals in the Third Congressional District of West Virginia; to give continued life to the lease-purchase program which, if

efficiently administered by the executive branch, will enable the construction of a research building for the Bureau of Mines in Mount Hope, W. Va.; the authorization of channel improvement work at Elizabeth, W. Va.; and for the orderly advance of the Sutton Dam.

Hard Scratch for a Dollar—Military Thrift

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I attach two editorials which appeared in the Washington Daily News on July 6, 1957, and the Wall Street Journal on July 8, 1957:

[From the Washington Daily News of July 6, 1957]

HARD SCRATCH FOR A DOLLAR

With most people it's hard scratch to make a dollar. With the Government it's even harder scratch to get a dollar saved.

Senator PAUL DOUGLAS, of Illinois, could tell about it.

Last Monday the Senator made a valiant effort to cut a mere half billion or so from the military budget of $34.5 billion.

He had the reports of investigators to show why. He had tables and statistics from the Defense Department itself to show why. He had done an immense amount of homework. He cited chapter and verse—waste, luxury, indifference, plain nonsense.

He mentioned $12,072 for ashtrays, $10,000 worth of diaper service at a single Army base, air conditioners for the Navy on the rock-bound coast of Maine, $62,750 for stairs at an inactive camp, buffet tables for the marines, swimming pools for the Air Force, etc., etc.

Even more impressive were the Senator's statistics on military inventories—$134 billion worth. And how much was excess or disposable.

All in all, it was a staggering indictment of the way the military spends fortunes of taxpayer money.

But after 2 days of struggle, only 6 Senators joined Mr. DOUGLAS in support of his amendment to cut the military budget by one sixty-ninth of the total.

It was eloquent testimony to the trepidation with which the United States Senate views the military demand for money. It was stirring evidence of the lack of understanding in the Senate, despite all its facilities for gathering information, of what goes on in the Armed Forces.

It was a defeat for Senator DOUGLAS, but it is the taxpayers who will pay.

[From the Wall Street Journal of July 8, 1957]

MILITARY THRIFT

"The military do have great virtues but thrift is not one of them," Senator DOUGLAS noted the other day. He was trying to get Congress to cut the $34.5 billion Defense Department appropriations bill, and also to get some of the "fat" replaced by "muscle."

As examples of things that could have been cut he cited Navy spending of $562,000 for an officers' mess and swimming pool in Florida. He noted, too, that the Air Force wants an eighth-of-an-acre swimming pool in the same State. He reported several other examples: The armed service that had spent $12,072 for "ash receiver, tobacco"; the diaper laundry planned by the Army at Fort Bragg; the Marine Corps' new buffet table; the alterations to the golf professional's shop at Fort Meade; and the rehabilitation of the putting greens at Eglin Air Force Base.

In short, said the Illinois Senator, there are places where military spending still can be cut without damage to the national security—military protestations to the contrary. "The military," he noted, "have a built-in bias against economizing."

Well, the Senator built his case so strongly there's scarcely anything that can be added by us. One would naturally assume, too, that the other Senators after all their talk about economy would agree with Mr. DOUGLAS. And that they would have gone along with the House in the $2.5 billion slash it had recommended in the military budget.

But that just isn't the way the senatorial minds work. The Senate voted to restore almost all the $2.5 billion slash. Plainly that will buy a lot of swimming pools, buffet tables, and putting greens for the Nation's warriors.

Joseph L. Carr, of Revere, Mass., Outstanding Citizen

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. LANE. Mr. Speaker, the way in which immigrants and children of immigrants have succeeded in spite of obstacles, and their devotion to the United States, is the recurring miracle of freedom that develops the best in men and women.

Freedom, Inc., has requested every city and town to choose an outstanding immigrant, or son or daughter of an immigrant, to receive a citation for good citizenship.

Joseph L. Carr, of Revere, Mass., has been nominated by Mayor Harry Della Russo to receive the honor in that community.

Joe Carr is the son of an Irish immigrant and is 1 of 8 children.

He went to work at the age of 12, because the lot of an immigrant's family was hard in those days. Youngsters did not have the opportunity to enjoy the long and carefree days of adolescence, or the blessings of an education. By sheer effort, and alone, they had to make their way in life. Some were embittered by this early experience with stern reality, but not Joe Carr. As he climbed the ladder of success, he developed an understanding of, and a consideration for, his fellow man. He gave himself unsparingly to every community endeavor.

When he finally retired as superintendent of mails of the Revere post office, Joe Carr was beloved by all the community.

In tribute to him, and to the spirit that animates the good citizenship awards, under unanimous consent to extend my remarks in the RECORD, I include the article about Joe Carr that was published in a recent edition of the Revere Journal:

CARR SCHEDULED TO GET AWARD FOR CITIZENSHIP—NOMINATED BY MAYOR FOR OUTSTANDING COMMUNITY SERVICE

Joseph L. Carr, retired superintendent of mails of the Revere Post Office and resident of Revere for about 35 years, has been nominated by Mayor Harry Della Russo to receive a citation for citizenship from Gov. Foster Furcolo in conjunction with Constitution Day exercises Tuesday at the Halls of Flags at the statehouse at 3 p. m.

Thirty-nine cities and three hundred and eight towns were asked by Freedom, Inc., to select an immigrant, or son or daughter of an immigrant, who has become an outstanding citizen in the city or town to receive the award.

Carr's many years of activity in civic and church organizations, and his years of service to the community as superintendent of the Revere Post Office have made him an outstanding citizen and well qualified to receive the citation, Mayor Harry Della Russo said.

Carr is the son of an Irish immigrant who worked for the city of Boston as a laborer. He was born in East Boston August 17, 1881, 1 of 8 children. During most of his boyhood years he lived in the Orient Heights section.

He began work at the age of 12 at McQueeny's dry goods store in East Boston for a wage of $2 per week, all of which he turned over to his mother. When his boss advanced him to $2.50 per week, he was given a weekly allowance of 10 cents. He worked for the dry goods store for 6 years until he reached $6 a week at the age of 18.

His next job was with the B. F. Hovey store in Boston as a clerk in the dry goods department. He advanced to the position of sales manager in a department with 30 clerks. The top salary paid to anyone in the Hovey store, except executives, was $25 a week, which Carr decided was not good enough.

He took the Federal examinations for postal carrier, got the job, and rose through the ranks to become superintendent of mails. Carr joined the United States Postal Service in 1907. His first assignment was to the Winthrop Post Office. He was then transferred to the Back Bay Branch Post Office as a substitute carrier, a job he held for 6 years.

He became a regular carrier in 1914 in the parcel post division and was informed that he and all other carriers in that department must learn to ride a motorcycle for use in delivering parcels. Carr protested and all the others joined in the protest. As punishment, he was assigned to Revere as a carrier in 1916, which he has always regarded as a great blessing.

In 1934 Carr was appointed superintendent of mails for Revere. The post office was located at that time at the corner of Beach Street and Ocean Avenue.

The present post office building was opened in 1938 with Carr as its first superintendent. He served in this capacity until his retirement in 1951 after 35 years as carrier and as superintendent of Revere mail.

He served for many years as president of the Revere Kiwanis Club, a member of the Revere District Council, Boy Scouts of America, first president of the Revere Memorial Hospital, as a leader in charity drives, such as the Red Cross, Community Chest, Salvation Army. Carr was the first president of the Revere Chamber of Commerce, a position which he still holds.

He has been active in church affairs as a member of Immaculate Conception parish since he came to Revere 35 years ago.

Carr is married to the former Juliet Booth. The couple live at 30 Javrin Avenue. Their four children are Lawrence, employed by the Journal Publishing Co.; Mrs. Alice Pedonti, who is living at Hull, Mass.; Joseph, who is married and is living in New Hampshire, employed by Craig Systems in Danvers; and William, who is in business for himself. He has seven grandchildren.

Freedom, Inc., with headquarters in Boston, is a nonprofit educational organization dedicated to the furtherance of the ideals of freedom.

The 85th Congress

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. NEAL. Mr. Speaker, the observation has been made by one of my distinguished colleagues that in the ensuing 2d session of the 85th Congress the Eisenhower administration should adopt a policy, hold fast to it, and hew to the line.

This, I submit, is specious reasoning. In all logic there is no foundation for such a position by the opposition.

There is, in the English parliamentary system, a label styled "His Majesty's loyal opposition." Suffice to say, we cannot, in conscience, apply such a term to the gentlemen and gentlewomen who sit across the aisle.

It is my thought that much of the confusion of the first session of this Congress was deliberately engineered, promoted, and fostered by that opposition.

When the Eisenhower administration came before the session with reasonable and productive proposals, we witnessed, day after day, the process of obstruction at work.

A mismated political marriage between northern Democrats and the southern wing of the party, held together only through necessity born of mutual dependence, saw to it that a debate on civil rights, prolonged and unbearably lengthy, effectively blocked the passage of vital measures.

While the Congress devoted thousands of words on hundreds of pages in this RECORD, and spawned innumerable headlines on civil rights, nothing was done. The Members of this House recall well the month we spent while a handful of Democrat Senators monotonously ground out manifold hours in underlining the basic fact that the opposition party is a hybrid agglomeration of organizations whose basic philosophies are as far apart as the Tropic of Cancer and the Tropic of Capricorn.

For instance, in the North there is the Americans for Democratic Action. This is a liberal group whose aim it is to equalize all of our citizens to a general standard of mediocrity. In essence, the ADA is the counterpart of the British Socialist Party which brought proud Albion from the rank of first-rate world power to a present position well below the top.

In the South, the antithesis of the ADA exists. There we have a conservative group, well exemplified by some of my warmest friends in this House, men and women for whom I hold the deepest respect and affection. They, I submit, Mr. Speaker, are in strange company when they consort and accompany the darlings of the ADA when legislation is under consideration here.

In every administration, there are some things, inevitably, which are indefensible to Members of the House and Senate.

I would recall, for the benefit of my colleague who asked that the next session see a definite set of Republican standards adopted, that it was his own beloved Franklin D. Roosevelt who, in 1937, attempted to stultify the Supreme Court and reduce it to an atrophied branch of government through his packing plan.

At that time, the members of his own party left him, and defeated that plan by a great majority, the fires of the struggle blazing so hotly that his own majority leader, the late, and I may add without partisanship, great Alben Barkley threatening to resign in the face of Mr. Roosevelt's capricious, audacious, and dangerous demand.

Members of the opposition control this Congress. Because of that inescapable fact, the fact that a majority of 233 Democrats has faced a 200-member Republican delegation, the administration has had, from time to time, to improvise and cut its cloth on a moment's notice.

If there has been any vacillation, any confusion, any inability upon the part of this Congress to be about the public's business, the fault becomes the fault of the Democratic Party.

On the score of economy, I would like to say, Mr. Speaker, that this Democrat-controlled Congress attempted to compel more than $2.7 billion in present and future expenses not provided for in the original budget.

I submit, Mr. Speaker, that there has been no lack of a policy downtown. They have been in the position of men with their backs to the wall, taking calculated risks, absorbing political punishment daily, trying to do a constructive job in the face of opposition devoted solely to the ideal of obstructionism.

And for what gain do members of the opposition pursue this course?

The answer returns clearly and unmistakably—control of the White House in 1958.

Report to My Constituents in the 14th Congressional District of New Jersey on My First Session in Congress

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. DELLAY. Mr. Speaker, at the close of the 1st session of the 85th Congress I am making a report to the people I represented in this Congress of its activity and achievements. This was one of the longest sessions of a peacetime Congress, opening on January 3 and closing its work August 30. There were more rollcalls and quorum calls—220 of them—than in any other Congress since the start of the Korean war.

CONGRESSIONAL ACTION ON THE BUDGET

We who are Members of this body agree on one fact—we were mandated by the American people to reduce Fed spending, balance the budget, and oth wise get the Government's finan affairs in order. By every means of co munication at their command, the peo let the Congress know they wanted pr ent levels of Government spending c That is what Congress did. It must understood that there are two kinds budgets—an appropriation budget a an expenditure budget. We reduced t President's appropriation budget fiscal year 1958 in the sum of $4,91 355,584. In addition, we reduced de ciency budget requests which were pr sented to Congress during this session the sum of $134,023,395. These de ciency requests were for the fiscal ye ending June 30, 1957. The total budg reductions during this session of Co gress have therefore been $5,048,378,97 I supported this reduction recommend by the Appropriations Committee an adopted by the Congress. My attitu toward the budget was to support all Ap propriations Committee efforts at eco omy—to trim fat and waste and to pos pone projects that could be postponed but to refuse to adopt the meat-ax ap proach of simply slashing at random.

SALARY INCREASES FOR POSTAL AND OTHER FEDERAL EMPLOYEES JUSTIFIED

Because of these substantial savings the budget I feel that my votes and effor to bring about long-delayed salary in creases for postal and other Federal em ployees are justified and not antieconom ical, especially since such increases woul help efficiency by reducing employmen turnover.

CIVIL RIGHTS; PROTECTING THE CONSTITUTIONAL RIGHTS OF INDIVIDUALS

The 1957 session of Congress will for ever be remembered for its accomplish ment in enacting a civil-rights law pro tecting the right to vote of all person regardless of race, color, or creed—th first such national law to be enacted sinc Civil War Reconstruction days. It estab lishes a Federal commission with sub pena power to investigate facts as a basi for additional protective legislation; i creates a new Civil Rights Division in th Office of the Attorney General, and au thorizes injunction proceedings to re strain violations of voting rights. De nial of the right to vote cannot b countenanced—and should be pun ished—if the Bill of Rights in our Na tional Constitution is to be given fu meaning. I am very proud that this wa one of the achievements of my firs Congress.

FBI FILES

I voted for and am glad to report tha the legislation was enacted to safeguar and protect the files of the FBI.

FURTHER ECONOMY POSSIBLE THROUGH CORDINER REPORT, HOOVER COMMISSION REPORTS, AN SEPARATION OF FEDERAL AND STATE TAXATION PROVIDING BASIS TAX CUT

On June 7, 1957, I introduced H. R 7990, a bill embracing the provisions o the Cordiner Report on the Armed Serv ices. This bill would result in several billion dollars being saved by a recasting of pay scales designed to keep skilled personnel in the Armed Forces, where now they leave for private industry and thereby require the Government to go to the expense of training their replace-

ments. Many of the carefully prepared Hoover Commission reports ought to be adopted, because they show that billions of dollars can be saved by more efficient Government budget and purchasing and operational practices. I was delighted at President Eisenhower's proposal to the Governors at their Williamsburg conference in June that there be set up a Federal-State task force to reallocate the functions and revenues of the two levels of government. As many of you will recall, I made repeated mention of this necessity as an economy measured during my campaign for election to the Congress. In fact, a study is now being made by the House Committee on Interstate and Foreign Commerce designed to prove that the States can take over many of the activities now engaged in by the Federal Government. These are huge possibilities for economizing, and I am hopeful that many will be put into effect during the next session of Congress, thus providing a basis for a tax cut and, at the same time, leave funds for protecting and improving the health, welfare, and education of our people.

SOME IMMIGRATION LIBERALIZATION ENACTED

On June 25, 1957, I introduced H. R. 8358, to facilitate the entry into the United States of certain adopted children and relatives of citizens and legally registered aliens. A bill identical to this one was adopted by Congress and is now a public law. State Department officials estimated the revision will open the door to 62,556 additional immigrants. These are expected to include 4,000 orphans adopted by American citizens, 14,556 refugees from Iron Curtain countries and 36,000 persons who will be granted special nonquota status. This will result in reuniting many fine families in my district, but will not give as much relief as I had anticipated would be coming out of this Congress. I have also introduced H. R. 7991 and other immigration bills which are much broader in scope. I am confident that these will be favorably considered in the next session of the 85th Congress.

PROTECTING SMALL- AND MEDIUM-SIZED BUSINESS

The Small Business Administration was extended for 1 year during the session just concluded. In the 1958 session it is my hope that this Government body will be made a permanent agency, that its powers will be enlarged, and that the delaying redtape which now hamstrings it will be materially reduced. Protecting and encouraging the small-business concern requires action on many fronts. Our corporate income tax structure needs overhauling so as to reduce the tax rate for the smaller corporations. And in the field of military procurement, where today big business has a virtual monopoly of Government contracts, a program is needed to increase the small-business man's share. All of these things require action in the forthcoming 1958 session of Congress.

LEGISLATIVE ASSISTANCE TO OUR SENIOR CITIZENS AND SOCIAL SECURITY AMENDMENTS

I have long felt the need for better care of our senior citizens. They are having a hard time paying today's prices on yesterday's pensions. I have introduced H. R. 3963, a bill to increase civil-service retirement annuities and H. R. 6793, to prohibit discrimination in employment against individuals on account of their age, and worked hard for their enactment. I also introduced H. R. 9203, to broaden the coverage and extend certain benefits under the Social Security Act. Among other things this bill would increase ultimate benefits for those who continue to work after age 65 by 1 percent a year delayed retirement benefit. It would also increase maximum monthly payments to a retired individual from $108.50 to $118.50 and for a married couple from $162.80 to $177.25, without increasing contributory tax rates.

MEDICAL EXPENSES DEDUCTION FROM INCOME TAX

On May 8, 1957, I introduced H. R. 7347, to eliminate the provision which presently restricts the deduction for medical expenses to those exceeding 3 percent of gross income. If this bill were enacted it would be possible to deduct the total amount of medical expenses from gross income. It is my feeling that this would give tax relief where it is sorely needed among lower income families. I will continue to press for action on this vital measure.

BAD CONDUCT DISCHARGES REVIEW

On June 27, 1957, I introduced H. R. 8412, which would authorize the appropriate military review boards to consider and take into account the good conduct, habits, character, activities, and rehabilitation of an individual in civilian life who has been discharged or dismissed from any of the Armed Forces not less than 3 years previous, or any of the discharges other than honorable—except by sentence of a general court martial. The military authorities maintain that existing statutes do not now authorize such consideration and such rehabilitation in civilian life is not now recognized as legal or appropriate grounds by the military boards for correction of discharge or dismissals. If enacted, it would erase the stigma and employment handicap in many worthy cases. Many of these discharges are given to teen-agers when under great stress or strain and without due consideration of results.

FEDERAL AID FOR LOCAL SCHOOL CONSTRUCTION

A temporary program for Federal aid to local school construction was considered by the House but was defeated when several Members attempted to add a crippling amendment regarding integration to this worthwhile legislation. Federal aid for local school construction is not one of Federal charity or random spending. It is a temporary program aimed largely at those States which have no State education agencies and leaves school construction to local communities. Its purpose is to compel these States to provide State programs for school construction in those poorer communities which have insufficient real estate to float school bonds. The northern States have to bear a disproportionate share in providing boys for military service because so many of the boys from southern States are rejected for illiteracy, and the Armed Forces spend about $30 million in an effort to educate the illiterate. Education is a national problem, a national responsibility. I shall do all I can in the 1958 session, believing as I do that the program is urgent, to help in enactment of a Federal program of aid for local school construction.

FHA-INSURED LOANS

An important bill that was enacted will lower downpayments on FHA-insured loans, but because the hard-money policy continues to increase interest rates, little improvement has yet been felt in the ailing housing market.

PROTECTION OF PUBLIC THROUGH POULTRY INSPECTION AND OPPOSITION TO NATURAL GAS BILL

Consumers received a break through the passage of a poultry inspection bill which will put fresher and better products on the market. We have had compulsory meat inspection, for the protection of the public health, for many years. Now we also have protection through inspection of poultry.

There was sufficient opposition among House Members to keep this bill from being considered in the first session of Congress.

TITO OF YUGOSLAVIA

I was one of the Members of Congress who signed the petition to keep Tito from visiting the United States this spring. As a result of this petition the State Department rescinded the invitation.

VETERANS AND SERVICEMEN

Laws were enacted increasing rates of compensation for disabled veterans, increasing and extending veterans' home loan program, consolidation and simplification of laws on veterans' benefits and liberalization of requirements for veterans' widows' benefits. I supported these measures.

MEMBER OF MERCHANT MARINE AND FISHERIES COMMITTEE

I cannot end this report without reference to the committee upon which I serve—the Merchant Marine and Fisheries. It was at my request that I was assigned to this committee. I felt that because of the physical makeup of my district with its waterfront problems, this is where I could do the most good. It has been a happy experience to see the way the committee has worked so diligently as a group, and I am proud and privileged to be a member. I am sure it has given me a keener insight into the problems of our waterfront and has made me more capable of coping with them.

Hon. Samuel K. McConnell, Jr.

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BAILEY. Mr. Speaker, it is with extreme regret that I view the retirement of our esteemed colleague, SAMUEL K. MCCONNELL, JR. My regret is tempered with the knowledge that in his new post he will continue to promote the cause of humanity.

SAM MCCONNELL and I have been closely associated in working for the boys and girls of America. Beginning in 1950 when we established the principle of Federal obligation to assist education in impacted areas through July of this year when the lack of leadership from the head of his own party pulled the rug from under SAM MCCONNELL, we have worked closely to promote the cause of better education in the United States.

In the field of mine safety legislation, another important issue with which I have been closely associated, I can safely state that what progress has been made is a direct result of the interest and hard work of the gentleman from Pennsylvania.

As he leaves the Congress, I wish to pay my respect and tribute to a good friend and able ally and a conscientious Congressman.

Doubletalk

SPEECH
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. MULTER. Mr. Speaker, this has been a most unusual legislative year. It started with much promise. The 1956 election had returned the people's hero to the Presidency with an unheard of popular vote.

At the same time, they showed their confidence in the Democratic Party by continuing it in control of both Houses of Congress.

Obviously, the American people agreed that control of the 84th Congress by the Democrats under a Republican President was indeed good for our country.

With the 1st session of the 85th Congress behind us, I believe we can demonstrate that the country would have been better off under a Democratic President. I, for one, am certain we would have had more real leadership and much less doubletalk.

Under our system of government we have a right to look to our President for leadership. Our Constitution requires him to send an annual message to Congress on the state of the Union. Traditionally, our Presidents have interpreted that to mean that they are required to submit a legislative program to the Congress.

Never before in our history have we experienced such a lack of leadership by the President, coupled with so much doubletalk.

Absenteeism is bad enough of and in itself, in high places. Vacillation and indecision is much, much worse. I will concede that few persons reading the President's message to the Congress can disagree with the fine, high-principled generalities contained therein. But, by the same token, so were his campaign speeches in 1952 and again in 1956.

But what are the specifics? What about the implementation of these fine principles?

Some of the President's supporters, even some of the members of his Cabinet, have been brash enough to label his campaign addresses as merely campaign promises. But his messages to the Congress were not campaign speeches.

It is all well and good for our Republican friends to say, "Oh, this is a Democratic Congress, the Democrats are in control. They can pass any legislation they want to."

Such statements, too, are mere doubletalk. The hard, practical facts of political life are that, in a Congress where the majority party does not have an overwhelming majority in both Houses, neither party can pass legislation without the cooperation of at least some members of the other party.

Wise congressional leadership avoids bringing to the floor of the Congress legislation that the leadership knows will be opposed by enough members of the opposition party to defeat the bills.

In all those spheres of activity where our party platforms are in agreement, the President should have been in a position to deliver enough Republican votes to offset the defections in Democratic ranks, so as to give the people of the country a working majority in the Congress.

Permit me now to document my case with some specifics.

PARTY PLATFORMS AGREE, BUT THE PRESIDENT IGNORES THEM

Both parties agree that the minimum wage laws should have wider application; that distressed labor areas require Government aid; that the Taft-Hartley law requires amendment; that all Federal employees and, more particularly, the postal employees, are entitled to increased compensation. In most of these instances the President talked gently and fairly but in generalities. As to the Federal employees and postal employees he spoke specifically. He said they were underpaid. He said they were entitled to increased wages.

In none of these instances, except as to the increase of salaries for Government employees, were we able to enact any legislation, because the President and his appointed officers in the executive departments not only refused to help but actually opposed congressional action.

As to the increases of salaries for Government employees, the President signed the bill which gave those in the highest brackets, big increases and more pay.

As to the little fellows, the civil-service employees, the career employees, the post office workers, he sent word to us that if we dared so legislate he would veto the bills. Unfortunately, we couldn't get the bills to him in time to override a veto. As of today—the last day of this session—it seems certain that the President will veto these bills which do only what he said was fair and just; that is, to give to the little fellow, the civil-service worker and the post-office employee, a cost-of-living increase.

BIG BUSINESS GETS BIGGER AND SMALL BUSINESS GOES TO THE WALL

Other spheres of activity where we go the same kind of doubletalk involve monopolies, trusts, and big business. The mergers continue. Big business get bigger. Their profits grow. The small business man goes into bankruptcy. The big-business man gets more and bigger tax cuts by way of fast writeoffs and ob solescence and depletion allowances and Government giveaways, and the little fellow gets the tax bills.

The President is still advocating a natural gas bill. One day he advocates an amendment to that bill, to protect the consumer, and the next day he said he would take the bill without the amendment.

He opposes the development of public power and tries to give the natural resources of the country to the big utilities. By his appointment to various Government agencies and commissions he does all within his power to destroy TVA, rural electrification, and the other important Government agencies.

HUMAN RIGHTS ARE FORGOTTEN

He says he is for statehood for Alaska and Hawaii but will not life a finger to bring that about. He says he is for liberalization of our immigration laws and instead of trying to liberalize them, he condones the action of his State Department and his Attorney General in keeping out immigrants clearly entitled to entry into this country under existing law.

The civil-rights muddle in the Congress was as much his doing as that of anyone else. He did not know from press conference to press conference what was in the bill labeled "the Eisenhower bill." It is surprising that we got a bill at all under the circumstances. Time will demonstrate, in my opinion, that the bill will accomplish very little except to give him and some of his supporters an excuse for new campaign doubletalk. And all the time, the demagogs will continue to rabble-rouse.

He talked big about Federal aid to education. When it came to a showdown in the House, the bill was lost on a very close vote. It could have been won if the President had made three telephone calls. He could have telephoned one of his erstwhile campaign supporters who left the Democratic Party to urge the people to reelect Mr. Eisenhower and who was absent on the day this important bill was defeated. The other 2 calls could surely have changed 2 opposition votes into 2 votes for the bill. These were not just two votes of Republican members of the House. These two men are the President's leaders of his party in the House. The three Members of the House referred to, Mr. Speaker, go unnamed as a matter of traditional congressional courtesy. The record vote discloses who they are.

FOREIGN AFFAIRS CONTINUE TO BE BUNGLED AFFAIRS

The muddle in foreign affairs is the direct responsibility of the President and his Secretary of State. Those matters of maladministration have no direct bear-

upon the legislative function of the ngress. I therefore make no further ention of them here, particularly since at subject alone would require much re time than I can devote today, and remarks pertain merely to the legis- ive program.

Those who are interested may read my tements before the House Foreign Af- rs Committee and on the floor of the use on this vital subject.

Suffice it to say, I foretold precisely at to expect with reference to the Mid- East, including the recent events in ypt and Syria. Although I did not tend to set forth any time table, the uence of events was exactly as I pre- ted.

The so-called Eisenhower doctrine is eventing the spread of communism d sovietism exactly nowhere.

THE HIGH COST OF EVERYTHING

The increase of interest rates on Gov- nment and private debt is the direct sponsibility of the President and his cretary of the Treasury. They have creased the cost of living of every an, woman, and child in the country by creasing the expense of operation of ery business enterprise in the country. The increase in cost of Government is ggering. At the same time, while tell- g us that the people should save more oney and spend less, the President and Secretary of the Treasury keep the terest rates on Government savings nds under other interest rates, destroy- g the incentive of our citizens to save. He insists that mortgage interest rates raised and because Congress refuses to crease the interest rates on veterans' rtgages, he threatens to veto the ex- nsion of the GI mortgage bill.

I, and many of our colleagues, have en urging that the veterans are en- led to direct loans from the Govern- ent. This would not be using Gov- nment money but would be using their n life-insurance funds.

Banks, trust companies, life-insurance mpanies, pension funds, all invest their oney in real-estate mortgages. But me shortsighted people urge that the terans' life-insurance funds should be vested only in low-interest Govern- ent bonds instead of into 4-percent vet- ans' mortgages.

We could not prevail upon our col- agues to go that far. The bill we sent the President, which he now threat- s to veto, merely extends existing law, rmitting veterans to get mortgages in ose areas of the country where FHA is t operating and for reasons mainly convenience, cannot or will not oper- e.

The President glibly talks about con- oling inflation and urges voluntary re- raint by labor and business to keep ts down.

Then he ridicules labor's promise to go wage increases if big business will wer prices.

At the same time, he permits price in- eases in all Government restaurants rving the very employees whose wages will not increase. He allows their nts and those of all others in FHA uses to be increased, thus setting the example for increased rents by all land- lords.

That is not doubletalk; it is double- dealing.

SOME HOPE FOR SMALL BUSINESS

The House passed a Small Business Administration Act to make that agency permanent and to make it more effective in serving the small-business community of our Nation. Despite the fact that the President has not talked out in favor of this bill, we hope that in the next session of Congress, the Senate will pass the House version of that bill.

By that time, too, I hope we will have a good bill ready to give the small-business men some sorely needed tax relief.

FUNNY FIGURES MAKE PHONY BUDGETS

The worst example of doubletalk on the part of the administration, however, came with reference to the budget and the request for appropriations for defense, for foreign aid, and for operation of the Government.

In this field, too, no one knew where the President or his appointees stood from one day to the next. All sorts of ridiculous claims were submitted to the Congress for exaggerated sums. Probing by alert members of the Appropriations Committees showed how farcical some of these claims were.

Despite the disclosure of tremendous waste of money and property during the last 5 years, heads of the departments, aided and abetted by the President, came forth again urging more money than they needed and more money than they could spend.

After the money was appropriated and the bills approved into law by the President, he then directed the heads of various departments not to spend the sums appropriated.

I will refer to only two of the many instances of this heinous maladministration.

The United States Public Health Service has indicated its need for funds to prevent a yellow fever epidemic threatening the United States. The money was appropriated. The bill was signed. The Budget Bureau, under the direction of the President, has directed the department not to expend those moneys, the sole purpose of which was to control the disease.

This is the Government that is conservative where property is concerned and liberal where human values are concerned. That is not my language. That is the modern Republicanism of President Eisenhower.

One more instance of the same kind. After the appropriation for the Defense Department had been approved into law by signature of the President, he then directed that the money not be spent. Mind you, this is the very appropriation request, which when cut by the Congress, was declared by the President to be insufficient for our national security. Now he says to his department heads that they may not spend as much money as was appropriated.

Practically all of the Members of Congress from metropolitan New York attended a conference with Navy Department officials, urging them not to release skilled career employees. It was admitted that if these men were discharged their skills and services would probably be forever lost to the Government. It was further conceded that the full sum necessary to keep these men employed for the next year had been appropriated and that the men were being dismissed solely in order to come within the President's directive to spend less money than had been appropriated. The question of national defense and security was subordinated to the demand to save a few paltry dollars.

WASTE AND CORRUPTION

Congressional committees continue to uncover waste and corruption in every department of Government. At another time, I will discourse at length upon this subject, which continues to be ignored by our President, except on those occasions when he awards a medal or a certificate of merit to the head of the department whose misconduct is exposed.

All of these facts are borne out by the record.

Amend Section 406 (b) of the Civil Aeronautics Act of 1938

SPEECH

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 5822) to amend section 406 (b) of the Civil Aeronautics Act of 1938 with respect to the reinvestment by air carriers of the proceeds from the sale or other disposition of certain operating property and equipment.

Mr. HESELTON. Mr. Chairman, I am not vigorously opposed to the bill as it is now presented, with the elimination of section 2. I think there are some reasons for believing that the bill, if properly administered, may be of assistance to some of the small lines. But with section 2 in the bill I feel certain that the results would not be those which the membership of the House would like to see.

However, I think there is a very real question of sound judgment involved in this legislation at this time. I attempted to outline that in the minority report I filed. The questions asked by the gentleman from Minnesota [Mr. JUDD] as to the wisdom of bringing this matter up at this time are well taken. It is true that we are entitled to establish a policy and should establish a policy. On the other hand, it is well known by this body that last year, when a predecessor bill was before this body, an adversary proceeding was commenced before the Civil Aeronautics Board. That proceeding was begun on April 6, 1956. The hearings have been completed. Briefs have been filed. The matter is now in the hands of the examiner.

I have a letter today from Mr. Chan Gurney, Vice Chairman of the Civil Aeronautics Board, in which he advised me

that it was not possible at this time to state a definite date as to when the initial decision will be served since the examiner who heard the case has been engaged in hearing another proceeding. Barring unforeseen contingencies, it is hoped that an initial decision can be served by early October. If that can be done and if exceptions should be filed to the initial decision, together with briefs in support thereof, as the parties have a right to file under the Board's regulations, it should be possible for the Board to hear oral argument in November or early December.

There is in the minority report a listing of the capital gains realized in 1956, at the request made by a member of the committee. That listing has been broken down to April 5, 1956, the day when the proceeding began. I shall place that listing in the RECORD, but I call attention at this time to the fact that Pan American is listed with capital gains from January 1, 1956, to April 5, 1956, $3,505,000 out of a total of $3,774,000.

That excerpt is as follows:

During consideration of this bill by the full committee, questions were raised as to the effect of making it retroactive to January 1, 1956, as provided in section 2, and specifically as to what that retroactive date would mean in dollars to the several airlines concerned. That information was not available at that time but the following information was submitted later to the committee:

1956 capital gains of subsidized carriers (before taxes)[1]

Local service	$212,000
Allegheny	169,000
Bonanza	2,000
Central	----------
Frontier	—1,000
Lake Central	----------
Mohawk	4,000
North Central	1,000
Ozark	—1,000
Piedmont	1,000
Southern	35,000
Southwest	2,000
Trans Texas	----------
West Coast	----------
Trunklines: Continental	[2]331,000
Foreign and overseas:	
Alaska Airlines	5,000
Braniff	3,000
Pacific Northern	10,000
Panagra	165,000
Pan American	[3]4,937,000
Territorial	[4]15,000

[1] Information obtained by committee staff from records.

[2] Continental sold 3 aircraft for this gain, only 2 of which were while on open rate. Total involved, $218,544.

[3] Pan American sold 6 aircraft and parts for $3,505,000 while on closed rate January-March 1956. Only capital gains realized on open rate was for loss of Boeing in Pacific in October. Gain, due to insurance, $967,000. Miscellaneous sales, $187,000.

[4] For intra-Alaska carriers.

I am not able to analyze this statement at this time in terms of the retroactive date of January 1, 1956, except to note that, by reference to the minority report I filed in 1956, it appears that the so-called capital-gains proceedings before the Civil Aeronautics Board were instituted on April 6, 1956.

My sole reason for bringing that to the attention of the House at this time is because I have no idea as to what the ultimate result will be. I think the passage of this legislation places upon the committee which has recommended this legislation to the House the responsibility to follow closely the developments, even if this whole proceeding is terminated after many weeks of hearings, to see that there is no injustice done to the small feeder lines or to anybody else, and that there is no injustice done to the taxpayers who ultimately will have to pay the bill if there should be windfalls as a result of the passage of this legislation.

Mr. MORANO. Mr. Chairman, will the gentleman yield?

Mr. HESELTON. I yield.

Mr. MORANO. I appreciate the gentleman's statement concerning Pan American's capital gains, but I do not see why we should discriminate against a company because it has grown large and happens to be one of the biggest airlines.

Mr. HESELTON. I understand the gentleman's position. I do not want to discriminate against anybody. I want to make certain that this is fair legislation and that it treats everybody properly, particularly the taxpayers of this country.

We have had a great deal of talk here this year about the tax burden; there has been much concern as to whether we could reduce that tax burden. One of the ways to reduce it would be through seeing there is no unwarranted special interest legislation passed by us in connection with anybody. I do not care whether that interest is big or little.

Mr. MORANO. I agree with the gentleman, but would not the gentleman agree with me that we must be equitable in legislation as far as we can be? We can never pass legislation that would be equitable in every possible sense, of course.

Mr. HESELTON. We should do the best we can. One way would be to be sure that we did not anticipate a decision and try to undo it before it comes down. I think that is very poor judgment, although some of my colleagues I know sincerely disagree with me.

Mr. DAWSON of Utah. Mr. Chairman, will the gentleman yield?

Mr. HESELTON. I yield to the gentleman from Utah.

Mr. DAWSON of Utah. I want to compliment the gentleman for calling the matter to our attention. I think it is something we need to look out for. If the gentleman had not been diligent in getting into matters of this kind, many of us would not have had any knowledge of it. I think he has done a service to the country in calling it to our attention.

Mr. HESELTON. I am sure the committee will follow the matter closely now that they have recommended this legislation. But the committee's action in striking out section 2 is vitally important, and it must be supported if this bill is to be justified in any sense.

First Things First

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. HERLONG. Mr. Speaker, a few weeks ago I introduced H. R. 9119, companion to H. R. 6452 introduced earlier by Representative A. N. SADLAK, Connecticut. The bills provide for scheduled personal and corporate income-tax reductions. In connection with this legislation, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Journal of Commerce, New York City, of August 2, 1957. The editorial follows:

FIRST THINGS FIRST

It is a good general rule that efficiency is greater when the horse precedes the cart rather than vice versa.

The same goes for the statement by J. Cameron Thomson, Vice Chairman of the Committee for Economic Development that "moderation of Government spending must come ahead of tax reduction and reform." Mr. Thomson's statement occurs in an article published by the CED which highlights the private business organization's views on taxation for growth, printed somewhat earlier. In any sensible and customary order of events, it would be logical, as Mr. Thomson says, that the Government should cut back its outlays prior to a decision that it can back the revenues it will receive to pay for them.

The difficulty is that, in recent years, the logic of this wholly desirable course of action has proved to be altogether abstract, suggesting that there may be some instances when it may make sense to put the cart before the horse; for instance, if the horse is pretty sick, or even just plain ornery. In the event of a breakdown in progress or an impasse, it may, then, prove necessary to depart from the ordinary rules.

This necessity has been recognized in the legislation proposed by Representative A. S. SADLAK, Republican, of Connecticut, which is already proving controversial. The simple logic of Mr. SADLAK's plan is to schedule tax cuts first and then fit the budget pattern to the size of the cloth that remains. H. R. 6452, which would implement this plan, bears watching for the important role that it is bound to play in the tax debate coming up for 1958.

It is the first farsighted legislative program for advance tax cut scheduling to win national attention.

This plan would preschedule tax reductions for a 5-year period in amounts which would not reduce Government revenues absolutely, but simply skim off the additions to revenues which accrue as a result of economic growth. These additions from growth so far, have for the most part been used up by increased Government outlays.

Actually, the SADLAK approach to tax reduction had been advocated earlier by the National Manufacturers Association, as a kind of productivity-geared tax-cut program. That H. R. 6452 will meet with opposition in the congressional session which will convene next January has been conceded by Representative JAMES ROOSEVELT, Democrat, of California, who last week launched a bitter attack which he promises to continue on a running basis. Mr. ROOSEVELT argues that

an amounts to putting a growing boy in all-sized pants to keep his height in unds.

The growing boy analogy, unfortunately, eals the true Democratic attitude. It pre-oposes that there is something healthy out the indefinite proliferation of govern-ental expenditures. The failure of the mocrats to come up with any kind of oposal for cutting back taxes appears to m from the deep-rooted conviction that e Government can spend the money more ely than the taxpayer.

If, however, it so happens that Mr. Roose-r's growing youth threatens to become a nt, then it would be smart to take a look his glands to see if something cannot be e to keep his pants size in bounds. owth beyond a certain point may menace e health both of youths and governmental dgets.

It is a detail, if an important one, of the dlak plan that the prescheduled tax re-uctions would bring the individual and rporate income taxes down to an ultimate percent maximum. While Mr. SADLAK is ght in holding that the extreme progres-ity of the present income-tax structure ust be corrected, there is nothing sacro-nct in the precise formula which he pro-es for the scheduling of tax cuts. This a matter which must be debated and de-rmined, as well as the point at which an ding or rationalizing of the present excise-x structure would become also a competing iority for relief.

In the first case, however, there ought to e no doubt that relief from the undue pro-ressivity of the present income tax and a duction of the corporate-income tax should ve top place in remedial action.

There is no reason why the orderly sched-ling of tax relief should hobble important tional programs. What the Sadlak plan es is emphasize that tax relief is an alter-tive to governmental spending. As the ED has pointedly said, the cost of increased ending must be recognized in terms of the rfeiture of tax reductions which it involves.

There is certainly a point at which social d economic objectives are better served by dividual spending and savings decisions an by governmental. That point must be und.

Address Delivered by Congressman Charles A. Wolverton at the 80th Anniversary of Camden Lodge, Brotherhood of Firemen and Enginemen, on Saturday, April 13, 1957, at Camden, N. J.

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. WOLVERTON. Mr. Speaker, it as my privilege to address the member-hip of the Camden Lodge of Firemen nd Enginemen on the 80th anniversary f the Camden Lodge held at Camden, . J., on Saturday, April 13, 1957. In ccordance with the unanimous consent ranted to me by the House, I herewith nclude in my remarks the address I de-vered on the above occasion. It is as llows:

Thank you, Mr. Chairman, ladies and gen-emen. I appreciate very much this oppor-unity to renew acquaintances with so many f my old friends. As you know, I have had a very pleasant relationship with your organization and your members that goes back a little bit longer than we might like to recall. This has been a fine association and I am proud to be invited here to talk with you on the occasion of your 80th birthday.

It is especially gratifying to address a meeting of the Brotherhood of Locomotive Firemen and Enginemen, in the light of the situation that we find in Washington today. The revelations of the Senate Committee on Improper Activities in the Field of Labor-Management Relations causes me to be even more respectful of a fine organization such as yours.

The revelations of the McClellan committee are indeed sobering. The leadership of the AFL–CIO is to be congratulated for the firm steps that they have taken to meet this challenge. I am sure that this challenge will be more than adequately met by the railroad brotherhoods. Your history has been a noble one and I am certain that your organizations will continue to remain as strong as ever.

I think it fitting that we discuss at least briefly some of the things that we are attempting to do in this Congress in which you are interested. I have introduced, along with Mr. HARRIS, of Arkansas, the chairman of our committee, H. R. 4353 and H. R. 4354. These bills, similar in every respect are known as the Harris-Wolverton bills. They are being strongly supported by all of the railway labor organizations. Mr. HARRIS and I introduced the bills after careful consideration and working with the leaders of your brotherhoods and others, as well as experts from the Railroad Retirement Board.

The objectives of our present legislation are threefold. First of all, we propose to increase by 10 percent the monthly checks of everyone covered by the Railroad Retirement Act. We intend that this increase be provided for widows—dependent children—old-age annuitants—pensioners—and those drawing spouse's benefits.

In considering improving benefits in the Railroad Retirement Act, Congress is constantly faced with requests from railroad people for assistance. Retired employees and their families throughout the Nation appeal to us time and again for assistance in meeting their problems. The plight of the widows and helpless children is indeed pitiful. Every day I receive letters from people who are trying to get by on incomes as small as $45 and $50 a month. I sometimes wonder how they keep body and soul together on these meager amounts. It is for this reason that we are determined that these senior citizens must be given relief.

With each succeeding month, the cost of living figures seem to go up. This means that all of the necessary staples of life increase in cost to those who live on fixed amounts. We all know that any time we increase benefits under the Railroad Retirement Act, we must necessarily provide the money. On the other hand, I am sure that you will all agree with me that our responsibility to these retired employees is so great that we must increase these benefits.

Secondly, our legislation provides for adequate financing to make sure that the railroad retirement system continues in a sound position. As you know, we adopted in the last Congress a bill which increased benefits by approximately 10 percent. Because of the legislative situation at that time, we were not able to provide the necessary financing for this increase. We are, therefore, in a position of being required to meet that obligation at this time.

We all know that increased taxes is not a pleasant subject to discuss. I have heard it said that no man in public life ought to go before a group of his constituents and talk about the need for increasing taxes. I am sure that our friendship is such that you would want me to talk frankly with you about this matter. In order to pay for the benefits we voted last year in Congress, we must have more income into the system. In order to pay for the benefits that we want to make now, we need more money. Therefore, it will be necessary to increase the tax rate and the tax base of railroad employees. On the other hand, the leaders of your brotherhood are asking Congress to exempt the amounts that you contribute into the railroad retirement system from income-tax coverage. The effect of both of these programs will be to increase your railroad retirement taxes, on the one hand, and to reduce your personal taxes, on the other hand. After it is all over, you will be contributing just about the same amount into the railroad retirement system that you now pay.

Thirdly, our legislation provides for substantial improvements in the Railroad Unemployment Insurance Act. Probably no organization in the railroad field is more concerned with this problem than your brotherhood. You are faced with the extremely serious effects of automation and technical progress. This is a matter which all of you are deeply concerned with. As you know, there have been thousands and thousands of railroad firemen and enginemen who have lost their jobs in the last 15 years as a result of the dieselization program. Other forms of automation, such as calculating machines—automatic message transmitters—and electronic remote-control of switching facilities, are having a similar effect on other types of employment in your great industry.

It is for these reasons that I have been deeply concerned with doing something to soften the impact of these changes on the people who work on the railroads. The most regrettable phase of this problem is that, in a great many instances, the people who are losing their jobs because of these changes are considered too old for employment in other industries—at the same time they are not old enough to retire under railroad retirement.

We have provided in our bill for extended unemployment insurance coverage for persons who are affected by these changes. I am not sure that the proposals in our bill are perfect, nor am I positive that the periods of time that we allow for extended benefits are exactly what is needed. I am sure, however, that we have a responsibility to these long-time employees on the railroads who are finding themselves thrown out of work after devoting a lifetime to the industry. We must make some kind of an arrangement that is fair to everyone to cover this most serious problem.

As you know, the cost of the Railroad Unemployment Insurance System is paid for by the railroad companies. Therefore, the increased taxes that will be required as a result of these improvements in unemployment insurance will not affect the employees. Many years ago, when the Unemployment Insurance Act was passed, we established the tax rate at 3 percent of covered payroll. After a few years it developed, however, that it was possible to reduce the tax rate substantially below 3 percent. Our present bill simply provides that that tax rate go up again to 4 percent in consideration of the needs of these lifetime railroad employees who are being put out into the streets.

In connection with the Harris-Wolverton bills on railroad retirement, H. R. 4353 and H. R. 4354, there is pending before the Ways and Means Committee of the House another bill in which you are interested. This is H. R. 5551 by Mr. MCCARTHY of Minnesota. This bill would remove the tax on a tax which you now pay on the amounts that you are forced to contribute to the railroad retirement system. There are some who have described this proposal as being an effort to force the Federal Government to pay for the railroad retirement system. I do not believe

that this is the case. It is a simple matter of eliminating a tax on a tax now being paid by railroad people. This is not a fair means of taxation. It is wrong in principle to regard as income, money taken out of your pay checks for taxes. You never see this money, nor do you use it. Every time that we pass a bill in Congress that increases the retirement benefits of people who are already retired, you who are now working are performing a social service. I believe that this ought to be recognized by the Government and that this tax on a tax should be eliminated.

In addition to the railroad-retirement matters that I have been discussing, your industry is faced with many other serious problems. The competitive position of the railroads in comparison with trucking and other forms of transportation is of great importance. There is a constant shifting of the freight haulage from the railroads to trucks. One of the reasons that the trucking industry has been able to get a larger share of this business is because it has been able to provide faster and more efficient service. The railroad industry must constantly search for ways of improving its service to the public. Faster through-freight service and more efficient methods of handling small shipments must be devised by your industry.

On the other hand, we in public life must be careful to make sure that your industry is not harmed by unfair competition. As you know, the railroad industry is pretty thoroughly regulated with regard to equipment safety and rate structure. On the other hand, it is generally known that the trucking industry is not nearly so well regulated. Undoubtedly this has contributed to the ability of the trucks to take over more freight business. To the extent that the trucking industry is getting business by using unsafe operating methods, we must make corrections.

We cannot afford to permit giant trucks to race up and down the Nation's highways with inadequate brakes, inadequate lights, inadequate weight limits, and overworked drivers. These are conditions that we have found in alarming proportion in the trucking industry. In my judgment, they have contributed heavily to the death tolls on our highways. We now have before our committee a bill which will correct some of these problems.

The history of World War II reveals that the railroad industry made a very important contribution. You will recall that at the time the war started in 1941 the railroad industry was in not too healthy a condition. The competition of the trucking industry was beginning to be felt and many, many railroads were in poor financial condition. The result was that the equipment of the railroads was not in the best condition. Despite this, however, when our country suddenly shifted to all-out war, the railroads assumed a staggering burden. All of the old equipment that had been laying on sidings for many years was pressed into service and almost overnight the railroad industry doubled its volume of business. Millions of troops were transported throughout the country for training in newly built military bases. Billions of tons of military equipment was moved rapidly and with very little loss. Everyone agrees that the railroad industry met the challenge of World War II in magnificent fashion.

I am wondering whether or not this industry is now in a position to meet the challenge of a new war should one develop. I am concerned with the failure of the Government and the railroads to provide an adequate pool of standby equipment for use in emergencies. I believe that extra freight cars, passenger cars, and locomotives ought to be distributed around the country strategically in case of an emergency. For example, if the great Altoona works of the Pennsylvania Railroad were to be destroyed in a bomb attack, we ought to have reserve supplies of equipment in other sections of the country. No matter what kind of an emergency we get into in the future, we will need the railroads and we will need railroad equipment. I hope that all of us can keep this problem in mind and do what is necessary to improve our ability to meet this situation.

Another problem that we are dealing with in Congress is a condition of employment in your particular craft or service. We are now considering legislation which will provide for more adequate power brakes on railroad locomotives. Studies of a long series of railroad accidents convince me that it is possible to improve railroad safety by insisting upon adequate power brake equipment. Only yesterday I had a visit with your president, Mr. H. E. Gilbert, and your vice president and national legislative representative, Mr. A. M. Lampley, about this bill. I am working closely with them in promoting this legislation.

The railroad industry has a long and a rich history. It was your industry that tied the Pacific coast to the Atlantic seaboard so many years ago. These lifelines of steel that went across mountains, rivers, and prairies provided the initial circulatory system for the great economic health that our Nation has grown to know. The great agricultural Middle West had its start and its development by the railroad builders of the 1800's. The mineral development of the Rocky Mountain area was encouraged and developed after the railroads had broken the trails. Golden California was only an isolated tropical paradise until the railroads made it possible to ship citrus fruits and other California products to the eastern markets.

There is still pioneering that the railroad industry is capable of doing. There are many things that you can do to further improve the welfare of our Nation. For example, in the congested Eastern States, the problem of commuting from a sprawling suburb to metropolitan centers has become increasingly difficult. No matter how many superhighways and turnpikes we build, they seem to be outmoded and overcrowded before they are completed. In my opinion, in the years to come we will have to return to the use of railroad facilities, perhaps of the monorail type, in commuting. We now have 170 million population in our great country. At the rate we are going, we are not too far away from owning and operating one or more automobiles for each family of these 170 million people. Obviously, when that day comes our streets, parking lots, and highways are just not going to be able to take care of the load. It is because of this that I am sure that in the next 20 or 30 years the railroads will again resume their very important function of moving large numbers of people over safe, private rights-of-way in the congested metropolitan areas.

The so-called piggyback freight service is, in my opinion, in its infancy. I am certain that in the future, this principle of mass movement of trucks on railroad freight cars will increase in great proportion. There are many other areas in which the railroad industry can meet the challenge of the times and I want to assure you that as always I shall be doing all that I can as a Member of Congress in dealing with the problems of your industry to make sure that your jobs are secure, your retirement is protected, and that your industry is healthy. Thank you.

Accomplishments of the Senate Committee on Interior and Insular Affairs, 85th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. MURRAY. Mr. President, I desire to submit for the RECORD a statement on the activities of the Committee on Interior and Insular Affairs, of which I have the honor to be chairman, during the 1st session of the 85th Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Senate Interior and Insular Affairs Committee approved 80 percent of the President's program coming within its jurisdiction during the first session of the 85th Congress. One Presidential recommendation is already law. Additionally, the committee approved scores of other bills, dozens of which are already law. Some of these are of major importance and benefit.

Here follows committee action on the five Presidential recommendations:

1. Legislation amending the Small Reclamation Projects Act of 1956, to restrict congressional committee veto power over contracts, is now Public Law 47.

2. Authorization of the Fryingpan-Arkansas project was approved by the Senate June 27. The bill (S. 60) is at a stalemate in the House Interior Committee as a result of the opposition of certain Republican members to irrigation and reclamation in general and narrow partisanship with respect to Hells Canyon in particular.

3 and 4. Bills providing statehood for Alaska and Hawaii were favorably reported and are on the Senate Calendar.

5. The so-called long-range minerals program was not presented to the committee until June 4, several days after it had been released to the press and a full 3 years after the administration began promising that its submission was imminent. It contained realistic suggestions for only two minerals—lead and zinc. The Senate Finance Committee considered portions of the recommendations. The administration hedged and backed away from its own proposals. The Interior Committee promptly conducted hearings on other parts of the minerals program. Their weakness and defects were too great to permit reporting of a bill during the brief time between the unveiling of the recommendations and the end of the session.

In addition to the above-mentioned action on the President's program, the Interior Committee reported the following 16 major legislative proposals, 8 of which are now law:

1. S. 846: Provides for establishment of a National Outdoor Recreation Resources Review Commission to study the outdoor recreation resources of the public lands and other land and water areas of the United States. Passed Senate.

2. Senate Joint Resolution 35: Provides for observance and commemoration of the 50th anniversary of the 1st conference of State governors for the protection, in the public interest, of the natural resources of the United States. In Senate-House conference.

3. S. 42: Provides for construction of San Angelo Federal reclamation project, Texas. Public Law 152.

4. S. 555: To authorize construction of a gh Hells Canyon Dam. Passed Senate.

5. S. 1031: Authorizes construction of four nits of the greater Wenatchee division, hief Joseph project, Washington. Passed nate.

6. Senate Joint Resolution 12: Provides for ansfer of right-of-way for Yellowtail Dam, ont., and payment to Crow Indians. Passed nate. Companion measure reported to ouse.

7. S. 334: Increases acreage of phosphate ases or permits on public domain which rsons may hold in any one State. Public w 122.

8. S. 677: Permits States of North Dakota, uth Dakota, Montana, and Washington to e certain public lands granted them for nstruction, reconstruction, repair, renova-on, etc., of public buildings in their cap-ls. Public Law 6.

9. H. R. 5538: Provides that withdrawals, servations, or restrictions of more than 00 acres of public lands for certain mili-ry purposes shall not become effective until pproved by act of Congress; and directs that nting, fishing, and trapping at military in-allations or facilities be in accordance with h and game laws of State or Territory here located. In conference.

10. S. 1556: Grants consent of Congress to tates of Montana, North Dakota, South Da-ta, and Wyoming to negotiate and enter to a compact for the apportionment of the aters of the Little Missouri River and its ibutaries. Public Law 184.

11. S. 2069: Promotes development of coal public domain by permitting individuals, sociations, or corporations to hold an ad-tional 10,240 (present limitation is 5,120) res of public lands if the Secretary of the terior finds that the increased acreage is cessary for an economic business opera-n. Passed Senate.

12. S. 1086: Grants consent and approval Congress to the Bear River compact en-red into by States of Idaho, Utah, and yoming. Passed Senate.

13. S. 1996: Authorizes amendatory repay-ent contract to be executed with Casper-cova Irrigation District, the water-user or-nization on the Kendrick project in Wyo-ing. Public Law 283.

14. S. 1396: Broadens scope of land-grant ovision in Act of Admission of the State of yoming. Public Law 97.

15. S. 1894: Amends law with respect to coupment of funds expended in coopera-on with school board of Klamath County, reg., because of attendance of Indian chil-en. Public Law 72.

16. S. 977: Suspends and modifies applica-on of excess-land provisions of the Federal clamation laws to lands in East Bench unit of Missouri River Basin project. Public Law 112.

17. Senate Resolution 148: Requesting executive agencies to supply certain information in connection with water conservation and other public-works projects with a view to improving procedures in the consideration for authorization of new projects. On Senate Calendar for action in second session.

18. S. 2757: Authorizing Burns Creek project on upper Snake River in Idaho. Passed Senate.

19. S. 1426: Extending time in which Secretary of the Interior may enter into amendatory repayment contracts on reclamation projects. Senate substituted H. R. 5492 for S. 1426 having same purpose. Public Law 85–156.

20. S. 42: Authorizing San Angelo project, Texas. Public Law 85–152.

21. S. 2120: Authorizing rehabilitation of Mercedes division, Rio Grande rehabilitation project, Texas. Passed Senate.

22. Senate Joint Resolution 39: Authorizing certain water conservation projects and providing more adequate supply of irrigation water in Pecos River Basin, Tex.-N. Mex. Passed Senate.

23. Senate Joint Resolution 35: Providing for observance and commemoration of the 50th anniversary of the first conference of State governors for the protection, in the public interest, of the natural resources of the United States. Passed both Houses, but still in conference.

24. S. 77: Establishing the Chesapeake and Ohio National Historical Park, and providing for a scenic parkway. Reported to Senate.

25. S. 342: Implementing the 10-year mission 66 program for the national parks. Reported to Senate.

26. H. R. 5538: Limiting military withdrawals of public lands to not more than 5,000 acres without the consent of Congress. House has not yet concurred in Senate amendments.

27. S. 2363: Authorizing creation of national shrine symbolizing ideals of democracy to be paid for by public contributions. Passed Senate.

S. 2536: Granting to Alaska title to "tidelands" out to pierhead line in Alaskan municipalities. House bill, as amended by Senate, enacted as Public Law 85–303.

In addition, the Senate Interior Committee approved many other bills of considerable and perhaps even greater importance to particular sections of the country and Territories or to Indian tribes.

I believe the committee can take pride in its accomplishments during this first session. As chairman of the committee, I take this opportunity to extend my thanks to all members of the committee, of both parties, for their diligence and effort which has enabled me to present this record of accomplishment.

I desire to express my appreciation particularly to the chairmen of the subcommittees for their cooperation and the efficient and effective manner in which they handled measures referred to them. They are as follows:

Senator RICHARD L. NEUBERGER, chairman, Indian Affairs.

Senator CLINTON P. ANDERSON, chairman, Irrigation and Reclamation.

Senator JOSEPH C. O'MAHONEY, chairman, Public Lands.

Senator HENRY M. JACKSON, chairman, Territories and Insular Affairs.

I am chairman of the Subcommittee on Minerals, Materials, and Fuels.

Voting and Attendance Record of Hon. Gerald R. Ford, Jr., of Michigan

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report of my voting and attendance record during the 1st session of the 85th Congress.

The record includes all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in one place information which is scattered through thousands of pages of the RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record.

It will be noted that out of a total of 220 rollcalls I missed on only 7 occasions for an attendance record of 97 percent. The footnotes at the end of the compilation will indicate the reason for the absences and how I would have voted if present.

The report follows:

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District of Michigan, 85th Cong., 1st sess.

No.	Date	Measure, question, and result	Vote
	1957		
1	Jan. 3	Quorum call	Present.
2	Jan. 3	Election of Speaker. (RAYBURN 227, MARTIN 199.)	MARTIN.
3	Jan. 29	Quorum call	Absent.[1]
4	Jan. 29	H. Res. 123, to conclude debate on this resolution which provided for consideration of H. J. Res. 117. (Passed 262 to 146)	Absent.[2]
5	Jan. 30	H. J. Res. 117, to authorize the President to undertake economic and military cooperation with nations in the Middle East. (Passed 355 to 61.)	Absent.[2]
6	Feb. 5	H. R. 4249, to amend a supplemental appropriations bill to place a limit of $15,728,000 on amount to be spent for State and local administration of public assistance grants. (Passed 206 to 167.)	Yes.
7	Feb. 6	H. R. 2367, to establish a deferred grazing program and protein-feed program as part of relief available to drought-stricken areas and for other purposes. (Passed 270 to 108.)	No.
8	Feb. 19	Quorum call	Present.
9	Feb. 27	Quorum call	Present.
10	Feb. 27	Quorum call	Present.
11	Feb. 27	Quorum call	Present.
12	Mar. 5	Quorum call	Present.
13	Mar. 6	Quorum call	Present.
14	Mar. 7	Quorum call	Present.
15	Mar. 7	H. Res. 188, agreeing to Senate amendments to H. J. Res. 117 to authorize the President to undertake economic and military cooperation with nations in Middle East. (Passed 350 to 60.)	Yes.
16	Mar. 12	Quorum call	Present.
17	Mar. 12	H. Res. 192, a rule to take up for discussion H. Res. 190 requesting the President to suggest reductions in the budget for fiscal 1958. (Passed 219 to 185.)	No.
18	Mar. 12	H. Res. 190, to recommit the resolution and to substitute therefor a commendation to the President for his decision to request each Department to recommend where budget cuts could be made. (Defeated 185 to 214.)	Yes.

Footnotes at end of table.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District of Michigan, 85th Cong., 1st sess.—Continued

No.	Date	Measure, question, and result	Vote
	1957		
19	Mar. 12	H. Res. 190, to pass resolution requesting the President to suggest where reductions may be made in budget for 1958. (Passed 219 to 178)	No.
20	Mar. 13	Quorum call	Present.
21	Mar. 13	Quorum call	Present.
22	Mar. 13	H. R. 4901, to recommit the amended bill to committee. (Defeated 168 to 237)	No.
23	Mar. 13	H. R. 4901, to pass the bill which had been changed by the adoption of the Harrison amendment providing for a 1-year program and giving commercial corn farmers a choice of programs. (Defeated 188 to 217.)	Yes.
24	Mar. 14	Quorum call	Present.
25	Mar. 14	Quorum call	Present.
26	Mar. 20	Quorum call	Present.
27	Mar. 21	Quorum call	Present.
28	Mar. 25	Quorum call	Present.
29	Mar. 26	Quorum call	Present.
30	Mar. 27	Quorum call	Present.
31	Mar. 27	H. Res. 85, to authorize Committee on Banking and Currency to investigate the monetary and credit structure of the United States. (Defeated 174 to 225.)	No.
32	Mar. 28	Quorum call	Present.
33	Mar. 29	Quorum call	Present.
34	Apr. 1	Quorum call	Absent.[1]
35	Apr. 2	Quorum call	Present.
36	Apr. 3	Quorum call	Present.
37	Apr. 4	H. R. 6287 (appropriations for Departments of Labor, and of Health, Education, and Welfare), to cut $30,000 from salaries and expenses of Office of Secretary of Labor. (Passed 286 to 126.)	Yes.
38	Apr. 4	H. R. 6287, to cut $204,000 from salaries and expenses of Office of Solicitor, Department of Labor. (Passed 241 to 171)	Yes.
39	Apr. 4	H. R. 6287, to cut $46,300 from salaries and expenses of Bureau of Labor Standards. (Passed 246 to 169)	Yes.
40	Apr. 4	H. R. 6287, to cut $136,000 from funds provided for Bureau of Veterans Reemployment Rights. (Defeated 137 to 275)	Yes.
41	Apr. 4	H. R. 6287, to cut $442,000 from funds for grants to States for unemployment compensation, etc. (Passed 220 to 200)	Yes.
42	Apr. 4	H. R. 6287, to cut $12,186,000 from funds for grants to States for unemployment compensation, etc. (Passed 220 to 200)	Yes.
43	Apr. 4	H. R. 6287, to cut $1,500,000 from unemployment compensation for Federal employees. (Passed 253 to 167)	Yes.
44	Apr. 4	H. R. 6287, to cut $236,800 from salaries and expenses of the Mexican farm labor program. (Passed 342 to 77)	Yes.
45	Apr. 4	H. R. 6287, to cut $346,800 from salaries and expenses of Bureau of Labor Statistics. (Passed 217 to 204)	Yes.
46	Apr. 4	H. R. 6287, to cut $31,000 from funds for Women's Bureau. (Defeated 206 to 210)	Yes.
47	Apr. 4	H. R. 6287, to cut $288,000 from salaries and expenses of the Wage and Hour Division. (Passed 214 to 205)	Yes.
48	Apr. 4	H. R. 6287, to reduce by $1,327,000 the funds of the Food and Drug Administration. (Defeated 130 to 285)	No.
49	Apr. 4	H. R. 6287, to cut $1,482,000 from Office of Education. (Defeated 206 to 207)	No.
50	Apr. 4	H. R. 6287, to eliminate provision for $50,000,000 for grants to States for waste treatment construction. (Defeated 185 to 231)	Yes.
51	Apr. 8	Quorum call	Present.
52	Apr. 8	H. R. 6306, to authorize construction of bridge to replace present 14th Street Bridge over Potomac. (Passed 190 to 131)	Yes.
53	Apr. 8	Quorum call	Present.
54	Apr. 8	Quorum call	Present.
55	Apr. 9	Quorum call	Present.
56	Apr. 9	Quorum call	Present.
57	Apr. 10	Quorum call	Present.
58	Apr. 10	Quorum call	Present.
59	Apr. 10	S. J. Res. 72, to approve an agreement amending the Anglo-American Financial Agreement of 1945 relative to deferment of certain interest payments. (Passed 218 to 167.)	Yes.
60	Apr. 11	H. Res. 191, to increase from $100,000 to $350,000 funds for investigative studies by House Committee on Interstate and Foreign Commerce. (Passed 225 to 143.)	No.
61	Apr. 15	Quorum call	Present.
62	Apr. 16	Quorum call	Present.
63	Apr. 17	Quorum call	Present.
64	Apr. 17	H. R. 6871, to make a further reduction of $7,039,958 in the appropriation for contributions to international organizations. (Defeated 166 to 205.)	No.
65	May 7	Quorum call	Present.
66	May 8	Quorum call	Present.
67	May 9	Quorum call	Present.
68	May 13	Quorum call	Present.
69	May 13	Quorum call	Present.
70	May 13	Quorum call	Present.
71	May 14	Quorum call	Present.
72	May 14	Quorum call	Present.
73	May 15	Quorum call	Present.
74	May 15	H. R. 7441, to adopt an amendment suspending operation of the "acreage reserve" aspect of the soil-bank program on June 30, 1957, and deleting a provision of $500,000,000 for the 1958 program. (Passed 192 to 187.)	No.
75	May 21	Quorum call	Present.
76	May 22	Quorum call	Present.
77	May 22	H. R. 7599, to recommit the bill in order to eliminate an appropriation of $7,500,000 for the construction of a 3d House Office Building. (Defeated 176 to 206.)	Yes.
78	May 22	H. R. 7599, to approve the legislative appropriations bill totaling $78,470,285. (Passed 278 to 93)	No.
79	May 22	H. Res. 254, to adopt a rule providing for the consideration of H. R. 2, the Lake Michigan water diversion bill. (Passed 267 to 102)	No.
80	May 22	H. R. 2, to recommit the bill to Committee on Public Works until the discussions between United States and Canada on further diversion of water from Lake Michigan have been concluded. (Defeated 143 to 224.)	Yes.
81	May 22	H. R. 2, to adopt the bill authorizing a test on a 3-year basis the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway. (Passed 222 to 143.)	No.
82	May 23	Quorum call	Present.
83	May 23	H. R. 985, to recommit to committee the bill providing that chief judges of circuit and district courts shall cease to serve as such upon reaching age 75. (Defeated 47 to 293.)	No.
84	May 24	Quorum call	Present.
85	May 24	Quorum call	Present.

An Explanation of Provisions Contained in the Natural Gas Bill, Reported by the House Committee on Interstate and Foreign Commerce, That Protects the Consumer and the Public Interest

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. WOLVERTON. Mr. Speaker, the Committee on Interstate and Foreign Commerce, after long and extensive hearings on the Harris natural gas bill, reported favorably a bill to regulate the production, distribution and sale of natural gas.

In order to give a clear understanding of the purpose and effect of the proposed bill as reported, it is my desire to make a summary explanation, setting forth the salient features of the bill intended to protect consumers in the price to be paid and to provide adequacy of supply.

The underlying conditions that must be considered in arriving at a proper decision as to character of legislation that is necessary and proper with respect to the production, distribution and sale of natural gas are numerous and important. The individual welfare of our people, as well as the economic and industrial welfare of our Nation and its progress, requires careful, sane and thoughtful consideration. To give the subject any less can result in harm that can be disastrous to our welfare.

The basic issues that exist with respect to natural gas legislation are such that they can readily lend themselves to appeals directed to the emotions rather than to reason. Consequently, we have statements being issued in many instances by individuals who have little or no knowledge or understanding of the basic facts, economic conditions and the many technical considerations that enter into and have a bearing on the issues and a correct decision.

It is regrettable that too often untrue, deceptive and misleading statements have been made by some who have improperly sought to create a feeling that all that has been done has been solely and entirely to the benefit of big interests and to the complete detriment of the consumer. For instance, the charge has been made that it will add millions of dollars to the cost of living and that every month the average consumer will be saddled with an extra cost and will mean an increase of gas charges to the consumers of upward of $800 million. There is no reasonable basis upon which any such claim can be justified if the provisions of this bill are properly administered.

The figure of $800 million that is being used is the same that was used against the bill which passed 2 years ago and which was vetoed by President Eisenhower. I fought against the enactment of that bill zealously and aggressively. I sought to have it recommitted to the committee for further study. Failing in that, I voted against its passage by Congress. In fact, I was a leader in the fight against its adoption.

I believed then, and I still believe, that the bill was so obnoxious that if its provisions had been carried out it co[uld] have meant in time the loss to consum[ers] totaling $800 million. But, that was [pre]der the terms of the bill of 2 years a[go]. The same thing does not apply to t[he] present bill.

FEDERAL POWER COMMISSION AND STATE UTI[LITY] COMMISSIONS REGULATE PRICE

The present bill is entirely differ[ent] from the above-mentioned bill. T[he] very purpose of the bill is to prov[ide] against any unreasonable price increa[se]. The Federal Power Commission, as t[he] guardian of the public interest, was i[n]augurated during the Roosevelt admi[n]istration to prevent unfair treatment [of] all interested parties. It was gi[ven] strong regulatory powers to be exerci[sed] in the public interest. The pending b[ill] does not seek to interfere with nor d[e]tail such, and, is designed to meet exi[st]ing conditions.

Of course, no one can say positiv[ely] that future conditions of an econom[ic] character would not arise to affect t[he] price structure, but, the bill is given d[e]nite power to regulate prices in the pu[b]lic interest. We are living in a per[iod] that the economic conditions are co[n]tinually causing an increase in liv[ing] costs. Today, for instance, railro[ad] fares are greatly increased, but we h[ave] the Interstate Commerce Commission [set] up as a regulatory body to make cert[ain] that all rates shall be just and reasona[ble]. The Federal Power Commission has b[een] given power under this bill to likew[ise] require that prices of gas to consum[ers] shall be just and reasonable.

Furthermore, under the proposed [bill] to insure this, every interested pa[rty] even to the humblest citizen and inc[lud]ing city and State officials are given

to oppose and be heard before there y increase in price.

is is something that did not exist fore. It is all for the benefit of onsumer. There can be no increase e price of gas unless the Federal r Commission so orders and permits. rthermore, it should be realized that nly does the Federal Power Com- on have the power to control the of gas that enters into interstate nerce, but, also the rate that can be ged by the pipelines that convey it the producing fields to the States e it is to be consumed. And, in ion to this, when the gas reaches onsuming State, New Jersey for in- e, then the State utility commis- has the power to fix the price that e charged by the distributing com- to the individual consumer.

us, from the time the gas leaves the ucing State until it enters the homes ividual consumers, or, the fur- of any industrial user, it is subject gulations affecting the price to be ed the consumer.

e bill before Congress gives regu- control to the Federal Power mission while the gas is subject to al jurisdiction, and the State util- ommissions have control when it es the consuming State. Thus, ghout its entire course the price of as is subject to the control of pub- odies set up by the Congress and legislatures to insure a fair and nable price. This is all done to ct the consumer and in the public est. This is as it should be.

l, while I am of the opinion that resent bill does give every reason- protection to the consumer consis- with our American way, yet, when ill is under consideration in the ress if it should appear that any dment is necessary and proper to then the bill, then such would cer- have my support.

m anxious to provide the very best ction to the public interest. That he purpose and intent of the com- e in reporting this bill to the Con-

ould have been unfair and undem- c for the committee to have ed" congressional consideration of important matter by refusing to a bill. The action of the com- e now permits every Member of the to express their views represent- he different sections of the Nation its differing viewpoints.

EQUATE SUPPLY OF GAS NECESSARY

our consideration of this subject, so must not overlook the impor- and necessity of giving the con- assurance of an adequate supply . In our present day economy an ate supply and reasonable price nd in hand. Each is important consumer.

course, the consumer is interested ce and the public interest requires uch shall at all times be so regu- that it shall not exceed what is able and fair. To make certain s, the bill gives the Federal Power ission the power to fix prices for interstate commerce that is rea- sonable and just. However, while it is important and appropriate to emphasize a proper price to the consumer, yet, we cannot discount nor should we overlook the fact that it is also important to make certain that the consumer has an adequate supply of gas. Without such the facilities, that are now in use and that have cost millions of dollars, would go for naught and the consequences would be disastrous to consumers.

In considering the question of providing an adequate supply, I ask in all seriousness what happens if the gas producer is not satisfied with the price? What then can happen to the consumer? If the producer does not receive what he considers a fair price for his gas, then he can refuse to sell it in interstate commerce. He can retain it in the well or sell it only within the State where produced and thus avoid Federal regulation.

Under such circumstances, I ask again, What happens if the gas producer is not satisfied with the price? What becomes of the consumer who is depending upon the gas being sold in interstate commerce and thus finally reaching him in his home in a State that does not produce gas? There is no power existing in our Federal Government under our present system of Government that can compel the producer to sell. This could be done in Russia, but not in America.

The same principle applies here as applies to labor. No worker can be compelled to sell his labor for any price that he does not wish. He can refuse to work. So can the owner of natural-gas wells refuse to sell his gas for a price that he does not consider fair and just.

There is also a further possibility that can happen with results that are disastrous in nonproducing States, if and when the price is not fair and just to the producer. This situation was pointed out to the committee in a statement of the Federal Power Commission, namely:

> The present situation appears to encourage the use of natural gas within the States where produced rather than in the more populous areas where it has the greatest usefulness.

In this connection, we are all aware of the tendency of many industries to remove their plants to Southern and other States where the wage scale and taxes are less than in the North and Northeastern States. Already this tendency has caused many textile mills to move away from present and long-established locations.

This has left many towns dead industrially. Labor unions, CIO and AFL, through their representatives have held many conferences with Members of Congress from the affected areas to find ways and means of stopping this tendency from becoming general. The fact that seasonal conditions make living costs cheaper has also been an influence.

Now, if we add to this a moving of industry because of a more beneficial price structure for natural gas in the producing States, we can readily understand the force of the statement made by the Federal Power Commission, "that without some legislation such as that here proposed domestic and other natural-gas consumers may find themselves facing not only diminishing supply of such gas but the fact that some of the industries upon which the economy of their communities depend may have removed from their midst and gone to the producing areas." This is no idle fear when we realize that Federal jurisdiction does not extend into the producing State and only applies if and when the gas moves in interstate commerce.

And, then there is the further danger pointed out to the committee, "Nor does the present regulation—existing law—appear to encourage further exploration and development which are essential to continued supplies." And, then, the committee very wisely directs attention to the necessity for remedial legislation in these words, "It is certainly not beyond the bounds of reason, therefore, to believe that without some legislation such as that here proposed domestic and other natural-gas consumers may find themselves facing the situations above outlined."

Under the circumstances as outlined by the Federal Power Commission, whose duty it is to study the question from every standpoint and report to Congress, would it not be foolish to cast aside its recommendations and ignore its warnings? The duty of the committee was clear and impelling. It met its obligation by reporting to the Congress what was considered by a majority of the committee as the most effectual way to solve the problem in the public interest.

Therefore, the purpose of the bill, as reported by the committee, in providing that the Federal Power Commission shall have regulatory powers to fix a reasonable price and transportation charges is intended not only to protect the consumer against unreasonable prices, but also to make certain that a fair and reasonable price is made available to the producer as an incentive to supply gas and make explorations for additional gas to meet the ever-growing demand in consuming States.

Thus, the fixing of a fair and reasonable price has its advantages to both parties—the producer and consumer. It thereupon becomes the duty of the Federal Power Commission and the local State utility commission at all times in fixing the price to be paid by the eventual consumer to do so with the thought in mind that the public interest must in all respects be kept paramount.

CAREFUL CONSIDERATION GIVEN BY COMMITTEE

In its effort to solve the important issue involved in this matter, the committee held extensive hearings. Witnesses to the number of 171 appeared and testified or submitted statements for the consideration of the committee. These covered wide and varied interests, including individuals, Federal, State, municipal, and other groups, each expressing their viewpoint and recommendations.

Agencies of government supplied much factual information, as well as conclusions, based upon experience gained in this and other regulatory matters. Altogether this testimony covered 1,742 printed pages. All of this was studied carefully and analyzed. The bill as reported to the Congress for its considera-

tion is the result. Certainly, there could not have been a more careful, conscientious, and sincere effort to reach a proper solution even though there may be differing viewpoints in some particulars.

NECESSITY FOR LEGISLATION

In recent years as a result of decisions made by our Federal courts, many complications have arisen. As a result of this, the Federal Power Commission has requested Congress to rectify and improve the situation so as to make the Natural Gas Act more adaptable to the regulation of gas producers and for the benefit of consumers.

The committee in complying with this respect has had at all times in mind the underlying policy of the Natural Gas Act, reading as follows:

It is hereby declared that the business of transporting and selling gas for ultimate distribution to the public interest and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary to the public interest.

I actively participated in the adoption of that statement of policy, believing as I do that the public interest is paramount.

FEDERAL POWER COMMISSION APPROVES COMMITTEE BILL

It seems to me that there is great significance and importance to be attached to the fact that the Federal Power Commission has given its approval to the bill as reported by the committee.

This is the Commission that since its inauguration in 1938 has been charged with protecting the public interest in the transportation and distribution of natural gas. This is the Commission that has had the experience of regulating that industry for approximately 20 years. It is to be assumed that the members of the Commission and its talented staff have gained much knowledge of what is necessary and proper for effectual regulation in all the varied phases of the natural-gas industry. It is with this background of experience that it has made its study, presented its recommendations and given its approval to the committee bill.

CONCLUSION

The Federal Power Commission in its report to the Committee on Interstate and Foreign Commerce concerning this legislation has very properly said: "While the public is interested in reasonable rates, it is equally concerned with the continued maintenance of adequate gas service to all of the ultimate consumers who have invested in the aggregate millions of dollars in gas furnaces, stoves, and other gas-using equipment."

Thus, the Commission points out that there must be a dual objective which legislation on the subject should achieve. To accomplish this purpose the Commission set forth five basic considerations that in its opinion were necessary to accomplish this purpose. These recommendations or suggestions have been incorporated in the pending bill. Whereupon, the Commission after a study of the proposed bill has reported to the committee its approval in these words:

The Commission favors the basic principles and objectives of the bill and believes that such legislation is necessary for practicable, workable, and efficient regulation of gas producers in the national interest. Early enactment is recommended.

In coming to this final decision it is appropriate to emphasize, and it cannot be emphasized too often or too strongly, the importance of having a regulatory law that will not only protect the price to the consumer, which is in itself a very important matter, but will also make certain an adequate supply to the consumer. Each is important and must be given consideration. I remember when—the time was a few years ago—the local distributing company in the Camden, N. J., locality had to refuse any more customers because of the insufficiency of supply. We certainly do not want this to happen again with a resulting disastrous effect on the millions of dollars of gas equipment our people now have and depend upon. Nor do we want to have to resort again to manufactured gas which would be prohibitive in price.

It has been, and will continue to be, my aim to protect in every way that is within my power the public interest in this and any other legislation that comes before the Congress during my membership in that body. This has always been, and will continue to be, my first and only consideration in the performance of my public duty.

Congressman Tewes Has 100 Percent Voting Record on Legislative Rollcalls

EXTENSION OF REMARKS

OF

HON. DONALD E. TEWES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. TEWES. Mr. Speaker, with the adjournment of the 1st session of the 85th Congress, I have compiled a report to the people I am privileged to represent. Included is my complete voting record on rollcalls and quorum calls. Nothing has been omitted, and I have exercised no censorship of any kind.

At the risk of sacrificing technical accuracy, I have eliminated all parliamentary terms such as recommit and recede from disagreement from the Senate. Instead I have attempted to phrase briefly and impartially the question which was at issue when my vote was cast.

The accompanying tables show that I was present and signified my position on every rollcall for a voting record of 100 percent. I was absent from the Chamber on 3 days when there were quorum calls not involving legislative issues. Including these unavoidable absences, my general attendance for the session was about 97 percent.

Because brief summaries cannot reflect the full significance of each vote, I invite my constituents to write me or contact me personally on any matters on which they desire additional information.

The report follows:

Roll-call No.	Date	Explanation	Vote
1	Jan. 3	Call of the House	Present.
2	Jan. 3	Election of Speaker	MARTIN.
3	Jan. 29	Quorum call	Present.
4	Jan. 29	H. R. 123: Shall the House consider the Middle East resolution under "closed" rule which limits debate? (262 yea to 146)	Nay.
5	Jan. 30	H. J. Res. 117: Shall the President be authorized to undertake military and economic cooperation with nations in the general area of the Middle East? (355 yea to 61.)	Yea.
6	Feb. 5	H. R. 4249: Shall there be a $15,728,000 limit on the amount which States can spend for administration of public assistance grants? (206 yea to 167.)	Yea.
7	Feb. 6	H. R. 2367: Shall ranchers be paid drought relief for deferring grazing? (270 yea to 108)	Nay.
8	Feb. 19	Quorum call	Present.
9	Feb. 20	Quorum call	Present.
10	Feb. 27	Quorum call	Present.
11	Feb. 27	Quorum call	Present.
12	Mar. 5	Quorum call	Present.
13	Mar. 6	Quorum call	Present.
14	Mar. 7	Quorum call	Present.
15	Mar. 7	H. R. 188: Shall the House agree to Senate amendments to the Middle East resolution? (350 yea to 60)	Yea.
16	Mar. 12	Quorum call	Present.
17	Mar. 12	H. R. 192: Shall the House consider a resolution demanding that the President indicate where reductions can be made in the budget? (219 yea to 185.)	Nay.
18	Mar. 12	H. R. 190: Shall a resolution be substituted commending the President for requesting department heads to advise the House on where budget cuts can be made? (214 nay to 185.)	Yea.
19	Mar. 12	H. R. 190: Shall a resolution be passed demanding that the President indicate to the House where reductions can be made in the budget? (219 yea to 178.)	Nay.
20	Mar. 13	Quorum call	Present.
21	Mar. 13	Quorum call	Present.
22	Mar. 13	H. R. 4901: Shall the bill establishing corn acreage allotments be returned to committee for further study? (237 nay to 168)	Nay.
23	Mar. 13	H. R. 4901: Shall the bill which establishes corn acreage allotments be passed? (217 nay to 188)	Yea.
24	Mar. 14	Quorum call	Present.
25	Mar. 14	Quorum call	Present.
26	Mar. 20	Quorum call	Present.
27	Mar. 21	Quorum call	Present.

Date	Explanation	Vote
Mar. 25	Quorum call	Present.
Mar. 26	Quorum call	Present.
Mar. 27	Quorum call	Present.
Mar. 27	H. R. 85: Shall the House Committee on Banking and Currency make an investigation into the monetary and credit structure of the United States? (225 nay to 174.)	Nay.
Mar. 28	Quorum call	Present.
Mar. 29	Quorum call	Present.
Apr. 1	Quorum call	Present.
Apr. 2	Quorum call	Present.
Apr. 3	Quorum call	Present.
Apr. 4	H. R. 6287: Shall $30,000 be cut from the Labor Department for posts in South America? (286 yea to 126)	Yea.
Apr. 4	H. R. 6287: Shall $204,000 be cut from the Solicitors Office in the Labor Department? (241 yea to 171)	Nay.
Apr. 4	H. R. 6287: Shall $46,300 be cut from the Bureau of Labor Standards? (246 yea to 169)	Yea.
Apr. 4	H. R. 6287: Shall $136,000 be cut from the Bureau of Veterans' Reemployment Rights? (275 yea to 137)	Nay.
Apr. 4	H. R. 6287: Shall $442,000 be cut from the Bureau of Employment Security? (214 yea to 206)	Yea.
Apr. 4	H. R. 6287: Shall $12,186,000 be cut from the estimate of unemployment grants to States? (220 yea to 199)	Yea.
Apr. 4	H. R. 6287: Shall $1,500,000 be cut from the estimate of unemployment contributions for Federal employees? (253 yea to 167)	Yea.
Apr. 4	H. R. 6287: Shall $263,800 be cut from the Mexican farm labor program? (342 yea to 167)	Yea.
Apr. 4	H. R. 6287: Shall $346,000 be cut from the Bureau of Labor Statistics? (217 yea to 201)	Yea.
Apr. 4	H. R. 6287: Shall $31,000 be cut from the Women's Bureau? (209 nay to 206)	Yea.
Apr. 4	H. R. 6287: Shall $288,000 be cut from the Wages and Hours Division? (214 yea to 205)	Nay.
Apr. 4	H. R. 6287: Shall $1,327,000 be cut from the Food and Drug Administration? (285 nay to 130)	Nay.
Apr. 4	H. R. 6287: Shall $1,482,000 be cut from the Office of Education? (207 nay to 206)	Nay.
Apr. 4	H. R. 6287: Shall $50,000,000 Federal grants for local sewerage disposal plants be eliminated? (231 nay to 185)	Yea.
Apr. 8	Quorum call	Present.
Apr. 8	H. R. 6306: Shall the House authorize a new bridge across the Potomac in Washington? (190 yea to 131)	Nay.
Apr. 8	Quorum call	Present.
Apr. 8	Quorum call	Present.
Apr. 9	Quorum call	Present.
Apr. 9	Quorum call	Present.
Apr. 10	Quorum call	Present.
Apr. 10	Quorum call	Present.
Apr. 10	S. J. Res. 72: Shall revising amendments to the Anglo-American Financial Agreement of 1945 be approved? (218 yea to 167)	Yea.
Apr. 11	H. R. 191: Shall an extra $250,000 be appropriated for investigations by the House Committee on Interstate and Foreign Commerce? (225 yea to 143.)	Nay.
Apr. 15	Quorum call	Present.
Apr. 16	Quorum call	Present.
Apr. 17	Quorum call	Present.
Apr. 17	H. R. 6871: Shall $7,039,958 be cut from the United States share of the administrative costs of international organizations of which we are a member? (205 nay to 166.)	Nay.
May 7	Quorum call	Absent.
May 8	Quorum call	Present.
May 9	Quorum call	Present.

134	July 9	Quorum call	Present.
135	July 9	Quorum call	Present.
136	July 10	H. R. 8240: Shall the Defense Department be authorized to discontinue activities that compete with private business without securing prior congressional approval? (230 nay to 183.)	Yea.
137	July 10	H. R. 7390: Shall this bill limiting the use of advisory committees by the executive branch be returned to committee for further study? (225 nay to 183.)	Yea.
138	July 10	H. R. 8364: Shall this bill which applies the 1949 Reorganization Act to new reorganization plans of the Government be returned to committee for further study? (336 nay to 44.)	Nay.
139	July 11	Quorum call	Present.
140	July 11	Quorum call	Present.
141	July 12	Quorum call	Present.
142	July 12	H. R. 72: Shall this bill restricting the transfer of the pension funded estates of incompetent veterans to near relatives be returned to committee for further study? (191 yea to 161.)	Nay.
143	July 15	Quorum call	Present.
144	July 16	Quorum call	Present.
145	July 16	Quorum call	Present.
146	July 17	Quorum call	Present.
147	July 19	Quorum call	Present.
148	July 19	S. 2130: Shall the Mutual Security Act be returned to committee with instructions to delete the Development Loan Fund? (227 nay to 181)	Nay.
149	July 19	S. 2130: Shall the Mutual Security Act be passed? (254 yea to 154)	Yea.
150	July 22	Quorum call	Present.
151	July 23	H. R. 2474: Shall the basic salary of postal workers be increased by $546 per year? (379 yea to 38)	Yea.
152	July 23	Quorum call	Present.
153	July 25	Quorum call	Present.
154	July 25	H. R. 1: Shall the House terminate consideration of this bill to provide Federal assistance to states for school construction without opportunity to debate or amend? (208 yea to 203)	Nay.
155	July 29	Quorum call	Present.
156	July 30	Quorum call	Present.
157	July 30	Quorum call	Present.
158	July 31	Quorum call	Present.
159	July 31	S. 1856: Shall a new Airways Modernization Board be established to develop and modernize air navigation and traffic control? (375 yea to 17.)	Yea.
160	July 31	Quorum call	Present.
161	July 31	H. R. 2147: Shall the authorization for a $32,000,000 reclamation project in San Angelo, Tex., be returned to committee for further study? (202 nay to 189.)	Yea.
162	July 31	H. R. 2147: Shall a $32,000,000 reclamation project in San Angelo, Tex., be authorized? (201 yea to 190)	Nay.
163	Aug. 1	Quorum call	Present.
164	Aug. 1	H. R. 8643: Shall construction of power improvements on the Niagara River be authorized? (313 yea to 75)	Yea.
165	Aug. 1	Quorum call	Present.
166	Aug. 1	H. R. 6763: Shall the House consider the bill to authorize a tunnel under the Potomac River? (296 yea to 76)	Yea.
167	Aug. 1	H. R. 6763: Shall the House terminate all further consideration of the bill to authorize a tunnel under the Potomac River? (194 nay to 175)	Yea.
168	Aug. 2	Quorum call	Present.
169	Aug. 2	H. R. 6763: Shall the House consider the bill to authorize a tunnel under the Potomac River? (275 yea to 59)	Yea.
170	Aug. 2	H. R. 6763: Shall the bill be amended to substitute a bridge for a tunnel? (225 yea to 107)	Yea.
171	Aug. 5	H. R. 6709: Shall the House approve the implementation of a treaty with the Republic of Panama? (279 yea to 91)	Yea.
172	Aug. 5	Quorum call	Present.
173	Aug. 6	Quorum call	Present.
174	Aug. 7	Quorum call	Present.
175	Aug. 7	H. R. 9131: Shall the supplemental appropriation be returned to committee with instructions to reduce new TVA funds by $9,784,000? (244 nay to 158.)	Yea.
176	Aug. 7	H. R. 9131: Shall the supplemental appropriation bill be passed? (330 yea to 75)	Yea.
177	Aug. 7	Quorum call	Present.
178	Aug. 7	H. R. 362: Shall the House consider a bill to permit deductions for a self-help meat promotion program? (216 nay to 175)	Yea.
179	Aug. 8	Quorum call	Present.
180	Aug. 8	H. R. 4813: Shall the acquisition of certain land for a District of Columbia auditorium be authorized? (284 nay to 115)	Nay.
181	Aug. 8	Quorum call	Present.
182	Aug. 8	H. R. 8992: Shall the House delete a Senate proposal for congressional control over distribution of nuclear material in the International Atomic Energy Agency? (298 yea to 100.)	Yea.
183	Aug. 8	Quorum call	Present.
184	Aug. 9	H. R. 8996: Shall $3,000,000 for design estimates on a plutonium reactor be cut? (201 nay to 197)	Yea.
185	Aug. 9	H. R. 8996: Shall $55,000,000 for Government construction of a natural plutonium recycle reactor be cut? (211 yea to 188)	Yea.
186	Aug. 9	H. R. 8996: Shall provisions for Government ownership and operation of atomic-energy generating plants be deleted? (213 yea to 185)	Yea.
187	Aug. 9	H. R. 8996: Shall the House pass the appropriation for the Atomic Energy Commission? (382 yea to 14)	Yea.
188	Aug. 9	H. R. 2462: Shall the bill providing for an 11-percent pay increase for Federal employees be returned to committee for further study? (319 nay to 70.)	Nay.
189	Aug. 9	H. R. 2462: Shall the bill providing for an 11 percent pay increase for Federal employees be passed? (329 yea to 58)	Yea.
190	Aug. 13	Quorum call	Present.
191	Aug. 13	H. R. 8090: Shall the House agree to a Senate amendment which appropriated $500,000 for the Bruces Eddy project in Idaho? (363 nay to 23.)	Nay.
192	Aug. 13	H. R. 5836: Shall postal rates on 1st, 2d, and 3d classes be increased? (256 yea to 129)	Yea.
193	Aug. 14	Quorum call	Present.
194	Aug. 14	S. 2130: Shall the House accept Senate amendments appropriating $250,000,000 additional funds to mutual security? (226 yea to 163)	Yea.
195	Aug. 14	S. 1383: Shall the Interstate Commerce Act be amended to change requirements for obtaining a freight forwarders permit? (177 yea to 176)	Nay.
196	Aug. 15	Quorum call	Present.
197	Aug. 15	H. R. 9302: Shall the appropriation for mutual security be returned to committee with instructions to reinsert $715,000,000? (254 nay to 129.)	Yea.
198	Aug. 15	H. R. 9302: Shall the appropriation for mutual security be passed? (252 yea to 130)	Yea.
199	Aug. 19	H. R. 7993: Shall the Government guarantee private loans of certain airline carriers? (242 yea to 94)	Nay.
200	Aug. 20	H. R. 1937: Shall the District of Columbia be authorized a stadium to be financed with private funds? (234 nay to 134)	Yea.
201	Aug. 20	S. 1520: Shall Federal contribution be limited to $50,000 in the disposal of a dam in West Virginia? (232 nay to 135)	Yea.
202	Aug. 21	H. R. 9131: Shall the House accept Senate amendment striking out funds for a new airport in Washington? (233 nay to 125)	Nay.
203	Aug. 21	H. R. 9131: Shall the House accept a Senate amendment adding $475,000 for the Columbia River project? (216 nay to 140)	Nay.
204	Aug. 21	H. R. 9379 (Atomic Energy Appropriation): Shall House restore $30,000,000 for a program of cooperation with private industry? (214 yea to 135.)	Yea.
205	Aug. 22	H. Con. Res. 176: Shall $95,000 be appropriated for 500,000 copies of an illustrated booklet to be distributed free by Congressmen? (183 yea to 129.)	Nay.
206	Aug. 23	Quorum call	Present.
207	Aug. 23	H. R. 9131: Shall the House accept a Senate amendment adding $475,000 for the Columbia River project? (166 yea to 121)	Nay.
208	Aug. 23	H. R. 9131: Shall the House accept a Senate amendment adding $475,000 for the Columbia River project? (165 yea to 120)	Nay.
209	Aug. 23	S. 2229: Shall the Government guarantee private loans to certain airline carriers? (203 yea to 77)	Nay.
210	Aug. 23	H. R. 407: Shall Louis Hartman be cited for contempt of Congress for refusing to answer questions before the Un-American Activities Committee? (276 yea to 0.)	Yea.
211	Aug. 23	H. R. 409: Shall Bernard Silber be cited for contempt of Congress for refusing to answer questions before the Un-American Activities Committee? (261 yea to 0.)	Yea.
212	Aug. 27	Quorum call	Present.
213	Aug. 27	H. R. 410: Shall the House accept Senate jury-trial amendments to civil-rights bill with further limitations in criminal contempt proceedings? (274 yea to 101.)	Yea.
214	Aug. 27	H. R. 410: Shall the House accept Senate jury-trial amendments to civil-rights bill with further limitations in criminal contempt proceedings? (279 yea to 97.)	Yea.
215	Aug. 27	H. R. 7915: Shall there be legislation clarifying Supreme Court decision in the Jencks case concerning use of FBI files? (351 yea to 17)	Yea.
216	Aug. 28	Quorum call	Present.

Roll-call No.	Date	Explanation	Vote
217	Aug. 28	S. 2792: Shall the immigration laws be amended to facilitate the entry into the United States of certain adopted children and other close relatives of United States citizens? (293 yea to 58.)	Yea.
218	Aug. 30	Quorum call	Present.
219	Aug. 30	H. R. 7915: Shall the House accept certain compromise amendments to legislation clarifying the Jencks decision? (315 yea to 0.)	Yea.
220	Aug. 30	H. R. 9032: Shall the House accept the mutual security appropriation compromise agreed upon in a Senate and House conference? (194 yea to 122.)	Yea.

A Report to My Constituents

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. FRIEDEL. Mr. Speaker, because I have the honor and great privilege of serving the people of the Seventh Congressional District of Maryland, I feel it is only fitting and proper that the voters have an accounting of my record in Congress. I have always believed that a Member should be truly representative of the people who sent him to Washington, and, as such, he should endeavor to do his utmost on their behalf and act on measures that promote and further the best interest of his city, State, and Nation.

Under leave to extend my remarks, I am including a report of my voting record on the major legislative actions taken during the 1st session of the 85th Congress, together with my views on some of the important issues considered this year.

BUDGET AND TAXES

The budget submitted by the President proposed that the Federal Government spend $71.8 billion during the fiscal year beginning July 1, 1957. This is the highest peacetime budget in American history and such a tremendous rate of spending would, unquestionably, add to inflationary pressures in the country's economy. Since I deemed it essential that this huge budget be brought under control, I voted in favor of cutting the requested appropriation for many items which I believed warranted such action.

I favor a reduction in Federal income taxes, and a repeal of all the so-called wartime excise taxes. I have introduced legislation to increase personal exemptions, for income-tax purposes from the present $600 to $800 per person. Federal budgets which require huge taxes naturally consume the savings which are required to finance private industry. Also high tax rates, which take such a large share of income, undermine the incentive to save and invest in normal business enterprises.

ESSENTIAL FEDERAL EXPENDITURES

In attempting to hold Government spending within reasonable bounds, we should not hold back on essential defense programs in the interest of national safety during the present world tension caused by the Russians in their ever-widening spheres of influence. Unfortunately, it is clear that the Communists are bent on world conquest and our Nation must be ready to cope with this growing menace to world peace by having the very best and newest weapons of defense and bolstering and aiding our friends across the seas through mutual security authorizations.

In like manner, we should not hold back on needed civilian programs. The heavy demands now being urged at all levels of government for roads and schools, for instance, are largely the result of failure to keep pace with the growth of the country. I believe in paying Federal and postal employees proper salaries commensurate with the increased cost of living. Such expenditures also help to keep up the general prosperity of America and provide essential facilities and services. Therefore, I favor appropriations for adequate defense to keep our country strong and reasonable appropriations for civilian programs to keep our economy healthy.

CIVIL RIGHTS

I voted in favor of the civil-rights bill, because I do not believe any citizen in the United States should be deprived of his right to vote.

FOREIGN AFFAIRS

As an American, I am unalterably opposed to the admission of Red China as a member of the United Nations, because I believe such action would further the cause of international communism. For the same reason, I am opposed to trading with Red China.

NATURAL-GAS BILL

During the last session of Congress, as well as during the present one, I registered my emphatic protest against the passage of any measure that would exempt the producers of natural gas from Federal control, because the removal of such controls might lead to increased cost to the millions of consumers of gas who use it not only for cooking but also for heating. I shall always continue to be vigilant and oppose legislation which is against the interest of the public at large.

TRAFFIC SAFETY

I take considerable pride in the fact that I was the first Member of the Congress to introduce a resolution calling for the creation of a committee to investigate traffic safety on our Nation's streets and highways, in order to find means to reduce the toll of lives and countless damage caused by traffic accidents. This matter is now under active investigation by the Congress, and it is hoped that it will be productive of results to accomplish the desired end.

BALTIMORE AND MARYLAND

I have endeavored to promote the interest of Baltimore and the State of Maryland at all times, in all matters on the Federal Government level. I am happy to report that the prospects for full utilization of Baltimore's Friendship Airport are brighter than ever before. Although funds have been provided to start construction of another airport in the Baltimore-Washington area, assurances have been given that the Civil Aeronautics Board will divert some of the Washington traffic to Friendship.

Construction of the new Social Security Building at Woodlawn will begin in the near future, as a result of an amendment to an appropriation bill, which was adopted at my request.

Baltimore is America's second largest port, providing employment for hundreds of people, and it is important that its interests be guarded, particularly in view of the fact that it will face formidable competition from the St. Lawrence seaway project. For this reason, I worked diligently to have legislation enacted permitting 24-hour quarantine service, in the port of Baltimore. I am pleased to report that my efforts were successful and as a result of this legislation, a saving of more than $1 million a year will be realized.

I also supported legislation providing for widening and deepening of the harbor and several other measures which will aid commerce and redound to Baltimore's lasting benefit.

Ever since the Secretary of the Navy announced the closing of the Office of the Supervisor of Shipbuilding and Assistant Industrial Manager, I have exerted every effort to have this order rescinded. Although my efforts did not meet with success, I have received assurance that the employees now working at that installation will be offered comparable positions at Newport News and Portsmouth.

Likewise, I have worked diligently to preserve the Recruit Training Command at Bainbridge, and the Curtis Bay storage facility.

IN GENERAL

At all times I have considered the best interest of my district and the Nation as being paramount, therefore, I have avoided blind partisanship. My record clearly reflects that I have supported the President many times when I deemed his recommendations right, such as my affirmative vote for the Middle East resolution. On other occasions when I did not agree with the Chief Executive's recommendations, I did not hesitate to raise my voice in opposition and vote against proposals which I considered contrary to the best interest of the Nation as a whole.

VOTING RECORD

In order that the people of my district may be informed as to how I voted on major legislation which was presented during the past session of Congress, I submit the following detailed record:

Date	Measure, question, and result	Vote
Jan. 30	H. J. Res. 117, authorizing the President to undertake economic and military cooperation with nations in the general area of the Middle East. On passage. (Passed 355 to 61.)	Yea.
Mar. 12	H. Res. 190, requesting the President to indicate where substantial reductions in the 1958 budget may best be made. (Passed 219 to 178)	Yea.
Mar. 27	H. Res. 85, authorizing the Committee on Banking and Currency to conduct studies and investigations, and to make inquiries relating to operation of the monetary and credit structure of the United States. (Defeated 174 to 225.)	Yea.
	H. R. 6287, making appropriations for the Departments of Labor and Health, Education, and Welfare, and related agencies for fiscal year 1958:	
Apr. 4	On amendment to reduce by $30,000 the appropriation for 3 new positions in the Department of Labor to handle international labor affairs in South America and the Near East. (Passed 286 to 126.)	Nay.
Apr. 4	On amendment to reduce by $204,000 the appropriation for new positions in the Office of the Solicitor, Department of Labor. (Passed 241 to 171)	Nay.
Apr. 4	On amendment to reduce by $46,300 the appropriation for new positions in the Bureau of Labor Standards, Department of Labor. (Passed 246 to 169.)	Nay.
Apr. 4	On amendment to reduce by $136,000 the appropriation for new positions in the Bureau of Veterans' Reemployment Rights. (Passed 137 to 275)	Nay.
Apr. 4	On amendment to reduce by $442,000 the appropriation for new positions in the Bureau of Employment Security, Department of Labor. (Passed 214 to 206.)	Nay.
Apr. 4	On amendment to reduce by $12,186,000 funds for grants to States for unemployment compensation, thus eliminating an increase requested by Bureau of Budget over departmental request and eliminating contingency funds. (Passed 220 to 199.)	Nay.
Apr. 4	On amendment to reduce by $1,500,000 funds for unemployment compensation for Federal employees and provide same amount used in 1957. (Passed 253 to 167.)	Nay.
Apr. 4	On amendment to reduce by $263,800 the appropriation for new positions in the Mexican farm labor program. (Passed 342 to 167)	Yea.
Apr. 4	On amendment to reduce by $346,000 the appropriation for new positions in the Bureau of Labor Statistics. (Passed 217 to 201)	Nay.
Apr. 4	On amendment to reduce by $31,000 the appropriation for new positions in the Women's Bureau. (Rejected 206 to 209)	Nay.
Apr. 4	On amendment to reduce by $288,000 the appropriation for new positions in the Wage and Hour Division, Department of Labor. (Passed 214 to 205)	Nay.
Apr. 4	On amendment to reduce by $1,327,000 the increase in funds for expansion of the Food and Drug Administration. (Rejected 130 to 285)	Nay.
Apr. 4	On amendment to reduce by $1,482,000 the appropriation for new positions in the Office of Education. (Rejected 206 to 207)	Nay.
Apr. 4	On amendment to delete language providing $50,000,000 to municipalities for waste treatment works construction. (Rejected 185 to 231)	Nay.
May 15	H. R. 7441, making appropriations for the Department of Agriculture and Farm Credit Administration for fiscal year 1958. On amendment to suspend operation of the soil-bank program at the end of fiscal year 1957 and to delete provision for $500,000,000 for the 1958 program. (Passed 192 to 187.)	Yea.
May 22	H. R. 7599, making appropriations for the legislative branch for fiscal year 1958:	
	On motion to recommit with instructions to delete $7,500,000 for construction of an additional House Office Building. (Rejected 176 to 206)	Nay.
	On passage. (Passed 278 to 93)	Yea.
May 29	H. R. 7665, making appropriations for the Department of Defense for fiscal year 1958:	
	On motion to recommit with instructions to restore $313,000,000 of the committee cut of $2,586,775,000. (Rejected 151 to 242)	Nay.
	On passage. (Passed 394 to 1)	Yea.
June 5	H. Res. 259, providing for the consideration of H. R. 6127, providing means of further securing and protecting the civil rights of persons in the jurisdiction of the United States. On passage. (Passed 290 to 117.)	Yea.
June 18	H. R. 6127, providing means of further securing and protecting the civil rights of persons within the jurisdiction of the United States:	
	On motion to recommit with instructions to add provision for jury trial in contempt proceedings. (Rejected 158 to 251)	Nay.
	On passage. (Passed 286 to 126)	Yea.
June 18	H. R. 7221, making supplemental appropriations for 1957. On motion to agree to Senate amendment providing $14,000,000 for initiation of Federal flood-insurance program. (Rejected 186 to 218.)	Nay.
June 25	H. R. 7963, amending the Small Business Act of 1953, making the Small Business Administration a permanent agency. On passage. (Passed 392 to 2)	Yea.
June 26	H. R. 6287, making appropriations for the Department of Health, Education, and Welfare, and related agencies, for fiscal year 1958. On motion to recommit the conference report. (Rejected 73 to 321.)	Nay.
July 10	H. R. 8240, authorizing certain construction at military installations. On amendment deleting from bill section requiring congressional review of action by Defense Department to eliminate activities competing with small business. (Rejected 183 to 230.)	Nay.
July 10	H. R. 7390, providing for limitation and regulation of the use of advisory committees within the executive branch. On motion to recommit to the Committee on Government Operations with instructions to receive further testimony from the Department of Defense and the Post Office Department. (Rejected 183 to 225.)	Nay.
July 12	H. R. 72, amending the World War Veterans' Act of 1924 to restrict the transfer of estates of incompetent veterans derived from compensation and pensions. On motion to recommit. (Passed 191 to 161.)	Nay.
July 19	S. 2130, the Mutual Security Act of 1957:	
	On motion to recommit to delete provisions creating the development loan fund. (Rejected 181 to 227)	Nay.
	On passage. (Passed 254 to 154)	Yea.
July 23	H. R. 2474, providing for a $546 increase in basic salary of employees in the postal field service. On passage. (Passed 379 to 38)	Yea.
July 25	H. R. 1, providing for Federal assistance to States for school construction. On motion to strike the enacting clause (and prevent further consideration of the bill). (Passed 208 to 203.)	Nay.
July 31	S. 1856, establishing the Airways Modernization Board to provide for the development and modernization of navigation and traffic-control facilities. On passage. (Passed 375 to 17.)	Yea.
Aug. 7	H. R. 9131, making supplemental appropriations for fiscal year 1958:	
	On motion to recommit with instructions to reduce appropriation of new funds for TVA by $9,784,000. (Rejected 158 to 244)	Nay.
	On passage. (Passed 330 to 75)	Yea.
Aug. 7	H. Res. 362, providing for the consideration of H. R. 7244, amending the Packers and Stockyards Act of 1921, permitting deductions for a self-help meat promotion program. On passage. (Defeated 175 to 216.)	Nay.
Aug. 9	H. R. 2462, providing an 11 percent across-the-board salary increase for classified Federal employees:	
	On motion to recommit. (Rejected 70 to 319)	Nay.
	On passage. (Passed 329 to 58)	Yea.
Aug. 13	H. R. 5836, increasing certain postal rates. On passage. (Passed 256 to 129)	Yea.
Aug. 14	S. 2130, the Mutual Security Act of 1957. On adoption of conference report increasing amount authorized by House by $250,000,000 and extending development loan fund to 1960. (Adopted 226 to 163.)	Yea.
Aug. 14	S. 1383, amending the Interstate Commerce Act to change the requirements for obtaining a freight forwarder permit. On passage. (Passed 177 to 176)	Yea.
Aug. 15	H. R. 9302, making appropriations for mutual security for fiscal year 1958:	
	On motion to recommit with instructions to increase various items by $715,000,000. (Rejected 129 to 254)	Nay.
	On passage. (Passed 252 to 130)	Yea.
Aug. 19	H. R. 7993, providing for Government guaranty of private loans to certain air carriers. On motion to suspend the rules and pass the bill. (Passed 242 to 94.)	Yea.
Aug. 21	H. R. 9131, making supplemental appropriations for the fiscal year 1958 (conference report). On motion to recede and concur in Senate amendment striking out funds for construction of an additional airport in or near Washington, D. C. (Rejected 125 to 253.)	Yea.
Aug. 21	H. R. 9379, making appropriations for the Atomic Energy Commission for fiscal year 1958. On amendment restoring $30,000,000 for industry cooperative program. (Passed 214 to 135.)	Yea.
Aug. 27	H. Res. 410, providing for House agreement to Senate amendments to H. R. 6127 (civil rights bill) with a further amendment limiting jury trials in criminal contempt proceedings:	
	On ordering the previous question. (Passed 274 to 101)	Yea.
	On passage. (Passed 279 to 97)	Yea.
Aug. 27	H. R. 7915, clarifying the Supreme Court decision in the Jencks case which opened FBI files to perusal of defendants under certain circumstances in Federal court cases. On passage. (Passed 351 to 17.)	Yea.
Aug. 28	S. 2792, amending the immigration laws so as to facilitate the entry into the United States of certain adopted children and other relatives of United States citizens. On motion to suspend the rules and pass the bill. (Passed 293 to 58.)	Yea.

A Report to the People of the Fourth Congressional District of Oregon

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I intend to comment today on the work of the 1st session of the 85th Congress which in some way affects the residents of Oregon's 4th Congressional District.

There are areas in which I believe this Congress could have dealt more effectively.

Certainly the problems of inadequate school construction continue to plague us. Inadequate farm legislation is a monument to a kind man's tragic inability to see that the modern farm family is being cast adrift.

The small-business man, and there are thousands in my district, continues to suffer. He is thwarted by a law which limits to $250,000 the money he may borrow for firm improvements or expansion.

Congressional pressure and lusty howls from citizens did force the President to follow congressional direction and lower Federal Housing Administration down-payment loans. This will bolster the economy of the Fourth District. The Housing Act of 1957 falls far short of the legislation I introduced, which would have decreased interest rates, expanded

the lending facilities of the Federal National Mortgage Association and speeded public housing starts previously authorized by Congress.

Statehood bills for Alaska and Hawaii once again failed to reach the floor.

An Alaskan bill was reported favorably from committee, but was bottled up in the Rules Committee. Hawaiian legislation is pending in the Interior and Insular Affairs Territories Subcommittee.

Inequities in our social-security laws have not been corrected. That will be a major problem facing Congress next session.

A postal rate-increase bill passed by the House was held up in the Senate.

The House Post Office and Civil Service Committee, of which I am a member, approved legislation increasing first-class mail to 4 cents, airmail to 7 cents, and the once penny postcard to 3 cents. Costs in second- and third-class mail were increased. More than 100 persons testified before the committee during the session.

Like most of the people who write to me, I oppose the suggested increases until thorough study is made. I agree that first-class mail, which is nearly self-sufficient, should not have to bear the burden of second- and third-class mail.

I have introduced legislation—H. R. 7138—which asks that congressional policy for the determination of postal rates and fees be established. The bill is pending before the Post Office and Civil Service Committee.

WAR, PEACE, AND THE HYDROGEN BOMB

Beyond the boundaries of the Fourth District, yet directly affecting every resident, are the problems of war and peace and nuclear energy. Joint Atomic Energy Committee hearings definitely established that no one really knows the good and bad aspects of nuclear testing. Atomic Energy Commission experts disagree with other leading physicists as to fallout hazards. It is difficult for citizen or Congressman to know what to believe.

Early this session Senator NEUBERGER and I introduced identical legislation which would provide for research, study, and prevention and treatment of effects of atomic and nuclear radiation on human health, development, and living conditions. The bill—H. R. 4820 in the House—calls for the establishment of a radiation health institute.

Later I introduced H. R. 8269, which would prohibit further testing by explosion of nuclear devices as long as all other countries refrain. This proposal is supported by such world citizens as Dwight Eisenhower, Adlai Stevenson, and Albert Schweitzer.

MAJOR LEGISLATION

Among the more important issues to face the House this year were the following:

First. The President's Mideast doctrine authorizing him to undertake a program of military and economic cooperation with Middle Eastern nations in order to counteract communism. Agreed to, 355 to 61, January 30, 1957—Democrats, 188 to 35; Republicans, 167 to 26. A yea vote supported the President's position. I voted "yea."

Second. Patman resolution authorizing an investigation of national monetary and credit policies by the House Banking and Currency Committee. Rejected, 174 to 225—Democrats, 172 to 38; Republicans, 2 to 185—March 27, 1957. President opposed resolution by Representative PATMAN, of Texas. I approved the resolution.

Third. Civil-rights bill: Passed the House June 18, 1957, 286 to 126—Democrats, 118 to 107; Republicans, 168 to 19. I voted "yea."

Fourth. Legislation to amend the Small Business Act of 1953 and make the Small Business Administration a permanent agency—H. R. 7963—passed House, 392 to 2, June 25, 1957—Democrats, 205 to 1; Republicans, 187 to 1. I voted "yea."

Fifth. Mutual Security Act of 1957—S. 2130—passed House, 254 to 154, July 19, 1957—Democrats, 135 to 78; Republicans, 119 to 76. I approved passage.

Sixth. Postal pay-increase bill passed House, 379 to 38, on July 23, 1957—Democrats, 217 to 9; Republicans, 162 to 29. I voted for passage. President opposed.

Seventh. School Construction Assistance Act of 1957—H. R. 1—killed when enacting clause struck by vote of 208 to 203—Democrats, 97 to 126; Republicans, 111 to 77. I voted "nay"; that is, against killing bill.

Eighth. Postal Rate Increase Act of 1957—H. R. 5836—raising first-, second-, and third-class mail rates. I opposed passage of bill, which passed, 256 to 129—Democrats, 85 to 125; Republicans, 171 to 4. President supported bill.

SECURITY, NOT WASTE

Before continuing to less-controversial matters, I want to comment on the so-called loyalty-security bill, S. 1411. As passed by the Senate, the legislation was noncontroversial and clarified suspension provisions relative to Government employees. As amended in the House Post Office and Civil Service Committee, it became a threat to every Government worker.

Because Representative HOLIFIELD and I believe this is an attempt, for no good reason, to create a security interest where none exists, we have filed a minority report against the bill as amended. We believe it is an unreasonable attempt to reverse the Supreme Court and is spite legislation. We urge full hearings on it.

BUILDING THE FUTURE

Too many promising students drop out of college or never have an opportunity to further their study because of inadequate finances. A need for Federal study in this field is evident. The question is: Should aid be in the form of self-sustaining loans or as outright gifts based on ability?

My H. R. 6212 would provide for national scholarships for college and university undergraduate study. It is pending before the Education and Labor Special Education Subcommittee. Hearings on this subject are scheduled, including one in Portland this fall. The Soviet Union provides higher education for capable scholars free of charge. This sort of assistance is pushing the Soviets ahead of the United States in such fields as science and engineering.

HELP FOR TODAY

Throughout the world thousands of orphans are neglected, spurned and even disliked by their countrymen. They are children of mixed blood, and the homes they need and seek seem to be waiting in the United States.

I introduced H. R. 3783 on January 28, 1957, which would amend the existing immigration laws and permit entry into the United States of 10,000 orphans who are under 12 years of age. This was identical to legislation originated and introduced by Senator NEUBERGER. Our bills became the basis for a section of the Immigration Subcommittee chairman's bill which passed Congress. In its final form it permits entry of an unlimited number of orphans under age 14 until June 30, 1959. Proxy adoptions are permitted.

FEDERAL-STATE COOPERATION—WATER POLLUTION CONTROL

The Federal Government and individual States join forces in many areas to improve living conditions and boost living standards.

For example, more than $300,000 in Federal assistance went to the cities of Albany, Lebanon, North Bend, and Roseburg in fiscal 1957 under provisions of the Water Pollution Control Act. Congress has appropriated $45 million for fiscal 1958 and Oregon's share is $651,575. Communities interested should contact the Oregon State Board of Health, Portland.

The Fourth District's share last fiscal year was $387,241.59 of the State's $1,080,054, distributed as follows:

Albany, $18,060 of $60,200 for sewage-treatment plant.

Lebanon, $13,300.09 of $44,334 for sewage-treatment plant.

North Bend, $5,881.50 of $19,605, raw sewage pump station.

Roseburg, $250,000 of $995,915 for sewage-treatment plant.

Drain, $19,781.40 of $65,938 for treatment plant and outfall sewer.

LIBRARY SERVICES ACT

Another area in Federal aid in rural library development. By July 1, 1958, Oregon will receive $116,941 from the Library Services Act, designed by the 84th Congress in 1956. Fourth District benefits include services of a consultant field worker, bookmobile exhibits in Josephine and Coos Counties and bookmobile sampling and cooperative cataloging in Jackson County. Congress authorized maximum $7,500,000 for each of the 5 years the program is to run. This Congress appropriated $5 million, double the fiscal 1957 amount. Oregon's EDITH GREEN helped draft initial legislation.

HOUSING AND HOME FINANCE AGENCY

Existing housing legislation makes possible urban planning assistance and the urban renewal programs which benefit the district. Under the former at least $10,400 has come to Fourth District cities whose planning programs were approved. A lump sum is awarded the State and then used by the Univer-

sity of Oregon's bureau of municipal research to aid in providing planning assistance. Urban planning goals aid smaller cities and help prevent slum conditions. 1957 grants in the district are as follows:

Albany, $3,000, February 21; one pending.

Grants Pass, Medford, North Bend, pending.

Sutherlin, $6,400, February 21.

Sweet Home, $1,000, February 21, one pending.

Eugene-Springfield, continuing project underway, $12,000 application pending.

Urban renewal, a second program, was initiated in the 1949 Housing Act, and provides for city improvement. Springfield has qualified and a sum of $445,757 has been reserved for that city's Third Street project. To date $65,975 approved by URA for preliminaries. Last March 31, the city received $18,900. Communities interested must display initiative and interest. Contact point in region is Housing and Home Finance Agency office: Flood Building, Ninth Floor, 870 Market Street, San Francisco, Mr. M. Justin Herman.

HOUSING LEGISLATION

The new housing legislation contains these major provisions:

First. Authorizes lowering of down payments on FHA-insured home loans to 3 percent on the first $10,000 of appraised value, 15 percent of the next $6,000, and 30 percent of the excess up to a maximum of $20,000 for a 1- or 2-family residence.

Second. Increases Federal National Mortgage Association authority to borrow from the public by $650 million to finance its purchase of FHA and VA-backed mortgages in the secondary market.

Third. Authorizes an additional $360 million in capital grants for slum clearance and urban renewal for 1 fiscal year.

Fourth. Directs the FHA and VA to impose discount controls, but permits them to vary in accordance with mortgage terms, geographical area, and other pertinent factors.

The conference report eliminated Senate proposals to allow over-income tenants to remain in public housing projects and to abolish the workable program requirement for such projects, but it also killed the House-approved amendment restricting future public housing units to those necessary to house families displaced by governmental action.

There are many areas which should be improved. However, there is, in the legislation as approved, considerable hope for the improvement of the slowed-down housing industry.

I believe that my bill, H. R. 4821, prepared after considerable work on the part of many persons, would have been more helpful. I intend to press for its enactment. It contains six major points:

First. Better the field of sales housing mortgage insurance by increasing the maximum mortgage amount to be insured by FHA and to decrease the required down payment. It would boost the mortgage loan insurance provision from the single-family residence maximum of $20,000 to $30,000 and decrease the FHA loan rate from 5 to 4½ percent.

Second. Benefit middle-income housing by replacing present inadequate programs for middle-income housing.

Third. Amend the National Housing Act by authorizing the Commissioner to make direct loans to eligible borrowers up to $10,000.

Fourth. Release for construction as needed 810,000 low-rent public-housing units authorized by Housing Act of 1949.

Fifth. Make direct supplemental veterans' loans available in urban areas as well as rural areas, and make $1 billion available for direct loans to veterans.

Sixth. Use money now in trust funds of SSA by VA through its National Service Life Insurance operation and make money available to eligible borrowers to correct the tight-money problem in home-loan field, create general increase in borrowing for home construction, and a following upsurge in the use of lumber and lumber products.

DISTRICT ECONOMY

Army civil works functions and a big Bureau of Reclamation project will bring $13,062,000 in Federal funds to the Fourth Congressional District in fiscal year 1958.

Each project is aimed at developing the district to a point where maximum usage of natural resources is possible. It should be noted that the nearly $20 million my district receives is a portion of the United States total of $858 million. The following chart provides a summary of appropriations and their use in the district:

Summary—Appropriations, Army civil functions and Bureau of Reclamation

Projects	Cost	Benefit	Status	Amount in administration budget	Engineers state amount usable in fiscal 1958	Recommended by Congressman PORTER	Final appropriation
ARMY CIVIL FUNCTIONS							
A. NOT STARTED							
I. Navigation, channels and harbors:							
Coos-Millicoma River	$487,000	Navigation	Authorized	0	$19,000	$19,000	(1)
Rogue River Harbor, Gold Beach	3,950,000	Provides jetties, channel improvement.	do	$21,000	250,000	250,000	$21,000
II. Flood control, local protection:							
Willamette River Basin, channel improvement, major drainage.	2,480,000	Flood control	do	0	86,000	86,000	(1)
Willamette River Basin, channel cleaning, snagging.	2,480,000	Reduce bank erosion, rectify channel.	do	0	25,000	25,000	(1)
Blue River Reservoir	13,700,000	Flood control	do	100,000	100,000	100,000	100,000
Fall Creek Reservoir	18,800,000	Flood control, irrigation	do	0	150,000	150,000	150,000
Holley Reservoir	12,500,000	Flood control	do	100,000	100,000	100,000	100,000
III. Multiple-purpose projects including power: Green Peter.	58,400,000	Flood control, power	do	225,000	500,000	500,000	225,000
B. CONTINUING PROJECTS							
I. Navigation, channels and harbors: Chetco River small boat channel and jetty.	425,000	Navigation, stabilization of channel.	Over half completed	200,000	200,000	200,000	200,000
II. Flood control, local protection:							
Amazon Creek	1,168,000	Flood control	⅔ completed	446,000	446,000	446,000	446,000
Willamette River bank protection	11,600,000	Flood control, bank protection	52 percent complete	300,000	800,000	800,000	450,000
III. Multiple-purpose projects including power:							
Cougar Reservoir	39,900,000	Power, storage, flood control	Under construction	6,570,000	6,570,000	6,570,000	6,570,000
Hills Creek Reservoir	34,500,000	Power, flood control	do	4,800,000	4,800,000	4,800,000	4,800,000
C. EXAMINATIONS AND SURVEYS							
Rogue River and tributaries survey report	134,900	Flood control, power, irrigation	Underway	0	44,000	44,000	[2] 40,000
Umpqua Harbor-River	7,000	Navigation	Authorized February 1956	0	7,000	7,000	[2] 7,000
Coquille River and tributaries	35,000	Flood control	Underway	25,000	25,000	25,000	[2] 25,000
Coquille River resurvey report	3,500	Navigation	Authorized	0	3,500	3,500	[2] 3,500
Umpqua River report	140,600	Flood control	Underway	27,100	27,100	27,100	[2] 27,100
Umpqua River at Winchester Bay	5,000	Navigation	do	2,800	2,800	2,800	[2] 2,800
BUREAU OF RECLAMATION							
CONSTRUCTION AND REHABILITATION							
Rogue River Basin talent division	19,200,000	Flood control, irrigation, power	Under construction	6,041,000	6,041,000	6,041,000	[2] 6,041,000

[1] No appropriation.

[2] Funds from a general increase with distribution as corps deems necessary.

SUMMARY

It is difficult to describe in the few words available here all of the things that a Congressman does to represent his constituents. One of his biggest, and in many ways most rewarding, jobs is reading and answering the mail from the district, providing information on specific subjects, giving advice on problems involving legislation, smoothing the way in contacts by constituents with Federal agencies, agreeing—and sometimes disagreeing—with correspondents regarding certain bills up for action.

I estimate that my office staff and myself spend at least half of our time answering mail from the seven counties of southwestern Oregon. The office receives between 40 and 60 letters on an average day, most of them from the Fourth District of Oregon, nearly all of them requiring answers, and many of them requiring considerable time and effort to gather the information necessary for an intelligent reply.

It has been my intention to answer every inquiry received from my constituents. I believe that I have accomplished that goal.

It seems to me that the people I represent may be interested in what I consider to have been the major events, the highlights, of the past 8 months of operation of my Washington, D. C., office. Therefore, I am including in the RECORD the following outline report:

MONTHLY HIGHLIGHTS—JANUARY

Congress urged to increase Cougar Dam appropriation to $6,720,000, $150,000 above President's request. United States Corps of Engineers asked to consider $400,000 for flood-control project protecting Oakridge and Willamette City from further flood threats. Legislation introduced to authorize Florence harbor improvement—$1,693,100 to extend north jetty at Siuslaw mouth and deepen channel entrance to 18 feet at bar and provide 16-foot inner channel 200 feet wide. Engineers say not feasible to undertake emergency flood-control works to protect Willamette City from high water on the Middle Fork of Willamette, say Hills Creek Dam will do job 3 years hence. Mysterious disappearance of Gerald Lester Murphy, Eugene, linked with disappearance of famed Basque scholar, Jesus de Galindez, New York City. Eugene Water Board asked to explain publicly future plans for Beaver Marsh. Green Peter Dam listed for only $225,000 in President's budget, Oregon delegation Democrats fight for increase. Engineers budget $21,000 for Rogue River harbor for fiscal 1958 and list Chetco River proposed construction at $200,000. Talent project becomes economy victim, sliced $1 million by Bureau of Budget to $6,041,000.

FEBRUARY

Life magazine says Gerry Murphy piloted plane carrying Professor Galindez to Dominican Republic. I introduce legislation to reinvest portion of yearly profits from national forests in forest maintenance and development. I am named to Post Office and Civil Service Committee and to Subcommittee on Civil Service. Senator NEUBERGER and I introduce National Radiation Health Institute bill. I push for installation of Navy oceanographic installation near Coos Bay. Navy announces it will place installation at Coos Head. Keith Skelton, my district office manager, initiates congressional clinics. Army engineers approve $200,000 to start improvements on Siuslaw Harbor in work to open port eventually to oceangoing trade. I ask House Appropriation Subcommittee to increase funds for access roads in national forests, ask that $2,664,000 be added; I note that Department of Interior this year has requested full authorized amount for timber access roads in the O. and C. lands under their jurisdiction but that Department of Agriculture did not for national forests. Senators MORSE and NEUBERGER and I term United States Department of Agriculture decision to reduce Three Sisters Wilderness Area by 53,000 acres hasty, point out a wiser decision would have resulted when land use and scientific studies in progress are completed. I join Representatives ULLMAN and GREEN in fight against limitation to public assistance administration funds placed in the urgent deficiency appropriation bill. I introduce housing legislation—described in detail above.

MARCH

Intention of introducing bill to authorize construction of remaining structures proposed in Rogue Basin project announced. Ways and Means Chairman JERE COOPER tells me excise tax on transportation will command our most serious attention. Oregon Democratic delegation works for $500,000 to complete reconstruction engineering and design work on Green Peter Dam project. Sum is more than twice that requested in budget and would speed actual construction by 1 year. I press for appropriations for review survey looking to development of deepwater channel at mouth of Umpqua. Effort to get Port Chicago Navy ammunition supply depot relocated in Coos Bay area nixed by Navy. Legislation introduced to provide 100,000 national scholarships. EWEB indicates continuing interest in Beaver Marsh hydroelectric project. Oregon Representatives and Senators introduce legislation asking for special stamp to honor Oregon's 100th anniversary in 1959. Hawaiian Delegate JOHN BURNS and I propose U. S. S. *Arizona* memorial at Pearl Harbor, funds to be raised by public subscription. I ask Federal Power Commission to cancel EWEB license extension to build Beaver Marsh project on upper McKenzie. Roseburg receives $250,000 Federal grant for pollution control.

APRIL

I demand Postmaster General Summerfield resign on grounds he has acted as a poor businessman and in bad faith in connection with deficiency appropriation request. Conference with United States Department of Agriculture officials on need for aid to Croft Easter-lily bulbgrowers in Curry County where symphylids did $100,000 damage in 1956. Medford receives $48,750 grant-in-aid from Civil Aeronautics Board for municipal airport under 1958 Federal-aid airport program. Grants Pass receives $56,611 under Federal aid airport program. Eugene receives $137,403 under Federal-aid airport program. EWEB withdraws FPC application for preliminary permit to build power features at Cougar Dam. I visit district during Easter recess and attend more than 20 meetings. Introduction of legislation to give Lillie Moore property in Roseburg to Douglas County Historical Society.

MAY

Federal assistance authorized in preparation of works plan on Lynx Hollow watershed near Cottage Grove under authority of Watershed Protection and Flood Prevention Act. I introduce legislation to establish National Outdoor Recreation Resources Review Commission, calling for genuine examination and appraisal of recreation values. I testify before House Small Business Committee, say high interest, tight-credit policies have not helped Oregon economy; point out need to increase loan ceiling of $250,000. National Park Service Director Conrad L. Wirth writes me that recreation survey of McKenzie River headwaters will be made at earliest opportunity "in accordance with your request." Vote against soil-bank program. Testimony before Public Works Committee for increased Green Peter appropriation, pointing out project will prevent annual damages of $1,589,700. Receive special recognition from Jackson County Young Farmers for attempting to obtain adequate recreation, irrigation, and flood-control program in Rogue Basin. Oregon Democratic delegation ask House Appropriations Subcommittee to add $14,118,880 to funds proposed by administration for Oregon water-resources development. National Rivers and Harbors Congress meeting in Washington, D. C., recommends United States Congress speed studies of Rogue River flood-control project and navigation project at Florence. I voice opposition to first-class mail price increases. Press for $19,000 Federal grant to get Coos-Millicoma Rivers dredging project underway; project removed from budget in economy move.

JUNE

I visit on different weekends Puerto Rico, Costa Rica, Colombia in effort to gain further information on Gerald Murphy case and return convinced United States policy in Latin America is ruining United States prestige. Introduce legislation to wipe out all fast tax writeoffs, except for new weapons, retroactive to January 1, 1957. Regretfully decline invitations to visit other Latin American countries opposing dictatorships until after session ends. Receive letter from Regional Forester J. Herbert Stone, Portland, stating that Beaver Marsh project on McKenzie would detract in a substantial way from upper river beauty. I write that public works projects are seed corn rather than pork barrel. House subcommittee does not increase Green Peter funds. Substantial increase in allowable cut in Siuslaw Forest predicted by me. Testimony before public works subcommittee

of House Committee on Appropriations to call for $20 million for Army Civil Works and Bureau of Reclamation projects in fourth district. Tentative Rogue bill redrafted; bill calls for construction of Lewis Creek Dam, Reservoir, and powerplant, and so forth, but could be amended if engineers' survey report deems necessary. AFL–CIO requests Congress to initiate full-scale investigation of Galindez-Murphy case and all its ramifications. I move for permanent subcommittees on Federal salaries, pensions, civil-service matters, and postal affairs to spread work of Post Office and Civil Service Committee and reduce control of chairman, lose in 11 to 11 tie vote in committee session. I introduced resolutions requesting study of Canada's family allowance program. Inquiry by me reveals that a nylonlike fiber may be manufactured from lignin, a substance which binds wood fibers in a tree. Harry Holt brings to Washington information regarding need for passage of orphan legislation. Learn Federal grand jury started study of Gerald Murphy case in March.

JULY

Dominican Republic hires New York State attorneys to conduct investigation into death of Dr. Galindez. My amendment banning aid to Latin American dictators overwhelmingly defeated. Coos-Curry Cooperative receives $702,000 REA loan for expansion. Nickel Corporation of America executive praises me for sincere concern with anything which will build up the economy of the area he represents in the national legislature. I ask investigation of Southern Pacific log hauling rates, after terming them discriminatory. Suggest Southern Pacific try diesel car passenger service for 1 year between Eugene and Ashland; Southern Pacific says no. Public works projects in fourth district uncut by Senate Appropriations Committee; Willamette River bank protection increased $150,000; Fall Creek Dam allocated $150,000. Bill introduced to rescind authorization for Waldo Lake tunnel in eastern Lane County to preserve lake in natural state. I inspect prefabrication plant in Lafayette, Ind., learn plant managers need lumber of specified lengths. I suggest Organization of American States investigate disappearances of Murphy and Galindez. Save the McKenzie River Association expresses appreciation for my work on behalf of Beaver Marsh. Rogue River bill introduced, $66 million would be authorized for completion.

AUGUST

Jose Figueres, President of Republic of Costa Rica, writes me about my anti-dictator stand: "destiny placed you in a position to do a great deal of good for democracy in the American Hemisphere, and fitted you with the appropriate qualifications for the job." Southern Pacific sees no serious boxcar shortage to hamper late summer shipping demands for lumber and harvested grain in western Oregon. Meet the Press has me as guest. Western Congressmen urge more Federal contracts for west coast shipyards. Introduction of legislation to use Railroad Retirement Act funds for investment in FHA mortgages to boost interest for the pension fund and help the building industry. Funds tentatively available for Army engineer surveys for six proposed projects in southwestern Oregon for about $105,000: $40,000 for report on Rogue River and tributaries; $7,000 to complete the Umpqua harbor and river report; $2,500 for Coquille River report to determine advisability of extending north jetty and deepening entrance channel; $27,100 for Umpqua River flood control report; $25,000 to complete flood control survey of Coquille River and tributaries; $2,800 for survey at Salmon Harbor, Winchester Bay. House passes U. S. S. *Arizona* memorial legislation. Subcommittee unanimously okays transfer of part of Lillie Moore property to Douglas County Historical Society; House to act on measure next session. Resolution to authorize survey on feasibility of small boat basin for Siuslaw Harbor delayed until next year. I introduce legislation to save National Grange headquarters.

POSTSESSION

In September the President signed orphan legislation into law, vetoed Federal employees' pay raise legislation.

Headlines Cannot Hide Labor's Great Work

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts as printed in a recent issue of the Machinist from a timely radio interview given by the able and conscientious Senator from Massachusetts [Mr. KENNEDY] on the work of the Senate committee investigating improper activities in the labor-management field and on the constructive record of American labor.

There has been a welter of unfavorable and unfair publicity recently directed at labor generally. It is heartening, therefore, to have one who has sifted the evidence carefully, as Senator KENNEDY has, present this well-balanced and thoughtful analysis of the abuses revealed on the part of a tiny fraction of labor leaders, the means of clearing them up, and the many positive contributions of labor to American life.

Senator KENNEDY's warnings against shotgun legislation against all labor are timely. The complicity of businessmen in the abuses is also noted. He properly points out the responsibility of rank-and-file union members, employers, local government officials, and the public generally for helping to improve present conditions.

I hope many Members of Congress and citizens generally will study this helpful and informative interview.

There being no objection, the excerpts of the radio interview were ordered to be printed in the RECORD, as follows:

HEADLINES CAN'T HIDE LABOR'S GREAT WORK

Mr. HAMILTON. Senator KENNEDY, do you believe that the labor movement will benefit or suffer from these hearings?

Senator KENNEDY. Well, I think the long-range objectives of our hearings, of course, should be, and I believe are, to help the labor movement. And I'm confident the trade-union movement as a whole will, in the long run, recognize that this investigation has been beneficial.

That certainly has been the position that the leadership of the AFL–CIO under George Meany has taken. They've given wonderful cooperation to our committee. They're taken steps with us to oust these corrupt officials. They have taken what I consider to be the most significant and admirable step in the history of the American trade-union movement by adopting an excellent hard-hitting set of ethical practices codes.

I don't think any other group in the country at any time in our history has gone so far as the labor movement has in setting up standards, fiduciary trusteeship standards, for labor-union officials.

And I think that it's an appropriate time, in considering where we're going in this investigation, for all of us in the Congress, particularly we in the Senate who serve on that committee, to remember that there is no basis for any general denunciation of labor based on these hearings.

There are, roughly, half a million local union officials in this country, another half a million business agents, lawyers, and other paid officials, and another 750,000 shop stewards and other employed in serving the labor movement. Of these nearly 2 million labor leaders, our committee has neither investigated nor received complaints about more than the tiniest fraction—considerably less than one one-hundredth of 1 percent.

The union movement, like any other part of American life—including political life—has its share of wrongdoers and corruption. When we hear about bankers who embezzle funds or financiers who use money entrusted to them in order to further their own interests, or politicians who betray the public trust, we don't condemn all bankers and all financiers and all politicians. So I hope the American people will keep a perspective about this investigation. It's a job that needs to be done, but it's a job that should be considered in the light of the great contribution that labor has made.

Mr. CONN. Senator KENNEDY, you're highly regarded as a friend of organized labor. I would like to ask you whether you feel that there are others in addition to Congress who have, perhaps, the primary responsibility to help clean up this situation?

Senator KENNEDY. Very definitely. And I say that with well over 11 years in the Congress, over 6 years in the House and 5 in the Senate of being a member of the Labor Committee, I'm aware of what we can do and I'm aware of what we cannot do. And I think that this problem is not one for the Congress alone, or really even primarily.

First, I think that local union members have the most important responsibility of all to police their own operations and provide their own safeguards. They must attend their union meetings, insist upon their rights, review carefully the use of their dues, select wisely the leaders whom they will entrust with their union's good name and authority, and purge those leaders (however popular or powerful) who fail to live up to that trust.

When they do that, of course, it makes it easy for those of us who are friends of labor to say that there is no need for any repressive legislation; that labor itself is doing

the job. And I think that's the theory that's activated the ethical practices committee of the AFL–CIO.

Of course it is true that in some of these cases we've looked into, it's not been the fault of the rank and file. These mobsters don't gain control through honest ballots and can't be ousted through honest ballots. In fact, under some union trusteeships, no ballots are ever cast. Officials are appointed from the outside and remain in office indefinitely.

And then I think it's important to realize that employers and businessmen also have a major responsibility in this field. We've seen cases where employers engaged in collusive deals with some of these racketeers to prevent unions from coming in, or in order to have a sweetheart contract in which an abnormally low wage is paid.

I think it's a shocking fact that so many employers, large and small, have collaborated in and benefited from these labor racketeering practices; obtaining monopolies for themselves and forcing their competitors in some cases out of business. I think these businessmen, too, must perform their civic responsibilities before this cancer of racketeering can be eliminated from our economic system.

And then, of course, local government has an important responsibility. Most of the things we've investigated have been against the law locally. If the local laws are administered effectively, then there's no need for overriding Federal laws.

And then I think, of course, the general public has the greatest responsibility of all to insist on the highest ethical standards by businessmen, by labor leaders, and by public officials.

Mr. HAMILTON. Senator KENNEDY, you're chairman of the permanent Labor Legislation Subcommittee, and I believe this committee will have the final responsibility for considering and sending to the Senate floor all the legislative proposals that may result from the McClellan hearings.

Well, now I wonder is there not a danger that some Members of Congress, including perhaps even some members of the investigation committee, will seek to use these hearings to justify unduly restrictive antilabor legislation.

Senator KENNEDY. Well, I think that there's obviously that danger that these hearings will be used for that purpose. I think there's a danger of injuring honest union leaders and members with legislation that's fired in a shotgun fashion to get rid of some racketeers, but, nevertheless, also limits the honest union activity of responsible union leaders.

For example, I don't see anything that we've looked into that justifies the passing of a national right-to-work law under which Congress would not permit employers and employees to bargain for a union shop, regardless of whether State law permits them to do so or not.

Nor has anything been disclosed by our investigation to justify the necessity of placing unions fully under the antitrust laws, as though union membership were a commodity bought and sold on the market. Union collusion with employers in order to restrain trade to obtain a monopoly, of course, is already covered by those laws.

Nor have the hearings disclosed any necessity of denying the right of union members to contribute voluntarily to candidates of their choice, Republicans or Democrats, since it's apparent that the racketeers have other means of obtaining their goals.

Mr. CONN. To sum it up, Senator KENNEDY, how do you think the reputation of the labor movement in general is emerging from this investigation? Isn't there a danger here, too, that some of the enemies of labor will seek to use these hearings to tarnish the whole labor movement and the leadership?

Senator KENNEDY. Yes, I think there is that danger, of course, against which responsible officials in the labor movement and in the Government and in the press and the general public must be on guard. These hearings have brought some sensational headlines, which some people will read as representing the whole picture. Others make sweeping statements generalizing from a few bad examples in order to prove their previous prejudices against the whole labor movement.

Moreover, these are sometimes complex matters, and there will inevitably be some who see extortion in every proper union attempt to bargain with employers, some who see conspiracies in every labor-union boycott permissible under the law and traditional in our history.

But these people don't belong in the labor movement and I think that we're helping the labor movement get rid of them. So this is a difficult period for the labor movement; but, of course, labor and the public and all of us will be much better off when these people who don't belong in the labor movement are thrown out.

After all, the labor movement has made a great contribution to the country, and its many members. It has raised the standard of living, brought beneficial legislation and the 40-hour week and all the rest of these things. And I think it's important that that movement continue, that it be free and honest and responsible; and I'm hopeful that this investigation will serve as a right arm to those great many hundreds of thousands of responsible union leaders who only want to serve their membership and advance the reasonable and responsible interests of the labor movement as a whole.

Activities of the House Committee on Government Operations

EXTENSION OF REMARKS

OF

HON. JOE M. KILGORE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. KILGORE. Mr. Speaker, I am pleased to present the following interim report on the activities of the Committee on Government Operations in the first 8 months of the 85th Congress.

JURISDICTION

The jurisdiction and duties of the Committee on Government Operations are set forth in rule XI (8) of the House of Representatives as follows:

All proposed legislation, messages, petitions, memorials, and other matters relating to * * * (a) budget and accounting measures, other than appropriations, and (b) reorganizations in the executive branch of the Government shall be referred to the Committee on Government Operations.

The Committee on Government Operations shall have the duty of—

(1) receiving and examining reports of the Comptroller General of the United States and of submitting such recommendations to the House as it deems necessary or desirable in connection with the subject matter of such reports;

(2) studying the operation of Government activities at all levels with a view to determining its economy and efficiency;

(3) evaluating the effects of laws enacted to reorganize the legislative and executive branches of the Government;

(4) studying intergovernmental relationships between the United States and the States and municipalities and between the United States and international organizations of which the United States is a member.

ORGANIZATION

In order to perform its functions and to carry out its duties as fully and as effectively as possible, the committee, under the leadership of its chairman, the Honorable WILLIAM L. DAWSON, of Illinois, at the beginning of the 84th Congress established seven regular subcommittees having agency and functional jurisdiction similar to corresponding subcommittees of the Committee on Appropriations. These seven regular subcommittees, which cover the entire field of executive expenditures, were continued in the 85th Congress. Their names and chairmen are as follows:

Executive and Legislative Reorganization Subcommittee, Hon. WILLIAM L. DAWSON, chairman.

Military Operations Subcommittee, Hon. CHET HOLIFIELD, chairman.

Intergovernmental Relations Subcommittee, Hon. L. H. FOUNTAIN, chairman.

Public Works and Resources Subcommittee, Hon. EARL CHUDOFF, chairman.

International Operations Subcommittee, Hon. PORTER HARDY, JR., chairman.

Legal and Monetary Affairs Subcommittee, Hon. JOHN A. BLATNIK, chairman.

General Government Activities Subcommittee, Hon. JACK BROOKS, chairman.

In addition, three special subcommittees were organized to handle special problems. The first two listed are continuing their studies, and the last has almost completed work on the report of its investigations. The special subcommittees and their chairmen are:

Special Donable Property Subcommittee, Hon. JOHN W. MCCORMACK, chairman.

Special Government Information Subcommittee, Hon. JOHN E. MOSS, chairman.

Special Subcommittee on Water Resources and Power, Hon. ROBERT E. JONES, chairman.

REPORTS

In the 1st 8 months of the 85th Congress, the Committee on Government Operations approved and submitted to the Congress 16 reports of an investigative nature. In addition, five committee prints consisting of staff studies or compilations were published. At the close of the first session a considerable number of reports and staff studies were under preparation. These will be considered by the subcommittees and the full committee early in the second session. A substantial number of hearings covering a wide range of subjects have been programed for the recess between sessions.

For convenience the published reports and committee prints are listed here with the name of the originating subcommittee. A more detailed discussion of the material will be found below in the breakdown of the committee's activities by subcommittee. In all cases where the hearings were held the transcripts have been printed.

COMMITTEE REPORTS

First report: No. 10, United States Aid Operations in Iran. Subcommittee on

International Operations, Congressman PORTER HARDY, JR., chairman.

Second report: No. 157, Availability of Information From Federal Departments and Agencies, Progress of Study, July–December 1956. Special Subcommittee on Government Information, Congressman JOHN E. MOSS, chairman.

Third report: No. 213, Private Electric Utilities' Organized Efforts To Influence the Secretary of the Interior, Ebasco Services, Inc., and Rocky Mountain Group. Subcommittee on Public Works and Resources, Congressman EARL CHUDOFF, chairman. Minority report filed.

Fourth report: No. 218, Availability of Power to Public Preference Customers From Central Valley Project, Roosevelt, Calif. Subcommittee on Public Works and Resources, Congressman EARL CHUDOFF, chairman. Minority report filed.

Fifth report: No. 449, Review of the Budget Formulation and Presentation Practices of the International Cooperation Administration. Subcommittee on International Operations, Congressman PORTER HARDY, JR., chairman.

Sixth report: No. 575, Replies from State and Local Governments to Questionnaire on Intergovernmental Relations. Subcommittee on Intergovernmental Relations, Congressman L. H. FOUNTAIN, chairman.

Seventh report: No. 822, Defense Standardization Program. Subcommittee on Military Operations, Congressman CHET HOLIFIELD, chairman.

Eighth report: No. 839, Status of Civil Defense Legislation. Subcommittee on Military Operations, Congressman CHET HOLIFIELD, chairman. Minority report filed.

Ninth report: No. 840, Operations of the Virgin Islands Government and the Virgin Islands Corporation. Subcommittee on Public Works and Resources, Congressman EARL CHUDOFF, chairman.

Tenth report: No. 958, Military Tank Procurement. Subcommittee on Military Operations, Congressman CHET HOLIFIELD, chairman.

Eleventh report: No. 1166, State Department Public Opinion Polls. Subcommittee on International Operations, Congressman PORTER HARDY, JR., chairman.

Twelfth report: No. 1167, Railroad Accounting Procedures—Prescribed by the Interstate Commerce Commission. Subcommittee on Legal and Monetary Affairs, Congressman JOHN A. BLATNIK, chairman.

Thirteenth report: No. 1168, Military Clothing Procurement. Subcommittee on Military Operations, Congressman CHET HOLIFIELD, chairman.

Fourteenth report: No. 1169, Letter Contracts and Contract Terminations in Military Procurement. Subcommittee on Military Operations, Congressman CHET HOLIFIELD, chairman.

Fifteenth report: No. 1175, Activities of the Department of Health, Education, and Welfare, Relating to Polio Vaccine. Subcommittee on Intergovernmental Relations, Congressman L. H. FOUNTAIN, chairman.

Sixteenth report: No. 1185, Army-Interior Reservoir Land Acquisition Policy. Subcommittee on Public Works and Resources, Congressman EARL CHUDOFF, chairman. Minority report filed.

COMMITTEE PRINTS

Questionnaire on administrative organization for public information activities.

Economic appraisal of the sugar operations of the Virgin Islands Corporation.

Reorganization by plan and by statute, 1946–56.

The budget process in the Federal Government.

Actions taken by departments and agencies on the lending agencies recommendations of the Hoover Commission.

LEGISLATION

The legislative jurisdiction of the Committee on Government Operations encompasses a wide range of very important governmental operations. It includes all matters relating to budgeting and accounting measures other than appropriations and all matters relating to reorganizations in the executive branch of the Government. In addition, property disposals and matters relating to Federal property and administrative services are referred to the committee. The committee studied a large number of legislative proposals and reported 15 favorably to the House. These are discussed more fully under the subcommittee breakdown below, but those reported are listed here for convenience, with the name of the subcommittee which initially considered them:

H. R. 3028, to provide for the relief of certain female members of the Air Force, and for other purposes. Executive and Legislative Reorganization Subcommittee.

H. R. 4945, providing for the conveyance of certain real property in West Palm Beach, Fla., to the Port of Palm Beach District. General Government Activities Subcommittee.

H. R. 5110, Public Law 85–51, amending the Federal Property and Administrative Services Act of 1949, as amended. General Government Activities Subcommittee.

H. R. 6182, to provide for the conveyance of certain real property of the United States to the former owners thereof. General Government Activities Subcommittee.

H. R. 6900, amending section 206 of the Legislative Reorganization Act of 1946, so as to enable the Comptroller General to make certain examinations of expenditures and more effectively to assist the Appropriations Committees in considering the budget. Executive and Legislative Reorganization Subcommittee.

H. R. 7081, providing for the removal of a cloud on the title to certain real property located in the State of Illinois. General Government Activities Subcommittee.

H. R. 7390, to amend the Administrative Expenses Act of 1946, and for other purposes. Executive and Legislative Reorganization Subcommittee.

H. R. 7964, removing the limitation on the use of certain real property heretofore conveyed to the city of Austin, Tex., by the United States. General Government Activities Subcommittee.

H. R. 8002, to provide for improved methods of stating budget estimates and estimates for deficiency and supplemental appropriations. Executive and Legislative Reorganization Subcommittee.

H. R. 8195, to facilitate the payment of Government checks, and for other purposes. Executive and Legislative Reorganization Subcommittee.

H. R. 8364, further amending the Reorganization Act of 1949, as amended, so that such act will apply to reorganization plans transmitted to the Congress at any time before June 1, 1959. Executive and Legislative Reorganization Subcommittee.

H. R. 8795, amending section 507 and subsection 602 (a) of the Federal Property and Administrative Services Act of 1949, as amended. Special Donable Property Subcommittee.

S. 806, Public Law 85–100, authorizing the Administrator of General Services to quitclaim all interest of the United States in and to a certain parcel of land in Indiana to the board of trustees for the Vincennes University, Vincennes, Ind. General Government Activities Subcommittee.

S. 1141, Public Law 85–81, authorizing and directing the Administrator of General Services to donate to the Philippine Republic certain records captured from insurrectors during 1899–1903. General Government Activities Subcommittee.

REORGANIZATION PLAN

Only one reorganization plan was transmitted to the 1st session of the 85th Congress by the President. This, Reorganization Plan No. 1 of 1957, made a further distribution of the functions and assets of the Reconstruction Finance Corporation and abolished the corporation.

No resolutions of disapproval were introduced in the House and the plan was allowed to take effect after study by the committee staff and consideration by committee members indicated no serious objection to the measure.

STUDY ON ADMINISTRATIVE ORGANIZATION, PROCEDURE AND PRACTICE

A comprehensive study of the administrative organization, procedure and practice of the Federal departments and agencies was commenced at the beginning of the 85th Congress. The committee staff had prepared a searching questionnaire on procedure and practice and asked 42 Federal departments and agencies to respond. The questionnaire was designed to provide an accurate and up-to-date picture of the status of administrative practice and procedural reform within the Federal agencies.

The staff has undertaken thorough and minute analysis of the responses. In addition, preparations have been made for hearings which will throw additional light on the current problems and suggested reforms in administrative procedure. A major product of the study will be making available in a single, authoritative source an evaluation of the effects of earlier proposals for adminis-

trative reform and the current status of administrative practice.

In the course of analyzing the responses to the questionnaire and preparing for hearings, the staff has conferred with interested persons and experts in administrative procedure. These include law professors, former and current Government officials, private practioners, and members of the staff of the Office of Administrative Procedure in the Department of Justice. A succinct and complete report encompassing all phases of the study will be ready by January 1958.

REVIEW OF AUDIT REPORTS BY THE GENERAL ACCOUNTING OFFICE

Pursuant to the duty and responsibility of the Committee on Government Operations as set forth in the rules of the House and by statute, the committee has established a procedure of review and analysis of the audit reports referred to it by the Comptroller General. Upon the direction of the chairman, a program of conferences between members of the committee staff and representatives from the General Accounting Office was established. These conferences were held after the staff had an opportunity to review, analyze, and study the audit reports. Staff conferences and other communications with agency officials were accomplished where it was deemed necessary or desirable to develop more fully the General Accounting Office findings and recommendations, or to assure proper compliance by the agency involved.

During the first 6½ months of this session the staff held conferences with representatives of the General Accounting Office on 20 different occasions discussing a total of 40 audit reports, involving a great many different and varied governmental activities and establishments. A report to the Congress on these audit reports is being prepared.

In addition members of the committee staff have undertaken advance work on a study and investigation of the European branch of the General Accounting Office and its audit reports. A report will be submitted to the Congress upon the completion of that study.

COMPILATION OF LEGISLATIVE ACTION ON THE RECOMMENDATIONS OF THE COMMISSION ON ORGANIZATION OF THE EXECUTIVE BRANCH OF THE GOVERNMENT (HOOVER COMMISSION)

The committee has prepared an up-to-date and simplified compilation of all bills introduced in the House and Senate and of legislative action to carry out the recommendations of the Commission on Organization of the Executive Branch of the Government—Hoover Commission—in the 84th Congress and in the 1st session of the 85th. This document will be published in the form of a committee print in the very near future.

SUBCOMMITTEE BREAKDOWN

Following is a more detailed description of the committee's activities arranged according to the subcommittee's primarily interested in the subject matter involved:

EXECUTIVE AND LEGISLATIVE REORGANIZATION SUBCOMMITTEE, WILLIAM L. DAWSON, CHAIRMAN

First. Legislation: Seventy-four bills were referred to this subcommittee for consideration. Twenty-five dealt with budget and accounting matters. Fourteen proposed the creation of new departments or agencies of the Federal Government. Eleven dealt with Government competition with private enterprise. The other bills involved various matters under the jurisdiction of the subcommittee. All of these measures were carefully studied by the members and the staff and reports were requested and obtained from the various departments affected. Background material of various types was collected from proper outside sources where necessary for the information of the subcommittee and the proper evaluation of the measures.

(a) Improving Federal budgeting and appropriations procedures: After careful study and extensive hearings on all of the bills on this subject which provided a variety of approaches the subcommittee acted favorably on H. R. 8002 and H. R. 6900. Both of these measures were subsequently reported by the full committee with recommendations that they be passed by the House. H. R. 8002 would place Federal budgeting and appropriations on an annual accrued expenditures basis. It was based on a recommendation of the Hoover Commission on Organization of the Executive Branch of the Government and supported by the Bureau of the Budget and the Comptroller General—see printed hearings and House Report No. 572. H. R. 6900 would enable the Comptroller General to make certain examinations of expenditures and more effectively assist the Appropriations Committees in considering the budget. This bill was approved by the Comptroller who recommended an amendment that was accepted by the subcommittee—see printed hearings and House Report No. 567.

(b) Standards for Government advisory committees: During the 84th Congress this subcommittee made an extensive inquiry into the operations of advisory committees to the various departments and agencies—see House Report No. 2894, 84th Congress, 2d session. The subcommittee's recommendations were put in the form of a bill, H. R. 7390, which established certain definite standards for the creation and functioning of such committees. The bill was approved after hearings and passed the House on July 10, 1957—see printed hearings and House Report No. 576.

(c) Validating certain improper payments to female Air Force personnel: At the request of the Department of Defense, Chairman DAWSON introduced and the subcommittee considered a bill, H. R. 3028, to validate certain payments made to female Air Force personnel by the Department of the Air Force and which were subsequently ruled illegal by the Comptroller General. The subcommittee recommended approval of the measure because of (a) the hardship which otherwise would be put on those who received the payments and (b) the expense of recoupment to the United States Government. The bill was reported favorably by the full committee and passed the House—see House Report No. 144. The House subsequently concurred in a Senate amendment designed to further insure that the situation could not arise again—Public Law No. 85-272.

(d) Procedures in the payment of Government checks: At the request of the Secretary of the Treasury, Chairman Dawson introduced H. R. 8195, a bill to facilitate the payment of Government checks, and for other purposes. This measure, a part of the joint accounting program, will produce economies in both the Treasury Department and the General Accounting Office. It will simplify and improve the accounting methods and procedures incident to the payment of Government checks which are lost, stolen, or destroyed, and related accounting operations now prescribed by law. Upon the subcommittee's recommendation, the bill was reported favorably by the full committee and passed the House—see House Report No. 666.

(e) Extending Reorganization Act of 1949: At the request of the President, the chairman introduced a bill, H. R. 6711, to extend the authority of the President to submit reorganization plans to the Congress. Prior authority expired on June 1, 1957. After hearings and deliberations, the subcommittee recommended that this authority be extended for 2 years and that the Reorganization Act of 1949 be amended to provide that reorganization plans could be disapproved by a simple majority vote of either House rather than by a constitutional majority.

H. R. 8364, a clean bill was reported favorably by the full committee and passed the House—see printed hearings and House Report No. 657. The Senate agreed to the House amendment and the bill became law—Public Law No. 85.

Second. Hoover Commission reports:

The subcommittee has continued its study of the reports of the Hoover Commission on Organization of the Executive Branch referred to the Committee on Government Operations by the Speaker of the House. In the committee report on the Hoover report on food and clothing—House Report No. 2013, 84th Congress, 2d session—released on April 18, 1956, the recommendation was made that semiannual reports be made to the Congress by the Secretary of Defense on the integration of supply management. These reports have been referred to this subcommittee and are being studied to see if the intent of Congress is being carried out.

The subcommittee sent a questionnaire to the various departments and agencies affected by the Hoover Commission recommendations on lending agencies for information on what steps had been taken, if any, to put these recommendations into effect. The replies have been put into the form of a committee print and made available to Members of the House.

A similar questionnaire was circulated on the recommendations of the Hoover Report on Transportation. Replies have been received and are being studied.

Third. Budget procedures: The subcommittee has been making an intensive study of budget procedures in the executive branch in connection with the large number of bills before it. A committee print, The Budget Process in the Federal Government, was prepared and made available to the Members of the House.

Fourth. Federal real and personal property inventory report:

In December 1956, the committee issued a committee print entitled "Supplementary Real and Personal Property Inventory Report, Civilian and Military, of the United States Government—Located in the Continental United States, in the Territories, and Overseas, as of July 30, 1956." This report was refined and broadened in scope from an earlier Federal property inventory report—House Report No. 1930, 84th Congress, 2d session—in that it listed a realistic value for public domain lands, heretofore listed on the books of the Government at no value. Public domain lands were appraised by the individual departments and agencies and an estimated present-day value was placed on them. In some instances, estimated present-day values were placed on buildings, structures, and facilities located on these lands, but these values were not included in the overall totals used in the report; rather, they were included merely for information purposes. Acquisition cost figures were used for all Federal realty—exclusive of public domain lands—buildings, structures, and facilities.

Personal property inventory figures of the Federal Government were increased as a result of refinements brought about by improved accounting procedures employed within the Government. The Treasury Department was instrumental in furnishing the committee with refinements in this area. Also, the latest report reflects additional figures in areas of construction-in-progress, leasehold improvements, and real estate collateral acquired.

The committee expects to issue in December of this year another Federal property inventory report, covering real and personal property inventories as of June 30, 1957. The report will be prepared along the same lines and in the same manner as the report issued last year. Further refinements in personalty and realty inventories will be reflected in this year's report, particularly in inventories of the Department of Defense.

Fifth. Reorganization plans: Only one reorganization plan was submitted to the Congress during the first session. This constituted a further liquidation of the Reconstruction Finance Corporation. The subject matter was carefully studied by the staff and members of the subcommittee. No objections were registered to the plan and it was permitted to take effect.

Sixth. Other matters: The subcommittee continued its study of past reorganization plans; advisory committees, w. o. c. personnel practices and management contracts; the curtailment of Government functions and the feasibility of the creation of a Federal Department of Urban Affairs.

Hearings were also held on H. R. 7694, introduced by Congressman McCORMACK, to constitute the General Services Administration a Federal department.

INTERGOVERNMENTAL RELATIONS SUBCOMMITTEE,
L. H. FOUNTAIN, CHAIRMAN

The Committee on Government Operations delegated to its Intergovernmental Relations Subcommittee responsibility for studying intergovernmental relationships between the United States and the States and municipalities. Since July 1955, the subcommittee has also had before it for study the report of the Commission on Intergovernmental Relations—the Kestnbaum Commission; this Commission had been established by Congress in 1953, at the request of the President, to study and clearly define the proper role of the National Government in relation to the States and their political subdivision. In addition, the subcommittee has been delegated responsibility for studying the operation of the Departments of Agriculture, Labor, and Health, Education, and Welfare and their related agencies at all levels with respect to economy and efficiency. This report on the activities of the subcommittee during the 1st session of the 85th Congress will, for convenience, separately state the work of the subcommittee in each of these areas of responsibility.

First. Intergovernmental relations:

During the first 7 months of 1957 the subcommittee continued and intensified a comprehensive study of intergovernmental relationships begun in 1955.

From the beginning, the subcommittee's activities in this field have been planned with two objectives in mind: First, to carry out the subcommittee's general responsibility for studying Federal-State-local relationships, and second, to evaluate the recommendations of the Kestnbaum Commission.

In December 1955, each Federal department and agency was asked to provide a detailed description of its programs and activities involving intergovernmental relationships. Each department and agency was also asked to list all recommendations of the Kestnbaum Commission which applied to it, and to describe any action taken to adopt such recommendations. A 776-page staff report on these replies was published in August 1956. A compilation of the recommendations and major statements of the Kestnbaum Commission identifying the Federal agency and program concerned was also prepared at the request of the subcommittee and published in 1956, as was a selected bibliography on intergovernmental relations in the United States.

In 1956, all State governors and a large number of major and county officials were asked to give their views on a series of broad questions relating to Federal programs of an intergovernmental nature. Replies from 42 of the 48 States, from 53 cities, and from 44 counties were received and analyzed in 1956 and early 1957. A 542-page report was prepared by the subcommittee containing the complete replies from all State and local officials and an analysis of the views they expressed; however, this report did not attempt to render any judgment as to the merits of such views.

The Report on Replies from State and Local Governments was unanimously adopted by the Committee on Government Operations on June 13, 1957, as its sixth report to the 85th Congress—House Report No. 575. The subcommittee has filled a large number of requests for this document from Federal, State, and local officials, educators, libraries, and other interested organizations and individuals. These same sources are continuing to send in a substantial number of requests for the subcommittee's earlier documents. The subcommittee is filling these requests, to the extent permitted by its limited supply, and has received a number of letters from recipients commenting on the usefulness of the subcommittee's series of documents on intergovernmental relations.

Much of the subcommittee's time and effort during the 1st session of the 85th Congress was devoted to preparing for a series of nine regional hearings on intergovernmental relations to be held throughout the country in October, November, and December. At these hearings, the subcommittee will seek particularly to obtain evidence bearing on two broad questions: First, whether the existing division of responsibility between the national and other levels of government is satisfactory, and second, whether intergovernmental cooperation can be improved in existing grant-in-aid programs in order to make their operation more efficient and economical. Governors of all 48 States will be invited to testify, as will a number of mayors, county officials, and State legislators.

The subcommittee's series of documents on intergovernmental relations is expected to serve as extremely valuable background material for its regional hearings. Further information useful in planning regional hearings was obtained during 3 days of public hearings in Washington on July 29, 30, and 31. Witnesses at theses hearings included Meyer Kestnbaum, who served as chairman of the Commission on Intergovernmental Relations, and Representatives Brooks Hays and Harold Ostertag, former members of that Commission. Other witnesses included representatives of the United States Conference of Mayors, the American Municipal Association, the International City Managers' Association, and the National Association of County Officials. The subcommittee also heard testimony from representatives of the United States Chamber of Commerce, the National Association of Manufacturers, and the AFL–CIO.

Second. Department of Agriculture:

(a) Cheese and butter transactions: As a direct result of the subcommittee's investigation of cheese and butter purchase resale transactions of the Department of Agriculture, a Federal court in Baltimore, Md., on July 3, 1957, ordered three companies to repay more than $252,000 to the taxpayers. The decision was the first in a series of lawsuits filed by the Justice Department; it is expected that other pending actions, if successful, will eventually lead to the recovery of an additional $2 million. The court cases were brought after the Comptroller General, at the request of the subcommittee and on the basis of its investigation, ruled that the 1954 purchase and simultaneous resale of 85 million pounds of cheese and 5 million pounds of butter was unauthorized and improper. The cheese and butter involved was never moved from the warehouses in which it was stored, but the Department of Agriculture paid the

owners the difference between the purchase and resale prices.

(b) Wheat storage: On July 22, 23, and 24 the subcommittee held public hearings concerning transactions involving storage of Government-owned wheat by the Burrus Mills Co., of Dallas, Tex. Beginning in 1954, this company stored 37 million bushels of wheat in huge plastic tents at St. Joseph, Mo., and Fort Worth, Tex. As a result of spoilage of a large percentage of this wheat, millions of dollars in claims by the Department of Agriculture's Commodity Credit Corporation are being made against the Burrus Co. Because of the extremely complicated nature of these transactions, the subcommittee's investigation is only partially finished; it is expected that several more months will be required to complete it.

(c) Agricultural drainage: On August 15, the subcommittee held a public hearing concerning drainage activities of the Department of Agriculture in the pothole or wetland areas of North and South Dakota and Minnesota in order to determine whether these activities, as presently carried on, conflict with or are inconsistent with other Federal activities relating to reduction of surpluses in agricultural commodities or wildlife conservation. Testimony was received from witnesses from the Department of Agriculture, the Fish and Wildlife Service of the Department of Interior, and from the director of the Department of Game, Fish, and Parks of the State of South Dakota and the former fish and game commissioner of North Dakota. The subcommittee has not yet made any findings with respect to this matter; however, at the conclusion of the hearings the chairman requested the representatives of the Departments of Interior and Agriculture to meet with each other and, insofar as possible, to resolve their policy differences.

(d) Other agricultural matters: Within the limitations necessarily imposed by the size of its staff and the time available, the subcommittee has conducted a continuing study of many other activities of the Department of Agriculture. The subcommittee has been particularly interested in the operation of the soil bank program and in transactions involving export of surplus agricultural commodities.

Third. Department of Health, Education, and Welfare:

(a) Polio vaccine: On October 11 and 12, 1956, the subcommittee held public hearings concerning expenditure of Federal funds for polio vaccine. Witnesses from the Department of Health, Education, and Welfare, the Public Health Service, and the Justice Department were called to testify. Disclosures at these hearings led to a Federal grand jury investigation, now in progress at Trenton, N. J., of a possible price-fixing conspiracy in the sale of polio vaccine. If such a conspiracy is shown to exist, Federal and State Governments could recover any excessive charges which were paid for polio vaccine as a result of the conspiracy.

On March 21, 1957, an additional public hearing was held at which witnesses from the Public Health Service testified concerning activities relating to assisting State and local governments in the prevention of polio; the supply of, demand for, and distribution of vaccine; and the collection and dissemination of information concerning polio vaccine.

A report on activities of the Department of Health, Education, and Welfare relating to polio vaccine was prepared by the subcommittee and, on August 14, unanimously adopted by the full committee as its 15th report to the 85th Congress—House Report No. 1175. The subcommittee is continuing to study further developments relating to polio vaccine activities of the Department and will hold further hearings and make a further report if necessary.

(b) Other matters: The subcommittee is studying a number of other activities of the Department of Health, Education, and Welfare. It is particularly interested in those activities relating to air pollution control and to Asian influenza.

Fourth. Department of Labor: The subcommittee staff studied activities of the Department of Labor during the 1st session of the 85th Congress. It is expected that this phase of the subcommittee's work will be expanded during the second session.

PUBLIC WORKS AND RESOURCES SUBCOMMITTEE, HON. EARL CHUDOFF, CHAIRMAN

A. Investigations: A brief outline of the subject matter of the investigations and public hearings in connection therewith follows:

First. The Virgin Islands Government and the Virgin Islands Corporation:

The subcommittee held comprehensive hearings on the operations of the Virgin Islands Government and the Virgin Islands Corporation. These hearings took place in the Virgin Islands during November and December of 1956 and in Washington, D. C., during March and May of 1957. A wide range of problems were investigated and a number of serious deficiencies were uncovered. The subcommittee's findings were adopted by the full committee in its ninth report, entitled "Operations of the Virgin Islands Government and the Virgin Islands Corporation."

The subcommittee looked into the problem of the recurring grave water shortage on the Island of St. Thomas and found that the Interior Department's and the island Governor's approach to solving the problem has been one of delay, indecision, and waste. No new water facilities have been constructed there since 1949.

Among other important findings of the subcommittee are:

(a) Accounting and budget controls have not yet been set up by any of the island Governors, this despite statutory requirements for such controls.

(b) The office of the island's government comptroller suffers from basic organizational flaws which seriously impede its effectiveness.

(c) Major inadequacies exist in local procedures and records affecting taxation and assessment.

(d) The office of the government secretary could, if properly established, provide the key to sound management of the operations of the island's government.

With respect to the Virgin Islands Corporation, the subcommittee's chief findings are:

(a) While the Corporation appears on the verge now of bringing its sugar operations out of the red, a test period of 3 to 5 years should be used to gage the ultimate trend and to determine whether the sugar operations should be disposed of to private industry or closed down altogether.

(b) The Corporation, in effect, subsidizes the rum industry by selling molasses to the distilleries at less than market value.

(c) Certain apparent conflict-of-interest situations exist involving officials of the Corporation.

At the request of the subcommittee chairman, the Commodity Stabilization Service prepared an "Economic Appraisal of the Sugar Operations of the Virgin Islands Corporation," which was published as a committee print.

Second. Army-Interior reservoir land-acquisition policy:

The subcommittee held hearings during June and July of 1957 into the matter of the joint-reservoir land-acquisition policy adopted in October of 1953 by the Army and Interior Departments. Under the new policy much of the reservoir area subject to periodic inundation is now acquired as a mere flowage easement instead of the full fee simple interest generally acquired under the previous policy. The subcommittee's findings were adopted by the full committee in its 16th report, entitled "Army-Interior Reservoir Land Acquisition Policy."

The report concluded that the change in policy has not been in the best interest of the Government and the people of the United States. More specifically, it was found that—

(a) Contrary to the claims of the Departments, there is little if any monetary saving to the acquiring agency when it acquires flowage easements instead of fee simple title.

(b) Contrary to the claims of the Departments, there is no overall loss of tax revenue to the local units of Government when the Government acquires the fee interest.

(c) There is less flexibility in reservoir operations when much of the land subject to inundation by the reservoir is held by the Government in easement rather than fee.

(d) The need for conservational and recreational use of reservoir lands is skyrocketing. Congress has recognized both uses. Nevertheless, the easement-taking policy markedly restricts such uses.

(e) The policy was adopted despite contrary advice of top officials of the Corps of Engineers.

Third. Morningside Hospital, Portland, Oreg.: As a result of extensive investigations by the staff, the subcommittee will hold hearings in Portland, Oreg., during the week of September 16, 1957, into the operations of the Morningside Hospital in connection with the care and treatment of mental patients committed there from the Territory of Alaska. The major problems to be examined are al-

legations as to improper care and treatment of mental patients, including the use of patient-labor; the relationships between the Department of the Interior, the Territory of Alaska, and the Sanitarium Company of Portland (which operates the hospital); and the financial aspects of the operating contract between the company and the Government.

Fourth. Alaska native loan program: The subcommittee will hold hearings in Juneau, Alaska, during the week of September 23, 1957, on the operations of the Bureau of Indian Affairs loan program as it affects Alaska native associations and individuals. The loans are authorized by the Wheeler-Howard Act, as amended—title 25, United States Code, sections 470, 473. The subcommittee is primarily concerned with the policy back of the making and administering of loans to native associations for the acquisition and operation of fish canneries and for relending to association members for purchase or repair of fishing boats. This inquiry stems from a memorial of the Alaska Territorial Senate, passed February 15, 1957, and addressed to, among others, the House Committee on Government Operations, which urges the correction of certain alleged practices and attitudes on the part of the Bureau of Indian Affairs in the handling and administration of the loan program.

Fifth. Federal Power Commission's report that utilities have improperly charged propaganda expenses: After formal notification by the chairman of the subcommittee of Recommendation No. 4 of House Report No. 231, 85th Congress, on private electric utilities' organized efforts to influence the Secretary of the Interior—Ebasco Services, Inc., and Rocky Mountain group—the Chairman of the Federal Power Commission reported to the subcommittee on May 17, 1957, that 59 major electric utility companies had improperly accounted for expenditures to publish either 1 or both of 2 anti-public-power propaganda booklets. In fact, not one company had properly accounted for the expenditure. In his report, the FPC Chairman held the private- against public-power question to be a political controversy and the propaganda booklets to represent political expenditures not properly chargeable to operating expenses. All future expenditures of similar nature must be excluded from the utility companies' operating expense accounts. Another far-reaching implication of the report is that the many millions of dollars spent by the industry in the past for political propaganda purposes may also have been improper deductions for income-tax purposes.

Sixth. Bonneville Power Administration claim against Alcoa for defected Chukar conductor: In response to a request by the subcommittee, the Comptroller General of the United States investigated allegations that the Aluminum Company of America had furnished defective high-voltage Chukar conductor to the Bonneville Power Administration. Thereafter, a supplemental agreement dated February 6, 1957, was entered into under which the Bonneville Power Administration received a consideration of approximately $330,000 for waiving its claims against the company.

Seventh. Proposed repayment contract with Kings River Conservation District, Pine Flat Dam, Calif.: The subcommittee has continued its study of developments in the Department of the Interior surrounding a proposed repayment contract between the Bureau of Reclamation and the Kings River Conservation District in California. Under the proposed contract it was sought to permit the district, and also any corporation or individual to pay out in not more than 10 years—instead of the normal 40 years—and thereby escape the restrictions of the provisions of law which limit land eligible for project water to a maximum of 160 acres for any one landowner. Investigation had revealed that such a proposed contract had been negotiated in the field with approval of former Secretary of the Interior Douglas McKay and Assistant Secretary Aandahl. After the committee and the subcommittee communicated their interest in the subject to the Department, final approval of the proposed contract in Washington was held up for some 19 months. On July 12, 1957, Secretary of the Interior Fred Seaton announced that he had determined not to approve the proposed contract in its present form because to permit individuals or corporations to escape the 160-acre limitation provisions by prepayment would be contrary to reclamation law.

Eighth. Rural telephone cooperative loan requirements: The subcommittee recently inquired of the Rural Electrification Administration for an explanation as to why equity requirements for telephone loans have been liberalized for commercial borrowers without a corresponding liberalization for rural telephone cooperatives. A subsequent announcement by REA indicates that this discrimination has now been removed.

B. Legislation: The subcommittee had referred to it the following bill:

H. R. 83, to provide for a survey of the production of fertilizer by the Tennessee Valley Authority, and for other purposes.

The committee has received adverse reports from the 2 of the 3 Government agencies most immediately concerned, and a partially adverse report from the third. In a letter to the committee dated January 28, 1957, the Comptroller General of the United States stated that he did not recommend favorable consideration of the bill. Likewise, in a letter to the committee dated February 6, 1957, the Chairman of the TVA declared that enactment of the bill would not be in the public interest. The Secretary of Agriculture advised by letter April 11, 1957, that only that portion of the bill be considered at this time which would authorize a Comptroller General's study of the cost of fertilizer production.

INTERNATIONAL OPERATIONS SUBCOMMITTEE, PORTER HARDY, JR., CHAIRMAN

First. United States aid operations in Iran:

The first report approved by the Committee on Government Operations in the 85th Congress was one submitted by this subcommittee. The report, United States Aid Operations in Iran, House Report No. 10, was based on hearings conducted by the subcommittee in the 84th Congress. It analyzes the economy and efficiency with which technical and economic assistance was furnished to Iran in the period 1951 through 1955. A number of serious defects in the formulation and administration of this program are discussed, some of which reflect certain weaknesses in the general handling of the United States aid program. The report includes recommendations designed to strengthen the administration of the program and to prevent recurrence of the defects.

Second. International Cooperation Administration's budget practices:

Beginning in February, the subcommittee conducted an inquiry into the budget formulation and presentation practices of the International Cooperation Administration. Hearings were held on April 4, 5, and 10 to receive testimony from the Director of ICA, the Comptroller General, and members of their staffs. On the basis of these hearings, study of a number of audit reports made by the Comptroller General, and of past studies made by the subcommittee with respect to specific areas—Latin America and Iran—the subcommittee submitted and the full committee approved the report entitled "Review of the Budget Formulation and Presentation Practices of the International Cooperation Administration," House Report No. 449.

This report discusses the existing budget practices of ICA and recommends a number of changes to improve the administration of the program and to provide better information regarding control of appropriations by Congress.

Third. State Department public opinion polls:

In May, the subcommittee initiated an inquiry into the conduct of public opinion polls by the Department of State. Five days of open hearings were held in July. A hearing in executive session on June 21 was subsequently included in the published hearings.

This inquiry resulted in the 11th report of the Committee on Government Operations, entitled "State Department Public Opinion Polls," House Report No. 1166. The report concluded that the polls were illegally financed with funds from the appropriation entitled "Emergencies in the Diplomatic and Consular Service." The report raised serious questions regarding the selection of questions and the validity of the sampling in connection with the polls, and regarding the possibility that violations of law had occurred when the poll results were released.

Fourth. Other investigations:

The subcommittee has been and is currently engaged in an investigation of the operations of certain projects of the foreign aid program in the Middle East and Indochina areas.

The subcommittee has been engaged in a continuing study of the administrative management of the Department of State, with particular emphasis on its person-

nel and budgetary operations. The subcommittee has made inquiries concerning the implementation of the recommendations contained in its report, No. 1663, 84th Congress, regarding Foreign Service promotions under the Wriston program.

Fifth. Legislation: No legislation was referred to this subcommittee during the first session.

LEGAL AND MONETARY AFFAIRS SUBCOMMITTEE, HON. JOHN A. BLATNIK, CHAIRMAN

First. Interstate Commerce Commission:

The subcommittee investigated charges that ICC prescribed railroad accounting procedures resulted in overstatement of rail earnings and that the ICC was protecting the investing public by leading them to a shearing. Also at issue were other ICC prescribed accounting practices allegedly at variance with generally accepted accounting principles. Witnesses at the subcommittee hearings included accountants, representatives of the railroad industry, the American Institute of Accountants, New York Stock Exchange, investment analysts from member firms of the New York Stock Exchange, as well as Interstate Commerce Commission officials.

As a result of its investigation, the committee recommended that railroad reports to stockholders conform to generally accepted accounting principles and particularly that savings resulting from tax amortization be incorporated in the body of such reports—not tucked away in footnotes.

The subcommittee also commended the ICC for instituting rulemaking procedures concerning replacement accounting for rail and track structure; rejected a suggestion to transfer jurisdiction over railroad securities from the Interstate Commerce Commission to the Securities and Exchange Commission; recommended that the Civil Service Commission take early action to reappraise the salary structure for critically needed ICC accountants; recommended that the District of Columbia Committee inquire into the failure of the District of Columbia to accord credit to Government experience for accountants' certificates.

Subsequent to the commencement of the subcommittee's hearings, the Interstate Commerce Commission commenced rulemaking procedures on correction of six accounting variances. These corrections are scheduled to become effective as of January 1, 1958.

Rulemaking procedures were also instituted to determine whether replacement or depreciation accounting is more appropriate for track structure.

The subcommittee's report and recommendations are contained in House Report No. 1167, 85th Congress, 1st session.

Second. False and misleading advertising: The subcommittee initiated its investigations into false and misleading advertising with studies of filter-tip cigarettes and weight-reducing remedies. Hearings were held on the above matters, to gage the effectiveness of enforcement actions of the Post Office Department and the Federal Trade Commission in the field of false and misleading advertising. Time did not permit the submission of reports on these matters as hearings were held during late July and in August.

(a) Cigarettes: The subcommittee heard testimony from leading medical and scientific experts on the casual relationship of cigarette smoking and lung cancer, as a background to evaluating advertising claims of filter cigarettes. Experts heard on this phase of the hearings included representatives of the American Cancer Society, the Surgeon General of the United States, the director of the National Cancer Institute, and medical and technical researchers.

On the issue of false and misleading cigarette advertising, the subcommittee heard from representatives of Consumers' Union, Reader's Digest, and the Federal Trade Commission.

The subcommittee's report will be submitted to the full committee at the earliest opportunity.

(b) Weight reducing remedies:

The subcommittee investigated no-diet-reducing claims of widely advertised alleged reducing remedies and the effectiveness of enforcement and policing of this advertising by the Post Office Department, Federal Trade Commission, and the Food and Drug Administration.

Testimony was received from leading medical experts on obesity, from the National Better Business Bureau, as well as officials of the above Federal agencies.

The subcommittee's report will be submitted to the full committee at the earliest opportunity.

Third. Legislation:

A report on S. 916—H. R. 4499—has been prepared following subcommittee resolution to report on this bill favorably to the full committee. This report will be presented to the full committee at the earliest opportunity.

This bill would permit continuation of Post Office Department accounts in the name of the deceased, resigned, separated, or discharged disbursing officer for a limited period pending the appointment of a successor.

GENERAL GOVERNMENT ACTIVITIES SUBCOMMITTEE, HON. JACK BROOKS, CHAIRMAN

First. Review of negotiated sales:

The subcommittee reviewed 54 proposed negotiated sales of surplus property set to sell for a total of $7,798,611, largely emanating from the General Services Administration.

(a) Exhaustive examination was made of 14 of these proposed sales, set to sell for a total of $7,071,389, and the proposed prices in 5 instances were disapproved. It is anticipated that subsequent public auctions of these five properties will bring in a possible $500,000 more than would have the negotiated prices.

(b) A striking example of how persistent vigilance by the subcommittee has resulted in cash gains for the Nation is evident in the case of the so-called Haster property at Garden Grove, Calif. The subcommittee thrice thwarted efforts to sell this surplus land to the former owners for as little as $400 an acre, or as much as $1,800 an acre, and GSA finally sold it at public auction, at the subcommittee's urging, on August 29, 1957, for $5,350 an acre.

The subcommittee stopped proposals to sell the land at negotiated prices of some $1,800 an acre during both the first and second sessions of the 84th Congress, recommending that fair market value be sought via public auction. During the 85th Congress, the subcommittee held a hearing June 18 and 19, 1957, on H. R. 2519, which would have permitted the former owners to buy the tract for as little as $400 an acre, and recommended instead that the GSA go ahead with plans to sell it at public auction. This auction found 59 acres bringing $5,350 each, a total of $315,650. This sum is $209,450 more than the same tract would have brought at the proposed negotiated sale prices.

Second. Legislative matters:

On legislative matters during the session, the subcommittee has had for consideration 55 House bills and 3 Senate bills. All bills were reviewed in detail and hearings were held on 18 of the House bills and 3 of the Senate bills. A major portion of the remaining House bills were determined to be inconsistent with subcommittee views and, after explanation to the authors, were not scheduled for hearings. Of those bills on which hearings were held, the subcommittee reported favorably on 7 of the House bills and 3 of the Senate bills. Study on some recently submitted bills is continuing.

(a) In the case of the proposed negotiated sale of the surplus aircraft facility at Chula Vista, Calif., to the Rohr Aircraft Corp., the subcommittee recommended to the General Services Administration that, contrary to the terms of the proposed sale, the Government receive rentals from the lessee-proposed buyer until the date the sale is consummated—means whereby the revenue in the matter would be increased by at least $130,000 from the rental, whether or not a recommended higher sale price was obtained.

(b) A hearing on the proposed negotiated sale of a communications system at the Naval Station in Newport, R. I., raised various facets of the question whether a Government agency can lawfully and properly, under the Federal Property and Administrative Services Act of 1949, as amended, report property to the GSA as excess to its needs when, in fact, such property is vital to its operations and is continued to be used after being reported as excess. The subcommittee halted the proposed Newport sale and the Comptroller General has now interpreted the definition of "excess" and "surplus" property, under the aforesaid act, as within the purview of the head of the Federal agency concerned. A positive sales price was not included in the negotiated sale proposal and the subcommittee still has the proposed sale under examination.

Third. Federal Housing Administration:

(a) The subcommittee surveyed leasehold practices of the Honolulu office of the Federal Housing Administration and recommended changes in procedure which may result in a repeated saving

to the Government of several hundred thousand dollars a year. The FHA officially welcomed the subcommittee's recommendations, dubbing them very useful, and has made resulting special studies of the situation, leading to a proposed revision in the method of appraising leased fees in Hawaii. The FHA is presently investigating the possibility of immediately putting the new method into actual practice.

(b) Alleged irregularities in the Federal Housing Administration office in Kansas City, Mo., have been investigated extensively with a view to a possible public hearing on the matter when the investigating phase is completed.

Fourth. Metal program:

(a) The subcommittee has continued studies on the expansion, operation, and disposition of the Government-owned nickel plant at Nicaro, Cuba, and has begun to check into the recent GAO audit of the neighboring Cuban-American Nickel Co., subsidiary of Freeport Sulphur Co.

(b) Information and material collected on the procurement of tungsten in California and other Western States has been reviewed and is being evaluated.

MILITARY OPERATIONS SUBCOMMITTEE, HON. CHET HOLIFIELD, CHAIRMAN

First. Subcommittee reports on investigations and studies:

(a) Defense standardization program:

On July 17, 1957, a subcommittee report on the Defense standardization program was approved as the seventh report of the Committee on Government Operations, House Report No. 822.

The report was based on hearings held by the subcommittee on cataloging and standardization in the Department of Defense on January 30, 31, and March 12, 1957. Major emphasis was given to standardization because this area has received less attention from the Congress than cataloging and because systematic progress of standardization is much less evident.

The report, which was unanimously approved by the full committee, was submitted to the Department of Defense and other interested Government agencies. It contained 11 recommendations for speeding up the standardization program and for achieving greater economy and efficiency in military supply management. The Department of Defense has acknowledged the basic validity of the subcommittee's findings and recommendations and has promised to give special attention to improvements in defense standardization. The Department of Defense will submit to the subcommittee a report within 6 months showing where improvements will have been made.

The verbatim transcripts of the hearings have been printed and are available for the public.

The General Services Administration, which has standardization responsibilities for civilian government agencies, also has commended the report.

The Bureau of the Budget and the General Accounting Office have likewise studied the report and have promised to give close attention to the defense standardization program.

(b) Status of civil-defense legislation:

On July 22, 1957, the subcommittee's report on the status of civil-defense legislation was approved as the eighth report of the committee, House Report No. 839.

Following the comprehensive investigation of civil defense and the subcommittee report which was approved by the full committee in 1956—House Report No. 2946, 84th Congress, 2d session—legislation was prepared embodying the subcommittee's recommendations on civil defense. All members of the subcommittee and several other Members of Congress introduced identical bills—H. R. 2125 and others.

Continuing its study and investigation of civil defense, the subcommittee held hearings on the proposed new civil defense legislation on February 5, 6, 8, 13, 14, 18, March 5, 6, and 7, 1957.

The verbatim transcripts of the hearings have been printed and are available for the public.

The objectives of the proposed legislation were widely endorsed by national organizations and civic associations interested in civil defense. Numerous minor amendments were suggested. These are the subject of subcommittee staff study. In the meantime the subcommittee decided to make an interim report, as identified above.

The subcommittee also is investigating certain features of Federal Civil Defense Administration management and operations and is studying atomic-weapons test data relating to civil-defense shelters.

(c) Military-tank procurement:

On July 31, 1957, the subcommittee's report entitled "Military Tank Procurement" was unanimously approved as the 10th report of the committee, House Report No. 958.

This report, which reviewed the development of the heavy-tank program and specific procurement contracts, was the subject of hearings in public and executive session on March 21 and 22, 1957.

The verbatim transcripts of the public hearings have been printed and are available for the public.

In view of the complex contractual matters involved, the subcommittee that the General Accounting Office audit the tank procurement under inquiry with specific attention to the matters designated by the subcommittee.

The report has been submitted to the Department of Defense for comment.

(d) Military-clothing procurement:

On August 14, 1957, the subcommittee's report on military-clothing procurement was unanimously approved as the 13th report of the committee, House Report No. 1168.

This report covered military-clothing contracts let by the military agencies to companies owned or controlled by Herman D. Wynn. It examined also the specific contract let to Wynn Enterprises, Inc., headed by the wife of Robert Tripp Ross when he was Assistant Secretary of Defense for Legislative and Public Affairs.

Public hearings were held on April 3, 4, 5, 8, 9, 10, 11, and 12, 1957.

The verbatim transcripts of the hearings have been printed and are available for the public.

The subcommittee made 30 recommendations for improving military procurement in clothing and related fields. The report has been submitted to the Department of Defense and other interested agencies for analysis and comment.

(e) Letter contracts and contract terminations in military procurement:

On August 14, 1957, the subcommittee's report on letter contracts and contract terminations was unanimously approved as the 14th report of the committee, House Report No. 1169.

This report embodied 3 surveys made by the General Accounting Office at the request of the subcommittee at the conclusion of its investigation, during the 84th Congress, of the Navy procurement of Demon aircraft. The surveys covered the use of letter contracts and the termination of procurement contracts by the 3 military departments for the fiscal years 1954, 1955, and 1956.

The subcommittee's work in this field has been noted by the House Committee on Appropriations in its own procurement studies. As a result of the subcommittee's earlier investigations into Navy procurement, the Comptroller General has decided to examine letter contracts and contract terminations as a regular part of his defense audit program.

(f) Air Force and Navy rocket launcher procurement:

The report of these matters is being prepared and will be submitted at the next session of Congress.

Public hearings were held February 8, 11, 12; March 26, 27, 28, 29; and April 1, 1957.

The verbatim transcript of the hearings is being published and will be available for the public.

Second. Miscellaneous investigations and studies: The subcommittee conducted numerous inquiries into military procurement and other matters referred to it by Members of Congress. It also conducted followup inquiries into projects which were the subject of investigation and report during the 84th Congress. Some of these projects may be identified as follows:

(a) Surplus property:

The subcommittee staff examined military surplus disposal actions, investigating more closely those which indicate dissipation of valuable Government resources.

In several cases the subcommittee was instrumental in calling attention of the Federal Civil Defense Administration to military surplus items needed for civil-defense purposes which would otherwise be sold for a small fraction of acquisition cost. Use of such surplus property for civil-defense purposes was authorized by Public Law 655 of the 84th Congress. The subcommittee also was instrumental in getting the Department of Defense to change its demilitarization policy which required the scrapping of military goods, such as aircraft, even though they have considerable commercial utility. Many thousands of dollars are being saved the

Government by disposal of usable aircraft to commercial outlets.

(b) Followup on Navy jetplane procurement: Following up its investigation and report of Navy procurement of Demon aircraft—84th Congress, 2d session, House Report No. 1891—the subcommittee inquired into recent developments concerning that program. The Navy replied to a detailed list of questions by the subcommittee. The information, which is classified, is under study by the subcommittee staff.

(c) Missile programs: The subcommittee is studying developments in the missile field in connection with its civil-defense inquiries and in terms of competing activities among the military services from the standpoint of economy and efficiency.

Third. Legislative matters:

(a) Civil-defense bills: The following bills relating to civil defense were referred to the subcommittee: H. R. 2125, H. R. 2149, H. R. 2159, H. R. 2213, H. R. 2214, H. R. 2223, H. R. 2239, H. R. 4219, H. R. 4295, H. R. 4415, H. R. 4418, H. R. 6313, H. R. 6467, House Joint Resolution 78, and House Joint Resolution 88. H. R. 2125 and identical bills were the subject of hearings and an interim report, as described in part I.

(b) Other bills: H. R. 84, providing for a survey by the Comptroller General of the operation by the Department of Defense of commissary stores and post exchanges, was referred to the subcommittee. The bill was considered by the subcommittee but was not reported out.

SPECIAL SUBCOMMITTEE ON DONABLE PROPERTY, HON. JOHN W. M'CORMACK, CHAIRMAN

First. Bills referred and investigated—not reported out:

H. R. 242, to amend the Federal Property and Administrative Services Act of 1949 to permit the donation of surplus property to certain community organizations.

H. R. 543, to amend the Federal Property and Administrative Services Act of 1949 to permit the donation and other disposal of property to tax-supported public-recreation agencies.

H. R. 737, to amend the Federal Property and Administrative Services Act of 1949 to permit the disposal of certain surplus property to State defense forces.

H. R. 2504, to provide that Government surplus property may be donated to 4-H Clubs for the construction, equipment, and operation of camps and centers.

H. R. 2552, to amend the Federal Property and Administrative Services Act of 1949 to permit the donation of surplus property to volunteer fire-fighting organizations.

H. R. 3406, to amend the Federal Property and Administrative Services Act of 1949 to permit the donation of surplus property to volunteer fire-fighting organizations.

H. R. 4007, to amend section 203 of the Federal Property and Administrative Services Act of 1949 to permit the disposal of surplus property to publicly owned water districts and publicly owned sewer districts.

H. R. 4107, to amend the Federal Property and Administrative Services Act of 1949 to permit the donation of surplus property to volunteer fire-fighting organizations, volunteer reserve services, squads, and first-aid crews.

H. R. 5448, to amend the Federal Property and Administrative Services Act of 1949 to make rehabilitation facilities and sheltered workshops eligible for donations of surplus real personal property.

H. R. 5451, to amend section 203 of the Federal Property and Administrative Services Act of 1949 to permit the disposal of surplus property to municipalities.

H. R. 5460, to amend section 203 (j) of the Federal Property and Administrative Services Act of 1949 to provide that surplus property which is not used in the donable property program shall be offered for sale to States and political subdivisions thereof.

H. R. 5470, to amend the Federal Property and Administrative Services Act of 1949 to make municipalities eligible for donations of surplus real and personal property.

H. R. 6316, to amend the Federal Property and Administrative Services Act of 1949 to permit the donation of surplus property to volunteer fire-fighting organizations, volunteer reserve services, squads, and first-aid crews.

H. R. 6537, to authorize the disposition of certain obsolete and excess property to the United States Volunteer Life Saving Corps.

H. R. 7067, to amend the Federal Property and Administrative Services Act of 1949 to permit the donation and other disposal of property to tax-supported public recreation agencies.

H. R. 7929, to amend the Federal Property and Administrative Services Act of 1949 to permit the donation of surplus property to volunteer fire-fighting organizations.

The above mentioned bills were carefully studied in conjunction with the interested executive agencies. Each bill would have had added to the list of eligible donees for surplus property and accordingly would have increased the administrative expense for the donable surplus property program and would also have reduced the amount of property available for education, health, and civil defense purposes as provided by Public Law 61 of the 84th Congress, 1st session, and Public Law 655 of the 84th Congress, 2d session.

The responsible executive agencies namely, the Bureau of the Budget, Department of Health, Education, and Welfare, and the General Services Administration opposed extension of the benefits of the donable act to other donees at the present time. Accordingly, hearings were not held on any of the bills but the matter will be kept under strict surveillance for the next year or so.

Second. Bills referred and investigated—reported out:

H. R. 8795, to amend section 507 and subsection 602 (a) of the Federal Property and Administrative Services Act of 1949, as amended.

This bill would place the Franklin D. Roosevelt Library at Hyde Park, New York, under the provisions of the Presidential Libraries Act. Hearings were held by the subcommittee on July 29, 1957, and the bill was reported to the full committee which approved it on July 31, 1957—see report No. 957. The Senate has not acted on the bill to date.

Third. Donable surplus property program:

The Department of Health, Education, and Welfare reports surplus personal property amounting to $234,862,274 at acquisition cost was allocated to education, health, and civil defense agencies during the fiscal year 1957 Real property valued at $6,729,682, acquisition cost, was likewise transferred to these activities. It is agreed that the program will continue at this volume for some time to come.

Several problems arose in the operation of the donable program during the fiscal year, 1957. Through the cooperation of the interested Federal and State agencies they were satisfactorily resolved to the mutual satisfaction of all parties.

Fourth. Foreign excess property: The subcommittee was also successful in having the Department of Defense issue instructions pursuant to section 402 of the Federal Property and Administrative Services Act of 1949 making foreign excess personal property available for donations to specified agencies. In many instances executive agencies operating in foreign countries have excess property which has no commercial value or the estimated cost of care and handling of which would exceed estimated proceeds from its sale. Such property will be eligible for donation to meritorious organizations.

Fifth. Sale of TBM planes:

Through subcommittee action 87 TBM planes which had been scheduled for sale as scrap were made available as commercial flyable planes. This resulted in a direct saving to the Government of $184,984.87.

In addition 10 TBM planes were transferred to the United States Forest Service for fire-protection purposes and the military regulations dealing with demilitarization were amended to make additional property available for sale for its original utility rather than for scrap purposes.

SPECIAL SUBCOMMITTEE ON GOVERNMENT INFORMATION, HON. JOHN E. MOSS, JR., CHAIRMAN

During 1957, the Special Subcommittee on Government Information has held 9 hearings with 24 witnesses to carry out the instructions from Congressman WILLIAM L. DAWSON, who chartered the subcommittee on June 9, 1955. At that time, Congressman DAWSON instructed the subcommittee to determine the restrictions placed on information from Federal executive and independent agencies and to suggest remedies for the unjustifiable restrictions.

First. Legislation:

(a) In January 1957, bills were introduced as an amendment to title 5, United States Code, section 22, by Congressman JOHN E. MOSS, H. R. 2767; Congressman DANTE B. FASCELL, H. R. 2768; and Congressman WILLIAM L. DAWSON, H. R. 2769. Title 5, United States Code, section 22, is the executive

department's basic housekeeping statute which has been twisted into a claim of authority to withhold information from the public. Similar legislation was introduced by Congressman CLARE E. HOFFMAN—H. R. 2810.

On July 22, 1957, the initial hearing on the proposed amendment was held and although each of the 10 executive departments filed statements objecting to the amendment, representatives of only 2 executive departments attended the hearing. Plans have been made to permit other executive departments to testify and to hear proponents of the legislation.

In addition to the hearing on the proposed amendment, questions were asked of the executive departments by letter and numerous civic organizations were contacted for their opinions on the legislation. Among those organizations supporting the principle set forth in the Dawson-Moss-Fascell bills is the American Society of Newspaper Editors.

(b) Other legislative developments include cooperation with the staff of the Ways and Means Committee of the House to work out legislative opening to the public the applications for tax-exempt status of nonprofit, nonpolitical organizations. Although this legislation was included in a general tax revision bill approved by the committee, there has been no final House action.

(c) A major development affecting the availability of information from the Federal Government was House approval of H. R. 7390, by Congressman DANTE B. FASCELL, a subcommittee member. The report on this bill includes the statement that minutes of meetings of the myriad governmental advisory committees shall be available to the public, subject only to security and other restrictions specifically provided by law.

(d) In April 1957, Congressmen DAWSON, MOSS, and FASCELL introduced legislation to amend the public-information section of the Administrative Procedure Act, removing many of the objectionable phrases which have been misused to refuse information to the public, the Congress, and the press. This legislation has been referred to the House Judiciary Committee. These bills are: H. R. 7172, DAWSON; H. R. 7173, FASCELL; and H. R. 7174, MOSS.

(e) Another important legislative development in the information field was action by both the House and Senate, abolishing the Office of Strategic Information in the Department of Commerce. Funds for this agency—found to be uneconomical and inefficient by the House Government Operations Committee following hearings by the Special Subcommittee on Government Information—were deleted from the Department of Commerce budget by the House and Senate Appropriations Committees.

(f) An important part of the subcommittee's effort during 1957 has been devoted to legislative matters and to a continuation of the study of the Defense Department's information practices and policies.

On March 11 and 12, 1957, the subcommittee held hearings to discuss the report of the so-called Coolidge Committee—the Defense Department's Committee on Classified Information. On April 10, 11, and 12, the subcommittee held hearings to discuss directives which the Defense Department had issued to put into effect some of the Coolidge Committee's recommendations. On July 1 and 8, hearings were held with the public-information chiefs of the Army, Navy, and Air Force. On July 22, the initial hearing was held on the proposed amendment to title 5, United States Code, section 22.

Second. Elimination of restrictions on information: In addition to developments as a result of these hearings, however, the subcommittee has, by letters and staff contacts, followed up a number of complaints against unjustifiable restrictions on information. The following are some of the results of the hearings and of the additional contact work:

(a) The Department of Agriculture revised a regulation which permitted censorship of television films, news releases, and similar information items prepared by private groups through cooperation with the Department. The objectionable features have been deleted from the new regulation.

(b) The Defense Department has made available information about concessionaires' rented space in the Pentagon. Contracts for such space previously were not made public.

(c) The Defense Department revised a "verbal" classification of a weather broadcast which was available through an unclassified telephone number.

(d) The General Services Administration withdrew a proposed form which all resigning employees would have had to sign, stating they would never divulge administratively controlled information.

(e) The Foreign Claims Settlement Commission also has stopped using a form prohibiting the dissemination of administratively controlled information.

(f) The Defense Department reversed an earlier decision to prohibit reporters from the launching of the first earth satellite.

(g) The Defense Department took action to declassify a roomful of World War II scientific documents at Harvard University's Widener Library.

(h) The Department of Justice declassified portions of a report on trips by border patrol inspectors to rifle and pistol matches and made classified sections of the report available to the appropriate House Government Operations Subcommittee.

(i) The General Services Administration revised an administrative order which restricted contacts by Congressmen, their staffs, and congressional committees' staffs with GSA employees.

(j) The Treasury Department issued Treasury Decision 5421—August 27, 1957, Federal Register, Document 57-7099—permitting the disclosure of statistical data on exports from United States ports which has been restricted since World War II.

(k) The General Services Administration clarified a regulation on photographic access to Federal buildings so that the Federal district court in Denver, Colo., would not impose restrictions on photographers in public corridors in the Denver Federal Building.

(l) An initial investigation disclosed that many of the so-called leaks by the press of security information cited by the Coolidge Committee came from properly cleared Defense Department statements.

(m) An initial investigation of charges by the Commission on Government Security that the press was guilty of using purloined documents and of frequent unauthorized disclosure indicates that this charge is unsubstantiated and unwarranted.

(n) The Department of Defense has undertaken a general revision of regulations affecting the flow of information from the Department, including a complete rewriting of the Department's regulations on classification of information and eliminating the requirement that all Defense Department information must make a constructive contribution to the primary mission of the Department.

SPECIAL SUBCOMMITTEE ON WATER RESOURCES AND POWER, HON. ROBERT E. JONES, CHAIRMAN

This special subcommittee was established to review the recommendations of the Commission on Organization of the Executive Branch of the Government—Hoover Commission—with respect to water resources and power. During the 84th Congress, the subcommittee held hearings in 15 different cities, compiling a record of over 5,500 pages. The subcommittee completed work on a proposed report as the 1st session of the 85th Congress closed which it is expected will be presented to the full committee for consideration early in the second session.

Status of Railroad Retirement and Unemployment Insurance Legislation

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. HARRIS. Mr. Speaker, many Members of the House have asked me, as chairman of the House Committee on Interstate and Foreign Commerce, about the present status of legislation to amend the Railroad Retirement Act and the Railroad Unemployment Insurance Act pending before this committee. I should, therefore, like to take this opportunity to explain the status of this legislation in some detail.

At the close of the first session of this Congress there were pending before the committee 65 bills to amend the Railroad Retirement Act. Some of these bills, like H. R. 4353 and 20 other bills identical to it, also proposed to amend the Railroad Retirement Tax Act and the Railroad Unemployment Insurance Act. There were only two bills to amend the Railroad Unemployment Insurance Act proper.

The committee proceeded to hold hearings on this legislation very promptly

this session of the Congres. A subcommittee under the chairmanship of Hon. PETER F. MACK, JR., opened hearings on March 11, 1957, at which time only Members of Congress who had introduced bills on this subject were given the opportunity to testify. Then the entire Committee on Interstate and Foreign Commerce opened public hearings in March 14, 1957, and continued these hearings for 5 additional days in March. More than 50 bills which were pending before the committee at that time were the subject of these hearings.

The committee was confronted with a serious problem right at the outset of the hearings. Most Members of the House will recall that during the closing days of the 2d session of the 84th Congress, legislation was adopted granting generally a 10-percent increase in benefits. It became Public Law 1013, of the 84th Congress. The principal exceptions to this 10-percent increase were those widows, spouses, and survivors who were then receiving benefits under the social security minimum guaranty provisions of the Railroad Retirement Act.

There was no provision made for the financing of the cost of these benefits which amounted to $83 million a year on a net level cost. The Congress was told that enactment of this legislation was an emergency measure and was necessary to help thousands of retired railroad employees, their wives, and the widows of such employees to meet their day-to-day living expenses. The Congress was assured that legislation would be considered promptly during the 1st session of the 85th Congress to finance the cost of these benefits. Representatives of railroad labor organizations also gave firm assurances that they would propose, at the opening of the 85th Congress, a legislative program to assure adequate financing of the railroad retirement system. The President, in a statement accompanying the signing of this bill, S. 3616, stated in part:

> It is imperative that satisfactory legislation for this purpose—to assure adequate financing of the railroad retirement system—be proposed and enacted.

As you know, the railroad retirement system is financed entirely by employee and employer payroll contributions. The employees pay 6¼ percent on taxable compensation up to $350 a month and employers pay an equal amount. Immediately prior to the enactment of Public Law 1013, 84th Congress, an actuarial valuation of the assets and liabilities of the railroad retirement system showed that the net level cost of the system was 14.13 percent of taxable payroll, assuming a level taxable payroll of $5.3 billion annually. That is to say, a combined employer-employee tax rate of 14.13 percent of taxable payroll was required to finance indefinitely the benefits payable under the Railroad Retirement Act as of that time. Since the combined employer-employee tax rate was only 12.5 percent of taxable payroll, there was an indicated deficiency of 1.63 percent of taxable payroll, or $86,390,000 a year on a level cost basis. Enactment of Public Law 1013, 84th Congress, therefore, increased this deficiency to approximately 3.20 percent of taxable payroll, or $169,390,000 a year on a level cost basis. The Committee on Interstate and Foreign Commerce was acutely aware of this fact at the time of the hearings on railroad-retirement legislation in March of this year.

The principal interest during these hearings centered around H. R. 4353 and 18 other bills identical to it which were pending before the committee at that time. These bills were sponsored by all the standard railway-labor organizations. The principal provisions of these bills are as follows:

AMENDMENTS TO THE RAILROAD RETIREMENT ACT

First. Annuities, pensions, and lump-sum payments—other than the residual lump sum—would be increased generally by 10 percent.

Second. The maximum amount of compensation creditable under this act would be increased from $350 to $400 a month.

Third. Women employees having 10 years of service could elect to retire on a reduced annuity at age 62 instead of waiting until age 65. The same privilege is provided for wives of annuitants.

Fourth. The earnings test now applicable to disability annuitants, under which any disability annuitant under age 65 does not receive an annuity for any month in which he is paid more than $100 in earnings, would be modified by the addition of a provision that, if the annuitant's earnings in any calendar year do not exceed $1,200, the annuity otherwise not payable because of his earnings in any month in that year would become payable.

Fifth. The insurance lump sum now payable on the death of an employee only if no annuity is payable, on application, to a survivor, would be payable irrespective of this circumstance, but would be subject to a maximum of $750.

Sixth. The formula for computing the residual lump sum would be amended in conformity with the amendments proposed to the Railroad Retirement Tax Act by increasing the percentage factor applicable to compensation after 1956 to 7½ percent and to 8 percent after 1957, and increasing the maximum amount of compensation for any month to which such factors are applicable from $350 to $400 for any month after June 30, 1957.

AMENDMENTS TO THE RAILROAD RETIREMENT TAX ACT

The tax rate on employees and employers would be increased from 6¼ percent to 7½ percent and the tax would be applicable to $400 instead of $350 of the employee's compensation earned in any month after June 1957. The tax rate would be increased with respect to compensation paid after 1969 by the same number of percentage points by which the then current social-security-tax rate exceed 2¾ percent, which is scheduled to be increased in 1965.

AMENDMENTS TO THE RAILROAD UNEMPLOYMENT INSURANCE ACT

First. A new schedule of daily benefit rates would increase the present daily benefits from 50 cents to $1.70. The alternative rate, which is now 50 percent of the employee's daily rate of pay in his last employment with an employer in the base year, would be increased to 60 percent of such daily rate of pay. The maximum daily benefit rate would be increased from $8.50 to $10.20.

Second. The maximum amount of compensation for a month for which credit would be given and contributions required would be increased from $350 to $400, effective with respect to compensation paid for service rendered in calendar months after June 1957.

Third. The minimum amount of earnings in a base year which would qualify an employee for benefits would be increased from $400 to $500, effective with respect to base years after 1956.

Fourth. An employee with 5 years or more of railroad service who is out of work through no fault of his own and has exhausted current rights to normal unemployment benefits, would receive additional benefits during an extended benefit period. The duration of such extended benefit period would vary in accordance with the length of the employee's previous railroad employment, so that an unemployed man with 20 years or more of service could receive benefits, under special conditions, for as much as 4½ years longer than he might under present law.

Fifth. The maximum number of days of unemployment in the first registration period in a benefit year for which benefits may be paid would be increased from 7 to 10 days, the same as it is now with respect to all subsequent registration periods.

Sixth. Sundays and holidays would be treated the same as other days for unemployment benefit purposes.

Seventh. The additional funds necessary to finance these benefits would be raised by increasing the taxable earnings from $350 to $400 a month and by providing for a tax rate of not less than 2 percent when the balance in the railroad unemployment insurance account is $450 million or more; and this rate would be increased, by steps, to 4 percent when the balance in the account falls below $300 million.

The additional cost of the railroad retirement benefits proposed by H. R. 4353 is estimated at 2.81 percent of taxable payroll or $162 million a year on a level cost basis, assuming a level taxable payroll of $5.75 billion annually, based on the increase in tax rate and tax base proposed by the bill. One-half of this amount would be paid by the railroads and one-half by the railroad employees. The additional revenue for the support of the railroad retirement system, to be derived by increasing the combined employer-employee tax rate from 12.5 percent to 15 percent of taxable payroll, and by increasing the taxable base from $350 to $400 a month, would amount to 5.42 percent of taxable payroll, or $312 million a year on a level cost basis. Hence, the added revenue proposed by the bill would exceed the cost of the additional benefits by 2.61 percent of taxable payroll, or $150 million a year on a level cost basis. Since the actuarial deficiency of the retirement system for the

present law would be 2.98 percent of taxable payroll, assuming a level taxable payroll of $5.75 billion annually based on the increase in the tax rate and tax base proposed in H. R. 4353, the enactment of the retirement benefits and tax provisions of this bill would leave the railroad retirement system with an actuarial deficiency of only 0.37 percent of taxable payroll, or approximately $21 million a year on a level cost basis.

The additional cost of unemployment insurance benefits proposed by H. R. 4353, as nearly as can be ascertained, is estimated at $83 million a year on a level cost basis, all of which would be payable by the railroad industry. A witness for the railroad industry stated that the immediate additional cost of the proposed unemployment benefits would be $100 million a year.

However, H. R. 4353 does not embody the complete program of recommendations which the standard railway labor organizations are asking the Congress to pass in the field of railroad retirement benefits. An integral part of this program is a separate bill, H. R. 5551, pending before the Committee on Ways and Means, which provides for the exclusion of employee retirement contributions from gross income for purposes of the employee's income tax and from withholdings at the source. A spokesman for the standard railway labor organizations advised the Committee on Interstate and Foreign Commerce that these organizations would not support H. R. 4353 unless they got favorable action on H. R. 5551. These organizations felt that they could not justify to their membership an increase in the tax rate from 6¼ percent to 7½ percent of taxable payroll, and an increase in the tax base from $350 to $400 a month, unless the employees got some-offsetting income-tax relief. Failure to get such relief, this spokesman stated, would mean that these organizations would have to reconsider the whole benefit program. He, however, assured the committee that these organizations would keep the commitment they made last year that they would recommend a program for putting the railroad retirement system on a sound financial basis, irrespective of what happens to the program they are recommending in H. R. 4353.

As I have stated, H. R. 5551 is the complementary part of the program recommended in H. R. 4353. The Committee on Interstate and Foreign Commerce has been waiting to see what action the Committee on Ways and Means might take with respect to H. R. 5551 before proceeding with the further consideration of pending railroad retirement bills. No action was taken on H. R. 5551 at the time the Congress adjourned this year.

The railroads have strongly opposed favorable action on H. R. 4353 principally because of the increased taxes that this bill would impose on the industry. The industry urged favorable action instead on H. R. 6016, which would substantially revise the Railroad Unemployment Insurance Act. Railway labor organizations opposed H. R. 6016.

That is how matters stood at the close of the 1st session of the 85th Congress. The fundamental problem of how to make up the existing deficiency in the railroad retirement account of $169,390,000 annually on a level cost basis remained unresolved. Until this deficit can be made up, it would be imprudent to enact legislation providing for additional retirement and survivor benefits. The Committee on Interstate and Foreign Commerce is unanimously of the opinion that regardless of the desirability of certain proposals for the liberalization of benefits payable under the Railroad Retirement Act, no amendments should be made to this law which would jeopardize the financial soundness of this retirement system. This principle is accepted by all the standard railway labor organizations as well as by railroad management.

In conclusion, I should like to remind my colleagues that benefits payable under the railroad retirement system have improved continuously in recent years, and will continue to improve within the limits of the funds available. When the Railroad Retirement Act was passed in 1937, the maximum retirement annuity was $120 a month. Today the maximum is $184.30, and this maximum is scheduled to rise to $191.90 by January 1967, and to $260.30 by January 1977, without any further changes in the law. The present maximum for a retired employee and his eligible spouse is $238.60, and this maximum is scheduled to rise to $246.20 by January 1967, and to $314.60 by January 1977, without any further changes in the law. Since 1937, the following additional benefits have been provided: Survivor benefits to widows, widowers, parents and children, spouses' benefits, more liberal disability annuities, lowering of the age requirements for survivor benefits from age 65 to age 60; benefits to widowed mothers or wives with disabled children over 18 years of age; repealing the dual benefit restriction on retirement and survivor annuities; increasing the permissible earnings for disability annuitants and for survivors, and so forth. In other words, benefits have been improved wherever possible to the maximum level possible without endangering the financial soundness of the railroad retirement system.

Every member of the Committee on Interstate and Foreign Commerce and every Member of the Congress, I am sure, has every desire to be helpful to retired railroad workers and their families. However, we must also be mindful of our grave responsibilities toward the currently active railroad workers and future railroad workers who will retire many years hence. We must make certain that when they retire the financial status of the railroad retirement system will be sound and that they will receive the benefits accruing to them, their dependents, and survivors. With these objectives in mind, the Committee on Interstate and Foreign Commerce will proceed early during the next session of the Congress to reconsider the retirement and unemployment-insurance bills pending before it, and I am confident that we can make progress in solving some of the problems which I have outlined.

An All-American Product

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BARING. Mr. Speaker, I as unanimous consent to have printed i the Appendix of the RECORD a statemen prepared and submitted to me by th American Vodka Council.

The statement follows:

A STATEMENT BY THE AMERICAN VODKA COUNCIL

The American Vodka Council is determine to bring to the attention of the America people a series of facts designed to puncture the fiction that Vodka, one of the most popular beverages on the American scene, is anything other than a pure American product.

American life has been enriched by association with other cultures and traditions. It would be a mistake, however, to be retiring or hesitating about the values of our own discoveries. We have been so hesitating about one such American contribution, modern American Vodka, and it is this hesitation which has the potential of damaging a great American industry.

American Vodka bears very little relationship to the cheaper Russian product which has the same name. In spite of that, many Americans remain under the misconception that Vodka is primarily a Russian drink. Our newspapers help to perpetuate that myth. Regardless of what the Russian leaders may, in fact, be drinking, the press labels it as Vodka. As a result, newspaper clippings by the score continue to call Vodka a Russian drink and question its patriotism. The truth of the matter is that Vodka consumed by Americans is an American product, made in the United States, sold in the United States, and consumed by citizens of the United States. Wolfschmidt Vodka is an example of this point. Its name is foreign sounding and it originates from a special process formulated in Riga, Latvia, in 1817. Its label reads "Original and Genuine" and yet every drop of this beverage is made in the United States with distinctive American skills and techniques.

A recent research study at the Brusch Medical Center in Cambridge, Mass., which was published in the April 1955 issue of the American Journal of Proctology, indicates that vodka produces less distress from use than do other kinds of liquor. This is due to the high purity of the neutral spirits used. This test was made by four physicians: Charles A. Brusch, medical director of the Brusch Medical Center; Calvin M. Cerrato, instructor, Harvard Medical School; Promodos N. Papas, emeritus clinical professor of urology, Tufts College School of Medicine and emeritus teaching assistant at Harvard Medical School; and Frank A. Straccia, associate instructor, Tufts College School of Medicine.

Vodka is a colorless, odorless, and tasteless liquid. It is made in the United States of pure grain, mellowed and purified by various charcoal filtering processes. The charcoal used is of a special variety including vegetable, hickory, and cork.

This highly purified and carefully manufactured beverage bears little if any resemblance to the Russian version, which is a drink made of potatoes. It is interesting to note that the Russian drink is primarily a Slovak drink and stems from the poverty of Latvia, Estonia, and Lithuania where the drink was born and where the only vege-

able that grew in quantity was the potato. Many immigrants came to the United States from Czarist Russia and brought with them this potato vodka. The American vodka, which has emerged from it, is the result of American ingenuity and genius. It is as fully American as are the sons, daughters, and grandchildren of the original Slovak and Russian immigrants.

The term "vodka" has a Russian source and means "little water"—and this beverage does indeed resemble water. Aside from the name, however, it is as American as blueberry pie and ice cream.

The American Vodka Council hereby resolves that it will bring this message to the American people so that this American industry can be proud of the fine American product which it is creating with the help of American skill and genius.

Accomplishments of the Senate Committee on Interstate and Foreign Commerce

---

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. MAGNUSON. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a report on the accomplishments of the Senate Committee on Interstate and Foreign Commerce of which I am chairman.

There being no objection, the report was ordered and printed in the RECORD, as follows:

Mr. President, I am proud to report to the Senate today that your Committee on Interstate and Foreign Commerce, of which I am chairman, accomplished more business this year than we did in the 1st session of the 84th Congress, with more legislation referred to us, more reported to you, more bills passed by the Senate, and more of our bills signed by the President than in the session 2 years ago.

This year our committee had referred to it 199 Senate and House bills, resolutions, and amendments as compared to 155 such pieces of legislation 2 years ago.

We reported 54 of them to the Senate, of which 52 were passed. This was nine more than was approved in the 1st session of the 84th Congress. House committees reported 10 of the bills to the House and passed a total of 19 Senate bills, since 9 of our approved measures were substituted for House bills when the legislation reached the House floor.

The President signed 30 of our bills this year as compared to 23 2 years ago. Sixteen of our bills remained in the House committee this year as compared to 13 in 1955.

We had 506 routine nominations referred to us in 1957, all of which were approved by us and confirmed by the Senate. We handled 14 major nominations which were approved and confirmed.

Our full committee held 30 days of open hearings this year as compared to 21 days of open hearings in 1955, while our subcommittees held 34 days of open hearings compared to 30 2 years ago.

Our full committee held 18 executive sessions the same as 2 years ago, but I want to emphasize that all except a very few were short sessions following open hearings to vote upon matters discussed at the open hearings. I recall only three full executive sessions and each of these were called at the request of Government officials.

Our subcommittees held 9 executive sessions the same as 2 years ago.

The tabulation of our record follows:

1st sess. of 84th Cong. as compared to 1st sess. of 85th Cong.

	1955	1957
Number of Senate and House bills, resolutions, and amendments referred to committee	155	199
Number of bills reported by committee (Senate and House)	46	54
Number of bills passed by Senate (Senate and House)	43	52
Number of Senate bills pending in House committees	13	16
Number of Senate bills reported by House committees	20	10
Number of Senate bills passed House	21	19
Number of bills signed by President (Senate and House)	23	30
Number of routine nominations:		
Referred to committee	572	506
Confirmed	545	506
Number of major nominations:		
Referred to committee	14	14
Confirmed	14	14
OPEN HEARINGS		
Number of days of open hearings of full committee	21	30
Communications Subcommittee	2	----
Surface Transportation Subcommittee	4	11
Aviation Subcommittee	13	10
Merchant Marine and Fisheries Subcommittee	7	6
S. 2060 (to improve Standards Bureau fiscal practices)	1	----
Air Agreement Subcommittee	1	----
Freight Car Shortage Subcommittee	2	----
S. 86 (rain making)	----	2
S. 1552 (fish farming)	----	1
Automobile Marketing Subcommittee	----	4
	51	64
EXECUTIVE MEETINGS		
Number of executive meetings of full committee	18	18
Surface Transportation Subcommittee	2	5
Communications Subcommittee	1	----
Aviation Subcommittee	3	2
Merchant Marine and Fisheries Subcommittee	1	----
Auto Marketing Subcommittee	2	----
S. 86	----	1
Operations of Petroleum Industry Subcommittee	----	1
Total	27	27

This record was made possible by the wholehearted cooperation of every one of the 15 members of our committee. Members of both the majority and minority worked shoulder to shoulder to move legislation which was referred to us.

I have appreciated the willing help of the Honorable JOHN W. BRICKER, ranking Republican on our committee, and the willing hard work put in by other minority members.

I want to express my gratitude to the chairman and members of our subcommittees who put in long hours holding public hearings to gather testimony on proposed legislation.

Our Surface Transportation Subcommittee, headed by the Honorable GEORGE A. SMATHERS, held 11 days of hearings on transportation subjects and reported the transportation bills the committee eventually sent to you.

Our Aviation Subcommittee, headed by Hon. A. S. MIKE MONRONEY held 10 days of public hearings and worked long hours preparing such legislation for the committee. My Subcommittee on Merchant Marine and Fisheries put in 6 days on public hearings.

During the year we created a Subcommittee on Foreign Commerce which intends to go thoroughly into the question of the Nation's foreign commerce during the 2d session of the 85th Congress. We also created a special subcommittee which will investigate the operations of the Military Air Transport Service and the Military Sea Transportation Service to determine how their operations affect the operations of our commercial sea and air services.

Mr. President, the work of our committee covered a wide range of important subjects, from establishment of a 3-man Airways Modernization Board which will develop and test plans for safe navigation and traffic control of all civil and military aircraft, to 9 changes in our transportation laws which will have important effect upon the work of the Interstate Commerce Commission.

The Airways Modernization Board is required to submit to Congress by January 1959 a plan for general reorganization of Federal aviation functions, looking to the establishment of an independent aviation authority. The committee looks to this report to lay down the plan for legislation to get away from the hit-and-miss aviation program now followed in the handling of our civilian and military aviation.

The committee also reported favorably S. 1423, a bill to amend the Civil Aeronautics Act by limiting the President's authority to overrule CAB certification decisions involving foreign air transportation. The measure requires that Government agencies permit a greater participation by a representative of domestic airlines in negotiations with foreign governments, and that such a representative be designated as a member of the United States negotiating delegation.

We also reported favorably a bill granting permanent certification to airlines operating in the States-Alaska service. These are the Alaska Airlines, Inc., Pacific Northern Airlines, and 1 of the 2 routes operated to Alaska by Northwest Airlines.

Upon the recommendation of your committee the Congress enacted Public Law 163, which redefines contract carriage under the Interstate Commerce Act. This is considered one of the most important steps taken regarding our interstate traffic laws. This, and the seven other amendments made to the Interstate Commerce Act, did much to meet the Cabinet Committee recommendations for revision of our transportation laws.

We held hearings on many other proposed amendments to the ICC Act and work on those bills will be resumed when Congress returns in January.

One of our aviation bills, S. 1753, to exclude from other income computations in determining subsidy needs the amount of capital gains realized by air carriers from the disposal of obsolete flight equipment was made the pending business when Congress reconvenes in January.

Another bill to aid air carriers to rejuvenate their equipment was S. 2229, a bill to provide Government guaranty of private loans to certain local air carriers, territorial airlines, and certificated helicopter companies. The guaranty would be for 90 percent of the loan and would enable the carriers to replace their obsolete equipmeut, modernize their fleets in interest of national defense, and increase comfort for the traveling public.

Our Subcommittee on Merchant Marine and Fisheries reported favorably 14 bills that became laws. These included legislation to implement the 1955 treaty with Panama, repeal the 50–50 escapement of salmon in Alaska limitation contained in the White law; authorize construction of vessels in United States shipyards; authorize additional funds for Coast and Geodetic Survey vessels and to postpone for 2 years the Coast Guard regulations appyling to small boats carrying 6 or more passengers for hire.

During the year we held extended hearings on proposals to restrict transfers of vessels from United States registry to foreign registry. We also held hearings on some 20 bills calling for the sale of ships from the national defense reserve fleet to foreign governments or foreign nationals.

Reports on these measures are being prepared and will be taken up by the committee in the 2d session of the 85th Congress.

Mutual Security Bill

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. CHIPERFIELD. Mr. Speaker, during the last several months committees of Congress as well as Congress itself have been looking into the mutual security program in great detail. Their efforts are reflected in the Authorization Act and in the Appropriation Act passed at the end of August. I know that much has been written and spoken on this subject. But I think it timely to highlight some of the major features of the program for this year.

As to the amounts involved, in January the President's budget message referred to a program of $4.4 billion. By the time the Committee on Foreign Affairs began its consideration of the measure last spring that sum had been reduced to $3.8 billion as a result of various savings effected by the administration. As the authorization bill emerged from the Senate it carried a sum of $3.6 billion. The House reduced this to $3.1 billion. The compromise that resulted was an authorization of $3.3 billion. The appropriations made pursuant to this authorization were $2.7 billion. Thus the reduction made by Congress from the President's request was almost 29 percent.

Economic aid has been drastically reduced. Such economic aid as is given now extends only to a few countries in the Near and Far East that need such assistance to support the forces our military authorities believe essential for the free world's defense.

An innovation in this year's law is the development loan fund. The fund has been established with a capital of $300 million to extend assistance in the form of loans and credits to the underdeveloped nations of the world, particularly the newer governments of Asia and Africa. There is a popular demand in those countries for improved living conditions. No government can remain in power in any of those nations if its people do not believe that it is dedicated to bringing them better living conditions.

Many of those nations know little about the Soviet Union. They believe that the Soviet system has brought great improvement in the standard of living of the people in Russia and in Communist China. At the same time, they regard their national sovereignty and independence as more important than anything else.

Events of the last year have made it clear that the future welfare and security of the United States are bound up to an increasing extent with the nations of Asia and Africa. If, in that period, we can maintain the confidence and respect of these nations, we can expect that the lives of our children will be more peaceful and secure than they are today. On the other hand, if these people believe us to be uninterested in their development, we may expect to live in a world of increasing international tension.

The development loan fund offers the underdeveloped people a reasonable expectation that the United States will extend them assistance if they come forward with feasible plans for their own development. Many of the projects necessary for their economic improvement may take several years to complete. It is important that, if we extend credit to start a project such as land reclamation, we follow through. Otherwise it would be better that we never start it. We want nations to feel confident that if they do their part of the job, they can count on us to carry out our commitments. I think the inclusion of the development loan fund is one of the most far-reaching steps we have taken in our foreign aid program. This is much better than outright grants from which we could expect no return.

The technical cooperation program, originally called point 4, has been continued although at a level below that planned by the administration. Those programs are almost entirely demonstration-type programs designed to impart our skills and information to other peoples in basic fields such as education, public health, agriculture, and public administration. By their very nature they have made a deep impress on many peoples in the underdeveloped countries and have garnered for us an important measure of goodwill and understanding at the grassroots level.

It is easy to be critical of parts of a program that is global in scope. I have no doubt that there is some waste, some inefficiency, some poor personnel, and some unwise programing. But these defects must always be weighed against the benefits that we Americans derive from a stronger world of free people.

Relief Assistance Under Public Law 875

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. YOUNG. Mr. President, late in June of this year, the city of Fargo, N. D., sustained a terrific loss as a result of one of the most devastating tornadoes in the history of this area. Various church organizations, civic groups, individuals, and the Red Cross have contributed greatly to the relief of the stricken people in the city of Fargo. The Federal Government, through Public Law 875, the Small Business Administration, and other organizations, particularly the Federal Civil Defense Administration, which administers Public Law 875, have given considerable relief.

There has been some misunderstanding regarding the relief assistance that can be provided under Public Law 875. The senior Senator from Tennessee [Mr. KEFAUVER], on August 28, made a statement on the Senate floor concerning the assistance provided by the Federal Government under Public Law 875.

Mr. President, with reference to the statement made by the senior Senator from Tennessee [Mr. KEFAUVER], I ask unanimous consent to have inserted as a part of my remarks a letter directed to me at my request by Mr. Lewis E. Berry, Deputy Administrator of the Federal Civil Defense Administration, explaining their action with respect to the assistance given Fargo.

Also, Mr. President, at my request, Mr. Theo W. Sneed, a staff member of the Senate Public Works Committee, gave me an interpretation regarding the scope and limitation of public assistance under Public Law 875. I ask unanimous consent to have Mr. Sneed's interpretation inserted as a part of my remarks.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FEDERAL CIVIL DEFENSE ADMINISTRATION,
Washington, D. C., August 30, 1957.

Hon. MILTON R. YOUNG,
United States Senate,
Washington, D. C.

DEAR SENATOR YOUNG: At your request, I submit the following report with respect to Senator ESTES KEFAUVER'S statement to the Senate on August 28 about the Fargo, N. Dak., tornado of June 20. Senator KEFAUVER said that in administering Public Law 875, the Federal Disaster Relief Act, FCDA had not followed congressional intent and that the law had been interpreted in a narrow and limited manner.

The section of the law in question reads as follows:

"SEC. 3. In any major disaster, Federal agencies are hereby authorized when directed by the President to provide assistance (a) by utilizing or landing, with or without compensation therefor, to States and local governments their equipment, supplies, facilities, personnel, and other resources, other than the extension of credit under the authority of any act; (b) by distributing, through the American National Red Cross or otherwise, medicine, food, and other consumable supplies; (c) by donating to States and local governments equipment and supplies determined under then existing law to be surplus to the needs and responsibilities of the Federal Government; and (d) by performing on public or private lands protective and other work essential for the preservation of life and property, clearing debris and wreckage, making emergency repairs to and temporary replacement of public facilities of local governments damaged or destroyed in such major disaster, and making contributions to States and local governments for purposes stated in subsection (d). The authority conferred by this act, and any funds provided hereunder shall be supplementary to, and not in substitution for, nor in limitation of, any

her authority conferred or funds provided der any other law. Any funds received by deral agencies as reimbursement for serv- s or supplies furnished under the authority this section shall be deposited to the credit the appropriation or appropriations cur- tly available for such services or supplies. e Federal Government shall not be liable any claim based upon the exercise or per- rmance or the failure to exercise or per- rm a discretionary function or duty on the rt of a Federal agency or an employee of e Government in carrying out the provi- ons of this section."

Damage caused by the Fargo tornado was incipally to private dwellings, churches, rochial schools, a public school fully cov- ed by insurance, and certain public facili- s including streets. The Governor of North kota requested $20,000 in Federal funds pay for damage to public facilities, tem- rary repairs, and for debris removal, all which were eligible under Public Law 5.

Since the debris was removed from the reets and public facilities were soon in eration, the city and State offices were ked to submit the necessary forms and oject application for Federal payment for bris removal on June 25, 5 days after the rnado. The June 25 cutoff date was agree- le to State Disaster Coordinator Tharalson d R. A. Shaw, disaster reconstruction su- erintendent of Fargo. This date had no aring whatever on FCDA's consideration of ems eligible for health or public safety easures, or for temporary replacement or mergency repair.

Applications for Federal funds for other ems eligible under Public Law 875, were to e submitted in 60 days. A further extension f 60 days was given the State on August 20 nd the State presumably advised the mayor. he mayor did not on June 25, nor for several eeks, raise objections to the initial 60-day eadline date.

Mr. Kenneth Lake, FCDA Disaster Co- rdinator, had an official of the United tates Public Health Service inspect the ealth situation in Fargo. After a thorough nvestigation, this official declared that there as no health hazard, that the local author- ties were doing everything necessary, and herefore that he would not certify to FCDA he existence of a health hazard as required efore Federal funds could be expended. he fact that there has been no epidemic or lnesses resulting from the disaster would ppear to bear out the judgment of the ederal health official. While Fargo health fficials desired that a mosquito spray job e done at a cost of $7,000, it was deter- mined that mosquito spraying was a recur- ng need and had been scheduled by the city hortly before the tornado hit. On several occasions, the mayor was requested by Mr. Lake to submit substantiated evidence of ny health hazard work performed, other han that of mosquito spraying and he did ot do so.

The mayor in a meeting with the North Dakota congressional delegation and an FCDA official said the city expected a blank check from the Federal Government of from $250,000 to $400,000 to pay for such items as:

1. Repair of churches.
2. Rebuilding of parochial schools.
3. Construction of new public school building, although the one damaged was fully insured.
4. Compensation for business concerns and trucking companies which had volunteered their services.
5. Federal reimbursement of individuals, businesses, etc., for work days and business lost as a result of damage.

The above items mentioned by the mayor were ineligible under any interpretation of the law because it would have meant the expenditure of Federal funds for religious and private organizations, and on private property.

I assure you that every effort, within the law, has been made to relieve the suffering and damage caused by the Fargo tornado. In addition to the assistance under Public Law 875, other Government agencies, particularly Small Business Administration and Housing and Home Finance Agency, assisted the people of the area whose homes and businesses were lost or damaged. Emergency welfare needs were cared for by the American National Red Cross.

I assure you that the city of Fargo has received the same treatment as have other cities struck by tornadoes, i. e., Worcester, Mass., Waco, Tex., Flint, Mich., Kansas City, Mo., and others.

Please advise me if you need additional information.

Sincerely,

LEWIS E. BERRY.

The matter of Federal assistance in emergency relief during major disasters has been the subject of considerable controversy for several years. Bills were introduced in the 80th Congress on which the Committee on Public Works held public hearings. The bill, S. 2831 (80th) was reported by the committee and passed the Senate, but was not acted on by the House.

During the 81st Congress, the matter was revived, and the Senate Committee on Public Works held hearings on S. 2415. The House bill, H. R. 8396, was passed by the House and reported by the committee without amendment, and became Public Law 875. Copies of the law, committee report, and hearings are enclosed.

It is believed that the intent of Congress in enacting Public Law 875 was to provide a standing authorization for the President to make use of all available Federal agencies to supplement State and local agencies in providing immediate and emergency assistance during and immediately after major disasters to alleviate suffering and damage, and to remove the threat of loss of life and property and to improve health conditions.

It was the intent that such relief of damage and hardship would be on an emergency basis only, with only temporary repair or major replacement of public facilities made during and immediately after such disaster, without making permanent repairs or rehabilitation. It was thought that after the work performed by the Federal agencies in alleviating the immediate effects of the disaster had been completed, for protection of the facilities of the individual or the community and so that the disaster would cause no further damage to life or property, the Federal activities would cease. The restoration, replacement, or permanent improvement of public facilities was believed to be a responsibility of the local governments.

I would certainly interpret the law as not being applicable to most of the items listed in Mr. Berry's letter to Senator YOUNG. The intent was for Federal coordination and advice toward use of local agencies, manpower, material, and equipment, during and immediately after the disaster. For instance, repair of churches and schools might be limited to repair of roofs, windows, or walls, to prevent further immediate damage to such buildings and permits its immediate use. I believe that the estimated cost of such emergency repairs could be paid a local agency to apply on the permanent repairs.

You will note in the hearings and in the report, S. 2415, contained section 6 that would permit Federal grants of funds to local governments for restoring or reconstructing public facilities on a permanent basis. This section was deleted from the bill, for reasons stated in the report. Items listed by the mayor for reimbursement go far beyond the terms of section 6, which was deleted from the bill.

I know of no additional Federal aid the city of Fargo can obtain, other than under some of the loan authorizations. I am also enclosing House Document No. 479, the president's report on the act, which discusses the administration of the act.

THEO. W. SNEED,
Technical Staff Member, Committee on Public Works.

Activities of the Committee on Un-American Activities During the 1st Session of the 85th Congress

---

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on the activities of the Committee on Un-American Activities during the 1st session of the 85th Congress:

REPORT BY CHAIRMAN FRANCIS E. WALTER ON THE ACTIVITIES OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES DURING THE 1ST SESSION OF THE 85TH CONGRESS

Through hearings and investigations conducted in key cities across the United States, the Committee on Un-American Activities thus far in 1957 has uncovered significant new aspects of the operation of the Communist conspiracy.

Paradoxically, the committee has found that at the very moment the Communist Party itself claims that its formal organization is disintegrating, the Communist apparatus has, in fact, been able to record some of its most important accomplishments.

The results of the committee's inquiries have shown that despite the brutal chronicle of communism in this country and abroad, and the Kremlin's patent goal of world enslavement, a great number of Americans still maintain allegiance to the program of conspiracy of international communism.

One major focus of the committee's work was Communist propaganda—material imported from overseas and newspapers and other literature published by the Communist-controlled foreign-language press and Communist publishing houses in the United States.

Public hearings were held in Washington, New York, Chicago, and New Orleans, as a continuation of the committee's propaganda hearings conducted last year in Washington, D. C., Philadelphia, and San Francisco.

In New York the committee called before it 28 witnesses from foreign-language publications, periodicals, publishing firms, and book stores. During these hearings, Irving Fishman, Deputy Director of Customs in New York City, testified that 6,947,000 pieces of Communist propaganda were imported into the United States last year as bulk mail; this, he added, does not include Communist propaganda imported via first-class mail or diplomatic pouches.

In Chicago the committee heard 9 witnesses, among them the editors and business manager of the Lithuania daily Vilnis, whose circulation of 32,000 makes it even larger than the Daily Worker. The hearings in both New York and Chicago provided further proof that the Communist-dominated foreign-language press constitutes the Kremlin's most important propaganda pipeline to nationality and minority groups in the United States.

In order to present to the American people a complete picture of the international Communist conspiracy, the committee this year extended its series of consultations with experts who have had firsthand contact with the global program of the Kremlin. Together their testimony confirms that the operations of the Communist apparatus in the United States comprise only one segment of a worldwide complex of subversion and treachery.

In one of these consultations, Dr. Frederick Charles Schwarz, executive director of the Christian Anti-Communist Crusade, predicts that international communism will achieve its goal of world domination within the next 16 years if its present rate of expansion continues unabated.

In another, three experts warned that trade with the Soviet Union and other Communist nations is a one-way street that can lead only to the ultimate destruction of United States economy.

Reviewing the Communist threat in the Far East, Kuo-Shuen Chang, a former Singapore newspaper editor, reported that Communist labor union and student organizations, backed by combat-trained guerrillas, are preparing to seize control of Singapore and Malaya in the vacuum created by termination of the British rule there.

Another witness, Dr. Augustus Rei, former President of Estonia, revealed that the Soviet Union has now converted the conquered Baltic States of Estonia, Latvia, and Lithuania into a vast staging area for a future world war. Dr. Rei and two Hungarian officials who fled after the revolution was crushed last fall, presented an appalling description of Soviet terror.

Dr. Rei testified that more than 170,000 of a total Estonia population of 1,200,000 had fallen victim to Soviet murder and deportation after the seizure of his country by the Kremlin.

The two leaders of the Hungarian revolution, Janos Jorvath and Sandor Kiss, reported that Hungary is now in the grip of a reign of terror imposed by the Red army and the reconstituted Hungarian security troops. Significantly, all of the witnesses who testified on international communism urged severance of diplomatic relations with the Kremlin and the satellite governments.

The Committee on Un-American Activities this year also inaugurated publication of biographies of leaders of the Soviet Union and international communism. Those released thus far have dealt with Nikita Khrushchev and Nikolai Bulganin, Marshals Georgi Zhukov and Ivan Konev of the Soviet Union; and Mao Tse-tung and Chou En-lai of Red China. The information contained in these biographies demonstrates beyond any doubt the hopelessness of attempting to negotiate with the leaders of international communism as if they were men of good faith.

Distribution of the staff consultations with experts on international communism and the biographies has been made throughout the country. The response that they have occasioned indicates that they have helped fill a need in the knowledge of the American people about the true nature of international communism.

Another need was filled with the publication by the committee of an extensive report on Communist Political Subversion—the campaign to destroy the security programs of the United States Government. The report resulted from hearings held by the committee in key cities across the United States, during which the committee heard dozens of witnesses and compiled thousands of documents dealing with the Communist program. The testimony and committee documents have been published in two massive volumes reflecting one of the most exhaustive inquiries ever made by a congressional committee into any aspect of communism.

The committee found that a prodigious campaign of political subversion, clandestinely directed by a nationwide apparatus of Communist agents, menaces the entire security system of the United States. The essence of this campaign, the committee found, is the perversion of our democratic process of Government. If it continues unabated, it promises the Kremlin a degree of success that never could have been achieved by the classic means of force and violence.

The chief targets of the Communist Party in its political subversion campaign, the committee found, are the Walter-McCarran Immigration and Nationality Act, the Internal Security Act, the Smith Act and, indeed, all other legislative and executive actions aimed against the Kremlin's operations in the United States.

The Committee on Un-American Activities found that the Communist Party has succeeded in establishing over 200 organizations to execute this campaign of political subversion. While these individual organizations claim to be independent and autonomous, the committee found that they are in fact, controlled in every instance by the Communist Party. Through these organizations the Communist Party has been able to subject both major political parties, State legislatures, and the Congress to an impact of letters, petitions, and personal appeals, all of which are designed to fabricate the impression that a popular sentiment exists for enfeebling the safeguards presently established by our immigration and security systems.

To cope successfully with aspects of the Communist apparatus not treated adequately in current laws, the Committee on Un-American Activities formulated and presented to the Congress proposals for legislation coordinating all individual recommendations that have been made in this field. Together they would greatly strengthen the Government's hand in dealing with all manifestations of Communist activity.

While it was impossible for the Congress to consider the legislation in the few days that remained of the session after it was introduced, it is hoped that action can be taken as soon as possible when Congress reconvenes.

One of the most acute problems presented by the Communist conspiracy continues to be that of espionage. Through testimony obtained from Boris Morros, the American counterspy whose work for over more than a decade has resulted in the exposure of nine key Soviet spies, the committee has been able to obtain connection links which it hopes will enable it to trace the pattern of Soviet espionage in yet undivulged areas.

Federal Aid to Dallas County

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. SISK. Mr. Speaker, on August 21, 1957, starting at page A6887 the CONGRESSIONAL RECORD reported my remarks under the heading "Fantastic Federal Aid to Dallas County Revealed." In those remarks I detailed some of the very large Federal Government expenditures in the form of grants, gifts, loans, subsidies, guaranties, and other programs for the benefit of Dallas County, Tex.

Two errors in the figures cited have now come to my attention. Although these inaccuracies did not materially alter the total, I want to be entirely fair in the matter and would therefore like to indicate appropriate corrections.

On the basis of information supplied by the Department of Agriculture I stated Dallas County programs received $7,496,000 in agriculture funds during the fiscal years 1955 through 1957. The Department now advises that through error it included sums actually allocated to other Texas counties by the Rural Electrification Administration, so that it appears the correct amount should have been $916,000.

I am also advised that cost figures furnished by the Veterans' Administration covering construction of a veterans' hospital were misinterpreted to indicate real estate costs of $10,358,263 which were actually included in total costs of $11,397,652. The separate real-estate costs should be eliminated.

I stated the incomplete expenditures in Dallas County detailed in my remarks reached the sum of $902,105,597. With these corrections, the total should be $885,167,334.

United States Week

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. DEROUNIAN. Mr. Speaker, on October 19, 1957, the American Legion Post, No. 1089, of New Hyde Park, N. Y., will begin its second celebration of a United States Week. The program will commemorate that glorious victory of Gen. George Washington at Yorktown, on October 19, 1781, when independence was won for the United States of America.

Many patriotic groups throughout the country hold similar celebrations and I hope many more will follow the pattern of the New Hyde Park post and set aside the week of October 19 to 26 to honor our flag and our patriots, who have made possible the freedom we now know.

I am pleased to request that there be placed in the CONGRESSIONAL RECORD a letter from the adjutant of New Hyde Park Post 1089, Harold A. Sandford, and a paper prepared by him on the events at Yorktown.

The letter follows:

NEW HYDE PARK (NEW YORK) POST 1089,
AMERICAN LEGION.

CONGRESSMAN STEVEN B. DEROUNIAN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DEROUNIAN: On October 19, 1957, the American Legion Post 1089, New Hyde Park, will begin its second celebration of a United States Week from October 19 to 26.

The purpose of such a program is to commemorate the glorious victory of Gen. George Washington at Yorktown, on October 19, 1781.

Through the wonderful cooperation of our Congressman, STEVEN B. DERDUNIAN, the mayors of various communities, American Legion posts, public and parochial school officials, Boy Scout and Girl Scout leaders and many patriotic citizens, we were very successful in starting the movement here in 1956. During the week of October 19–26 we have an opportunity to honor our flag, our patriots, our historical documents and events of the past. We hope that our good citizens all over the country will join us this year to again celebrate our magnificent heritage on United States Week.

For God and country.

HAROLD A. SANDFORD, *Adjutant.*

YORKTOWN AND THE SIEGE OF 1781

On the level fields outside the small colonial village of Yorktown occurred 1 of the great decisive battles of world history and 1 of the most momentous events in American history. Here, on October 19, 1781, after a prolonged siege, Lord Cornwallis surrendered to an allied French and American army under George Washington, virtually ending the American Revolution and assuring American independence. Although the hostilities did not end formally until 2 years later—on September 3, 1783—in reality the dramatic victory at Yorktown had ended forever the subservience of the American colonies to a foreign power. Because of this victory the United States became truly a free and independent nation.

THE VIRGINIA CAMPAIGN

The early campaigns of the Revolutionary War were fought mostly in New England and the Middle Atlantic States. After 1778 the greatest activity was to the South. In 1780 and 1781, Lord Cornwallis led his British army victoriously out of Charleston and through North and South Carolina, not, however, without feeling the effective use of American arms at Kings Mountain and at Cowpens.

On March 15, 1781, Gen. Nathanael Green accepted the challenge to battle and met the British forces at Guilford Courthouse, N. C. Although this battle was a British victory it left the victor weakened to the extent that he was unable to capitalize on his success. In April Cornwallis decided to proceed to Wilmington (N. C.) for the purpose of recruiting and refitting. Thus the stage was set for the final campaign of the war.

Cornwallis, believing that he had to reduce Virginia before he could hope to hold the southern provinces, marched to Petersburg, Va., on April 25, and made junction with other British forces in Virginia on May 20. He now commanded a reasonably well supplied and able field force of some 5,300 troops and was opposed by the Marquis de Lafayette, commanding a small force not strong enough to risk battle. The role of this youthful commander was "that of a terrier baiting a bull." In the weeks that followed he harassed, threatened, feinted, and retreated from the superior British forces. Cornwallis continued his destruction of arms and supply depots until about June 15, when, with the season hot, his troops tired, and Lafayette still evading him, decided to return to Williamsburg.

On June 10 General Wayne joined the American forces with 1,000 men. Two days later Col. William Campbell provided an additional 600 mountain men, and Von Steuben appeared with a detachment. With these reinforcements Lafayette felt strong enough for more aggressive action.

By this time a misunderstanding between Cornwallis and Sir Clinton, his superior in New York, over matters of strategy and troop deployment, began to shape the direction of affairs in Virginia. Cornwallis received instructions to take defensive station at Williamsburg or Yorktown, reserve troops for his protection, and send the remainder by transport to New York. In the execution of these orders Cornwallis left Williamsburg on July 4 for Portsmouth, where he could dispatch the troops to New York. It was during this march that General Wayne, with small advance unit, came face to face with the major part of the British Army. There was sharp action and after a daring charge which stopped the British advancement, momentarily, Wayne was able to effect a retreat with reasonable success. Actual military victory again rested with the British, but the battle of Green Spring was another good test of the training and discipline of the American troops.

When Cornwallis arrived at Portsmouth the troops requested by Clinton were made ready and he was notified on July 17. A few days later, on July 21, it was learned that all plans had been drastically changed. He was instructed to hold a position on the peninsula. After careful study it was decided to fortify Yorktown and Gloucester. On July 30 transports sailed for Yorktown, the remainder of the forces crossed Hampton Roads by small boat and proceeded to Yorktown by road. The construction of defenses was begun immediately and soldiers wrote that Camp Yorktown was a place of hard labor. Lafayette took up a position some 30 miles away, near West Point, and instructed General Wayne to remain where he was near Portsmouth.

STRATEGY OF THE SIEGE

As the year 1781 opened, Washington continued to be troubled by the lack of assistance to his units to the south, and the inability to achieve anything decisive in the north. New hope came when the French Government approved of a sizable naval force for operation in American waters, under the command of the Count de Grasse. There was already an excellent French Army corps under the Count de Rochambeau, ready to cooperate with Washington, at Newport, R. I.

From February 10 to August 14 Washington was engaged with the French in working out a plan of action. The plan was that if Clinton's position became vulnerable the French fleet would move inside Sandy Hook. The alternate plan was an operation to capture the British force in Virginia. In July diversionary action by Washington in New York caused Clinton to request troops from Cornwallis and resulted in the movement of British forces to Portsmouth, as already described. When Washington received dispatches from the Count de Grasse, on August 14, informing him that the French fleet was sailing for Chesapeake Bay with a substantial fleet and 3,200 land troops, he saw that a combined land and naval operation in Virginia was the only possible plan.

Leaving less than 4,000 men before New York, Washington, with 4,000 French and 2,000 American troops, started the movement to Virginia on August 19. They used three separate and distinct routes to confuse Clinton, who did not fully understand what was happening. At Princeton the forces joined and continued through Trenton, Philadelphia, Chester, Pa., and Wilmington to the head of Chesapeake Bay.

On September 5 Washington heard that de Grasse had arrived in Chesapeake Bay with 28 ships, some frigates and sloops and 3,200 troops which had already joined Lafayette forces near Yorktown. Plans were made to transport the allied armies down the bay by ship, after which Washington, Rochambeau and Chastellux proceeded by land to Williamsburg, stopping enroute for several days at Mt. Vernon. This was Washingtons first visit home in 6 years. On his arrvial at Williamsburg September 14, Washington assumed command of the American and French forces.

BATTLE OF THE VIRGINIA CAPES

This naval action of September 5 was a most important phase of the siege of Yorktown. At a critical point the French had seized control of the sea and had sealed in the British at Yorktown. Thus preventing the evacuation of Cornwallis and ending his hopes of reinforcements and supply.

De Grasse had arrived off the Virginia Capes on August 30, and after disposing the two British lookout ships, landed his troops who joined Lafayette. He was no doubt wondering how he had been able to reach Virginia without British interference. At 4 p. m. on September 5 the British fleet was sighted and de Grasse moved his French fleet into the Atlantic to allow more room to maneuver. Heavy action started and continued for 2½ hours, when it became dark. During the night the two fleets remained close together. For the next 2 days they remained within sight of each other but both hesitated to resume the action. On the 9th contact was lost and Rear Admiral Graves decided that it was too hazardous to renew the action.

THE SIEGE

On September 7 Lafayette started moving his forces to where he could temporarily block Cornwallis. During the next day his army was enlarged by the arrival of French forces from de Grasse's ships. When Washington arrived on September 14 there was great rejoicing. The American and French forces continued to arrive by ship from the upper Chesapeake and by September 27 all was in readiness for an allied movement against Yorktown.

On the morning of the 28th French and American units began to move up. Contact was made with the British pickets who fell back giving the alarm. Some shots were fired as the allied forces assumed positions, forming a semicircle around Yorktown. In the days that followed there was much scouting and probing at the enemy defenses. Heavy guns and mortars were arriving continually and British artillery maintained a steady and effective fire. Up to October 3 there had been several encounters with the British, their unsuccessful encounter on this day was responsible for them remaining behind their defenses until the end of the siege.

On October 6, the allies started digging in to form their first siege line. Numerous trenches were dug and mortars and howitzers were set into position. On October 9 the first guns went into action. For 3 days there was no letup in the concentrated and methodical bombardment of Yorktown. It was on October 11 that Washington started his forces to work on a second siege line, which was much closer to the British lines.

To complete the second siege line it was necessary to reduce 2 British redoubts, Nos. 9 and 10. On the night of October 14 this was accomplished by 400 Americans who took No. 10 redoubt in 10 minutes, and the French who took No. 9 redoubt. The action on this night was called the most dramatic and heroic movement in the siege. On the nights of October 15 and 16 Cornwallis made 2 unsuccessful attempts to break the allied lines and as a result called a council with his officers and requested a parley with the allied commander on October 17.

THE SURRENDER, OCTOBER 19, 1781

On October 17, after 8 days of devastating artillery fire, the British flag of truce was raised. There followed a cessation of hostilities during which two officers from each side met to settle the terms of surrender.

On the morning of October 19, Washington sent his Articles of Capitulation to Cornwallis, who signed them with Captain Symonds, commander of the British naval

units. Washington and Rochambeau appear to have signed in captured redoubt No. 10.

At noon two British redoubts were occupied by an American and a French unit.

At 2 p. m., the British Army, led by Brigadier General O'Hara (Cornwallis was sick) marched out from Yorktown to the tune of an old British march entitled "The World Turned Upside Down." Major General Lincoln accepted his sword—the token of surrender—and then returned it. Following this the British Army marched down Surrender Road between columns of allied troops to a large level field where the formal surrender took place.

Thus the siege of Yorktown ended. The climax of the Revolution had passed and America could look forward to a free and independent status. A new nation was born.

A Report to the People of Berks County

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, as has been my custom in years past, I take this opportunity of reporting to my constituents, the people of Berks County, the 14th Congressional District of Pennsylvania.

PURPOSE OF REPORT

This report deals with the work and the record of the 1st session of the 85th Congress. It summarizes my activities during the past year and the position I have taken on important issues in the Congress.

During the session, I have made weekly radio reports and have written a report for the weekly newspapers of Berks County. This printed report supplements the weekly radio broadcasts and news columns so that all citizens of Berks County may have the opportunity to know my legislative record and the record of the Congress as a whole.

REPRESENTATION

As a Representative of the people of Berks County in the Congress, I have made every effort to serve to the best of my ability. The views of every person who has written me on legislative issues have been afforded full consideration. Individual problems of constituents have been promptly handled. Every possible effort has been made to be of assistance to those persons who have come to my office for information, advice, or service. Again in the 1st session of the 85th Congress, I was present for every rollcall vote.

READING OFFICE

My office in the Reading Post Office Building has been open 6 days a week for the convenience of constituents who have problems or who wish to present their views and suggestions. I have spent every other weekend in Reading during the session and have fulfilled numerous appointments with constituents who called at my office.

WASHINGTON VISITS

An increased number of school groups, religious organizations, women's clubs, Boy and Girl Scout groups have come to Washington this year and visited me in the Capitol. With the help of Mrs. Rhodes, I have tried to make these visits interesting, educational, and enjoyable.

COMMITTEE WORK

During the 85th Congress I have served on the Interstate and Foreign Commerce Committee and the Committee on House Administration. The Commerce Committee has wide jurisdiction over matters pertaining to transportation, communications, health, science, and research. I am also a member of the Health and Science Subcommittee. Last February I served as chairman of a special committee which was named to represent the Commerce Committee at a meeting of deans and directors of schools of public health, held in San Juan, P. R.

My views on pending legislation were presented to other committees of the House and Senate on such subjects as railroad retirement, postal rates, assistance to the handicapped, civil-service retirement, postal pay, and tax exemption on nonprofit community swimming pool associations.

BILLS INTRODUCED

I have sponsored legislation to raise income-tax exemptions to $800, establish a Bureau of Older Persons, reduce the retirement age under social security, establish an agency to assist the handicapped, reduce small-business tax rates, stabilize employment in the textile industry, and to increase railroad retirement benefits. Other bills I have introduced would curb arbitrary cancellation of health, accident, and hospitalization insurance, prohibit destruction of the National Grange headquarters, grant tax deductions to handicapped persons, provide grants to schools of public health, liberalize public-assistance provisions of the Social Security Act, and limit subsidies paid to second-class mail users.

CONGRESSIONAL DEBATE

I have taken part in important debates on the floor of the House on such issues as postal rates, public-health funds, pension increases for Spanish-American War widows, exemption of nonprofit swimming-pool groups from Federal excise taxes, and providing additional wheat-acreage allotments for feed grain use on the farm.

CONSERVATIVE COALITION

A coalition of Republicans and southern Democrats was again a dominant force in the 85th Congress. This coalition succeeded in blocking or weakening many important measures which minority liberal Members of Congress considered essential.

LEGISLATIVE RECORD OF THE 85TH CONGRESS

The 85th Congress took an important step forward in enacting civil-rights legislation but failed to act favorably or to act at all on other important issues necessary to meet successfully the challenge of automation, abundance, and surpluses.

The average citizen did not properly share in the prosperity created by increased production, scientific and technical advances. Those of us who wanted to channel some of this prosperity to aged, retired, disabled, and handicapped citizens were in a minority.

Listed below are some of the important proposals which came before the 85th Congress.

COST OF LIVING—HARD MONEY POLICIES

The cost of living has gone up each month during the past year to a new record high. Inflation is particularly hard on retired persons and others living on fixed incomes since it reduces the amount of goods and services which they can afford. The American dollar today is worth less than ever before in our history.

The administration's monetary and fiscal policies have not stopped inflation. Many Members of Congress and recognized economic experts have been critical of these policies as the cause of the inflationary trend. The national debt has risen by $8 billion during the past 4 years; the Federal budget is the largest single peace time budget in our history. Interest rates which the Government must pay are now at their highest level since the depression years of the 1930's. In Federal taxes alone this costs the people an additional billion dollars a year. This has also raised interest rates on private borrowing to a similar record high, making it difficult for small businesses to expand, increasing costs of home-buying, automobile financing, and other consumer time-purchasing transactions. It has also increased costs of local governments in the issuance of bonds to finance new schools, streets, sewers, and other public improvements.

TAX REDUCTION

No tax cut was considered in the 1st session. But next January the House Ways and Means Committee will begin consideration of ways to reduce income taxes. Among the plans to be considered is my proposal to increase the exemption for taxpayers and dependents from $600 to $800. This would give substantial tax savings to the great majority of American taxpayers in the low and middle income brackets. It would put additional purchasing power into the hands of people and will contribute substantially to business activity and economic progress.

RETIREMENT LEGISLATION

Bills to increase benefits under the Railroad Retirement and Civil Service Retirement Acts made progress this year, but did not receive final approval before adjournment. Hearings were held on both measures, at which time I presented statements in support of an increase in benefits needed to offset the rising cost of living. There is a strong possibility that this legislation, which has my support, will be favorably acted on early in the next session.

SOCIAL SECURITY

Congress did nothing in this important field, despite the fact that rising costs cut the living level of retired persons receiving social-security benefits. At the end of 1956 more than 9 million persons in the United States were receiving old-age and survivors' insurance benefits. Over 18,000 of these persons reside in Berks County.

More than 73 million American wage earners are now covered. If death

uld take the family breadwinner, the thers and children of 9 out of 10 fam- s would be eligible for survivors' efits.

nder amendments enacted last year, lly disabled individuals are now eligi- for full benefits at age 50. However, d interpretation of the new disability visions has denied many thousands of ericans of these benefits.

Much remains to be done to make the al-security program fully adequate in eting the needs of our retired and dis- ed folks. The rising cost of living kes an increase in the benefits an ent necessity. The retirement age both men and women should be low- d to age 62 and 60, respectively. Dis- ity benefits should be paid immedi- y upon disability, regardless of age. n sponsoring legislation to make these provements in the law.

Congress enacted a law to extend for ther year the time limits for dis- ed persons to file applications for dis- ity freeze to preserve their rights to -age, survivors', and disability insur- e.

LIBERAL DEMOCRATIC PROGRAM

joined a group of northern and west- liberal Democratic Members of Con- ss in offering a positive legislative gram to meet the needs and chal- ges of our modern civilization.

Our program calls for tax reform, im- ved social security, aid to small busi- s, strengthening of the antitrust laws, hool construction, civil rights, im- ved utilization and conservation of natural resources, a positive foreign licy, an adequate and modern na- nal defense, expanded health and re- rch, public-works projects, and an proved and realistic farm program.

All of these objectives cannot be hieved in one session or in one Con- ss. They are the types of programs ich we feel are necessary to the long- ge welfare of the American people. ogress on some of these measures has n made during the past session. On hers, we have received setbacks. Con- ering the conservative makeup of the sent Congress, I feel that our progress s been encouraging.

We will continue to work for this type liberal and progressive program in e months and years ahead.

FARM LEGISLATION

Many farmers are being caught in the ueeze between rising living costs and clining farm income. They have not ared well in the Nation's increased oduction and wealth.

A bill which will benefit Berks farmers d my active support. It permits farm- s to grow up to 30 acres of wheat for ed, without being subject to penalty der the acreage-allotment program. e new law was backed by Berks farm ganizations.

Congress increased funds for the farm rplus disposal program, under which trade our farm commodities for for- n currencies. These, in turn, are used purchase strategic materials and to ster their economies.

A limitation of $3,000 was placed on l-bank acreage reserve payments, ile conservation reserve payments were limited to $5,000 per farm unit. These limitations were enacted as a result of abuses of soil-bank payments among large corporation farms in the West. One such farm received $209,000 for not planting crops last year. The new law corrects this unwarranted situation.

CIVIL RIGHTS

For the first time in 82 years a civil-rights bill has been passed by Congress. It is a compromise measure, designed to protect the voting rights of all citizens. It also establishes a Commission on Civil Rights and a Civil Rights Section in the Justice Department. The measure is an important step forward on civil rights; it received my full support.

VETERANS

Legislation was enacted to increase by an average of 10 percent the rates of compensation for veterans suffering service-connected disabilities. Allowances for dependents of these veterans were also increased. This meritorious bill had my full support.

I spoke and voted for a House-passed bill to increase the pensions of Spanish-American War widows to $75 a month; the Senate failed to act on the measure this year. No action has yet been taken on World War I widows' pension legislation. Legislation to incorporate the Veterans of World War I made progress in the Judiciary Committee and is expected to come before the House next session.

An amendment to the Social Security Act permits disabled veterans to draw both service-connected disability compensation from the VA and social-security disability benefits without any reduction.

CONSERVATION

Conservationists in Congress turned back a powerful attack on the water pollution control program. Under the guise of economy, funds to provide grants to States to build sewage-treatment plants were first eliminated from the appropriation bill. They were finally restored on a rollcall vote. I voted for the grants, which are needed to control pollution to safeguard the public health and prevent destruction of fish in our rivers and streams.

GOVERNMENT FISCAL PROBE

The Senate Finance Committee began an extensive investigation of the administration's monetary and fiscal policies, including such problems as hard money, high interest rates, inflation, the public debt, and the budget.

It has already been disclosed that these policies had benefited big speculators and financial interests and seriously hurt small business, farmers, retired folks, professional and industrial workers.

POSTAL RATE INCREASE

The House passed the bill increasing first-class postal rates from 3 to 4 cents and making increases in second- and third-class mail. My amendment to limit publisher's subsidies to $100,000 for any one year was adopted by the House. I feel that it is unfair to require the average citizen to pay more for his letter postage unless subsidies to big magazine publishers, which now amount to as much as $9½ million a year for one publisher, are substantially reduced.

This legislation is now in the Senate committee where it will be considered next session.

NATURAL GAS

A bill to exempt producers of natural gas from effective Federal regulation is again before the Congress. Vetoed last year after oil lobbyists attempted to bribe a Senator, the bill was again pushed through committee. Final action was put off until next session. I am opposed to the bill, because it is special-interest legislation which would cost the American gas-consuming public hundreds of millions of dollars in higher gas rates.

HOUSING

Increased grants for slum clearance and urban-renewal programs were authorized by Congress in the 1957 Housing Act. The Walnut Street redevelopment and parking project in Reading was approved by Federal housing officials during the year.

Downpayment requirements on FHA-insured homes were lowered after much administration reluctance. FHA interest rates were raised again, costing home buyers many additional millions of dollars a year.

The new housing measure failed to provide for special housing for elderly folks, a program for which I have been working.

LABOR-MANAGEMENT RACKETEERING PROBE

A special Senate subcommittee has conducted lengthy hearings on improper activities in the labor-management field. The AFL–CIO has moved to expel labor leaders whose actions have been contrary to the best interests of their membership. The hearings will continue in the next session.

Legislation to require more strict regulation of union welfare funds has been considered by various congressional committees but no final action was taken in the first session.

SCHOOL CONSTRUCTION

Legislation to provide Federal assistance to States in building school classrooms to meet critical shortages was blocked in the House by a coalition of Republicans and southern Democrats by a narrow margin of 5 votes.

Although the President said he favored school-construction legislation, he gave it little positive support in the crucial stages. Three of his top four House leaders voted to kill the school bill, along with 108 other Republicans; I joined 125 other Democrats in voting for the school bill. The fate of school-construction legislation in the next session is now in doubt.

ATOMIC ENERGY AND POWER DEVELOPMENT

Congress provided funds for the construction of three atomic-power reactors by the Atomic Energy Commission.

The Niagara River project was approved by Congress authorizing the construction of a hydroelectric power project by the New York State Power Authority. Power generated will be divided between private utilities and municipally owned public utilities and coopera-

tives. Pennsylvania and other nearby States will share 10 percent of the power.

NONPROFIT SWIMMING POOLS

My bill to exempt dues and fees paid to nonprofit community swimming pools from the 20-percent Federal excise tax has passed the House as part of a broad excise-tax-revision measure. These pools serve a useful purpose in the community in providing healthy recreational facilities for children and young people.

Repeal of the tax would stimulate the growth of these nonprofit pool organizations throughout the country. The Senate is expected to act on my proposal in the next session.

DISTRESSED LABOR AREAS

Senate hearings were held on legislation to provide assistance to areas of our country suffering from chronic unemployment and severe economic distress. No action was taken in the House committee. I strongly favor this legislation and will continue to work for its enactment in the next session.

HEALTH AND HANDICAPPED

Funds for medical research were increased by the 85th Congress, assuring a continuation of the fight against heart disease, cancer, mental illness and other major diseases. Vocational rehabilitation programs to assist mentally retarded children, the blind, deaf, and other handicapped individuals were also extended. Legislation to assist in the training of job placement personnel to assist handicapped persons made progress in committee.

As a member of the Health and Science Subcommittee, I introduced and worked for legislation to improve our public health facilities and to help the handicapped achieve a happier and more productive way of life.

Our subcommittee held hearings on the potential dangers to the public from the use of untested chemical additives in food and other products. Legislation to require more extensive testing before these additives are approved by the Food and Drug Administration is pending before our group.

FOREIGN POLICY

Congress approved President Eisenhower's request for a Middle Eastern doctrine to discourage further Communist aggression. Some $200 million in military and economic aid funds for Middle Eastern countries was approved by Congress. Yet the Soviet threat continues to grow in that part of the world.

Congress ratified United States membership in the International Atomic Energy Agency to promote the peaceful uses of atomic energy for the good of mankind.

The mutual-security program was extended by Congress after reducing the administration's original fund request. A long-term economic loan program was authorized, along with funds for military aid, direct economic aid, and technical assistance programs.

In disarmament talks between the United States, Britain, France, and Russia, efforts have been made to limit the production of nuclear and hydrogen weapons. No tangible results of disarmament conferences have yet been forthcoming.

GOVERNMENT FISCAL POLICIES

President Eisenhower submitted to Congress the largest peacetime budget in our history. Congress cut the budget by over $5 billion, while, in the meantime, the administration instructed all Government agencies to hold fiscal 1958 expenditures to the fiscal 1957 levels.

Administration leaders themselves differed sharply over the size and necessity of recommended programs. I voted for reductions of the budget in areas where it was clear that the public welfare was not endangered. I opposed drastic cuts in the fields of public health, research, education, and other programs essential to the well-being of our people.

DEFENSE PROCUREMENT POLICIES

Procurement policies of the Defense Department have continued to favor large companies over their small-business competitors. Over 90 percent of defense contracts have been awarded without competitive bidding, contrary to sound public policy. The small-business share of defense prime contracts has now dropped to a record low.

MONTHLY NEWSLETTER

During the next session it is my plan to issue a newsletter summarizing congressional activity each month. If you would be interested in receiving this newsletter, write your name and address on a post card and mail it to me at my office, Room 1640, New House Office Building, Washington 25, D. C.

AVAILABLE FOR MEETINGS

In a brief report such as this it is not possible to discuss in detail the issues before Congress. I welcome the opportunity to appear before any group in Berks County to speak and answer questions on the work of this session. Contact my Reading office with any such requests or on any other matter in which you may be interested.

Nationalized Tin Properties in Bolivia

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me with respect to the nationalized tin properties in Bolivia.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GREEN

Mr. President, for some time I have been concerned with respect to the situation of the nationalized tin properties in Bolivia. At this particular time I would like to call to the attention of my Senate colleagues an exchange of correspondence between myself and the Department of State with respect to our Government's policy toward the present Government of Bolivia:

JUNE 6, 19

The SECRETARY OF STATE,
Department of State,
Washington, D. C.

DEAR MR. SECRETARY: With reference to previous communication of March 19 subsequent replies from the Department State on March 19 and April 3, I am wri to request further information in regar the situation of the nationalized tin p erties in Bolivia.

I am particularly interested in knowin the Department has available any infor tion as to when the Bolivian Government dispose of the mining properties which confiscated and nationalized almost 5 y ago. As you know, one of the mining c panies whose mines were nationalized American firm with many American st holders. Over the years, more and m Americans have invested in the develop of industry abroad, particularly in L America. Therefore, I know you will a that this matter has special significance cause the very foundations of our econo free enterprise are endangered when vate property is confiscated and not comp sated for fairly and properly.

There have been many press reports f Bolivia regarding this problem, but the c rent facts are unmistakable—namely, t the Bolivians have done little to compen for the property they have confiscated. cording to these press reports, the Boliv have studiously avoided an agreement s the value of these nationalized proper even though they have discussed the ma many times at meetings with interes parties.

I am not writing to discuss whether Bolivians were wise in confiscating t properties or whether they have been succ ful in the operation of them. It has b reported that the mining properties h been dissipated and that there is a very s ous drop in production. Those factors h been reported by various United States ag cies of the Government and also by the livian Government. It is believed, howe that, if the Bolivians have failed in operation of these properties, there is no reason for the owners and stockholders confiscated properties to suffer financially

As the United States has extended ass ance to Bolivia in the form of loans, it d seem that the American taxpayer who stockholder in companies located in t country should be entitled to a fair accou ing of the operation and value of these pr erties.

I trust that you can favor me wit complete, detailed report on the matter question.

Yours sincerely,

THEODORE FRANCIS GREE

DEPARTMENT OF STATE,
Washington, D. C., June 21, 195

Hon. THEODORE FRANCIS GREEN,
Chairman, Committee on Foreign Rela tions, United States Senate.

DEAR SENATOR GREEN: I refer to your le of June 6, 1957, in which you requested f ther information in regard to the situati of the nationalized tin properties in Boli

The background of this situation and cent significant developments, as well as views of the Department of State, have already been covered in my letter to Sena George of May 25, 1956, and in my letter you of April 3, 1957.

Since I last wrote you, the Bolivian G ernment has continued to make the peri payments to the former owners of the tionalized mines. These payments are ba on percentages of the sales proceeds of m erals extracted from the property. Payme are currently being made to the former m owners in accordance with the higher v schedule which was agreed upon in Decem

last year. According to the latest informa-
n available to the Department, the total
payments made to Patino Mines & Enter-
ses Consolidated, Inc., from 1953 through
rch 31, 1957, was $1,624,043. The com-
ed total of payments to all the former
ners of expropriated mining properties is
derstood to be slightly over $12 million.
tino Mines & Enterprises Consolidated,
., is the only one of the mining companies
olved in which it is understood there is
American ownership. Unfortunately, the
mission composed of representatives of
Bolivian Government and of the Patino
up which was organized for the purpose of
ablishing the bases of a final settlement
s made little progress since the first meet-
in March 1957.

The Department heartily concurs in your
w that free enterprise is in danger when
vate property is confiscated and not com-
sated for, fairly and properly. The De-
rtment considers that when United States
izens are deprived of their properties in
other country by nationalization or by
her governmental acts they should have
mpt, adequate, and effective compensa-
n for that property in conformity with
ternational law. The Department and our
bassy at La Paz have continued to urge
on the Government of Bolivia an early
olution of this problem.

United States economic assistance to Bo-
ia was initiated at a time when there was
imminent threat of economic and political
lapse in Bolivia which could adversely
ect our interest in this hemisphere. The
we have extended has been designed to
rt this collapse and to make possible a
versified economy stable enough to achieve
elf-supporting status. At the end of 1956,
e Government of Bolivia, at our urging and
th our technical and financial support,
barked upon an economic stabilization
gram designed to arrest the extreme in-
tion which had existed and to create con-
ions conducive to orderly development of
e Bolivian economy. Although there are
ll many problems to be overcome, much
ogress toward stabilization has been made.
livia's ability to effect a final settlement
th the former owners of the nationalized
ining properties will depend in good part
further progress of the stabilization pro-
am.

I can assure you that the need for prompt
d adequate compensation for the Ameri-
n stockholders in the company whose
ining properties were nationalized by the
vernment of Bolivia is uppermost in our
nds, and the Department is continuing to
rt its efforts toward that end.

Sincerely yours,

ROBERT C. HILL,
Assistant Secretary
(For the Secretary of State).

The reasons why I have made this inquiry
garding Bolivia are based upon growing
ubts and concern over the policy which
have adopted for dealing with the con-
uing Bolivian crisis. My study of the
uation convinces me that the United
ates has acted toward Bolivia as a good
ighbor must: First, by nonintervention
the conduct or policy of the Bolivian Gov-
ment and by respecting that Govern-
ent's self-determination. This is impor-
t because the present national revolu-
nary movement Government of Bolivia has
opted some practices which may be con-
ered socialistic and which are alien to our
ncept of government.

Secondly, when Bolivia indicated that it
eded massive help, the United States re-
onded to this appeal in the most humani-
rian manner. Since 1953 we have expended
re than $67 million in loans, grants, and
her types of direct aid. My committee and
e Senate have been prompt in responding
all of the President's requests for help for Bolivia, and we have passed the legislation which has made this help possible.

Now, let us view this question conversely, or from the viewpoint of whether or not Bolivia has been faithful in discharging its obligations to the United States.

On the basis of the volume and intensity of the criticism which has been leveled at our Government's policy in Bolivia, and which has come from many responsible, respectable sources in the United States and South America, I have become increasingly concerned as to whether the Bolivian Government is justifying our faith in its willingness to satisfy its obligations.

The most important reason for this concern is the fact that Bolivia, which nationalized its large privately owned mining properties in 1952, has thus far not fulfilled its obligation to compensate fully and justly the owners of these properties.

In less tense and troublesome times, this failure of a nation in a democratic bloc to meet an obligation to compensate after it has nationalized properties might be considered a minor problem. But, we are living in perhaps the most revolutionary period in recent history. One of the most disturbing phenomena of our times is the spread of the type of nationalism which believes that the nationalization of private property and the adoption of Socialist economic policy are the basic solutions for all economic ills.

The political philosophy of the United States is firmly rooted in the concept that the individual is entitled to enjoy and hold private property. We, therefore, cannot be indifferent to the growth of this problem.

I believe that the United States through its Government is obliged to take a positive stand on this matter of Bolivia's seizure of its large mines. There is no question that the world is looking to us for guidance in these troubled times and that socialistically inclined politicians in many countries will interpret the actions of the United States for their own purposes if we fail to take a firm stand.

The Department of State has established as a principle that an acceptable compensation is only that compensation which is prompt, adequate, and effective.

The President has established also as a principle that the Government of the United States requires respect for international obligations in all questions of nationalization, whether the financial interests involved are those of our friends or those only of American nationals.

With regard to Bolivia, I believe that it has now been clearly established that the action of the present government has not led to prompt, adequate, and effective compensation, nor has it fulfilled its international obligations with respect to American investors.

As time goes on, and as the United States continues to expend large sums to help the Bolivian Governmen to support itself, we have been identified more and more openly with the policy of the present Government of Bolivia. This is most unfortunate, because it has led to misinterpretation of United States Government policy with respect to nationalization. The time has come, it seems to me, for clarification of this anomalous situation.

We owe this, not merely to the people of the United States who support Bolivia as taxpayers, but also to our many friends in countries in the Western Hemisphere, in Europe and Asia who look to the United States for clear and intelligent guidance in these troubled times.

When Congress reconvenes I shall propose that my committee look into all the facts with a view to making sound recommendations for the future conduct of our foreign policy toward the Government of Bolivia.

Montana and the REA's

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. MANSFIELD. Mr. President, the farms and rural communities of America today enjoy the use of the same modern equipment and conveniences that are enjoyed by urban areas. These include the many necessities and luxuries operated by electric current. In the past 20 years we have witnessed a vast transformation in the mode of rural living due largely to electricity—electricity brought to farms and communities at reasonable rates.

This could have been done only with the cooperation of the Federal Government. The job of bringing electricity to the isolated areas of this Nation has been a tremendous one and the accomplishments have been great. I commend the many rural-electric cooperatives who in cooperation with the Rural Electrification Administration have made all of this possible.

Farm electrification advanced very slowly in the United States during the period after 1882, when the first central generating system went into service, until 1935 when the Rural Electrification Administration was created. In 1944 Congress extended for an indefinite period of time the life of this lending agency.

It is quite important that we distinguish between the REA and the individual rural-electric cooperative. The REA is an arm of the Federal Government empowered to make loans to qualified borrowers, with preference to nonprofit and cooperative organizations and to public bodies. The REA is not in the power business. It does not operate rural-electric facilities and makes no grants or subsidies. Its loans are repaid from the operating revenues of the locally owned, locally managed cooperative, the other partner in this program of rural electrification. The REA serves principally as a banker to the local system and contributes technical advice. The rural cooperative constructs the power lines and other electric facilities to serve persons in rural areas who are without central-station electric service. The loans the cooperatives receive bear a 2-percent interest rate and are repaid over a maximum period of 35 years.

Few farmers were connected to central-station power prior to World War I. The early twenties saw a short-lived spurt in which the progress made in electrical engineering was reflected by a small increase in the number of farms served. However, only 10.9 percent of all farms in the United States were receiving central-station electric service by 1935. Few power lines had been built beyond the immediate vicinities of cities and towns.

Farmers and farm organizations, chafing at the slow rate of progress, increased their demands for Government action in the field of rural electrification.

The result was the establishment of REA, with an action program designed primarily to make electric service available to those farm people who were without electricity.

REA estimated as of June 30, 1956, that approximately 95 percent of the Nation's farms were electrified.

Many of the remaining unelectrified farms are situated in isolated areas, or in areas of relatively low farm income. Consequently, the most difficult part of the rural electrification job remains to be completed. However, the REA program has succeeded in establishing a pattern which eventually can provide virtually every unserved farm in the country with electric service.

Membership in rural electric cooperatives is not confined to farmers. It is open to all people in a rural area who can be reached and who want electric service. More than three-fourths of all consumers on REA-financed cooperative lines are farms. But also included are many thousands of rural nonfarm dwellings, schools, churches, stores, community buildings, and similar facilities. REA borrowers also serve thousands of rural industries and other commercial enterprises. Many of these rural industries themselves are operating on a cooperative plan.

Rural electric cooperatives have proved the most effective instrument for carrying out the REA program because of their advantages as a method of making reasonable cost electric service available to farmers in rural areas. These advantages include:

First, REA-financed cooperatives operate on a nonprofit basis. This enables them to provide electric service at cost to their members.

Second, directors of REA-financed cooperatives are elected because of their known interest in making electric service available to rural people at reasonable rates. They serve without compensation and keep operating expense at the lowest possible level consistent with good service.

Third, members of REA-financed cooperatives also are interested in electric service at reasonable cost. For example, they help reduce operating expense by voluntarily reporting potential causes of service interruptions such as tree limbs touching the lines. Most of them read their own meters, and many make out their own bills.

Fourth, previous experience of farmers with other types of cooperatives helps them to organize and operate rural electric cooperatives on a sound basis with a minimum of effort and expense.

Lines constructed by REA borrowers are built to serve entire areas, including less densely settled sections as well as those of greater population. This is known as area coverage. The test is no longer whether an individual line or section will be self-supporting, but whether the entire system as a whole is feasible. This policy has become increasingly important as the rural electrification job has progressed. Only through area coverage can electric service be extended to many of the more isolated farms, and to others which are remotely situated in pocketed areas far removed from any established source of power.

In every region in the United States rural electric cooperatives have demonstrated that farm electrification, far from constituting an additional cash drain on low-farm incomes, actually brings about a higher real-farm income and better farm living. It brings more business into rural communities. It encourages new local enterprises which come about when low-cost power is available. It stimulates private business, both locally and nationally. Surveys indicate that for every dollar invested in rural power facilities the farmer invests an additional $4.50 in wiring, plumbing, and electrical appliances.

The use of electric power in farm production and processing is constantly expanding. To date about 400 farm uses for electricity have been reported. Electric power on the farm is an economic necessity which can pay its way with handsome profits for the farmer. Guidance is given consumers on REA-financed lines as to which uses are the most efficient and the most profitable in these times of power shortages.

In the State of Montana, at the time REA was established in 1935, only 2,768 farms, or 5.5 percent, were receiving central station electric service. REA estimated as of June 30, 1956, that 28,450 farms, or 86.1 percent of all farms in the State, were served. An estimated 4,600 farms in the State still were without service.

The first REA loan in Montana was approved in May 1936, and the first REA-financed line placed in operation on December 5, 1937, by the Lower Yellowstone Rural Electric Association at Sidney, Mont.

As of July 1, 1957, REA had approved $56,828,109 in loans in the State to 25 borrowers, all of them cooperatives. The loans will enable these borrowers to finance the construction of 28,774 miles of line and other rural electric facilities to serve 42,938 rural consumers. Most of these facilities already are in operation and additional lines are being built.

As of July 1, 1957, REA had advanced $45,915,174 as loans in Montana, and the State's borrowers were operating 27,554 miles of line serving 40,322 farms and other rural consumers.

The average monthly consumption on REA-financed lines in this State increased from 238 kilowatt-hours per farm in 1949 to 501 kilowatt-hours in 1956.

This increase reflects greater use of electrical equipment to save time and labor in performing farm and household tasks to help bring about a more comfortable rural living.

REA's latest debt-service summary, covering all transactions to July 1, 1957, shows that the Montana borrowers have paid $3,854,122 interest on their Government loans, and repaid $5,855,291 of the principal on their Government loans. In addition, they had paid $3,128,118 ahead of schedule—for a total repayment record of $12,837,531

No payments are overdue.

This is a great record for a great pro
gram in a great State. It is my hop
that the day is not too far distant whe
every farm in Montana is electrified.

If the rural areas of Montana are
continue to enjoy the benefits of electri
power purchased at reasonable rate
there are several things which we mus
do:

First, we must be assured of an ade
quate supply of cheap electric powe
This is the basis of the entire program
We must fight for equal rights in th
purchase of wholesale power from suc
great projects as Hungry Horse, Canyo
Ferry and Fort Peck. Public power an
private power development must kee
pace with one another.

Second, the preservation of the prefer
ence clause as it was written into th
Reclamation Act of 1906 is essential t
the continued success of the program
The preference clause is not discrimina
tory in any sense; to the contrary i
injects an element of competition in th
business of selling electricity.

It is essential that each electric coop
erative in Montana and the Natio
maintain control of its own electric busi
ness. Those of you here in Montana
have worked hard to enjoy the benefit
of electric service and you must mak
sure that it is not taken away.

During the recent session of Congres
the one word which would summarize it
activities would be "economy." Th
most dominant issue of the session wa
inflation. One way is not to increas
rates. Higher interest rates help onl
the bankers. Rates have gone up o
various Government loans and there i
going to be a concerted effort to doubl
the REA interest rate in the next sessio
of Congress.

The REA program in Montana is pay
ing off with adequate and dependabl
service, with an orderly and economica
construction pattern. We want to con
tinue this pattern of progress. In
creased interest rates will place an ob
struction in your way. You can b
assured that the Montana congressiona
delegation will act in the interests o
Montana's rural electric cooperatives.

It was a distinct pleasure to work wit
Senator JAMES E. MURRAY, Congressmen
LEE METCALF and LEROY ANDERSON. We
worked together—held periodic confer
ences—in connection with all matter
affecting Montana's welfare and endeav
ored at all times to work as a unit in
furthering the development and bes
interests of our State.

Mr. President, I ask unanimous con
sent to have printed in the Appendix o
the RECORD a tabulation of each Mon
tana electric cooperative, their loans, re
payments, the number of consumer
served, and the counties in Montana
served by each. The time covered i
from 1953 to date. I use this period t
include the term I have served as a
United States Senator from Montana.

There being no objection, the tabula
tions were ordered to be printed in th
RECORD, as follows:

Borrower	Amount of gross loans, fiscal years—						Repayments						Consumers served as of June 30					Location of facilities by counties
	1953	1954	1955	1956	1947	Total	1953	1954	1955	1956	1957	Total	1953	1954	1955	1956	1957	
Ravalli County Electric Cooperative, Inc., Corvallis, Mont.	$195,000					$195,000	$17,572	$17,572	$18,091	$24,299	$28,951	$106,485	1,005	942	978	974	975	Ravalli.
Sun River Electric Cooperative, Inc., Fairfield, Mont.			$415,000			415,000	77,261	83,958	254,012	91,838	94,706	601,775	2,293	2,334	2,337	2,374	2,395	Cascade, Chouteau, Judith Basin, Lewis and Clark, Pondera, Teton, Toole.
Lower Yellowstone Rural Electric Association, Inc., Sidney, Mont.	385,000					385,000	29,967	85,500	51,624	51,623	67,689	286,403	1,397	1,506	1,512	1,569	1,575	Dawson, Richland, Roosevelt in Montana; McKenzie in North Dakota.

Accomplishments of the House Committee on Interior and Insular Affairs, During 1st Session, 85th Congress

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. ENGLE. Mr. Speaker, the House Committee on Interior and Insular Affairs, which I have again been honored to serve as chairman, has established during the 1st session of the 85th Congress just ended what I believe to be an outstanding record of performance of its legislative responsibilities, and I take this opportunity to summarize for my colleagues the major accomplishments of the committee. The achievements of the committee were made possible through the cooperation and diligence of all members of the committee. I especially want to recognize the energy and leadership of the subcommittee chairmen and the continuing cooperation of Dr. MILLER, the ranking minority member. I am particularly pleased, too, with the work of the committee staff which has again met a high standard of performance in committee activities and in service to members.

First, I wish to comment briefly on the statistical aspects of the committee's functions; and, second, I want to comment on the legislative activity of the committee, breaking down the legislation under the five categories reflecting the basic jurisdiction of the subcommittees.

STATISTICAL ASPECTS WITH RESPECT TO COMMITTEE'S WORKLOAD AND PERFORMANCE

During the 141 legislative days of the 1st session of the 85th Congress, the Committee on Interior and Insular Affairs of the House convened a total of 157 separate meetings—125 subcommittee meetings and 32 full committee meetings. Of the 572 House and Senate bills, resolutions, joint resolutions, and concurrent resolutions referred to the committee, 257 were disposed of through reporting or tabling. A total of 78 bills or resolutions were reported to the House by the committee, of which 54 were enacted into law, 2 concurrent resolutions were approved, 3 bills are pending before conference committees, 12 have passed the House and are pending in the Senate, and 7 are pending in the Rules Committee or in the House.

With respect to subcommittee responsibilities, 15 of the 78 bills and resolutions reported by the committee fall into the category of irrigation and reclamation, 18 in Territories and insular affairs, 3 in mineral resources, 25 in public lands, and 17 in Indian affairs. Of the 315 bills pending before the committee at the end of the session, 23 are Senate-passed bills.

LEGISLATIVE ACTIVITY OF THE COMMITTEE

The Interior and Insular Affairs Committee is responsible for legislative measures, first, providing for maximum development, utilization, disposition, management, and conservation of the natural resources of the United States, its Territories and possessions; second, involving the government and the administration of our Territories and possessions; third, affecting the Indians, Indian tribes, trust lands, and claims of Indians of the United States and Alaska, including Alaska natives. This legislative responsibility is divided among five standing subcommittees and the summary of legislative activity of the committee which follows reflects the basic jurisdiction of such subcommittees.

I. IRRIGATION AND RECLAMATION

The Irrigation and Reclamation Subcommittee, chairmaned by Hon. WAYNE N. ASPINALL, of Colorado, has jurisdiction over all legislation relating to the Federal reclamation program and over other legislation relating to the development of the Nation's water resources. During the 1st session of the 85th Congress, 115 bills and resolutions were referred to the Irrigation and Reclamation Subcommittee, of which 15 were reported, 43 were tabled, and 57 remain as pending business of the subcommittee. Of the 15 reclamation bills reported by the committee, 12 were enacted into law. Of the 3 bills not enacted, 1 is pending in the Senate and 2 are pending in the House Rules Committee. The legislation enacted into law includes the authorization of 1 new reclamation project, 2 amendments to general reclamation law, 7 acts relating to specific irrigation districts or projects, and 2 acts relating to interstate compacts.

NEW PROJECT AUTHORIZED

The new reclamation project authorized—Public Law 85-152; S. 42; H. R. 2147, FISHER—is the San Angelo reclamation project in Texas. This is a $[illegible] million multiple-purpose project for irrigation, municipal and industrial water supply, flood control, the protection and enhancement of fish and wildlife, and recreation.

AMENDMENTS TO GENERAL RECLAMATION LAW

The two changes in general reclamation law are an amendment to the Small Reclamation Projects Act—Public Law 85-47; H. R. 2146, ENGLE—and an amendment to the Reclamation Project Act of 1939 relating to amendatory repayment contracts—Public Law 85-[illegible]; H. R. 5492, RUTHERFORD. Enactment of the amendment to the Small Reclamation Projects Act makes it possible for the much-needed small-projects program to get underway. The basic act was enacted in the 84th Congress but the President objected to certain language and the program had not been initiated by the administration. The amendment to the Reclamation Project Act of 1[illegible] continues through December 31, 19[illegible] the authorities given the Secretary of the Interior to enter into amendatory repayment contracts and, more important, makes it possible for the Secretary to continue to grant deferments of construction charges in special hardship cases.

SPECIFIC PROJECT LEGISLATION

Seven measures relating to specific irrigation districts or projects were enacted, including 2 relating to the Columbia Basin project, 3 relating to repayment contracts with irrigation districts, 1 relating to the East Bench unit of the Missouri Basin project, and 1 relating to the Shoshone reclamation project. The first act—Public Law 85-264; [illegible] 1482; H. R. 4802, MAGNUSON; H. R. 49[illegible]

MES—relating to the Columbia Basin ject amends the Columbia Basin ject Act by modifying the rigid own- ip restrictions, thereby bringing this ject more in line with other similar deral reclamation projects. It per- s delivery of water to ownerships of acres in the case of an individual or acres for a family. While modifying ownership limitation, this amend- nt does not change the Federal settle- nt program whereby only one farm t can be sold to an individual or ily. The second act—Public Law 240; S. 1574; H. R. 3389, HORAN—re- ing to the Columbia Basin project vides for disposal of certain Federal perty in the vicinity of Grand Coulee m and provides assistance in the ablishment of the town of Coulee Dam a municipality incorporated under the s of the State of Washington.

The acts approving amendatory re- yment contracts are Public Law 85- —H. R. 3071, MILLER of Nebraska— thorizing an amendatory repayment ntract with the Northport Irrigation strict, Nebraska, Public Law 85-160— R. 5679, MILLER of Nebraska—author- ng an amendment to an existing re- yment contract with the Mirage Flats igation District, Nebraska, and Pub- Law 85-283—S. 1996; H. R. 7254, OMSON of Wyoming—authorizing an endatory repayment contract with the sper-Alcova Irrigation District, Wyo- ng.

The act relating to the East Bench it of the Missouri River Basin project Public Law 85-112—S. 977; H. R. 4410, TCALF—which modifies the excess land ovisions of Federal reclamation law they apply to this unit. The act re- ing to the Shoshone project is Public w 85-33—House Joint Resolution 287, OMSON of Wyoming—which author- s temporary delivery of water to the art Mountain division of that project ile a long-term repayment contract is ing negotiated.

INTERSTATE COMPACTS

The two acts relating to interstate mpacts are Public Law 85-222—S. 31; H. R. 8465, ENGLE; H. R. 8472, ULL- N—which gives congressional consent the completed Klamath River com- ct, and Public Law 85-184—S. 1556; R. 5878, KRUEGER—which gives con- essional consent to the States of Mon- na, North Dakota, South Dakota, and yoming to negotiate and enter into a mpact with respect to the waters of e Little Missouri River.

LEGISLATION REPORTED BUT NOT ENACTED

In addition to the measures enacted, e committee reported a bill—H. R. 40, ENGLE—to supplement general rec- mation law by authorizing reimburse- nt for moving expenses to owners of nds acquired for public-works projects. is bill passed the House and is pending the Senate. The committee also re- rted two bills which are pending in the ouse Rules Committee. One of these— nate Joint Resolution 39; House Joint solution 179, RUTHERFORD—provides r salvaging additional water for irri- tion purposes and for salinity reduc- n in the Pecos River Basin in New exico and Texas. The other bill—H. R. 5309, KILGORE—would authorize the Secretary of the Interior to construct, rehabilitate, operate, and maintain the Mercedes rehabilitation project, Texas.

OTHER LEGISLATION CONSIDERED BY THE COMMITTEE

Other legislation considered by the committee but not finally acted upon includes the Hells Canyon, Fryingpan-Arkansas, Greater Wenatchee and Burns Creek reclamation projects.

II. TERRITORIAL AND INSULAR AFFAIRS

The Subcommittee on Territorial and Insular Affairs, chairmaned by Hon. LEO W. O'BRIEN, of New York, is responsible for legislation affecting Alaska, Hawaii, Guam, American Samoa, the Trust Territory of the Pacific Islands, Puerto Rico, and the Virgin Islands, and for exercising a continuing oversight of the administration of these areas by the Department of the Interior.

Of the 101 bills referred to the Subcommittee on Territorial and Insular Affairs, 18 were reported by the committee, 24 were tabled, and 59 remain as pending business before the subcommittee. Of the 18 reported, 10 were enacted into law, 6 are pending in the Senate, and 2 in the House.

STATEHOOD LEGISLATION

While statehood for neither Alaska nor Hawaii was approved in the first session, this legislation received major attention in the committee. Alaska statehood legislation—H. R. 7999, O'BRIEN of New York—was reported to the House following 18 days of hearings and is presently pending in the Rules Committee. Three days of hearings were completed on Hawaiian statehood legislation—H. R. 629, ENGLE; H. R. 848, O'BRIEN of New York; H. R. 1243, SAYLOR; H. R. 339, MACK of Washington; H. R. 8739, DELLAY; and H. R. 49, BURNS—but consideration was not completed and the bills remain as pending business in the subcommittee.

REVISION OF ORGANIC ACTS

As usual, a considerable portion of the subcommittee's time was taken up with legislation to revise the various organic acts. Legislation was enacted—Public Law 85-224; H. R. 8126, O'BRIEN of New York—which amends the Virgin Islands Organic Act with respect to the establishment of boards, authorities, or commissions. This act gives the electorate of the Virgin Islands the maximum degree of responsibility, home-rule authority, and self-government consistent with and equal to the demonstrated capacity and willingness of the persons affected.

The committee reported a bill—H. R. 8673, BURNS—which would delete language in the Hawaiian Organic Act requiring semiannual reports covering the executive proceedings of the Territory. Experience over the years has demonstrated that the semiannual reports serve no useful purpose. This bill is pending in the Senate. The committee also reported a bill—H. R. 4215, O'BRIEN of New York—which would amend the Organic Act of Guam by increasing the salary of the district judge. This bill is pending in the House.

ALASKA DEVELOPMENT MEASURES

Consonant with its desire to accelerate resource and economic development of Alaska, the committee approved 12 measures to achieve that purpose. Of these 12 bills, 7 were enacted into law. One act—Public Law 85-11; H. R. 4939, MILLER of Nebraska—conveys a 10-acre tidal flat area, including improvements, to the Territory of Alaska. Two measures relate to the area along the Chilkat River—one of these was enacted—Public Law 85-271; H. R. 6562, BARTLETT. This act enlarges the Klukwan Reservation for the use of the Indians residing thereon, including lease for mining purposes. The other measure—H. R. 6785, BARTLETT—amends existing statutes by permitting mining for gold and other precious minerals in certain parts of the Chilkat River. Another measure enacted—Public Law 85-303; H. R. 6760, BARTLETT—grants the Territory of Alaska title to certain lands beneath tidal waters in or near Juneau, Ketchikan, Cordova, and Valdez.

The committee reported two bills relating to Alaska financial matters, one of which was enacted. The measure enacted—Public Law 85-88; H. R. 3477, BARTLETT—increases the Territory's share of mineral royalties and places the responsibility for the disposition thereof in the Alaska Legislature. The other measure—H. R. 4183, BARTLETT—amends existing municipal corporation or public-utility bonding laws in Alaska. H. R. 4183 is pending in the Senate.

With respect to public recreational facilities in Alaska, legislation was approved—Public Law 85-225; H. R. 7864, BARTLETT—amending the act of May 4, 1956, by providing specific authority for the Secretary to convey public recreational facilities, including lands, to the Territory.

Two bills reported by the committee, passed by the House, and presently pending in the Senate concern mineral deposits in Alaska. One of these—H. R. 4635, BARTLETT—would amend existing statutes by permitting entry on public lands which may contain oil, gas, or coal for homesites, headquarter sites, trade or manufacturing sites, or for a serviceman's additional homestead entry. The other bill—H. R. 8054, BARTLETT—would provide for the leasing of oil and gas deposits in lands beneath inland navigable waters of Alaska.

The committee reported 2 measures relating to Alaska land grants, 1 of which was enacted. The measure enacted—Public Law 85-265; H. R. 3940, BARTLETT—grants to the Territory 640 acres of public-school lands in Anchorage. The other bill—H. R. 3358, BARTLETT—supplements the land-grant provisions of the Alaska Mental Health Enabling Act of 1956. This bill is pending in the Senate.

The last of the Alaska development measures enacted into law—Public Law 85-233; H. R. 8646, BARTLETT—amends the Alaska Public Works Act of 1949 to clarify the authority of the Secretary of the Interior to convey to the Territory federally owned land utilized in the construction of public works.

MISCELLANEOUS

Miscellaneous Alaska legislation enacted into law includes one measure—Public Law 85-16; H. R. 4271, ENGLE—

providing that the Delegate from Alaska be a member of the Alaska International Rail and Highway Commission, and another measure—Private Law 85–287; H. R. 3877, BARTLETT—clarifying the title of Carl E. Robinson to 160 acres of land at Anchor Point, Alaska.

With respect to Antarctica, hearings were held on 10 bills providing for the creation of the Richard E. Byrd Antarctic Commission which would assemble, catalog, and diffuse knowledge and information with respect to Antarctica. No final action was taken by the committee on this legislation.

III. MINES AND MINING RESOURCES

The Subcommittee on Mines and Mining, chairmaned by Hon. WALTER ROGERS, of Texas, has jurisdiction over mining interests generally, mineral resources of the public lands, mineral-land laws, and claims and entries thereunder, geological survey, mining schools and experimental stations, and petroleum conservation on the public lands, and conservation of the radium supply in the United States.

The committee reported three measures relating to mining and mineral resources which were enacted into law. In addition, hearings were held on several other matters of concern to the mining industry. Also, the Special Subcommittee on Coal Research, chairmaned by Hon. ED EDMONDSON, of Oklahoma, concluded a coal study which was started in the 84th Congress.

MINERAL LEASING ACT AMENDMENTS

One of the measures enacted—Public Law 85–122; S. 334; H. R. 2131, BARING; H. R. 4787, METCALF—amends the Mineral Leasing Act by removing the State acreage limitation—5,120 acres—on Federal phosphate leases. Public Law 85–122 permits the leasing of 10,420 acres of phosphate-bearing lands without regard to State boundaries.

The committee held hearings on additional legislation—H. R. 8204, THOMSON; H. R. 7496, EDMONDSON; H. R. 7497, ALBERT; H. R. 7498, PATMAN—to amend the Mineral Leasing Act but took no final action. This legislation would amend the Mineral Leasing Act so as to, first, increase the basic limitation on the aggregate acreage of coal leases which may be held by 1 person in any 1 State to twice the present limitation of 5,120 acres; second, permit the Secretary of the Interior to increase the acreage by an additional 10,240 acres under certain circumstances; and, third, repeal section 2 (c) of the existing act, thereby putting railroad companies on the same footing as other companies with respect to coal leases.

TIME EXTENSION FOR ASSESSMENT WORK

One other measure reported by the committee and enacted into law—Public Law 85–68; H. R. 4748, BERRY—extends for 1 additional year the time during which annual assessment work may be performed on unpatented mining claims based on the discovery of uraniferous lignite.

PRIVATE LEGISLATION

One private measure enacted—Private Law 85–168; H. R. 5341, ASPINALL—directs the Secretary to grant to an individual extensions with respect to certain oil and gas leases.

MULTIPLE-USE MINING LAW

The committee held hearings on the administration and operation of section 5 of the multiple-use mining law, which relates to title uncertainties and surface rights on mining claims. The hearings were printed and contain valuable information for those interested in or affected by section 5 of this act.

DOMESTIC TUNGSTEN PURCHASE PROGRAM

The committee also held hearings to review the matter of appropriations to implement the domestic tungsten, asbestos, fluorspar, and columbium-tantalum purchase program and adopted a resolution urging the House of Representatives to make available in the third supplemental appropriation bill, 1957, $30 million to implement this program. These funds, however, were not appropriated.

COAL STUDY

A special Subcommittee on Coal Research concluded its study on the need and possibilities of a research and development program for the coal industry of the United States. The findings and recommendations of the subcommittee are contained in a 91-page report printed as House Report No. 1263.

IV. PUBLIC LANDS AND NATIONAL PARK SYSTEM

Through the Public Lands Subcommittee, under the chairmanship of Hon. GRACIE PFOST, of Idaho, the Committee on Interior and Insular Affairs has legislative responsibility for utilization, conservation, and development, including entry, easements and grazing thereon, of more than 459 million acres of public lands and associated resources in the United States and Alaska, together with more than 24 million acres embraced within some 180 units of the national park system and nearly 160 million additional acres of land within national forests created from the public domain.

One hundred and ninety-five bills and resolutions were referred to the Public Lands Subcommittee of which 25 bills were reported, 67 were tabled, and 103 remain as pending business of the committee. Of the 25 bills and resolutions reported by the committee, 15 were enacted into law—10 public and 5 private laws—2 concurrent resolutions were approved by Congress, and the remainder await further action either in the House or in the Senate. In addition, hearings were held on several other measures on which no committee action was taken and which are now pending before the subcommittee or the full committee.

NATIONAL PARK SYSTEM AND CEMETERIES

The committee considered several measures relating to the National Park System and national cemeteries, two of which were enacted into law. One of these acts—Public Law 85–5; H. R. 3845, MCCORMACK—extends for 1 year the time which the Boston National Historic Sites Commission has to complete its work. This Commission is investigating the feasibility of establishing a coordinated program in the vicinity of Boston for preserving historic properties, objects, and buildings. The other act—Public Law 85–41; S. 1274; H. R. 5687, PFOST—amends the act of March 3, 1911, by removing restrictions on the use of 3.5 acres of the Springfield Confederate Cemetery which are excess to its needs.

Eight other measures relating to the National Park System were considered by the committee, 4 of which were reported and are pending either in the House or in the Senate. Legislation to authorize the appropriation of $7,250,000 for development of the Independence National Historical Park—H. R. 1244, SAYLOR; H. R. 694, JAMES; H. R. 1925, BYRNE of Pennsylvania; H. R. 9141, PURTON—was reported by the committee and is pending before the House Rules Committee. The specific bill reported was H. R. 1244—SAYLOR.

H. R. 4115—MURRAY—relating to the Shiloh National Military Park passed the House and is pending in the Senate. This bill would authorize the conveyance to the State of Tennessee of about 200 acres of land at Shiloh Military Park for highway relocation purposes and would assure use for recreational purposes of lands abutting the relocated highways.

H. R. 2170—REECE—would authorize exchange of not more than 200 acres within the Great Smoky National Park for privately owned land within the park. This legislation to facilitate park administration passed the House and is pending in the Senate.

Several bills—H. R. 8290, ASPINALL; H. R. 8301, WESTLAND; H. R. 8296, JONES of Alabama; H. R. 8300, SMITH of Wisconsin—to grant authority to the National Freedom Shrine Foundation to erect a national monument to the five freedoms were considered by the committee and H. R. 8290—ASPINALL—was reported and is pending in the House. The monument would be located in Virginia, just south of the Iwo Jima Monument. Funds for the construction, estimated at about $24 million, would be raised by public subscription.

Other bills relating to national parks which the committee considered but took no final action on are H. R. 5450—BENNETT of Michigan—to authorize the enlargement of the administrative headquarters site for the Isle Royale National Park in Michigan, H. R. 6641—FASCELL—and H. R. 6653—ROGERS of Florida—to fix the boundary of Everglades National Park, Fla., and to authorize the acquisition of land therein, H. R. 4964—MAGNUSON—and H. R. 5421—WESTLAND—to authorize the exchange of approximately 6,609 acres of land adjacent to the Olympic National Park for lands and interest in lands within the boundaries of the park, and H. R. 2549—HOLMES—to authorize the acquisition of an additional 50 acres of land for the Whitman National Monument in Washington.

LAND, TITLE AND RESOURCE CONVEYANCES

Several measures relating to land title and resource conveyances were considered by the committee. Of these, 4 were enacted into public law and 5 into private law. Public Law 85–35—H. R. 2401, BERRY—reconveys to the city of Spearfish, S. Dak., 1 acre of land adjacent to the city's park, which was transferred to

the Federal Government in 1936 for expansion of a fish hatchery and is no longer needed. Public Law 85-193—S. 556—directs the Secretary of the Interior to convey to the State of Nevada something less than 2 acres located in the city of Las Vegas for use of the Nevada Fish and Game Commission. Public Law 85-139—S. 1773; H. R. 6519, BARING—validates the conveyance of certain railroad right-of-way land in Reno, Nev., to the State of Nevada to use for hospital purposes. Public Law 85-153—H. R. 3473, UTT—provides for the sale at public auction of about 172 acres of public domain land near Plaster City, Calif., to use as a construction site for a portland cement plant.

The private laws enacted were Private Law 85-57—S. 1352; H. R. 5297, KRUEGER; H. R. 5570, BURDICK—to direct the Secretary to convey a 20-acre tract of acquired lands in Richland County, N. Dak., to the Fairview Cemetery Association, Inc., of Wahpeton, N. Dak.; Private Law 85-208—H. R. 1826, THOMSON of Wyoming—to permit Mr. Bud E. Burnaugh, of Green River, Wyo., because of a land classification error, to purchase a 5-acre tract of public land in Wyoming under the Small Tract Act; Private Law 85-38—S. 1319—renouncing Federal interest in certain lands in Harlowton, Mont., to remove any possible cloud on the title of such lands; Private Law 85-285—H. R. 1394, FASCELL—to authorize and direct the Secretary of the Interior to sell 11 tracts of land aggregating 13.82 acres in the Florida Keys area to individuals who previously purchased the tracts from the State believing that title to the lands was in the State; and Private Law 85-116—H. R. 7522, ENGLE—to authorize the Secretary of the Interior to extend for a 2-year period the right of the McCloud River Lumber Co. to cut and remove certain timber which it owns on a 160-acre tract of land within the Shasta National Forest, Calif.

Two measures relating to land title and resource conveyances were reported by the committee but were not enacted. One of these bills—H. R. 8928, JENSEN—would delete from an 1880 act language imposing certain public use conditions on a title conveyance by the United States to the city of Council Bluffs, Iowa, and thereby remove a cloud on the city's title to about 375 to 400 acres of land. This bill passed the House and is pending in the Senate.

The other measure—S. 1568; H. R. 2393, BARING—has passed both the House and the Senate and is pending in conference committee. This legislation would authorize conveyance, under certain conditions, to the State of Nevada of approximately 126,775 acres of land owned by the United States in southern Nevada. The area is desert in nature but large portions are suitable for agricultural purposes and for homesites and suburban developments, provided water can be made available. It is the State's intention to use a portion of its allotted share of the Colorado River water for development in this area.

PUBLIC LAND CONTROL AND UTILIZATION

One of the most important land and associated resources policy measures in many years is the socalled military land withdrawal legislation—H. R. 5538, ENGLE; H. R. 608, DAWSON of Utah; H. R. 931, SAYLOR; H. R. 1148, JOHNSON; H. R. 3403, METCALF; H. R. 3661, THOMPSON of Wyoming; H. R. 3788, UDALL; H. R. 3799, BARING; H. R. 3860, PFOST; H. R. 5739, DIXON. The committee reported H. R. 5538—ENGLE—and this bill passed both the House and the Senate and is awaiting agreement between the two with respect to Senate amendments. This legislation would accomplish two principal purposes—first, it would require that no single area embracing more than 5,000 acres of public domain lands can be withdrawn for exclusive military use without approval by Congress; second, it would make applicable within all military reservations the hunting and fishing laws of the States or Territories in which such reservations are located.

In addition to the military land withdrawal legislation, the committee has requested a temporary halt to nonmilitary land withdrawals pending an examination of current Federal land and resource use and development policies. This request was formally made to the Secretary of the Interior and to the Secretary of Agriculture on July 29, 1957.

There are several bills—H. R. 3594, ENGLE; H. R. 3592, ASPINALL; H. R. 3593, SAYLOR; H. R. 3595, METCALF; H. R. 3596, RHODES of Arizona; H. R. 4819, PFOST; H. R. 4822, PORTER; H. R. 5238, HAGEN; H. R. 6884 and H. R. 7230, DOYLE—under consideration by the committee which would establish a bipartisan National Outdoor Recreation Resources Review Commission composed of 15 members to study the outdoor recreation resources of the public lands and other land and water areas of the United States. Although some hearings were held on this legislation, the committee's consideration was not completed principally because time was not available. It is expected that the commmittee will return to this legislation next year.

Several bills—H. R. 1960, METCALF; H. R. 500, SAYLOR; H. R. 361, O'HARA of Illinois; H. R. 540, BALDWIN; H. R. 906, REUSS; H. R. 2162, MILLER of California; H. R. 7880, PORTER—are before the committee which would establish a national wilderness preservation system on the public lands of the United States. Three days of hearings were held on this legislation but the hearings were not completed and the committee took no action.

FEDERAL LAND GRANTS TO STATES

Several measures relating to Federal land grants to States were enacted. One of these acts—Public Law 85-180; H. R. 8079, DEMPSEY; H. R. 7705, MONTOYA—deletes certain provisions of the New Mexico-Arizona Enabling Act which restricts the degree of discretion those States may exercise in the establishment, deposit, and investment of funds derived from Federal land grants to them.

Three measures were enacted which broaden the permissive uses of revenues from lands granted to States for public buildings at the capitals of such States to include construction, reconstruction, repair, renovation, and other permanent improvements of such buildings, the acquisition of necessary land for such buildings, furnishings and equipment for such buildings, and the payment of principal and interest on bonds issued for such purpose. They are Public Law 85-6—H. R. 348, METCALF—amending the Enabling Act of the States of North Dakota, South Dakota, Montana, and Washington, Public Law 85-84—S. 1794—amending the Enabling Act for the State of Idaho, and Public Law 85-97—S. 1396; H. R. 7708, THOMSON of Wyoming—amending the Enabling Act for the State of Wyoming. A fourth measure—H. R. 5149, RHODES of Arizona—containing similar provisions but general in nature, passed the House and is pending in the Senate. This bill would apply to any State that has been granted lands for the purpose of erecting certain public buildings at the capital of such State.

RESOLUTIONS

Two concurrent resolutions were approved by the Congress. One of these—House Concurrent Resolution 91, BASS—expresses the sense of Congress that the altar of the Nation, located in the Cathedral of the Pines, Rindge, N. H., has been dedicated to the glory of God as a memorial to all American war dead and is so recognized. The other—Senate Concurrent Resolution 32; House Concurrent Resolution 183, EDMONDSON; House Concurrent Resolution 178, BERRY; House Concurrent Resolution 177, DEMPSEY; House Concurrent Resolution 181, ALBERT; House Concurrent Resolution 182, BELCHER; House Concurrent Resolution 184, MORRIS; House Concurrent Resolution 185, STEED; House Concurrent Resolution 186, JARMAN—gives congressional recognition to the National Cowboy Hall of Fame and Museum as a memorial to western pioneers.

V. INDIAN AFFAIRS LEGISLATION

The Subcommittee on Indian Affairs, chairmaned by Hon. JAMES A. HALEY, of Florida, has legislative responsibility over matters involving the relationship of the Federal Government with the approximately 435,000 Indians, Aleuts, and Eskimos of the United States and Alaska. Indian landholdings and reservations subject to varying degrees of Federal control total approximately 52 million acres in some 28 States and Alaska.

During the first session, substantial progress was made in the committee's continuing efforts to aid effectively in the management and conservation of Indian human, natural, and economic resources and funds, to assist in improving individual and tribal economic conditions, and to resolve difficulties arising from claims against the United States. Of the 113 bills referred to the Indian Affairs Subcommittee, 17 were reported, 28 were tabled, 1 is pending in full committee, and 67 remain as pending subcommittee business. Of the 17 bills reported by the committee, 14 were enacted into law, 1 is pending in conference committee, 1 is pending in the Senate, and 1 in the House.

TERMINATION AND READJUSTMENT PROGRAMS

Among the major items of legislation considered by the Subcommittee on Indian Affairs were those relating to the termination of Federal supervision over Indian tribes and the need for assistance

in the development of readjustment programs.

One measure enacted—Public Law 85–132; S. 469; H. R. 2471, MILLER of Nebraska; H. R. 2518, ULLMAN—authorizes the appropriation of not more than $550,000 to assist the Klamath Tribe of Indians in preparing for termination of Federal supervision and defers the final termination date for 18 months.

Several bills—H. R. 2824, Moss; H. R. 6364, ENGLE; H. R. 2838 and H. R. 8072, SISK; H. R. 2576, SCUDDER—relating to California rancherias were considered by the committee. The committee reported H. R. 2824, providing for the distribution of lands, minerals, water rights and improvements on 14 Indian rancherias and reservations in California. The Bureau of Indian Affairs is required to furnish assistance in this program. The legislation is purely permissive and does not impose the program on any of the groups who do not want it. This bill is pending in the Senate.

The committee reported one measure—H. R. 6322, LAIRD—relating to the Menominee Indians of Wisconsin, which is pending in conference committee. This legislation would defer for 2 years the date for formulating and submitting the Menominee tribal plan for the future management and control of the tribal property after termination. It would also postpone the final termination date for 2½ years.

RESOURCE DEVELOPMENT

Two measures were enacted which will improve Indian land and resource development. One of these—Public Law 85–86; H. R. 3836, HALEY—repeals existing law prohibiting the sale of livestock issued to or purchased in trust for Indians without the consent of the superintendent in charge of the tribe. This law is no longer necessary and it places undue burden upon the purchasers of Indian livestock. The other act—Public Law 85–186; H. R. 7051, ULLMAN; H. R. 3942, BERRY—will stimulate industrial development near certain Indian reservations by authorizing the transfer of certain surplus Federal property at McNary Dam, Oreg., and Pickstown, S. Dak., to Indian tribes.

INDIAN LAND AND PROPERTY CONVEYANCE

As usual, a number of measures concerning Indian land and property conveyance were considered by the committee during the first session. Six such measures were enacted into law. Public Law 85–34—H. R. 676, HEMPHILL—authorizes the city of Rock Hill, S. C., to acquire approximately 49 acres of tribal lands on the Catawba Indian Reservation to serve as a site for a new sewage disposal plant.

Public Law 85–91—H. R. 6692, SCUDDER—terminates Federal supervision over the members of the Coyote Valley Indian Rancheria in California and provides for the transfer of certain Indian lands to the Secretary of the Army in connection with the construction of the Coyote Valley Dam.

Public Law 85–188—H. R. 993, WESTLAND—authorizes the exchange and conveyance of certain land on the Makah Reservation to the Cape Flattery School District in the State of Washington.

Public Law 85–205—S. 999—directs the Secretary of the Interior to convey 70 acres of land to the State of North Dakota for the use of the North Dakota State School of Science, in return for which the school will provide tuition to 10 Indian students each year for the next 10 years.

By enactment of Private Law 85–217—H. R. 1259, SCRIVNER—the United States disclaims its interest in 86 acres of land in Miami County, Kans., and confirms a judgment of the county district court.

Public Law 85–31—S. 998; H. R. 3995, PFOST—amends in certain respects existing law which authorizes the conveyance to local governmental agencies land and improvements used for Federal Indian school purposes after they are no longer needed for that purpose.

EDUCATIONAL MEASURES

Two Indian educational measures were enacted. One of these acts—Public Law 85–89; H. R. 3837, HALEY—permits teachers in Bureau of Indian Affairs schools to take leave for attending educational meetings which are in the interest of the Federal Government. The other act—Public Law 85–72; H. R. 7050, ULLMAN—provides for the recoupment of funds expended in cooperation with the school board of Klamath County, Oreg., because of the attendance of Indian children.

INDIAN RECLAMATION

One Indian reclamation bill was reported by the committee but was not enacted. House Joint Resolution 2—ANDERSON—provides for payment to the Crow Indian Tribe for transfer to the United States of certain tribal lands necessary for the construction of the Yellowtail Dam and Reservoir. This resolution is pending before the House Rules Committee.

MISCELLANEOUS

Miscellaneous Indian legislation enacted includes a measure—Public Law 85–154; H. R. 4830, SHUFORD—authorizing revision of the roll of the Eastern Band of Cherokee Indians, a measure—Public Law 85–195; H. R. 6521, BERRY—authorizing payment of claims to certain Sioux Indians for losses incurred during wars with the United States, and a measure—Public Law 85–192; S. 1417; H. R. 4912, EDMONDSON—extending the tribal government of the Osage Indians for 25 years.

Although not reported, the committee held extensive hearings on H. R. 3789—UDALL—to determine the rights and interests of the Navaho and Hopi Tribes.

Awarding of Television Station Franchises Important to the Public

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BRAY. Mr. Speaker, the granting of television station franchises is of great interest not only to the broadcasting industry but also to the general public. The developments which precede such decisions are sometimes lost sight of because they often stretch over a long period of tme. The allocations in Indianapolis over a 4-year period can be summed up in the following résumé:

In 1953 there were 6 applicants for the 2 VHF television channels which had been designated for Indianapolis. The applicants for channel 8 were:

First. Crosley Broadcasting Corp.
Second. Television Indianapolis, Inc.
Third. Universal Broadcasting, Inc.

The applicants for channel 13 were:

First. Indianapolis Broadcasting, Inc.
Second. Midwest TV Corp..
Third. WIBC, Inc.

Of the six applicants all but the Crosley Broadcasting Corp. were composed of or dominated by local Indiana people.

Late in 1953 Crosley withdrew its application for channel 8 and applied for channel 13. After the Crosley withdrawal, Television Indianapolis, Inc., dropped its application, which left Universal as the only applicant for channel 8, and this grant was made in December 1953. Subsequent to the withdrawal of Television Indianapolis, Inc., and prior to the grant to Universal, there was a reorganization of Universal Broadcasting, Inc., in which may of the stockholders of Television Indianapolis, Inc., were brought into Universal.

It is perhaps understandable that some of the stockholders of Television Indianapolis, Inc., would think it wise to drop their application and later to obtain stock in Universal Broadcasting, Inc. It is more difficult to understand why Crosley would drop out of a race with 2 other applicants to enter a race with 3 applicants, each of which was a completely local organization. Playing this long shot proved successful, however, for in March 1957 the FCC, by a 4–3 vote, awarded channel 13 to Crosley.

The awarding of these franchises throughout the country deserves the continued scrutiny of us all. They are not only valuable properties, they are factors of vital importance to the public interest.

Good Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to an outstanding example of good labor and management relationship. In these days when the press is filled with the accounts of wrongdoings of a few union officers and members, the public is inclined to attribute all the wrongs of labor and management relations to organized labor. Unfortunately, the sensationalism of a widely publicized investigation often obscures the vast amount of good things

that go on as a matter of routine day by day and which are the product of enlightened work of progressive union labor leaders and their counterparts in management.

Such an example is the progressive activities of the electrical industry in New York City. There, almost 15 years ago, labor and management decided to join together in a team to work out their own problems. Labor wanted employment opportunities, job security, and a measure of security in old age and in event of disaster. Management sought a high level of production, responsibility in its dealings with labor, and all of those conditions that make it possible to produce to the satisfaction of the public. This team was called the Joint Industry Board of the Electrical Industry and it was formed on April 1, 1943. Ten members from management and 10 out of labor comprised this team of members of Local No. 3 of the International Brotherhood of Electrical Workers and the Electrical Contracting Industry in New York City.

This team had three purposes:

First. To find ways and means to expand harmony between management and labor.

Second. To work out plans for increasing the services of electrical contractors to the public.

Third. To develop new tools and methods of installation to increase production and cut costs.

Suffice to say that in the intervening time the team has more than justified the faith in the plan of such industry leaders as Harry Van Arsdale, of the union, and Harry F. Fischbach and A. Lincoln Bush, of the electrical contractors.

The public is getting the benefit of the widest use of all types of labor-saving tools and methods and production is very high. The worker has obtained the benefit of a high hourly wage, plus medical, pension, and educational benefits and apprenticeship and training which is a pace setter for the entire construction industry.

I am pleased to note that these good things have, indeed, been given some measure of recognition. The September 3, 1957, issue of Look magazine has a picture story of this fine relationship which comes from effective union leadership. It is entitled "What Should a Union Be?" The January 1956 issue of Reader's Digest contains another excellent article on this relationship entitled "The Union That Gives More to the Boss," by Lester Velie.

This team has produced many unusual but effective methods to achieve better labor-management relations. For example, members of the union themselves have stepped up production by eliminating incompetence on the job. This was accomplished by the setting up of a union school and through the elimination by union members themselves of loafing on the job. The ancient practice of featherbedding has been eliminated. Union members have invented various tools and methods raising the production throughout the industry. Union members are assured of efficient administration within their union and through financial reports rendered at their monthly meetings at which attendance is almost a matter of compulsion.

A joint union-employer hiring office was established. Members of the union have obtained pensions, free dental care and medical checkups, and were the first in the building trade to receive paid vacations.

A joint management-union committee administers the welfare system in the industry, thus the employers now plan with the union instead of fighting a welfare system.

This same team has produced low-cost apartments for members of local No. 3. A convalescent home has been established for union members. One of the most recent progressive steps has been the establishment of scholarships for the children of union members.

Thus, this combination of labor and management has established a remarkable welfare program which provides not only lifetime protection against illness, accidents, and unemployment, but a substantial retirement income after the age of 65.

The funds that provide these benefits throughout the industry are amply protected by sound fiscal requirements and management.

It is, indeed, a point of personal satisfaction for me to call attention to this outstanding example of progressive labor-management relationship, for one of the founders and leaders of this program is a personal friend of long standing, Harry F. Fischbach, a man for whom I have the highest regard and who typifies by his industrial and personal life a true leader, a great leader in a progressive industry.

Ten Years of Progress

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. FOGARTY. Mr. Speaker, the past 10 years have been 10 years of perhaps the greatest progress against disease that our country has ever seen.

As a recent article said, "You're living in medicine's golden age." It pointed out that new medical knowledge had meant the saving of 1,240,000 lives since World War II. It stressed the fact that "this miracle of medical progress has come largely within the last 10 years."

As I look back over the past decade, I am proud to have had the opportunity to work in Congress, year by year, to provide through congressional appropriations the share of Federal aid that has helped achieve the progress of these 10 years. This aid has been a major influence in increasing and stepping up our Nation's medical research that has meant the saving of those million and more lives.

This year marked the ninth time that it has been my privilege to present to my colleagues in the House of Representatives, on behalf of our Committee on Appropriations, a bill which represented the consensus of the House and Senate committees on the support for health and medical research to be provided through the Federal Government. The bill represented, at the same time, carefully considered judgments as to the interests of economy. It reflected what was needed to strengthen and speed up just as much as scientifically and humanly possible this year's attack on the many problems of disease and disability.

This year, we believe, will see further medical advances, in which the continuing and new programs to which we have given adequate and needed support will play, as in the past, a vital role.

Let us glance back for a moment into the field of health research achivements to see what may lie ahead in the way of returns on the tax dollars invested.

The decline in death rates since World War II from some of the major illnesses dramatically shows how over a million lives have been saved by modern medicine.

Influenza has gone down over 90 percent in its death rate. I should mention here, and emphasize, too, that there is not only great concern with the threatened invasion of the Asian flu, but there is concerted action underway—to set up a great network of protection for the American people.

We in Congress have already acted by appropriating the $800,000 which will be used in providing diagnostic materials to the States and also have authorized an additional $2 million out of the President's reserve fund if an outbreak should occur, which would be used in those areas where needed.

The Public Health Service, American Medical Association, State health authorities, the medical societies, and individual physicians are all alert to the problem and are joined in the nationwide collaborative endeavor against this threat.

To return to the past 10 years of progress, we see the striking fact that once great killers like acute rheumatic fever, tuberculosis, diseases that cause maternal deaths, and appendicitis have had the rate at which they cause death reduced over 70 percent in each case. Syphilis' death rate has been brought down 63 percent, pneumonia's over 40 percent, some kidney disorders 60 percent, and infant death rates have dropped 33 percent. Even high blood pressure, one of the greatest medical problems in terms of numbers afflicted, has seen some decline in death rates in the past few years—and, authorities say, is going to be subject to even better control through new and improved drugs for treatment.

This is what the recent past has brought. What of the work under way today, the challenging and promising new areas of medical research that will pay off increasingly?

The medical research and health programs under way in our State of Rhode Island offers splendid examples of the

march of progress and some of its new areas of promise.

As a result of these programs, Rhode Island is taking a place of leadership among the States in the forefront of medical research, modern medical teaching and practice and public health advances.

Our State institutions and organizations, both public and private, and Rhode Island's researchers, medical teachers, physicians, nurses, and allied hospital and health agencies workers of all kinds—these men and women and their institutions are placing our State in this new position of leadership—as well as bringing its people the very best in medical and health benefits.

Supplementing and aiding them, and helping make many of the forward looking programs in Rhode Island possible, is support such as that which we are providing through congressional appropriations.

For health and medical research and related work in Rhode Island there was provided in fiscal year 1957, which ended June 30, almost $3 million in grants and awards from the programs of the Department of Health, Education, and Welfare. From the Public Health Service's National Institutes of Health, about $1 million aided research, research training, building and equipping of research facilities, and other activities in institutions in our State.

Some $881,000 last year from the Public Health Service's Bureau of State Services helped a variety of public health programs in Rhode Island, such as control of water pollution, tuberculosis, mental illness, heart disease, cancer, and poliomyelitis. Through the Service's Bureau of Medical Services, Rhode Island in fiscal year 1957 had available for medical facilities and hospital construction some $788,000. Of this, almost half a million dollars was for hospital construction for needed facilities at the Providence lying-in hospital, the State hospital at Cranston—Howard—and Roger Williams General Hospital at Providence.

Through the Children's Bureau of the Department of Health, Education, and Welfare, our State health department had about $235,000 for services for crippled children and for maternal and child-health activities. Also, from the Dpartment's Office of Vocational Rehabilitation came a research grant of $39,415 to Butler Health Center at Providence to evaluate the effectiveness of rehabilitation programs for both physically and mentally disabled persons.

Speaking of mental illness, which is one of our gravest health problems of today, we can be proud of the progressive work that is being undertaken in Rhode Island on this.

Butler, as well as another institution in Rhode Island, has recently been awarded mental-health project grants by the Surgeon General of the Public Health Service. The Emma Pendleton Home, a children's psychiatric hospital, is using the mental-health project-grants funds to study a special group program for acting-out children. This study will shed light on the effectiveness and application of group work to special diagnostic categories of disturbed children. This project, begun in August of this year, will extend over a 4-year period.

Butler Health Center, which recently open an inpatient unit, the fourth of its major programs, has been awarded two mental-health project grants. One of these projects has been set up to investigate the nature of attitudes, interactions, and activities by the patients and personnel, which help recovery of chronically ill psychotic patients. This project will continue, according to present plans, over a 3-year period.

The other research program at the Butler Mental Health Center supported by a mental health project grant is one essentially designed to discover and test effective alternatives to the conventional inpatient psychiatric treatment. Through the operation of a new kind of outpatient department, a day hospital and a hospitalization program for emergency services to patients in periods of intense panic, the Butler Health Center hopes to do pioneering work in treatment and care of the mentally ill. Present plans for this project cover a 3-year period.

Grants have also been made to Rhode Island institutions to participate in the large scale evaluations of the tranquilizing drugs—that have been so useful in mental illness and other conditions, but that need a great deal of study before we understand just how they act and produce their effects. This kind of study will lead to even greater eventual usefulness on the part of these drugs which affect the central nervous system. Indeed, the whole knowledge of the brain and its chemistry—an area our scientists say that they need much more information on before it is fully understood—is being opened up tremendously through new investigations today.

In the field of cancer research, Rhode Island institutions are participating in the vast new endeavor that has been implemented through National Institutes of Health grants to screen all chemical compounds that might have possible use in the treatment of cancer.

Moreover, in the field of cancer control, Rhode Island is actively engaged in a new program aimed at cancer of the uterus, the second largest cause of death from cancer among women, which claims the lives of nearly 15,000 American women each year. Now a test, known as the cytologic test, makes possible the early detection of this type of cancer.

Unfortunately uterine cancer, which is highly curable in its earliest stage, presents no detectable symptoms until the disease reaches a stage when cure is more difficult. By means of the cytologic test, women with a suspicion of uterine cancer can learn about its presence long before they ordinarily would. Numerous investigators and clinicians believe that, if widely used, this test could reduce mortality by as much as 75 percent.

The test is completely painless and usually takes less than 5 minutes. The technique consists simply in taking samples of vaginal fluid which contains cells shed by the internal organs of the body. Microscopic examination of slides made from these samples enables trained laboratory workers to distinguish cells which are suspected of being cancerous from those that appear to be normal. Scientists recommend that women take the test once a year to be sure that they do not have uterine cancer.

In collaboration with the Rhode Island Medical Society and Rhode Island Society of Pathologists, the Rhode Island State Department of Health is, for the second year, making the cytologic test available to women over 20 in the State. The project, which was aided by a grant of $70,000 from the National Cancer Institute in 1956, is receiving additional assistance this year in the form of a $100,000 grant from the same source.

The program is being conducted through hospitals, private practitioners, and State-sponsored cancer-detection centers, and is endorsed by the Rhode Island Medical Society and the Rhode Island Society of Pathologists.

The Rhode Island cytology program is one of several which were recently established in this country after the effectiveness of the technique as a case-finding procedure was successfully demonstrated in Memphis, Tenn. The Memphis project, now in its fifth year, led to the discovery of about 800 cases of uterine cancer among 108,000 women who were examined for the first time.

Half these 800 cases were found in the very earliest stages, and most of these were entirely unsuspected. Many of the 400 cases of advanced cancer were also unsuspected.

The first year of the Rhode Island project was spent in tooling up and training technicians to examine slide tubes as a part of the test. Since operations were started, 10,000 women have been screened as of September 1. Carcinomas in situ proved by biopsy totaled 51. These are the tumors that this program is designed to discover, because they can be cured in the early stage. There were also 13 other cancers of the uterus diagnosed which were somewhat more advanced but not dangerously so. This is a total of 64 early cancers of the uterus discovered and proved so far by this cytology laboratory. In 14 other cases, biopsies have been requested and will be done soon.

There are between 225,000 and 250,000 women over 20 in Rhode Island. It is hoped that the project will eventually make it possible for 50,000 a year to take this test. For the great majority, it will mean peace of mind and relief from needless worry. For those who have uterine cancer, it will mean the discovery of their disease at a time when cure is most probable. In my opinion, this is one of the best run programs in the country.

Rhode Island is playing a key role in another project which has a direct bearing on the health and well-being of millions of Americans. I refer to the recently launched nationwide investigation directed to studying and evaluating the factors which are believed to bring on such diseases as cerebral palsy and mental retardation—disorders which are

often due to damage to the brain of an infant before, during, or shortly after birth.

This investigation is being coordinated by the National Institute of Neurological Diseases and Blindness in Bethesda, Md. Eleven medical schools and hospitals—in key communities throughout the Nation—are working with the Institute. Among these is our own Brown University in Providence.

I have had occasion to hear testimony on this nationwide study from medical men in position to know a good deal about cerebral palsy and related disorders. It is my feeling that this study—which may go on for a decade or longer—may bring the effective treatment and prevention of such disorders a generation or more closer to achievement.

What are some of the causative factors which the project will be evaluating? Well, there are many. Among these are such factors as lack of oxygen, brain injuries, infections occurring during pregnancy, and the so-called Rh factor which is actually a blood incompatibility between mother and child. Heredity, which is believed to play only a minor role in cerebral palsy and mental retardation, will also be evaluated.

Brown University, I am pleased to say, was among the first institutions to join in this important study and its program is well underway. The university's initial grant—a grant covering the last fiscal year—was for just short of $100,000—$97,633.

I might say here that Providence is truly blessed in terms of its fitness for this kind of project. Brown University, which has an unusually fine department of biology, is working closely with the Providence Lying-In Hospital on one hand and the Meeting Street School on the other.

Providence Hospital is one of the largest lying-in hospitals in the country and the Meeting Street School is a unique semicustodial institution for cerebral palsied children. Thus, we have a coordinated approach to the research problem posed in which the onset and impact of cerebral palsy can be studied and evaluated through pregnancy, birth, and the early years of life.

Dr. Glidden Brooks, director of the project, brings to the study not only years of research experience but a number of major contributions to our knowledge of cerebral palsy and related disorders.

Why is this collaborative program—in which Brown University and its associated organizations are playing a key role—of such importance?

One answer, of course, lies in its humanitarian aspects—in the promise it holds for the development of effective treatments and preventive techniques for coping with cerebral palsy, mental retardation, and related disorders. But the problem can also be sketched in terms of statistics—statistics of vital concern to all of us.

Today, there are an estimated 500,000 people in the United States who have cerebral palsy traceable to brain damage occurring in the year or so surrounding birth. There are an estimated 4,500,000 Americans with mental retardation, about one-third of them children. There are thousands of others with related disorders—thousands who stand to be benefited by the results of the study.

Clearly, then, the severity and scope of the problem cannot be questioned.

Eventually, it is expected that about 15 medical schools and hospitals will be collaborating with the National Institute of Neurological Diseases and Blindness and about 8,000 cases will be coming under investigation each year. Whenever possible, the mother will be studied through the entire period of pregnancy. Infants showing signs of neurological stress or brain damage at birth will be closely observed. They will be given detailed psychological and neurological tests. Normal infants will serve as controls to provide an adequate basis for comparison with those who show stress.

This broad-gaged investigation may go on for a decade or even longer. But, as I have said, its implications for future and present generations are considerable. It is among the most hopeful and most comprehensive studies in the medical field that the Congress has been called upon to consider during my service in Washington.

Turning to another field of disease, rheumatic fever, Rhode Island also offers a splendid example of how researchers, physicians, health workers, school authorities, and others team up to apply new medical knowledge through their alertness and cooperative action.

As knowledge about rheumatic fever developed, Rhode Island was one of the first States to develop and carry on a good, sound program against this killer and crippler that strikes hardest at children and that does its damage through causing rheumatic heart disease.

The Rhode Island rheumatic-fever program, as long as 10 years ago, was selected as the subject of an educational film because our State exemplified how community resources could be brought to bear on this disease. The film was made with the sponsorship of the United States Children's Bureau, whose funds have aided the rheumatic-fever program along with our own private and public funds in our State. Shown widely throughout the country, this fine educational motion picture, called We See Them Through, is still being used, I understand, for health-education purposes.

With this background, we can understand why, early this year when there seemed to be a good deal more scarlet fever showing up than there ought to be, our people in Rhode Island were in a position to do something about it. With cooperative programs already well grounded in the heart as in other fields, they, of course, were alert to and acting against rheumatic fever through these programs. Therefore, they would merely need to see what new or intensified action was necessary. There were meetings of the groups, and the medical society, State and city health departments, school authorities, and heart association joined forces to take any desirable and necessary action.

The United States Public Health Service was invited to cooperate and a team of epidemiologists of the Service came to Providence and aided in studying the how, when, where, and why of the scarlet fever cases.

The situation, it was decided, needed an action program to prevent first attacks of rheumatic fever by treating or preventing scarlet fever in the areas where it had shown up heavily. Moreover, with measures to do this established along with other measures to strengthen the general rheumatic fever program, the data that could be gathered and the techniques that could be studied offered a vital research opportunity, which the Public Health Service assisted in starting and carrying on.

I understand that the intensified activity has been very successful and that our people, particularly our children, have been well protected through the physicians' and community's efforts. Alertness averted what might have been a grave situation. The combined forces of medicine, voluntary and official health agencies, school authorities, and parents and the people generally showed how activities could be intensified when needed. The research experiment has not been completed, but I am told by the Public Health Service that the splendid cooperation of the people in Rhode Island made possible gathering of important data which will be of value in the nationwide heart program.

Another first in Rhode Island of which we are very proud is the special clinic that was organized jointly by the Our Lady of Fatima Hospital, the State Committee on Aging, and the Federal Office of Vocational Rehabilitation, at an annual cost of $40,000—$30,000 provided by Congress and $10,000 by Our Lady of Fatima Hospital.

Its purpose is to demonstrate the extent to which vocational rehabilitation for older workers can be achieved through an intensive program of diagnostic, evaluation and rehabilitation services. These services are primarily for workers 45 to 65 years of age, who are eligible for the OAIS disability freeze program and for other persons in the same age category identified by the State rehabilitation agency as persons whose readjustment can be only effected by the clinic's total, coordinated and intensive program of restorative services.

The operation of the clinic involves the participation of multiple professions including rehabilitation counselor, social worker, doctors, nurse, therapists and an employment specialist. The clinic got underway in the middle of 1956 and has since provided services for over 100 older disabled persons. These persons had a variety of handicaps including cerebral vascular accidents, arthritis, multiple sclerosis and other orthopedic involvements.

The last report of the clinic reveals that 21 of these persons had been rehabilitated into employment. National statistics indicate that less than 10 percent of this age group is restored by the official State Vocational Rehabilitation Agencies throughout the country. The

25 percent rate of rehabilitation in the Our Lady of Fatima Clinic documents the efficacy of this special program.

As a result of its accomplishment the Federal Office of Vocational Rehabilitation chose the Our Lady of Fatima Clinic as a selected demonstration project in vocational rehabilitation and recommended State rehabilitation agencies throughout the country to help in organizing similar clinics in their communities with Federal grants coming from the demonstration appropriation.

The clinic is now in its second year of operation and will continue through a third year.

With these examples of current progress in our fine State of Rhode Island, let me turn now to a glimpse of what may lie ahead for us as a result of the medical research and public health measures that the people want and that we in Congress are aiding through providing supportive funds.

I think—and my opinion is based upon the best thinking of the many authorities in medical and scientific fields whom I am in constant touch with—that the foreseeable future will bring even greater gains.

The past 10 years' advances have exceeded those of the previous half century. I think it likely that the next 10 years' gains will surpass those of the past decade.

Why? Because, in almost every one of the great disease fields that cause most of the death and disability each year in the United States, there has been a tremendous opening up of new and promising avenues of research where just a few years ago there seemed to exist only blind alleys.

Hardening of the arteries is an outstanding example. Instead of previous, complete darkness, and little research interest and few researchers working on this disease whose consequence is 400,000 or more deaths each year, there is today a burgeoning of research. Already many, many new clues have been turned up, and some of the causative factors are being intensively researched and being broken down into firm specifics. We may well look for treatments and preventives of real effectiveness in the coming years.

Cancer, another stubborn and difficult enemy, may yield, at least in part, within a reasonable time. It would require a volume to list the many pathways of new knowledge that are being charted today. To mention one effort, being implemented on a scale and with an intensity never before seen in history, there is the great search for chemotherapeutic agents, drugs, that may be effective. This is highly promising—as are, indeed, other avenues of approach, such as the new one that involves the possibility of training viruses to attack cancer without harming the host.

In the field of mental illness, that affects so many in our Nation today, we may see very exciting developments. As I mentioned earlier, the tranquilizing drugs and others that act upon the central nervous system are already bringing benefits, but the most encouraging thing about them is the new roads that they will open up into understanding. A broad-scale program is just getting underway, for example, in psychopharmacotherapy that will mean both basic and clinical studies of a wide range and great magnitude.

The answer to the riddles of brain chemistry, an outstanding medical research authority has very recently said, may well come by 1967. Predicting tremendous strides in the next 10 years, he feels that we are on the threshold of great discoveries. These, he says, could mean that many mental illnesses could prove to be chemically remediable.

These are only a few examples of the many cheering and promising new developments, yet they serve to show why I feel so strongly that the past 10 years of progress are but a prelude of greater things to come.

This is why, too, I believe that the work we do in Congress to increase and speed up medical research is work that my own constituents desire me to do and at the same time a real fulfilling of my responsibilities to the whole electorate of the country, who look to Congress to establish and maintain programs that will protect and better their health and welfare.

The Scandal in TV Licensing

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. PROXMIRE. Mr. President, I have been greatly disturbed recently by the manner in which licenses for television stations are handed out by the Federal Communications Commission. These licenses are worth millions of dollars. They involve deep-reaching principles of mass communication as regulated by Government. The statutory possibilities exist for arbitrary awards of licenses in such a way that the type of broadcasting permitted as well as the type of ownership condoned can be decided by an administrative agency without any very good code of ethics or aims except what is arrived at by the agency itself.

The possibilities for arbitrary bureaucratic decision—and monopoly in a powerful medium of communication—exist in the structure of the FCC and the laws affecting that agency. There is some evidence that authority has been abused. The problem is stated very succinctly in the following article by Louis L. Jaffe, Byrne professor of administrative law at Harvard, from a recent issue of Harper's magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SCANDAL IN TV LICENSING

(By Louis L. Jaffe, Byrne professor of administrative law, Harvard Law School)

In recent months the air in Washington, New York, and Boston has been thick with rumors of political favoritism in the Federal Communications Commission. Some of them have been circulated by disgruntled losers, but the case against the FCC does not rest on these. It rests on the record of the Commission's decisions in licensing television stations, and the reaction of the bench and bar. And on the basis of this record it seems clear that the FCC is dealing a heavy blow to good government.

Congress is becoming aware of this threat. Recently a House antitrust committee condemned behind-doors discussion of pending cases between representatives of the industry and members of the Commission. "This practice," says the committee, "is repugnant to fundamental principles of quasi-judicial procedure." But the committee neglects to mention that Congressmen themselves set the example by intervening on behalf of favored constituents.

Not long ago a TV license was sold for over $9 million. It is shocking to realize that a legally protected monopoly of such value can be awarded on the basis of bureaucratic caprice. But this is not the most serious aspect of the phenomenon. Doubt as to the rationality and integrity of administrative action poisons the wellsprings of government. Our democratic virtues of mutual respect, regard for the attitudes of our neighbors, and resort to persuasion and compromise can in such a situation become vices.

It has been a stereotype of political wisdom that the bureaucrat is ever ready to exercise authority arbitrarily. But there is the far greater danger that the second-rate, insecure personality who often finds his way into bureaucracy will become uncomfortable at having to exercise authority and will anxiously seek to placate as many interests as possible. This fear to offend, complaisance, and readiness to listen and be "fair" and "reasonable" clog the muscles of the will, and what begins in amiability can end in corruption. Undeniably there are great values in the widespread consent to Government which our democracy produces. Nowhere in the world has government regulation made more brilliant creative contributions to society. But if the administrator is not disinterested, government will surely lose the credit which is a necessary condition for its moral leadership and creative initiative.

The trouble with the Communications Commission begins with the statute under which it operates. Originally it was passed to take care of a crisis: the courts had decided that the Secretary of Commerce was without authority to limit the number of broadcasters. As a result many programs could be broadcast at the same time on the same wavelength, and their chaotic interference with each other threatened to destroy the usefulness of radio. Consequently, in 1927 power was conferred on the Radio Commission (later the FCC) to limit the number of broadcasters. But Congress gave the Commission no guides whatever to enable it to choose among rival applicants, or to regulate the performance of those who were licensed. The statute simply provided that a license should be granted to an applicant if "public convenience, interest, or necessity will be served thereby," and, very generally, that the Commission should "study new uses for radio, provide for experimental uses of frequencies, and generally encourage the larger and more effective use of radio in the public interests."

Perhaps Congress failed to see the difficult problems that were to arise in licensing and regulating broadcasting—a not unlikely assumption since the legislation was first adopted in 1927 and reenacted in 1934. But the problems have since become glaringly acute, and though Congress has unceasingly criticized and investigated the Commission, it has not in all these years made a single contribution to policy, except through

threats of committees and pressure exerted over the telephone.

A broad delegation of power to an administrative agency is not unusual. Both our railroad and public-utility commissions are authorized to fix the rates for service and otherwise regulate utilities. But when the utility legislation was passed, there was a precisely isolated problem, and the legislative attitudes for dealing with it were well understood, if not explicitly expressed. The Communications Commission, however, began life in a legislative vacuum.

WHO GETS THE PLUMS?

When faced with two applicants for the same broadcasting facility, therefore, the Commission had to devise some technique for determining which one should get the license. Furthermore, since by statute the license is good only for 3 years, each time its renewal is in question, the Commission is once again faced with the question of whether the licensee or some other entrepreneur should have the frequency.

The Commission decided that the choice should be made on grounds which were relevant to the effective use of the broadcast medium. Gradually it developed criteria which purported to enable it to choose, in the first instance, from among two or more applicants, and then to decide, at the end of 3 years, whether the licensee was entitled to a renewal.

In devising these criteria it was treading on treacherous ground. What, indeed, are good radio and good TV? If the people want cakes and ale, does it lie in the mouth of a public authority to state that they shall have only so much cakes and ale and the rest physic? And if good radio can be defined, what kind of organizations and persons are best fitted to provide it? It takes little imagination to sympathize with the predicament of an agency which is called upon to answer such touchy and unprecedented questions without any guidance whatever from Congress, the authorized voice of the people.

Yet, up to a point, the Commission did not hesitate to grasp this thorny nettle. It started with the large concept that radio has public functions, of both entertaining and educating the citizenry; of providing a platform for the dissemination of the arts, the discussion of public questions, the propagation of news, and, somewhat more delicate, for religious observation and worship.

The Commission has not dictated precisely what the balance should be among the desirable and inevitable uses. It has done no more than announce that some balance there must be; and it has been persistently attacked for its hesitant timidity in enforcing this policy. But it must be recalled in its defense that it has no express statutory warrant for any policy in these areas; that in this country, as opposed to Britain with its governmentally produced radio, there is little or no tradition for controlling communications or for administering authoritative cultural or moral dispensations.

A more controversial and difficult task was the formulation of criteria for choosing among applicants. It is elementary and basic that the applicant must be decent and law abiding, with sufficient intelligence and integrity to fulfill the public responsibility placed upon the broadcaster. He must also be required to make a tolerably concrete demonstration that his proposed program will have the necessary variety and interest, and that he has the means for delivering what he promises. The Commission has further indicated that an applicant whose management and proposed personnel are ultimately connected with the community and prepared to devote most of their time to a study of the community's needs will be preferred to an absentee owner.

Most controversial of all the Commission's criteria—and the one in which it is today foundering most dangerously—is the so-called diversification policy. It is a commonplace that the current trend is toward fewer and fewer newspapers and other outlets of communication. Many American cities are already one-newspaper towns. Newspapers were quite understandably interested in radio in its earliest beginnings, and have been successful in securing an important number of the most valuable AM and TV licenses. Furthermore, a newspaper licensee may own a number of newspapers, sometimes within a well-defined region, as well as a number of AM and TV stations—since the rules of the Commission which prohibit the ownership of more than 7 AM and 7 TV stations say nothing about other mediums.

The dangers of this concentration of communication facilities are obvious. A monopoly of channels of communication is a monopoly of the approaches to the mind of the citizenry. The lack of competition may produce a deterioration in the tone and extent of the service provided, and so ultimately of the cultural level of the community. And in those communities in which there are still two or more newspapers, a grant of a TV license to one may spell the doom of the other. Because a TV license is by its nature a monopoly, the profit is out of all proportion to the investment. The favored newspaper may offer special advantages to advertisers and readers below cost, and retrench its losses from its TV earnings. Ultimately its rival will be compelled to withdraw.

Because of these various considerations the Communications Commission has formulated a so-called policy of diversification. Thus, if two applicants are equal in other respects, the applicant who is not affiliated with other newspaper or communications mediums will be preferred. Some think the Commission should have a firm rule against ever granting a license to a newspaper. But whenever it has been suggested that the Commission was pursuing such a policy, there has been such strong protest in Congress that the Commission has been compelled to disavow the action.

These, then, are the purported criteria for making choices among competing applicants. They are, in my opinion, relevant criteria. They further important social and economic interests. They have secured the approval of the courts.

But they are unfortunately extremely imprecise, and they are capable of infinite manipulation. They can become—and, in my opinion, the record shows that they have become—spurious criteria, used to justify results otherwise arrived at.

It is, of course, obvious that a charge of this sort cannot be demonstrated with the kind of certainty that would be necessary to hang a man. But two cases decided by the Court of Appeals of the District of Columbia in the last year must cause any thinking man, any man who looks hopefully to government, acute discomfort.

THE CLARKSBURG AND M'CLATCHY CASES

The first is *Clarksburg Publishing Company* v. *Federal Communications Commission*. In this case, the Clarksburg Publishing Co., a publisher of a newspaper in Clarksburg, W. Va., protested the grant of a TV license to the Ohio Valley Broadcasting Corp. If Ohio Valley's application were granted it would have direct or indirect ownership interests in two television stations serving Clarksburg. It already had similar interests in nearby radio stations. News Publishing Co., an affiliate, published morning, evening, and Sunday newspapers in Wheeling, 58 miles away, and papers in 8 other cities in Wese Virginia. Nine communities in West Virginia, including Wheeling, Parkersburg, and Fairmont—the third, fifth, and sixth largest cities, respectively—were completely dependent on Ohio Valley for their local daily newspapers.

Out of only 9 cities in the State which have both morning and evening daily papers, Ohio Valley controlled both papers in 3: Fairmont, Parkersburg, and Wheeling. It also controlled 6 of the 12 single daily newspapers published in the State. The combined circulation of all daily newspapers published in the northern, north central, and eastern portions of West Virginia—where Ohio Valley Broadcasting Corp. interest predominated—was 191,922. Of this figure 121,005 represented the daily circulation of newspapers published or controlled by News Publishing Co.

Originally there had been a rival applicant for the TV license, and the two applications had been set down for a comparative hearing. Then the rival withdrew, after being paid $14,390 by Ohio—purportedly its out-of-pocket expenses in pressing the application. The next day an award was made to Ohio, without reference to the Commission's policy of diversification and without investigation of whether or not the payment to the rival applicant covered merely bona fide expense.

Clarksburg Publishing Co. protested the grant of a TV license to so formidable a rival in the communications field, and asked for a hearing. This request was denied by the Commission. The court, reversing the action of the Commission, found nothing in the record to justify the Commission's disregard of its own announced policy: "Nothing in the * * * record dispels the strong impression that, on the concentration of control issue alone, the grant would not be in the public interest." The matter was returned to the Commission for, at the very least, a hearing and a statement by the Commission justifying its departure from its announced standards.

Compare this with the actions of the Commission in the McClatchy Broadcasting case. McClatchy was the owner of a chain of newspapers and radio stations in the Central Valley of California. It applied for a TV station in Sacramento. Another company, Telecasters, made a rival application. Initially Telecasters was permitted to amend its application to increase the height of its antenna so that its coverage might be equal to that proposed by McClatchy.

Following the usual Commission procedure, the hearing was conducted by a so-called trial examiner. The examiner found that McClatchy was superior to Telecasters in all respects except "diversification of control of the mediums of mass communication." He discovered, however, that McClatchy had never engaged in the practices frequently associated with monopolistic conduct in the public-information field, e. g., cutthroat rate-slashing or personnel pirating. He noted also that there was a multiplicity of mass-communication mediums in the area to be served. He awarded the license to McClatchy. The Commission, reversing him, disagreed as to the relative superiority of McClatchy and Telecasters and then rejected McClatchy almost solely on the diversification issue.

McClatchy appealed to the court of appeals, which, holding that the Commission had acted within the legitimate area of its discretion, upheld the decision. But during the appeal curious things were happening. Immediately upon receiving its construction license, Telecasters petitioned the Commission to permit it to reduce the height of its antenna, and the Commission forthwith agreed. McClatchy protested and asked for a reopening of the comparative hearing. This the Commission denied. And all this time the case was on appeal. McClatchy appealed a second time, and the court stated indignantly that it was unseemly for the Commission without the knowledge or permission of the court to substitute another

grant for that which is being judicially examined on appeal. It ordered the Commission to reopen the hearing.

Thus, in the Clarksburg case the Commission refused even to consider diversification; in the McClatchy case diversification became the controlling consideration.

A more recent decision awarding the immensely valuable TV channel 5 in Boston adds to this picture of contradiction. There were originally 6 applicants, 4 of whom held the course to the end. The winner was the Boston Herald, already the owner of a morning, evening, and Sunday newspaper, and licensee of an AM and TV radio station. The Commission, duly noting its diversification policy, nevertheless awarded the license to the Herald.

How did the Commission rationalize its action? The reason given was that the Herald's experience in operating its radio station assured a good TV performance. Is this not the very heart of contradiction? If, on the basis of its past performance, one already in the communications business is to be preferred, what room is there for the diversification policy?

A further feature of the case underlines the doubts raised by the decision. The Herald's chief newspaper rival, the Globe, after the close of the hearing, offered affidavits of its officers showing that the Herald had put constant pressure on it to merge the two newspapers, and when the proposals were refused said: "Wait until we get the television station and see what happens."

The Globe asked for a reopening of the hearing to present this evidence. The Globe's move came very late, it is true, but the information was quite unknown to the other applicants until the affidavits were filed. The Commission rejected the motions to reopen, partly because of their lateness, but also because the alleged behavior of the Herald was magnified out of proportion and its threats should be attributed to pique—thus cavalierly disposing of these serious charges without giving the parties even a chance either to prove them or to explore their relevance.

WHAT CAN BE DONE

These are not isolated instances. But by their striking character they cast a strong light on much that has been ambiguous, and bring into focus a pattern of administration which has been growing steadily more disturbing over the past few years. There is not space here to evaluate the whole performance, but enough has been shown, I think, to cause alarm. Standards are announced only to be ignored, ingeniously explained away, or so occasionaly applied that their very application seems a mockery of justice.

There are, unfortunately, no immediate or easy remedies for the situation. The present modes of regulation and the existing structure of broadcasting are powerfully entrenched. It might have been possible at an earlier time to have taxed the monopoly profits of broadcasting; to have levied, for example, an annual license fee proportional to profit, and thus to have reduced the pressures for administrative irregularity. But the enormous investments which have been made preclude such a drastic revision of the legal structure.

Congress might, to be sure, clarify and reinforce the already developed licensing criteria, most of which are in themselves quite sound. Statutory enactment would somewhat strengthen the hand of the courts in reviewing and controlling wayward administrative activity. But it must be confessed that such legislation would not substantially narrow the range of administrative discretion. We must face the fact that the nature of the broadcasting problem does not lend itself to solution by formulas which would eliminate the need for official judgment.

In this it is like most Government regulation today. Regulation assumes legislative determination only of the major policy conflicts, with a resulting firm declaration of the regulatory principles to be applied; a grant of sufficient discretion to find the best ways and means to adapt these policies to a constantly developing situation; and a well-informed, imaginative, disinterested bureaucracy operating in a judicial spirit.

Though Congress has been notably weak during the past few years in providing policy guides, strong administration would have in some measure filled the void. But in our administrative, as in our legislative, life, compromise, camaraderie, and trafficking are eating away at the fabric of the legal structure. This is a massive trend and can be fought only if there is a public opinion aware of this threat to effective Government.

The challenge is a tremendous one. In our present context it will require an unwonted discipline and restraint in many quarters. We must reestablish the notion that commissioners when they have a case before them are quasi-judicial officers. Congressmen, high officials of the administration, and party politicos must refuse to approach commissioners. The commissioners in their turn must close their doors and ears to everything except the record made openly before them. A litigant would not dare procure his Congressman to intercede with a judge. We must establish a tradition which makes the show of influence equally unthinkable in an administrative proceeding. It would be an important step in the building of such a tradition for Congress by statute to give authoritative expression to these principles.

Integration in Southern Schools Advances in All but Five States

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the able education reporter of the New York Times, Mr. Benjamin Fine, from the Times for Sunday, August 25, 1957, reviewing the successes and failures in the Southern States in carrying out the public-school desegregation decisions of the Court.

The Senator from Florida [Mr. HOLLAND] on August 26, very properly placed in the CONGRESSIONAL RECORD at pages 14554–14555 a companion article by the same reporter from the Times for August 26, giving a similar report for the Northern States.

I hope these reports may be considered together, for, in my opinion, they clearly establish the point in the case of our schools, that our problem of protecting racial minorities against denials of their constitutional rights is nationwide. Not one section alone, but many, need the assistance in securing compliance with the Constitution that would be afforded by carefully drawn Federal legislation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTEGRATION IN SOUTHERN SCHOOLS ADVANCES IN ALL BUT FIVE STATES

(By Benjamin Fine)

NASHVILLE, August 24.—Racial integration is gaining in the schools of the South.

When schools open next month a record total of 350,000 Negroes will attend classes under integrated situations. They will go to school with 2 million white pupils.

Despite all kinds of obstacles integration is spreading. Only five hard-core States remain untouched by either school or college integration—South Carolina, Georgia, Alabama, Florida, and Mississippi.

Two others—Virginia and Louisiana—have mixed classes on the college level, but not in their public schools.

Virginia faces a number of court suits; it is believed to be only a matter of months before a breakthrough is made.

In Louisiana, integration in parochial schools is expected ultimately although not for this year.

Integration will reach the strong outposts of the South within the next 2 weeks. Three of the largest cities in North Carolina—Charlotte, Greensboro, and Winston-Salem—will have mixed classes when schools open on September 3.

Nashville will integrate on a limited scale, starting with the first grade. Although schools open there on September 9, advance registration for first-graders will take place next Tuesday. This is expected to be a big test for the city, as threats have been made to prevent mixed classes.

Another major test will take place September 3, when Little Rock and four other Arkansas cities integrate their schools. At Little Rock integration will start with the high schools, and gradually work down to the elementary grades. Open threats have come from opposing forces in Arkansas. The new policy will not be accepted by the opposition without a last-ditch struggle.

This fall a total of 707 school districts in 17 Southern States and the District of Columbia will be integrated. This is a gain of 57 districts in the past 12 months. Twenty-three districts will operate on a mixed-class basis for the first time. Of the 9,000 school districts in the South, fewer than 6,000 are biracial. The rest are all white. Some 3,000 biracial districts still remain segregated.

"We are making progress," one southern educator observed. "Some say that the progress is too slow, while others believe we are going too fast. We just have to move ahead at the pace that the community is ready to accept."

SNAIL'S PACE IRKS SOME

Many officials of the National Association for the Advancement of Colored People and other groups favoring integration are unhappy at what they call the snail's pace of desegregation.

At any rate, when schools reopen soon, these districts will join the integration camp:

Arkansas: Little Rock, North Little Rock, Fort Smith, Van Buren, and Ozark.

Kentucky: Lebanon, Clay, and Sturgis.

Maryland: St. Mary's County.

Missouri: Bend, Malta, Lebanon, Gallatin, Pacific, Mendon, and Clinton.

North Carolina: Charlotte, Greensboro, and Winston-Salem.

Oklahoma: Marietta, Hugo, and Sand Springs.

Tennessee: Nashville.

Although progress has been made, large sections of the South remain untouched by the Supreme Court decision of May 17, 1954, outlawing separate but equal schools.

The term "integrated situation" is used by the southern school news headquarters to describe conditions under which Negro children attend mixed schools or reside in districts where mixed classes have been authorized.

Thus, although 350,000 Negroes are under integrated conditions, far fewer than that number actually attend mixed classes. Because of residential patterns, many Negroes attend segregated schools, even though they are legally entitled to go to mixed schools. This de facto segregation exists in the North as well as the South.

CONCLUSIONS OF SURVEY

As the schools start their fourth year since the historic Supreme Court decision, these conclusions emerge from a study of the 17 States and the District of Columbia made by the New York Times:

Integration is spreading rapidly in the border States of Maryland, West Virginia, Kentucky, Missouri, Arkansas, and Oklahoma.

The District of Columbia has completely integrated its school system.

Resistance continues strong in Virginia, South Carolina, Georgia, Florida, Alabama, Mississippi, and Louisiana.

Many Southern States have passed laws during the last 2 years that would abolish the public schools and set up privately supported institutions, if segregation is enforced. Some 7 million white pupils and 2,450,000 Negroes still remain in segregated situations.

Greater reliance is placed by the South on the use of the courts to delay action on integration as long as legally possible.

Serious trouble appears possible in several of the new districts that will integrate their schools this fall.

KASPER IN NASHVILLE

There is organized opposition in Little Rock, Nashville, and the three North Carolina cities.

Although indicted twice by the courts, Frederick John Kasper, executive secretary of the Tennessee White Citizens' Council, has come to Nashville to "alert" the public. The New Jersey born segregationist has begun a campaign similar to the one he organized at Clinton, Tenn., to prevent Negroes from attending schools with white pupils. Whether he is successful depends upon how much of a following he can muster here. Kasper has also threatened to move into other communities this fall. Moreover, the White Citizens' Councils in other States are girding for battle.

The legal counsel for the Capital Citizens' Council in Little Rock launched the first legal attack last week against high school integration. Little Rock has ordered its high schools integrated; complete integration is to take place by 1963.

Arkansas, in common with Texas and most of the other Southern States, finds that the State laws conflict with the Federal laws. Four segregation laws are on the Arkansas State books; recently 10 Negro ministers asked a Federal court to rule these illegal.

TEXAS PLANS HALTED

In Texas, where more than 100 districts with a white enrollment of 500,000 have been integrated, all further plans for desegregation have been temporarily halted. A law prohibits future integration until approved at a local election, with loss of State funds and fines against administrators for violation.

As a result, plans to integrate schools in Galveston, Port Arthur, Stamford (west Texas), and several other communities have been abandoned. Lawsuits have been filed in Federal courts to require Houston and Dallas to integrate their schools. The court has held Dallas must desegregate, but has set no specific time for it. Dallas has made several studies of the question; the school officials say they need more time to choose the best plan.

The Houston officials argue that they need several years to complete a building program. Without such a program, they say, Negroes and whites would be compelled to attend the same schools, even thought a free-choice integration system might be ordered.

Several Southern States have adopted a pupil-assignment law, which they hope will keep integration to a legal minimum. Under this law, pupils are assigned to those schools that would be best for their general health, safety, and welfare. Officials of the National Association for the Advancement of Colored People have called this a ruse to circumvent an honest application of the integration policy.

FEW NEGROES ACCEPTED

The first test of this policy is now taking place in North Carolina. Although many Negro pupils applied, only a dozen or so were accepted in the three cities that will desegregate this fall. For example, the Charlotte School Board accepted only five Negro children in the white schools. Twenty-four others were rejected. The board did not explain why some were permitted to go to the all-white schools, while others were turned down.

The Raleigh School Board did not accept any Negro students. And in Marion, the McDowell County Board of Education vetoed the applications of 66 Negroes who had sought admission to the white school at Old Fort. The pupils had asked to be assigned to the Old Fort school rather than the consolidated Negro school at Marion, 13 miles away.

The legal counsel for the North Carolina NAACP, C. O. Pearson, said, concerning the rejection of pupils through the pupil-assignment laws:

"I think everyone understands that this procedure will be tested legally."

It is expected that one of the strongest efforts to end segregation in the South will be made in Virginia this fall. Virginia is an island of segregation. She is surrounded by Maryland, West Virginia, Kentucky, Tennessee, and North Carolina, all now under complete or token integration.

Lawsuits to bring about integration are pending in courts in at least five areas—Norfolk, Newport News, Charlottesville, Arlington, and Prince Edward County. NAACP lawyers have indicated they will make efforts to place Negro children this fall in white schools at Arlington and Charlottesville.

A 15-year-old Negro girl in Arlington has applied for admission to the Washington-Lee High School, now all white. Her application is in the hands of the pupil-placement board. This board is empowered under Virginia law to assign pupils to specific schools for reasons other than race.

The constitutionality of the board is being challenged in the courts. At a special session last year a law was passed that requires the withholding of State funds from a locality's public schools when any integration takes place. That, too, will be ultimately tested in the courts.

"As I see the picture now," Gov. Thomas B. Stanley said recently, "I am very hopeful that schools will open on a segregated basis in September as they have in the past."

Another likely trouble spot this fall is western Kentucky. Although the integration program in Louisville has received national attention, threats have been made against it. But school officials, headed by Dr. Omar Carmichael, and the police have said that they would not stand for any tampering with the integration rulings.

Webster County officials have announced they will integrate in September on a voluntary basis. They have not spelled out the meaning of "voluntary." Last fall trouble broke out at Clay, in Webster County; the State militia was called out by Gov. A. B. Chandler.

"We will, of course, comply with the Federal Court order," said Wilbur Collins, superintendent of Webster County schools.

Integration has also been ordered for other counties in western Kentucky. Union County (Sturgis) plans to integrate the ninth grade this fall; 10th grade in 1958, and 11th and 12th in 1959. Hopkins County proposes integrating first through fourth grades now, and the others through 1960.

There is no single pattern for gradual integration. Some school systems want to start with the first grade, as at Nashville; others are starting with the high-school division, as in Little Rock.

The Kentucky Citizens' Councils have threatened to forestall integration in some areas. If trouble develops, observers believe, it will come in the rural areas of western Kentucky, where feeling is still strong against the Governor for calling out the militia last September.

James A. Crumlin, a Louisville lawyer and president of Kentucky State conference of the NAACP, observed:

"We're just hoping that everything is going to work out all right. We'll continue to hope that to the very last."

Summary of Three Addresses Made by Dr. Frank P. Graham, Former United States Senator

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. COOPER. Mr. President, I ask consent to include in the RECORD the following summary of speeches made by Dr. Frank P. Graham, former United States Senator, at the Chautauqua Institution, on August 14, 1957.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

In the course of three addresses on the United Nations at the 84th Chautauqua assembly of people from 48 States and 14 foreign countries, Dr. Frank P. Graham, 19 years president of the University of North Carolina, former United States Senator, and U. N. mediator in two Asian conflicts, made some timely observations on: (1) the development among southern people of the sense of obligation to prepare all their children, including Negro children, for full citizenship; and (2) the faithful way in which Negro youth have prepared themselves for full citizenship, including the right to vote as the most fundamental right in a democracy on which other rights so largely depend.

He remarked that despite heavy lags and unfair procedures and pressures in many communities in many States there has yet been a steady increase in the number of Negro voters through the initiative of Negro organizations and the widening of the religious conscience and a sense of democratic responsibility. The opportunity is at hand, he said, for the first time in almost fourscore years to adopt measures without a Senate filibuster, which in a few years will likely more than double the rate of increase in the number of Negro voters in 12 Southern States.

The southern people, Dr. Graham remarked, on the basis of their own commitments, have a special legal and moral responsibility to join in the program for local-State-Federal cooperation in removing obstructions and ending the evasion of the right of Negroes to vote. When Negroes were disenfranchised by grandfather clauses in amendments to State constitutions at the turn of the century, the promise was made that, after an early terminal date, they would again have the right to vote on the basis of

a literacy test to be applied equally under the law.

In North Carolina—one of the three Southern States with more than a million Negroes—when some political leaders insisted that the terminal date of 1908 be indefinitely postponed for Negroes and that the taxes paid by the two races be segregated in support of their respective schools in the biracial structure, Gov. Charles B. Aycock declared in that event he would resign as governor in protest against his broken word and the dishonor of his State. He proclaimed all over the region that the first obligation of the people was to provide public schools so that "every child could burgeon out all that is in him."

Bearing on the preparation for the right to vote based on literacy are the following developments: (1) In 1875 9 Southern States spent a little over $5 million for the maintenance of the public schools, mainly for white children; (2) in 1952 13 Southern States spent $1,200 million for the maintenance of the public school in that year for all children; (3) in the last decade North Carolina, for example, has maintained a statewide State-supported 12-grade, 9-month school system for all children, rural and urban, white or colored; (4) in North Carolina, Tennessee, and Virginia teachers of Negro children, because of their longer experience and training, receive, on the average, higher salaries than the teachers of white children; (5) The southern people of both races invest a larger proportion of their income in the education of their children than the people of other regions; and (6) although one-tenth of the Negroes in the world are in the United States, more Negro youth are in colleges in the United States, mainly in the Southern States, than in all the rest of the world.

These facts emphasize, said Dr. Graham, the moral obligation to remove any barriers still unfairly placed in the way of the promised right to vote. Six Southern States require a poll tax as a qualification for voting. The inclusion of unpaid back poll taxes as a part of the poll tax of any year works unfairly against the universal suffrage rights of low-income groups to which the Negroes largely and often unfairly belong.

While 60 percent of the white people of voting age register in the 12 Southern States, it is roughly and sincerely estimated that approximately 1,250,000 Negroes register, out of 5 million Negroes of voting age in these 12 States. In the last 5 years there has been an increase of almost one-quarter of a million Negro registrations in these States.

The present searchlight of public opinion turned against the threats, subterfuges and other unfair procedures and pressures against the equal right of Negroes to vote, the debates in Congress regarding present feasible and effective provisions, and the commitments made by southern leaders in Congress, in newspapers and in public assemblies, all indicate a growing public opinion in the South for the cooperation of local, State, and Federal authorities in behalf of the equal right to vote as the very foundation of our democracy.

One of the alternatives recently before the country was whether it was wise to resort to Federal threats and measures of coercion and thereby not only increase the largely mistaken, but widespread deep anxiety of the majority of the people in the Southern States, but also, to cause a massive southwide solidification of the resistance of this majority. Is it not wiser to adopt presently feasible measures without a filibuster which will win the cooperation of an increasingly larger number of southern people in support of the equal right of suffrage, acknowledgedly now long overdue for fulfillment in many communities in many Southern States?

Without threats of coercion the city of Charlotte desegregated the buses without either local commotion or global notice. A large proportion of Negroes vote in the city of Charlotte. Twice a Negro janitor in the State university led the ticket for the town council by the decisive vote of the town and gown majority. A large number of Negroes vote in Chapel Hill. Beginning steps in the admission of Negro children to formerly all-white schools in Charlotte, Greensboro, and Winston-Salem have been made both in obedience to the law of the land and for the preservation of the public schools. A large proportion of Negroes vote in these cities.

Without a Marshall plan, with full responsibility in difficult decades for the pensions and rehabilitation of Confederate veterans, with part responsibility for the pensions and rehabilitation of Union veterans, with the disproportionate loads of tariffs and discriminatory freight rates, and with the responsibility during recent decades of educating one-third of the Nation's children with one-sixth of the Nation's financial ability, the southern people, amid almost the universal poverty of the war's desolation, rose from the ruins as unconquerable in spirit in the duties of defeat as they were brave on the battlefields against the heavy odds of a long and exhausting war.

As a vital part of the southern people, the Negro people, despite all the wrongs to these people, compounded by centuries of slavery and discrimination, have in the recent decades of their freedom and labor made a progress unsurpassed by any people in a like period in human history. In their spiritual faith and patient upward struggles, their zest for living and laughter, songs merry and sad, and creations of enterprise and spirit, they have revealed the innate capacity of a great people in their rich, various, and enduring contributions to the making and meaning of America.

In the free minds and generous hearts of millions of southern people of both races who have long cooperated in works of personal loyalty and kindness, will live and grow the unfulfilled teachings of our religion for the equal freedom, dignity, and opportunity of all human beings, the struggles of freedom for a higher freedom, and the renewing faith of the American dream with its message of hope and brotherhood in this age of suspicion and fear.

Those who today look down on the ideas and pioneering work of Henry W. Grady, Booker T. Washington, and Charles B. Aycock must stand on their broad shoulders from which to look down. Rather may we all look up with them for the next feasible advance of democracy in America. The gospel of love and understanding preached by Martin Luther King, who draws his inspiration from Jesus, his techniques from Gandhi, and his advice from his noble teacher, Benjamin Mays, of Morehouse College, will yet prevail in our time over fear and hate. The cross, warm with the blood of human brotherhood, will triumph over all the crosses lighted with the hot oil of prejudice, privilege, and power.

The great adventures in creative cooperation of the different peoples, without violation of the rights of privacy, friendship, and personal choice, will tend to preserve their racial identity and diversities to the enrichment of the South, release and unite their highest energies in the upbuilding of America, and increasingly compose their interracial tensions in working together in equal freedom and opportunity in the local communities and the world neighborhood.

Marketing in United States Steel Corp.

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DIRKSEN. Mr. President, during the closing days of the present session, the Senate Antitrust and Monopoly Subcommittee heard several officials of the United States Steel Corp. discuss administered prices and the relationship of price increases and wage increases to our national economy. I ask unanimous consent that the prepared text by Richard F. Sentner, executive vice president, commercial, United States Steel Corp., be inserted in the Appendix of the RECORD.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

MARKETING IN UNITED STATES STEEL CORP.

(By Richard F. Sentner, executive vice president, commercial, United States Steel Corp.)

United States Steel is successful. We are successful because we satisfy the requirements of our customers. We strive to do this better than other steel producers. At the thousands of customers' plants where various steel producers attempt to serve an individual buyer's needs, the competition is vigorous and intense.

These hearings have been directed principally at one element of this competition—that is, prices and pricing. To describe prices, terms have been employed during these proceedings which are not used or thought of in the steel business. No useful purpose would be served by my attempting to discuss the propriety of these terms. Rather, it would appear that my contribution to your deliberations could best be made by describing what happens in the area of our commercial planning and pricing, and their significance in the sale of our steel products.

In order to appreciate the significance of price competition in the steel market, it is first necessary to understand the relationship which exists between the supplier of steel and the consumer of steel. The need for continuity over an extended period of time is the single most important consideration in each buyer-seller relationship, and one which differentiates competition in steel markets from competition in markets for many other common articles of commerce. Let me explain why this is so.

The market for steel mill products is made up of the requirements of thousands of large and small individual plants, which process, fabricate, and assemble steel products into end items for sale. At each consuming plant the steel mill product which we sell is stamped, cut, fitted, welded, and combined with other materials to produce an end product. The user of steel mill products has invested his money in the facilities and organization required in these processes. He hopes to realize a profit by selling the item which he produces in competition with other manufacturers of the same item. His daily decisions are made in the light of his objective to maintain a high rate of operations over a continuing period of years. In this way he can maintain his own position in his market, and realize a profit on his own in-

vestment. To achieve this objective, he must have assurance of a constant and reliable source of steel mill products available to him at a cost low enough and of a quality high enough to enable him to compete in his own market.

This, then, is the market for which we compete. How do we plan for this continuing customer-supplier relationship which is essential to our participation in the market?

We have invested huge sums of money in sources of raw materials and in steelmaking facilities which are costly and long-lived. We have invested in these facilities to provide each of our large and small customers continuity of supply. It is obvious that our daily sales decisions must be made in the light of the need for a continuing flow of orders from customers to keep our facilities operating profitably, not only today but in all the tomorrows in which we and our customers will be in business.

Because the day-to-day decisions of both the buyer and the seller of steel are influenced by long-range considerations, the soundness of each sales decision is proved only over an extended period of time. To guide our daily selling activity, United States Steel has a commercial policy made up of the several aspects of our total marketing effort. Among these are:

The detailed study of markets in total, by consuming industry, by customer, by area, by product—today, tomorrow, and in the distant future;

The availability of the products which we have for sale;

The quality of our products;

The service which we render to our customers; and

The factor of prices.

Let me describe briefly the role which these factors play in determining our participation in the market.

To be competitive, we must stand ready to provide a continuing supply of steel products to each of our customers. The basis of the sales planning necessary to accomplish this lies in the study of markets. Markets are the collective desires and needs of thousands of buyers of steel mill products in all parts of the country, in businesses both large and small. We understand steel markets by knowing all we can about the individual needs of steel buyers, consumer by consumer, in substantial product detail. Only with this detailed market knowledge can we know what the customer will want to buy and how we can best supply his needs.

The total steel market requires thousands of steel products of particular specifications. Each customer order specifies a particular product by the grade, chemistry, and size required for a particular end-use. The steel mill product is produced only after the customer's order is on hand. Thus, the steel to satisfy markets cannot be made in advance and placed on the shelf for future sales.

As a practical matter, we cannot consider the steel market in terms of an isolated moment in time. We must examine markets both in the near-term future and over longer periods of time. We cannot plan our solicitation efforts, our sales force, our supply of raw materials, our facilities, or our pricing on the basis of what we think the market might be next week or 3 months from now. The steel market is an enduring opportunity. The market must be served today, tomorrow, and far into the future, and, assuredly, we must conduct our business in such a way that our customers today will still be our customers tomorrow. We are, of course, sensitive to the fact that the total steel market moves upward or downward with changing conditions; but we cannot base our commercial planning on sporadic week-to-week or month-to-month fluctuations.

Our pricing is the product of management judgment applied to long-range commercial planning, as well as to the day-to-day administration of our commercial affairs. It, of course, recognizes the need for sustaining long-term sales relationships with customers.

United States Steel endeavors—to the extent competition permits—to sell its products at prices which will recover its costs and yield a profit which will prove attractive to investors in United States Steel. Let me distinguish the role which costs and profits play in our pricing.

Knowledge of costs is fundamental to the successful operation of any business. The costs involved in assembling enormous quantities of basic raw materials, providing modern steelmaking facilities, and efficiently combining these with millions of man-hours of skilled labor, present a complex accounting job. Nevertheless, through the application of modern techniques, we identify these many and varied costs with each of the products we offer for sale. This detailed cost identification permits us to seek constant improvement in individual product costs. It also is important in considering the prices of individual steel products.

Now, let me turn to the element of profit. Earning a profit attractive to investors is fundamental to the successful operation of any business. If United States Steel is to fulfill its responsibilities to its owners, to its employees who depend on it for continued job security, to the thousands of customers who look to it for ever-increasing quantities of improved steel products, and to the American people who expect United States Steel to be ready to serve the national interest in time of emergency, then it must prosper. If United States Steel did not endeavor to prosper it would fail to fulfill these responsibilities.

But the actual attainment of such a profit is the difficult problem. Business profits are merely a residual between the seller's costs and the proceeds realizable on products sold. The fact that a steel buyer will not pay more for our steel mill products than for our competitors' products is a vital factor in the attainment of a profit.

Our mill price must permit us to sell the product of our mills; to develop mutually beneficial long-term individual customer relationships; to maintain our position in the market with respect to competitive nonferrous materials.

To the steel buyer, the "price of steel" is actually the cost of steel at his plant. Ordinarily, he simply will not pay more to one supplier than to another. To obtain his business on a continuing basis, we must be prepared to meet a lower delivered price if offered by another steel producer.

Such factors as changes in transportation costs and revision of competitors' mill prices exert a constant influence on the competitiveness of our prices. These changes require continuous reappraisal of our prices.

There are some who hold that similarity between prices of competing steel producers is evidence of a lack of competition. Nothing could be further from the truth. Actually, similarity is real evidence of the high degree of competition existing among sellers. We pride ourselves on the quality of the products which we produce, on our dependability as a source of supply; and on the technical service which we offer to a customer. All of these factors are important to our customers. Nonetheless, we know from practical experience that when we are not competitive in prices, we are not fully competitive.

Full recognition of the significance of this is reflected in that portion of our commercial policy dealing with price. It is simple and clearly understood by our customers. We have published f. o. b. mill prices for standard steel mill products at each of our producing mills. This is the price we quote to all of our customers, large or small. In other words, we have a one-price policy. When a change is made in our f. o. b. mill price, the new price applies to all of our customers and to all unshipped orders on the books as of the date of change.

The antithesis of a one-price policy would be one in which we had many prices for the same product. Every customer would like a lower price than his competitor. On the other hand, no customer wants his competitor to enjoy a lower price than himself. We believe our one-price policy is the sound and equitable manner in which to conduct our business. Each of our individual customers faces competition in his own market. If we were to charge one customer more for his steel than we charged a competitor of his, we would be impairing his ability to compete. Not only would such a practice result in price discrimination, but also it would almost certainly conflict with our plans to maintain enduring customer reltaionships.

It has been suggested that when demand is temporarily in excess of supply, steel mill products should be sold to the highest bidder. During such periods this type of expedient pricing might indeed yield a handsome quick profit. However, this would be a short-sighted policy and would surely lead to serious discrimination among our customers.

As the availability of space on our producing facilities neared the sellout point, we would be weighing price offers as each customer bid higher and higher amounts in an effort to obtain a supply essential to his operations in future weeks and months. Not only would this result in discrimination in price but also in discrimination in the distribution of our products. In the end, their inability to bid successfully would mean that some customers would be denied any steel at all. The net result would be that some customers would prosper; some customers would sustain losses, and might even be forced out of business by the lack of their needed raw material.

Once peak demand had subsided, many of those who had been bidding for our supply would turn to other steel suppliers who gave promise of a stable continuing supply. We would be left without the broad base of thousands of continuing large and small customer relationships which we need to operate our mills year after year.

Thus, there is no place in our commercial planning or policy for auction-type pricing of our steel products. In periods of strong demand we exercise restraint in our pricing. The reasons are obvious. First, we have no desire to exploit our customers. Second, good business judgment, based on long-term market considerations, tells us that exorbitant prices would only encourage our customers to engineer their own operations away from the use of steel or turn them to another steel supplier at the earliest possible moment.

Up to this point, we have discussed competition in the steel industry largely in terms of price. The practical business of selling steel, however, involves vigorous competition in other areas as well.

It is not enough merely to have a product which can be offered for sale. The product must be of a quality at least equal to that offered by our competitors. Steels of improved quality mean market advantages for the manufacturers of products made from steel. For example, railroad freight cars made from a steel slightly more expensive than ordinary steel, have a 50-percent longer life. With an improved product, the steel user has considerably improved his position in his own markets.

Each steel producer is compelled by competition to seek constant improvement in the quality and utility of his products and to develop new types of steels which can be made available to his customers. This is one of the most intensely competitive factors in the steel industry. In fact, survival in the

steel industry depends upon the continuing ability to produce steels of a quality and type equal to or better than those of any competitor.

Customers record the quality performance of products received from each competing steel supplier. The supplier whose material is unsatisfactory for a given application loses participation in that customer's business, and the supplier who maintains his quality above that of his competitors increases his participation. Competition through improved steel quality is real, and causes changes in the amount of steel bought from various suppliers.

May I emphasize again, the market for steel cannot be considered in terms of an isolated moment in time. Each of our day-to-day decisions must reaffirm our position as a supplier with whom our customers will want to continue a long-term relationship. We must have such relationships to assure the continued operation of our facilities. Our commercial policy—based on these long-term considerations—serves the best interests of both our customers and United States Steel.

North Dakota's Incredible American Legion

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "North Dakota's Incredible American Legion," by Robert B. Pitkin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NORTH DAKOTA'S INCREDIBLE AMERICAN LEGION

(By Robert B. Pitkin)

The approach of fall heralds the American Legion's annual membership drive. The thoughts of every elected and appointed official turn to the more necessary than enjoyable question of how to get the old members to pay their dues promptly, and how—most efficiently—to enroll desirable new members.

It is a time to speculate more than usual on how North Dakota does it. The American Legion in North Dakota—a vast, thinly populated State—is the colossus of membership achievemeent in the Legion. Just about half of all the war veterans in the State—whose total population is roughly that of Newark, N. J.—are Legionnaires.

Nationally, this is the best record in attracting eligible vets; so there is a general conviction that North Dakota knows something worth learning.

As a matter of fact, there is very little in the American Legion in North Dakota that is not familiar elsewhere. When asked directly what his membership "secret" is, North Dakota Adjutant Jack Williams—who has been on the job ever since 1919—pulls on his nose and says: "We just have an active Legion and we try to run an efficient operation, I guess."

Jack doesn't guess. He knows. Active Legion programs, a general dedication of the membership to Legion ideals, and a high-class leadership interested in the good of the Legion are the chief "secrets" North Dakota has.

More than anything else, North Dakota's operation proves again that the way to have a lot of members is to hew to Legion fundamentals all year, with precise attention to the many details that will produce the highest level of Legion accomplishment.

• • • • •

North Dakota Legion leadership is not infiltrated and stagnated by gloryseekers more interested in titles than in duties. Committees are small and exactly as numerous as necessary, and each appointment carries with it a burden of responsibility. There aren't any honorary appointments, so there is only one way for an ambitious individual to use a Legion office for his own personal prestige, and that is to do a whale of a job for the Legion.

Anyone can imagine the results of such a commonsense arrangement. During 37 years, North Dakota has built up a corps of present and past officeholders whose ability, sincerity, influence, experience, and dedication are assets still available.

Even those who have long gone elsewhere maintain a keen interest in their home State Legion. Past Department Committeeman Tommy Whelan, now United States Ambassador to Nicaragua; North Dakota's only past national commander, Lynn Stambaugh, now an executive of the Export-Import Bank in Washington; C. L. "Dad" Dawson, of Beach, the first department commander, who admonished the State Legion in 1919 to "do always in the present what is best in the circumstances" and is now a prominent Washington attorney. T. O. Kraabel, North Dakota's first director of veterans' affairs and now the Legion's national rehabilitation director—also in Washington—maintain a lively interest in their favorite department and return for the department conventions whenever the occasion permits.

Oldtime Legion leaders still at home seldom quit. State Supreme Court Justice Pames Morris, of post 1, in Bismarck, was an early youth activities leader in the department. Increased responsibilities and advancing years do not prevent him, today, from presiding over a mock trial at American Legion Boys State in Fargo each year. The Morrises have been another great Legion family team. Mrs. Morris was national auxiliary president in 1938–39.

Adrian Pfusch, a founder of Valley City Post 60, may still be found of an evening, drilling a young bugle corps in the basement of the post home.

North Dakotans are sharply watchful of who leads them, and their judgment ranks high. John E. Davis, from the little prairie town of McClusky, was the Legion's choice for its first World War II department commander in 1946. Last fall, Davis was the people's choice for Governor of North Dakota.

To provide a testing ground for the new generation of Legion officials after World War II, North Dakota Legionnaires increased the number of department vice commanders from 1 to 3, assigning a region to each. Starting with Davis, a long succession of capable and dedicated young veterans has filled the State commandership via this route since World War II.

The zeal of Commanders John Preboske and Wayne Seelhammer in the last 2 years has been almost alarming. They hit a tireless pace of visiting posts which, some fear, will set a precedent that may break future commanders in their efforts to do better.

Comradeship and mutual helpfulness in the North Dakota Legion go hand in hand with dedication to the Legion. During the drought and depression of the thirties the western half of the State, particularly, was parched brown and desolate. To those who stubbornly hung on, money and food became equally scarce.

The relatively more prosperous eastern Legionnaires shipped food in. Meanwhile there was not enough cash in sight to maintain the Legion dues of many of the most ardent members. Some paid their dues in kind with what little farm produce they could salvage. Others had nothing from one year's end to the next and find it hard now to recall how they survived.

In the stanch little western town of Beach, where the rainfall is everybody's business, "Stub" Noyes was among those who, having some cash, kept Beach Post 5 going by paying the dues of other members.

"You know," he recalls, "when times got better, every one of those fellows paid me back."

Internal Legion politics are healthy in North Dakota. Most political conniving is aimed at improving the Legion. Power struggles are rare. An exception was a sectional fight years back when a block of central posts tried to upset the power of the more populous Red River Valley in the east, centered in Fargo.

Adj. Jack Williams was made the issue, on the basis of his power in the Legion and his marked influence in North Dakota politics. Williams is a potent figure in State politics whenever he chooses to be, and is conceded to be one of the most astute politicians in the American Legion.

Both sides won the sectional fight. The central coalition failed to unhorse Williams, but served healthy notice that it could combine to be a force to reckon with.

Frank Traynor, of New Town, and Perry Goss, of Carrington, both members of the original central combination, recall with relish how Williams beat them, at one point leaping over a table on the stage at the department convention to answer charges made against him.

"Greatest speech I ever heard," says Goss.

"I'd be sorry, today, if we'd beat him," says Traynor.

Williams was not the real issue. Those not part of the sectional fight couldn't be convinced that Jack did not invariably use his power and ability for the good of the Legion. So the western cattle and wheat men, even more remote from Fargo than the central posts, went down the line for Jack.

No effort is ever made to have a closed race for any Legion office in North Dakota. If there is a ganging up against a candidate, it takes the form not of closing the door but of enticing others, thought more desirable, to enter an open race. Everybody considers it a sad convention if the delegates do not have a goodly choice of aspirants to vote for or against.

• • • • •

Most of the larger clubhouses are run by full-time paid managers. Fargo has found it advantageous to combine the offices of post adjutant and club manager in one man, Glen Rott, a disabled veteran of Guadalcanal. Nobody can enter a Legion clubhouse in North Dakota without showing his current membership card. If a post slips on this, you will soon hear grumbling about it 300 miles away.

There is nothing unique about the kind of programs that Legion posts carry out in North Dakota. The standard Legion programs, plus community service activities, fill the bill.

What is amazing and undemonstrable in anything short of a book-length report is the scale on which 238 scattered posts in a State with about 60,000 veterans spread over 70,000 square miles activate the Legion programs.

Boys State is limited to 550 boys by the capacity of the State college dormitories in Fargo. It is always full, and towns of 5,000 to 15,000 will send 2, 5, 10, 20, and more boys. Posts urge other civic groups to sponsor boys. A dozen boys go from Jamestown, sponsored by the Legion, its auxiliary, and every civic group in town. Sponsor pays $33 Boys State fee, plus expenses and transportation.

It's 300 miles from Killdeer to Fargo, and Killdeer is a little western street scene with 700 people and 126 Legionnaires. But Killdeer Post 46 always aims to send at least two boys to Boys State. Killdeer Legionnaires kicked themselves this year because they sent the boys' names in too late, and their quota was immediately taken up by sandbys elsewhere.

American Legion junior baseball, which began locally in the Dakotas in 1922, is so enthusiastically backed by North Dakota posts that the State has two leagues, A and B in the national program. A B team can challenge into the A competition if it wants to take a crack at the national playoffs. Many A class posts have a second team in the B league. Midget boys' baseball teams and leagues sponsored by Legion posts abound.

Bismarck and Fargo posts spend as much as $4,000 a year on junior baseball. Bismarck has its own bus to haul the boys to "away" games. Post 3 in Dickinson owns its own floodlighted $75,000 American Legion Memorial Ball Park and keeps 257 boys busy playing summertime baseball.

Jamestown has an A and B team, plus a peewee and 4 midget teams in separate leagues.

Earnie Schmit, of Beach, the newly elected department commander, says: "Our little post spends about $1,000 a year for baseball coaches and transportation for the team. Kids follow the games, and there's great excitement at them. Nobody has any problem with kids all summer. They practice ball—swim—then go to ball game either to play or cheer."

Where there's no Legion post in a small town, a neighboring post may sponsor a kids' ball team. Post 153 in Wyndmere (114 members) sponsors its own junior baseball team and another in Barney. Post 88 in Hankinson (91 members) sponsors teams in Great Bend and Mantador as well as its own.

Fargo Post 2 built up midget baseball to the point where, with 600 enthusiastic players, it got too big to handle. The post had 4 coaches on the payroll, with a northside and a southside midget league as well as 2 regular junior baseball teams. It finally persuaded the city park board to take over the midgets.

A full listing of the community projects of posts in North Dakota is an impossibility here. The Fargo post alone publishes a list of 26 annual projects for which $12,500 is budgeted by the post.

A major community charity drive in the capital city of Bismarck is the open-your-heart campaign. Conducted by Post 1 for 27 years, it raises from $5,000 to $7,000 annually, which is turned over to the city nurse for welfare administration.

Many posts, such as 139 in Tioga and 290 in New Town, help underwrite the local medical clinics. Gifts to hospitals and the maintenance of onloan equipment needed for the sick at home are commonplace of the North Dakota posts. The 40 & 8 at Devils Lake places onloan hospital beds and other equipment in posts for issue where needed. Recent post hospital aid projects include $2,500 for hospital improvement at McVille, and $5,000 toward an operating room at Linton, where the post also gave 4½ acres of land to the city for its community swimming pool.

Richardton Post 180 legionnaires provide and man the local ambulance.

In February 1956, 6 of them made a 1,000-mile round trip to Minneapolis to give blood to a 2-year-old Richardton girl.

The Lutheran home for crippled children in Jamestown, is well endowed with 40 & 8 equipment.

Fargo Legionnaires work all year remaking old toys that they collect. At Christmastime they deliver about 1,200 remodeled toys from their Santa's workshop, along with Christmas baskets, to children in hundreds of needy families.

Minot's Post provides a continuing scholarship for a deserving student picked by the regents at Minot State Teachers College, and puts on entertainment one night each week for hospitalized veterans at the Minot VA hospital.

Legionnaires at Antler Post 263 own and maintain a 27-acre park for community use. Almont Post 261 recently raised $1,200 to help the family of a sick girl. Abercrombie Post 128 Legionnaires lend their manpower annually to maintain the State park and grounds at Fort Abercrombie.

Thousands of Legionnaires sprang to relief work when a tornado smashed through the middle of Fargo last June.

Such listings of Legion community efforts aren't news anywhere in the American Legion. But nearly every post in North Dakota could provide a list as impressive as the above statewide sampling.

North Dakota's membership secret is not just its well-organized membership drive. Its secret is everything stated above and more—a statewide saturation of the best in commonsense legionism which gives the organization the public esteem and attractiveness that make member getting easy, and which circumvents the familiar organizational evils that make member getting hard.

The question remains: How has such a high level of Legion ideals been maintained? North Dakotans say that the State's chief commodity is people. At any event, if anything characterizes the North Dakota Legion it is that it has good leaders, and that it has members who are intensely jealous and watchful of their leadership. Nothing that the department has accomplished could have come to pass if the people who make up the organization hadn't wanted it that way, and worked hard for what they wanted.

Bill Stern, who has been North Dakota's national executive committeeman since 1925, is a remarkable paradox. Bill is nothing like anyone else in North Dakota or elsewhere, yet his basic characteristics typify North Dakota's Legionnaires.

The salty, 71-year-old president of the bright, modern Dakota National Bank in Fargo has four loves: his bank; Northwest Airlines (of which he is a director); the American Legion (of which he was a founder); and politics.

His language is usually fit only for a pirate's parrot, and his ideas are younger than Bill is old.

He gads about all over the country and the world (he was dining with General MacArthur in Korea when word came that President Truman had relieved the general of his command).

Wherever Stern is he sells his four loves. You have to belong to the Legion if you're a veteran; if you travel you have to fly; you should vote for the candidates of Bill's party; and even if you're a bellhop in the Carlton Hotel in Washington, D. C., where Bill puts up, you'd better have a savings account in the Dakota National Bank.

North Dakota Legionnaires who are nothing like Bill still share his chief attributes: rugged individualism, good humor, leadership, enthusiasm, sociability, and hardiness.

And it is generally agreed in North Dakota that Jack Williams, the department adjutant, bears a full share of the credit for the Legion's outstanding achievements in the State.

The son of an Irish railroad worker from Minnesota who moved to Fargo, Williams worked as a youngster in printshops in Fargo. Coming home from World War I, he threw in with an able group of returned veterans who were forming the North Dakota Legion, and was their unanimous choice for secretary, then adjutant.

Williams had a flair for politics, a vast interest in and a quick intuition about people. His talents are those of a born political leader. He can listen interminably, is universally liked, and his opinion in political matters is sought and respected not only within the Legion but at the highest level of State government.

The remarkably sensible internal organization of North Dakota's Legion is largely attributable to Williams' guidance. It was at his own insistence that he should stand for election every 2 years, at a time when friends sought to protect him by arranging long-term appointments for the office of adjutant.

For 38 years, Williams has devoted most of his political acumen to the good of the Legion.

On this subject, Jack recently said: "The Legion must keep out of partisan politics, but you have to be a pretty good politician to know what to keep out of."

In the State capital, where he is known and respected as a political power, Williams' talents have mainly been used to bring about a sound set of State veterans' laws. He serves extra duty as the Legion's State legislative director.

His wife, affectionately known as Hans (pronounced "Hance"), has lived and breathed the Legion with Jack ever since she first came to work as his secretary in 1919.

Jack Williams and Jim Boyle, of Maine, are the only men who, today, have served continuously as their department adjutants since 1919. It is a pretty good tribute to both of them.

Record of the Activities of the Committee on the Judiciary, 1st Session, 85th Congress

---

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. CELLER. Mr. Speaker, the concentration of the activities and operations of the Committee on the Judiciary is evidenced not only by the number of bills considered, but by the very nature of the legislation itself. Major legislation enacted into law which came out of this committee includes, among others, the civil rights legislation, which bears the chairman's name, the first revisions in the Immigration and Nationality Act since 1952, the legislation dealing with the production of statements and reports of witnesses arising out of the case of Jencks against United States.

Out of the total of 10,711 bills, joint resolutions, concurrent resolutions, and House resolutions included, 4,181 were referred to the Committee on the Judiciary. Add to that 375 Senate bills referred to this committee and we find that 4,556 were referred to this committee. Thus, 39 percent of all bills and resolutions introduced in the House came before us. Thirty-three bills were enacted into public law. Approximately 2,660 individuals were beneficiaries of private bills and resolutions who, otherwise, would have been inadmissible of permanent residence in this country under the immigration law. Private laws enacted

arising out of the work of our subcommittee on claims totaled 105, granting to these people equitable relief for losses sustained.

A list of the special reports issued by this committee during the first session reveals the scope of the operations of this committee in addition to the consideration of the bills routinely referred. A list of these special reports follows:

Antitrust Problems in the Exploitation of Patents.

Judicial Doctrine of Primary Jurisdiction as Applied in Antitrust Suits.

Spanish Sheepherders.

Refugee Relief Act of 1953, as amended.

ICEM and Land Resettlement.

Presidential Inability.

The Television Broadcasting Industry.

Japanese Agricultural Workers.

Airlines.

Problems Relating to a Federal Constitutional Convention.

As stated above 33 public laws resulted from the activities of this committee, and it is to be noted that this list reveals the wide rang of subject matter which comes before this committee. The statistics themselves, of course, do not reveal the intensive nature of the work since the statistics themselves cannot reveal the amount of preparation and deliberation that entered into both favorable and adverse reports of the work before us.

Public bills and resolutions enacted into law

No. of law	Title	No. of bill or resolution
85-32	Requesting the President to designate the 3d Friday of May of each year as National Defense Transportation Day	S. J. Res. 22.
85-60	To implement the convention between the United States of America and Norway, which entered into force on Nov. 9, 1948, for disposition of the claim against the Government of the United States of America asserted by the Government of Norway on behalf of Christoffer Hanneviz.	H. J. Res. 193.
85-70	To amend the act of Dec. 2, 1942, and the act of Aug. 16, 1941, relating to injury, disability, and death resulting from war-risk hazards and from employment, suffered by employees of contractors of the United States and for other purposes.	H. R. 3373.
85-71	To amend the Federal Employees' Compensation Act to provide compensation for employees of the United States suffering injuries from war-risk hazards or during detention by a hostile force or person.	H. R. 6523.
85-140	For the relief of the Sergeant Bluff Consolidated School District	H. R. 1942.
85-202	To amend sec. 331 of title 28, United States Code, to provide representation of district judges on the Judicial Conference of the United States	H. R. 3819.
85-214	For the relief of the village of Wauneta, Nebr	S. 364.
85-216	To authorize the designation of Oct. 19, 1957, as National Olympic Day	H. J. Res. 354.
85-219	To provide for the maintenance of a roster of retired judges available for special judicial duty and for their assignment to such duty by the Chief Justice of the United States.	H. R. 3818.
85-243	Designating the week of Nov. 22-28, 1957, as National Farm-City Week	H. J. Res. 313.
85-248	For the relief of the town of Medicine Lake, Mont	H. R. 7384.
85-252	To suspend the application of certain Federal laws with respect to personnel employed by the House Committee on Ways and Means in connection with the investigations ordered by H. Res. 104, 85th Cong.	H. J. Res. 320.
85-255	To authorize settlement for certain inequitable losses in pay sustained by officers of the commissioned services under the emergency economy legislation, and for other purposes.	H. R. 293.
85-259	To amend sec. 1867 of title 28 of the United States Code to authorize the use of certified mail in summoning jurors	H. R. 3367.
85-261	To amend sec. 372 of title 28, United States Code (resignation and retirement of judges)	H. R. 110.
85-262	To establish a Lincoln Sesquicentennial Commission	H. J. Res. 331.
85-268	To amend sec. 1716 of title 18, United States Code, so as to conform to the act of July 14, 1956 (70 Stat. 538-540)	H. R. 4193.
85-269	To amend ch. 223, title 18, United States Code, to provide for the production of statements and reports of witnesses	S. 2377.
85-274	To provide reimbursement to the tribal council of the Cheyenne River Sioux Reservation in accordance with the act of Sept. 3, 1954	H. R. 5810.
85-275	To amend subdiv. b of Sec. 14—Discharges, when granted—of the Bankruptcy Act, as amended, and subdiv. b of Sec. 58—Notices—the Bankruptcy Act, as amended.	H. R. 5811.
85-276	To amend sec. 633 of title 28, United States Code, prescribing fees of United States commissioners	H. R. 4191.
85-291	For the relief of Jackson School Township, Ind	S. 807.
85-293	To provide for the conveyance to the State of Florida of a certain tract of land in such State owned by the United States	H. R. 7636.
85-295	To amend sec. 116 of ch. X of the Federal Bankruptcy Act, to make certain equipment trust provisions applicable to aircraft and aircraft equipment of air carriers.	H. R. 7671.
85-297	To authorize and request the President to issue a proclamation in connection with the centennial of the birth of Theodore Roosevelt	S. J. Res. 18.
85-298	To amend sec. 124 (c) of title 28 of the United States Code so as to transfer Shelby County from the Beaumont to the Tyler Division of the eastern district of Texas.	H. R. 2136.
85-299	To amend sec. 1871 of title 28, United States Code, to increase the mileage and subsistence allowances of grand and petit jurors	H. R. 3370.
85-305	To establish a commission to commemorate the 100th anniversary of the Civil War, and for other purposes	H. J. Res. 32.
85-306	To amend the act of Jan. 12, 1951, as amended, to continue in effect the provisions of title II of the First War Powers Act, 1941	H. R. 7536.
85-310	To clarify the authority of the President to fill the judgeship for the district of South Dakota authorized by the act of Feb. 10, 1954, and to repeal the prohibition contained in such act against filling the next vacancy occurring in the office of district judge for such district.	S. 2413.
85-313	To amend title 17 of the United States Code entitled "Copyrights" to provide for a statute of limitations with respect to civil actions	H. R. 277.
85-315	To provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States	H. R. 6127.
85-316	To amend the Immigration and Nationality Act, and for other purposes	S. 2792.

The enactment of this committee's legislation into public and private law does not take into account the work done on some 19 bills now pending before the Senate, a number of bills pending before the House Rules Committee for its consideration. It is for this reason that I attach hereto a detailed account of the work of each of our 5 subcommittees and the 4 special subcommittees set up to consider matters coming within the jurisdiction of the committee, although of singular interest and complexity demanding separate concentrated attention.

Throughout the session this committee, together with the subcommittees, held approximately 190 meetings. Without the unflagging interest and sustained work of the members of this committee and the devotion of its staff, none of this would have been possible.

SUBCOMMITTEE NO. 1: GENERAL JURISDICTION OVER BILLS AS ASSIGNED, SPECIAL JURISDICTION OVER IMMIGRATION AND NATURALIZATION

The principal public legislation considered by Subcommittee No. 1 in this session of the 85th Congress was the bill, H. R. 8123, to facilitate the entry into the United States of certain adopted children, and other relatives of United States citizens, and for other purposes, which was introduced by Representative WALTER on June 13, 1957. The bill was reported by the House Judiciary Committee on August 19, 1957, with amendments, and was placed on the Union Calendar. A Senate bill, S. 2792, described as a companion bill to H. R. 8123, sponsored jointly by Senators KENNEDY, WATKINS, DIRKSEN, PASTORE, LAUSCHE, CLARK, NEUBERGER, JACKSON, and KEFAUVER, passed the Senate on August 21, 1957. The Senate bill, with amendments, was brought up on the House floor, under suspension of rules on August 28, and was approved as amended, becoming Public Law No. 316.

Public hearings were held by a special subcommittee of Subcommittee No. 1, on Japanese temporary workers, on May 15, 1957. A report, with recommendations dealing with the problems involved in the importation of these agricultural laborers, was issued by Subcommittee No. 1 on July 10, 1957—House Report No. 780.

Hearings were also held by Subcommittee No. 1 on May 23, 1957, on the bills: H. R. 1011, by Representative WILSON of California, and H. R. 4452, by Mr. SAUND, on the crossing of the international borders by juveniles.

A careful review was made by the subcommittee of the circumstances and conditions of employment of skilled sheepherders, mainly imported from Spain. House Report No. 67 containing the recommendations of Subcommittee No. 1 was issued on February 14, 1957.

Following the last session of the Intergovernmental Committee for European Migration last October, an intensive study was made of the problems involving land resettlement, specifically the resettlement of European migrants in Latin America. House Report No. 203 was issued by Subcommittee No. 1 on March 18, 1957.

The extent of work of this subcommittee cannot be appreciated without a review of its activity in the area of pri-

vate legislation. The following table sets this forth:

House bills:	
Private laws:	
Individual bills	30
House bills incorporated in 25 House joint resolutions which became private law	279
Pending in Senate:	
Individual bills	6
Bills incorporated in 5 House joint resolutions	54
Adverse action by Senate: Individual bills deleted from House joint resolutions	22
Recommitted	1
Tabled	288
Deferred	38
Pending before committee	1,794
Total	2,512
House joint resolutions:	
Private laws	28
(Joint resolutions, referred to above, incorporating individual bills: 25)	
(Joint resolutions granting relief to 205 persons who were not subjects of individual bills: 3)	
Pending in Senate	5
Not acted upon	1
Total	34
House concurrent resolutions:	
Confirming the findings of the Attorney General in cases submitted to the Congress under the provisions of sec. 6 of the Refugee Relief Act of 1953, as amended	2
(Of the 1,677 applications considered by the committee, 1,375 were included in the 2 concurrent resolutions; 21 were withdrawn by the Attorney General, 261 were not approved, and 20 were held for further investigation.)	
Confirming the findings of the Attornel General in cases submitted to the Congress under the provisions of sec. 4 of the Displaced Persons Act of 1948, as amended	1
(Of the 92 applications considered, 79 were included in the concurrent resolution; 3 were withdrawn by the Attorney General, 5 were not approved, and 5 were held for further investigation.)	
Not considered	1
Total	4
Senate bills:	
Private laws	160
Awaiting concurrence of the Senate in amendments of the House	3
On House Calendar	1
Tabled	50
Deferred [1]	59
Not acted upon [1]	55
Total	328
Senate concurrent resolutions:	
Confirming the findings of the Attorney General in cases submitted to the Congress under the provisions of the Immigration Act of 1917, as amended, and under the provisions of sec. 244 (a) (5) of the Immigration and Nationality Act	4
(Of the 586 applications considered, 510 were included in the above resolutions; 5 were withdrawn by the Attorney General, 10 were not approved, and 11 were held for further investigation.)	
Senate concurrent resolutions—Continued	
Withdrawing suspension of deportation cases (pursuant to sec. 246 (a) of the Immigration and Nationality Act	2
Total	6

Footnote at end of table.

[1] Action on approximately 75 percent of the bills deferred or pending will be unnecessary, since administrative relief will be available by the enactment of Public Law 85–316.

SUBCOMMITTEE NO. 2—GENERAL JURISDICTION OVER JUDICIARY BILLS, AS ASSIGNED; SPECIAL JURISDICTION OVER CLAIMS

During the first session of the Congress the subcommittee conducted hearings on 16 different days. These covered public as well as private claims measures.

Consideration was given to a total of 327 bills and resolutions.

The subcommittee considered several bills relating to statutory provisions governing claims handled by the Armed Forces. Two of the bills recommended by the Treasury Department and approved by the subcommittee, H. R. 3820 and H. R. 4370, provide for an amendment of title 14, the title of the United States Code relating to the Coast Guard. H. R. 3820 provides for the amendment of section 490 so that the Secretary of the Treasury can have the same authority to settle claims of the military and civilian personnel of the Coast Guard as is now possessed by the Secretaries of the military departments with respect to their personnel. The bill was reported favorably and passed by the House, but no action was taken on it in the Senate prior to adjournment. H. R. 4370 would amend section 645 of title 14 so that its provisions would conform to those of section 2733 of title 10, United States Code, relating to similar claims for damage to property, personal injury, or death which are asserted against the Army, Navy, or Air Force. This bill was also reported favorably and passed by the House but was not acted upon in the Senate.

Another bill relating to claims handled by the military departments, H. R. 1061, was favorably reported by the subcommittee and the committee and was passed by the House. That bill would grant the Secretary of the Army and the Secretary of the Air Force the same authority now possessed by the Secretary of the Navy to settle claims for damage to or the loss of private property. The bill would further expand the authority to include settlement of claims for personal injury and death within the limitations of the new section which would be added to title 10, Armed Forces, of the United States Code. No action was taken on this measure in the Senate.

A number of bills granting relief to States or political subdivisions within States were referred to the subcommittee. Among the bills recommended favorably was H. R. 7636, authorizing the Attorney General to convey a site of land to Florida for use as a State road department shortwave-radio tower upon the payment of a fair value for the land conveyed. This bill became Public Law 85–293. The bill, H. R. 1942, provided for the payment of the amount due the Sergeant Bluff Consolidated School District of Iowa for the tuition of children of Air Force personnel—Public Law 85–140. Another bill favorably recommended was S. 807, to provide payment to the Jackson School Township of Indiana the amount of $193,392, in exchange for the conveyance of the school building and land, which was necessitated by the proximity of the school to an airfield—Public Law 85–291. S. 364, providing for payment of compensation to the village of Wauneta, Nebr., for the demolition of a dam by the United States, was favorably reported and became Public Law 85–214.

The subcommittee also recommended H. R. 4768, to confer jurisdiction on a United States district court to adjudicate a controversy relating to certain lands in San Jacinto County, Tex. That bill passed the House, but no action was taken in the Senate prior to adjournment.

A bill providing for the payment of $581,721.91 to the State of Washington for the replacement of a road previously located on land taken for use by the United States, H. R. 2224, was considered and passed by the Congress, but was the subject of a pocket veto. This is the claim on which hearings were held by the subcommittee in the State of Washington during the 84th Congress.

A bill, H. R. 293, authorized the payment of amounts due certain commissioned officers during the years 1932, 1933, and 1934 for advancement in rank, which were not paid because of an application of the Economy Act of 1932. This bill became Public Law 85–255.

Prior to July 1, 1954, certain officers were placed on active duty with the armed services while they were interns or resident physicians in non-Federal hospitals. These persons received the usual compensation, including meals and living quarters in kind, which normally attached to the positions. The Comptroller General subsequently ruled that these amounts should have been regarded as having been received in behalf of the United States and should be refunded. The situation was not clarified finally until 1953, and the affected individuals were not given clear notice of the situation until that time. The subcommittee made a favorable recommendation as did the committee and the bill was passed by the House; however, no action was taken in the Senate.

The Secretary of the Army recommended a bill which became H. R. 5810, and which provided for the reimbursement to the Tribal Council of the Cheyenne River Sioux Reservation for expenses incurred in negotiations relating to an agreement between the United States and the tribal council. The payment authorized was in accordance with the provisions of the agreement set out in the act of September 3, 1954—68th United States Statutes at Large, page 1191. The bill became Public Law 85–274.

House Joint Resolution 185 authorized the reference to the Court of Claims of a claim asserted against the United States by Norway. This reference was in line with an agreement previously entered into between the two countries providing that the matter, with the consent of Congress, would be referred to that court in the event that it could not be settled by

negotiation. This bill became Public Law 85–60.

The settlement of a group of claims arising as the result of the crash of an airplane at Worcester, Mass., on July 18, 1957, would be provided for under the provisions of H. R. 8868. The bill was reported and passed the House, but was not acted upon in the Senate prior to adjournment.

The subcommittee held hearings on several bills which remained pending in the subcommittee at the time of adjournment, and further consideration of such bills is contemplated in the coming session. One of those bills was H. R. 105, which is a bill to cancel certain bonds posted in accordance with the Immigration Act of 1924. Based on the testimony presented at the hearing, a substitute bill was introduced, H. R. 8439, which is presently before the subcommittee. Also, an extensive hearing was held on H. R. 6681, which is a bill to make the Federal tort claim provisions of title 28 of the United States Code the exclusive remedy for persons injured or damaged as the result of accidents involving Government vehicles instead of permitting suit against individual Government drivers. This bill, too, remained pending in the subcommittee at the end of the session.

The following tabulation indicates the workload of this subcommittee in connection with claims against the Government:

Referred to subcommittee:

Claims settled administratively	5

Five public bills were referred to Subcommittee No. 2 dealing with such varied subjects as the War Contractors Relief Act, a Commission on the Office of the President, the appellate review of sentences in criminal cases, the law relating to perjury and the provision of an additional remedy for claims arising out of contracts of the United States relating to certain vessels. The subcommittee heard testimony on H. R. 6609, a bill to amend the War Contractors Relief Act and adversely reported it to the full committee.

SUBCOMMITTEE NO. 3—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED—SPECIAL JURISDICTION OVER PATENTS, TRADE-MARKS, COPYRIGHTS, AND REVISION OF THE LAWS

During the first session of this Congress 99 bills were referred to the subcommittee. They included such subjects as appellate review, juvenile delinquency, interstate compacts, patents and copyrights, constitutional amendments, and the classification and codification of laws of a general and permanent nature to the United States Code. Some 58 bills were considered by the subcommittee. In connection with this work, hearings were held on 41 bills. In some instances favorable action was taken; in others action has been deferred pending the submission of additional information and Government agency report. There follows a three-part statement pointing up the work of the subcommittee and highlighting some of the particular items of legislation which were processed.

GENERAL LEGISLATION

Because of the great difficulty experienced in recent years by the States with juvenile delinquency, the subcommittee, after hearings, took favorable action on House Joint Resolution 10, granting the consent of Congress to 23 States and the Federal Territories and possessions, to enter into compacts by which they may cooperate for the apprehension, return, and supervision of delinquent juveniles. This legislation is urgently needed, especially where States are seeking to erect and maintain, on a joint and cooperative basis, specialized institutions for the rehabilitation of delinquent juveniles and runaways.

In order to reduce the current heavy workload of the Federal courts and to help in eliminating the great backlog of cases now pending on the court calendars, the subcommittee held hearings on legislation (H. R. 2516 and H. R. 4497—diversity of citizenship) which would increase from $3,000 to $10,000 the monetary jurisdiction of the courts, and which would either eliminate completely corporations from the diversity of citizenship provision of our Federal statutes or restrict their use of the Federal courts by declaring them citizens of those States where they have their principal places of business. Because of the legislation's widespread effect, the subcommittee decided, instead of taking final action at this time, to have the hearings printed and made available for wide distribution so that during the congressional recess, interested parties may study the material and submit recommendations for the subcommittee's consideration in the next session of Congress.

Recent bomb scares and bomb explosions in public transportation facilities such as railroads, trains, airplanes, and their terminals caused the subcommittee to take early favorable action on H. R. 4193, which makes the mailing of bombs Federal offenses. The bill also makes the giving of false information or "tips" on these matters Federal offenses.

Several identical bills on which the subcommittee took favorable action reconcern legislation authorizing the President of the United States to veto individual items in appropriation bills. Proponents of the measure were heard and the subcommittee will hear those who would oppose such legislation in order that it may be apprised of all of the arguments before taking action.

Important legislation upon which the subcommittee took favorable action relates to abbreviated records on appeals—H. R. 6788. This bill will permit the several courts of appeal to adopt rules authorizing the abbreviation of the transcript and other parts of the record made before Federal agencies when the orders of those agencies are reviewed by the courts of appeal. In many instances much of the record before such agencies is not relevant to the questions actually raised on appeal. This legislation, in permitting an abbreviated record to be transmitted, should result in substantial savings of time and money to the Government without interfering with appellate rights.

The subcommittee also acted favorably on H. R. 7915 which would authorize Federal courts, after a witness has testified, to require the Government to submit prior statements and records of the witness in its possession for the court's inspection for the purpose of turning relevant material over to defendants who seek to impeach the credibility of the witness. This legislation resulted from the Supreme Court decision in the case of *Jencks* v. *United States* (353 U. S. 657).

The subcommittee approved other matters, such as the use of certified mail for summoning jurors—H. R. 3367—

which will result in monetary savings to the Government; peremptory challenges—H. R. 3368—giving to plaintiffs the same advantages which defendants now have; H. R. 7261, bringing the District of Columbia under the Federal probation laws, thereby making the laws uniform throughout the Federal districts; H. R. 7153, consenting to the agreement between the States of Oregon and Washington reestablishing their boundary line along the Columbia River; and H. R. 6789, authorizing interested parties to seek temporary injunctive relief from the orders of administrative agencies on reasonable notice where irreparable harm might result if the agency order became immediately effective.

PATENTS, TRADEMARKS, AND COPYRIGHTS

Favorable action was taken again this year on H. R. 103, which would reward persons, both Government and non-Government employees, who make inventive contributions to the national defense.

The subcommittee also reaffirmed its favorable position and reported H. R. 7151 which raises generally patent and trademark fees. It is estimated that these fee rises will offset the expenses of the Patent Office by 70 percent.

Another measure approved by the subcommittee is H. R. 277 which sets a 3-year statute of limitations on civil copyright actions, thereby establishing a statute of limitations which would be uniform throughout the United States.

The subcommittee took unfavorable action on H. R. 1656, a private patent bill and on a series of bills relating to patent extensions.

REVISION OF THE LAWS

The work of classifying the general public laws to the appropriate title in the United States Code and the general laws of application in the District of Columbia to the District of Columbia Code has been carried on since the beginning of the session. These laws and the balance of the laws enacted at this session will be incorporated into supplement V of the United States Code and into supplement VI of the District of Columbia Code. With respect to the supplement of the District of Columbia Code all the decisions of the courts affecting the Code from August 1, 1956, to July 31, 1957, have been examined and notes have been prepared for insertion under the appropriate sections in the next supplement.

The reading of page proofs on supplement IV of the United States Code and supplement V to the District of Columbia Code was completed early this year and the supplements have been published and distributed.

At the last Congress Public Law 1028 was enacted codifying the laws relating to the armed services and the National Guard. Inasmuch as the bill had been pending in the Congress for more than a year, Public Law 1028 did not contain all the laws on the subject as of the date of enactment—a cutoff date of March 31, 1955, had been decided upon when the bill was reported by the committee during the 1st session of the 84th Congress. During the recess at the end of the 84th Congress and for several months during the present session the law revision staff cooperated with the codification group at the Pentagon in the preparation of a bill and constructive report intended to incorporate in titles 10 and 32 the applicable laws enacted between April 1, 1955, and January 2, 1957. This bill, consisting of almost 200 pages, has passed the House and is now pending in the Committee on the Judiciary in the Senate. In addition the bills to enact into law Title 20, Education; Title 21: Food, Drugs, and Animals, and Title 39: the Postal Service, have been brought up to date as of the beginning of the present session and introduced. We are now awaiting reports from the departments concerned with a view of reporting the bills favorably to the House at the earliest moment.

Work has also progressed on bringing up to date and eliminating changes in substantive law from the bills to enact into law Title 16: Conservation, and Title 43: Public Lands.

With respect to the District of Columbia Code a bill has been prepared by the staff to enact into law part IV consisting of titles 22, 23, and 24. In addition, the services of a publishing corporation have been engaged to assist in the preparation of a bill to enact into law part II consisting of titles 11 to 17.

After the adjournment of the present session work will be continued in conjunction with the West Publishing Co. and the Edward Thompson Co. in preparing copy for the Government Printing Office for supplement V of the United States Code and in reading proofs. Also copy for supplement VI for the District of Columbia Code will be sent to the Government Printing Office and proofs will be read as received.

During the session the staff has continued its cooperation with other committees of the Congress and with numerous Government departments and agencies with regard to the form and style of proposed legislation affecting the United States Code.

SUBCOMMITTEE NO. 4—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED—SPECIAL JURISDICTION OVER BANKRUPTCY AND REORGANIZATION

During the 1st session of the 85th Congress, Subcommittee No. 4 held hearings and reported a number of bills improving the substance and administration of the bankruptcy law. H. R. 106 gives bankruptcy courts jurisdiction to determine the effect of a discharge. At present, with some exceptions, bankruptcy courts are determining only the right to a discharge. This bill was passed by the House and sent on to the Senate. The subcommittee has held comprehensive hearings on H. R. 5195, dealing with the difficult problem of circuity of liens embodied in section 67 (c) of the Bankruptcy Act. To make administration of the bankruptcy system more efficient, H. R. 5811 was favorably reported and passed the House. The bill eliminates one of the notices now required in bankruptcy proceedings and results in a substantial saving of money. Impelled by the reequipment financing problems of the air lines, the subcommittee favorably reported and both House and Senate passed H. R. 7671, making chapter X proceedings inapplicable insofar as they effect title and the right to repossess aircraft and aircraft equipment. In the area of railroad reorganizations, the subcommittee favorably reported H. R. 982, which provides that a former lessor whose properties are being operated under section 77 (c) (6) of the Bankruptcy Act shall have the same right as other carriers to receive a division of revenue accruing from operations over its lines, in accordance with the criteria fixed by section 15 (6) of the Interstate Commerce Act.

General legislation assigned to Subcommittee No. 4 has covered a wide variety of subjects, including over 60 holiday and celebration bills. Among these were bills establishing both a Civil War Centennial Commemoration Commission and a Lincoln Sesquicentennial Commission. In addition, action was taken extending certain temporary legislation. These included war-risk hazard and detention benefits for direct-hire Federal employees and employees of Federal contractors. The subcommittee also favorably reported the extension of title II of the First War Powers Act, enacted into law. H. R. 3370, increasing the mileage and subsistence allowances of Federal jurors, was also passed and has been signed by the President.

Number of public bills referred to subcommittee	117
Number of hearings held	19
Number of public bills reported to full committee	22
Number of reports filed	19
Number of public bills passed House	18
Number of public bills pending in the Senate	4

Number of public bills approved by the President	11

SUBCOMMITTEE NO. 5—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED—SPECIAL JURISDICTION OVER ANTITRUST MATTERS

This subcommittee exercised jurisdiction over a variety of subjects, with specialization over bills concerning antitrust and the Federal judicial system. Under its general jurisdiction, the subcommittee considered several bills relating to the improvement of the Federal judicial system. Among these bills were bills providing for a roster of retired judges, for representation by district judges in the judicial conference of the United States and for the retirement of the chief judges of the circuit and district courts, as chief judges, upon reaching the age of 75. In addition, the subcommittee approved a bill increasing the fees of the United States commissioners. The subcommittee has under consideration additional bills creating a number of new judgeships throughout the entire Federal judiciary as well as bills relating

to the organization of the judicial districts and places of holding court.

This subcommittee devoted considerable time to the consideration of approximately 60 bills relating to various civil-rights proposals. It conducted several days of hearings on these bills which constituted over 1,000 printed pages. As a result of its considerations and deliberations of civil-rights bill H. R. 6127 was enacted in to law.

During the 1st session of the 85th Congress the subcommittee had referred to it 187 bills—186 being House bills and one being a Senate measure. Hearings were conducted on 68 of these measures. It disposed of 74 bills of which 8 were favorably reported to the House. There were seven bills enacted into public law during the 1st session of the 85th Congress.

Number of bills referred to Subcommittee No. 5	187
Hearings conducted	68
Number of bills reported to the full committee	74
Number of bills reported to the House	8
Number of bills enacted into public law	7

ANTITRUST JURISDICTION

In March, the subcommittee held hearings on three bills, H. R. 264, H. R. 2143, and H. R. 7698, that would require advance notification to antitrust enforcement officials of certain corporate mergers and acquisitions. Based on amendments recommended by the subcommittee and additional amendments adopted by the Judiciary Committee, a new bill, H. R. 7698, was reported by the Judiciary Committee with the recommendation that it be enacted by the House—House Report 486. At the close of the first session, H. R. 7698 was pending in the Rules Committee.

H. R. 7698 provides that when a corporation subject to the Clayton Act acquire the stock or assets of another corporation engaged in commerce, if the combined capital, surplus, and undivided profits of the 2 corporations exceed $10 million, 60 days' advance notification must be given to the Attorney General and to the Federal Trade Commission or other appropriate commission or board. Together with this notice, the corporations must supply specifically enumerated information to the Government, in order to enable a determination to be made of the transaction's probable effect on competition. The bill requires the Government officials vested with jurisdiction to establish procedures for the waiver of all or part of the waiting requirement in appropriate cases or categories of cases. Willful failure to give the notice or to give the information required by the bill subjects the offending corporation to a fine of not less than $5,000 nor more than $50,000 in a civil action brought by the Attorney General.

In addition to the broad exemption for mergers and acquisitions where the combined capital, surplus, and undivided profits of the corporations are $10 million or less, the bill also exempts from its notification and waiting requirements a number of specific types of transactions. Fifteen specific types of transactions are enumerated in H. R. 7698 that are not likely to have substantial antitrust significance and, therefore, are not required to be reported in the interest of effective enforcement in the antitrust statutes.

H. R. 7698 also would amend the Clayton Act to provide the Federal Trade Commission with authority to seek a district court order to prevent and restrain a merger in violation of Clayton Act section 7, pending issuance of a complaint and completion of the Commission's administrative proceeding. This amendment would give the FTC, which has concurrent jurisdiction with the Attorney General to enforce the merger provisions of the Clayton Act, authority similar to that now possessed by the Attorney General to seek a preliminary court injunction to restrain consummation of a merger pending adjudication of its legality.

In June, the Antitrust Subcommittee jointly held hearings with the Subcommittee on Commerce and Finance of the Committee on Interstate and Foreign Commerce on a series of bills designed to vest in the Federal Trade Commission jurisdiction over unfair or monopolistic trade practices in the meatpacking industry. The subcommittees held joint hearings in order to consider conveniently and expeditiously, H. R. 5282, H. R. 5283, H. R. 5454, H. R. 7764, and H. R. 7796 which were referred to the Committee on Interstate and Foreign Commerce and H. R. 7038 and H. R. 7319, which were referred to the Judiciary Committee.

Under existing law, jurisdiction over the trade practices of meatpackers is vested in the Secretary of Agriculture, by virtue of the Packers and Stockyards Act of 1921. That act ousted the Federal Trade Commission of jurisdiction over unfair methods of competition by companies engaged in the meatpacking industry. The bills were introduced to cope with the recent criticisms of the lack of enforcement by the Secretary of Agriculture of his jurisdiction over allegedly unfair and monopolistic practices in the meatpacking industry. It has been contended that for a number of years meatpackers have enjoyed a virtual immunity for their trade practices from supervision by any Federal agency. Further, recent Federal Trade Commission cases disclosed a situation where certain food stores and other elements of the food-distribution industry escaped Federal supervision of their trade practices by the simple expedient of acquiring minority interests in a meatpacking plant.

Because of these criticisms, bills were introduced to amend title II of the Packers and Stockyards Act in a manner to transfer to the Federal Trade Commission responsibility for supervising the unfair and monopolistic practices of companies engaged in the meatpacking industry. At the end of the first session public hearings had been completed and the bills were under consideration by the subcommittees.

In June, July, and August, the Antitrust Subcommittee held hearings on a series of bills that would clarify the applicability of the antitrust laws to organized professional sports enterprises. These bills were introduced in response to recent Supreme Court decisions which have had the effect of placing under antitrust coverage all organized professional sports with the exception of baseball.

In the Toolson case in 1953 the Supreme Court reaffirmed its 1922 ruling that organized baseball is not subject to the antitrust laws. In its decision the Supreme Court signified that baseball in effect is a unique enterprise. By contrast in February 1954 the Supreme Court in the Radovich case held not only that professional football is subject to the antitrust laws but implied that all other professional organized sports, like other interstate businesses, are subject to the antitrust laws. In the Radovich case, the Supreme Court recognized that its ruling, in light of baseball's unique exemption, might be regarded as "unrealistic, inconsistent or illogical." It indicated, however, it would have no doubt as to baseball's coverage under the antitrust laws were it considering this question for the first time upon a clean slate.

In explanation of its position, the Supreme Court said, "The orderly way to eliminate error or discrimination, if any there be, is by legislation and not by court decision. Congressional processes are more accommodative, affording the whole industry hearings and an opportunity to assist in the formulation of new legislation. The resulting product is therefore more likely to protect the industry and the public alike."

Three types of solution to the sports problem were suggested by the bills that were referred to the subcommittee. H. R. 5319 and H. R. 5307 provide that baseball, like other professional sports activities, shall be subject to the antitrust laws. Under these bills, the courts would be permitted to determine upon the facts of each individual case whether or not any particular agreement or trade practice constituted an unreasonable restraint of trade.

Other bills, H. R. 6876, H. R. 6877, and H. R. 8023, include all professional sports under the antitrust laws, with the exception of certain enumerated practices which are specifically exempted. H. R. 8023 also provided that a reserve clause in a player's contract of employment would enjoy an antitrust exemption only if it did not exceed 5 years in duration and if the amount of compensation for the last 2 years were increased by 15 percent each year.

Finally, H. R. 5383 provides a complete antitrust exemption for all professional sports enterprises, as well as for acts in the conduct of such enterprises.

During its extensive hearings, the subcommittee received testimony from representatives of the American and National Baseball Leagues, National Football League, National Hockey League, National Basketball Association, owners of team sports enterprises and from a number of players. At the end of the session, hearings had been completed with respect to professional team sports and the bills were pending before the subcommittee.

INVESTIGATIONS

The subcommittee completed and published two reports that contain the results of its investigations during the 84th

Congress of the airlines and television industries.

On June 7, 1957, the subcommittee released its report on the television-broadcasting industry. The record on which the report was based contains the testimony of 58 witnesses and comprises 3,342 pages of transcript.

Among the matters examined into by the report on the basis of this record was the manner in which the Federal Communications Commission has discharged its antitrust responsibilities in important areas of broadcasting; the UHF problem and competitive television; the network programing and time sales with reference to alleged tendency of networks to favor their own programs; network talent contracts; network time sales and discounts; the role of the advertising agency in the sale of TV time; the FCC chain-broadcasting regulations; network affiliation contracts; network ownership of stations and the multiple-ownership rule; network must-buy policy; network time options; the first-call rule; regulation by the FCC of coaxial cable and microwave relay rates and private relay systems; and activities by broadcasters in the field of music. The report was particularly critical of testimony and documentary evidence disclosed in its investigation in which references were made to informal private conferences and discussions between Commissioners of the FCC and representatives of industry, some of whom were directly interested in problems pending before the Commission.

On September 3, 1957, the subcommittee released its report on airlines. In its hearings on the commercial airlines industry, the subcommittee received the testimony of 38 witnesses and compiled a record that includes 3,106 pages.

In its report the subcommittee gave particular attention to the following: The present structure of the airlines industry; analysis of Federal administrative controls with respect to airlines operations; the record of the Civil Aeronautics Board with respect to the antitrust problems involved in competition and entry into commercial aviation; the antitrust implications of the activities of the Air Transport Association and an analysis of its operations; the role of travel agents in civil aviation; the results of the activities of the International Air Transport Association; and a case study of the Pan American World Airways System.

Particular attention was given to ATA, the trade association of the certificated carriers. The close relationship with the Board's responsibilities that has been established by the certificated industry through its trade association provides the means for a result that frequently has been deplored by critics of Government regulation. It is here that there is the greatest danger that the "regulated" may become the "regulators."

On April 3, 1957, the Antitrust Subcommittee initiated a study into the procedures and competitive effects of the consent decree program administered by the Antitrust Division of the Department of Justice. In this study, the subcommittee is seeking to ascertain how effective consent decrees have been in the elimination of conditions that caused the Government to institute its antitrust proceedings, and to restore a competitive climate in the industries concerned.

In addition, the subcommittee in this study is interested in determining the impact of consent decrees upon competitors of the defendants. As part of its study, the staff of the subcommittee has secured relevant information from the Department of Justice and has conducted file examinations of certain companies that are parties to specific consent decrees. During the first session this investigation was in preliminary stages and hearings were not scheduled by the subcommittee.

SPECIAL SUBCOMMITTEE ON THE OPERATION OF SUBMERGED LANDS LEGISLATION

The Special Subcommittee on the Operation of Submerged Lands Legislation was instituted under the authority granted to the Committee on the Judiciary to conduct studies and investigations, including the operation and administration of the Submerged Lands Act and the Outer Continental Shelf Act. The subcommittee is composed of Messrs. EDWIN E. WILLIS, chairman, WILLIAM M. TUCK, JAMES B. FRAZIER, JR., KENNETH B. KEATING and PATRICK J. HILLINGS.

The purpose of the special subcommittee is to conduct a study and analysis of the problems arising from the operation and administration of those laws. The need for such a study was predicated upon a preliminary survey conducted by the staff of the Committee on the Judiciary as well as other studies conducted by agencies outside of the Government. Such preliminary studies have pointed up many and varied problems arising out of the operation and administration of the existing law. Examples of such problems are the question of double jeopardy in criminal law over violations committed in the area of the outer Continental Shelf; the peculiar problem of contract law resulting from the drilling and building operations in the same area. Also, there are serious questions of workmen's compensation as well as problems in the field of insurance such as the type of underwriters and of policies. Of course, there are many others.

Therefore, the special subcommittee will undertake the task of gathering sufficient facts and knowledge from the time and experience of operation under the existing laws in order that a conclusion may be reached as to what, if anything, should be done in the way of amendatory legislation to the existing law. It is believed that sufficient time has passed in which to garner experience in the administration and operation of these laws so that whatever improvements may be necessary will be in the best interests of all the parties involved, including the Government of the United States.

The subcommittee held an executive conference with representatives of the various governmental departments concerned with submerged lands legislation.

In the near future the subcommittee will conduct a study of the problem at which time representatives of private industry engaged in operations under this legislation will be heard.

SPECIAL SUBCOMMITTEE ON STUDY OF PRESIDENTIAL INABILITY

The Special Subcommittee on the Study of Presidential Inability is composed of Messrs. EMANUEL CELLER, chairman, FRANCIS E. WALTER, JACK B. BROOKS, KENNETH B. KEATING, and WILLIAM M. MCCULLOCH. It was originally constituted in the 84th Congress. During that time an exhaustive study was made of this subject and hearings held in which the views of eminent political scientists and constitutional lawyers were heard. In addition to these hearings, that subcommittee published a document setting forth replies to a detailed questionnaire on the problem.

This subcommittee in the 1st session of the 85th Congress conducted a hearing on the problem at which time the Attorney General testified. The subcommittee also published a document which was an analysis of the replies to the questionnaire and hearing held on the subject during the 84th Congress. The subcommittee had referred to it several bills relating to the subject. After considerable deliberation and consideration, the subcommittee reported four bills, House Joint Resolution 293, House Joint Resolution 295, H. R. 6510, and House Joint Resolution 334, to the full committee, where they are pending at the present time.

SPECIAL SUBCOMMITTEE ON ADMINISTRATIVE PROCEDURE

Eleven bills have been referred to the Special Subcommittee on Administrative Procedure. These cover problems such as pay for hearing examiners, legal career service, admission to practice before Federal agencies, etc. Several comprehensive bills, notably H. R. 3350, dealing with all of these topics are now before the subcommittee and information and departmental reports are now being compiled and analyzed with a view toward conducting extensive hearings at the beginning of the next session. The subcommittee is composed of FRANCIS E. WALTER, chairman, ROBERT T. ASHMORE, DEWITT S. HYDE, and RUSSELL W. KEENEY.

SPECIAL SUBCOMMITTEE TO STUDY SUPREME COURT DECISIONS

This subcommittee was established by the Judiciary Committee and authorized to conduct an inquiry and make findings and recommendations, legislative or otherwise, with reference to those questions raised by decisions of the Supreme Court, rendered at its last session which affect the power of Congress to investigate Federal laws relating to subversive activities and the enforcement of Federal criminal laws. The subcommittee is composed of Messrs. EDWIN E. WILLIS, chairman, BYRON G. ROGERS, EARL CHUDOFF, WILLIAM C. CRAMER, and ARCH A. MOORE, JR.

The subcommittee initiated hearings during the 1st session of the 85th Congress with reference to the particular decision of the Supreme Court in Mallory against the United States, which affects Federal law enforcement. A series of hearings was held on this case and witnesses represented Federal and local law authorities as well as representatives of bar associations.

Further hearings on this and other Supreme Court decisions in these particular fields will be held both during the adjournment period and the second session.

Cost of Living Hits Record High

EXTENSION OF REMARKS
OF
HON. GRACIE PFOST
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. PFOST. Mr. Speaker, I have just received permission from the author of an article entitled "Selective Inflation, 1957," which appeared in the September issue of the Democratic Digest, to have it placed in the RECORD so that all of you might have an opportunity to study the much-discussed subject of our present cost of living.

The article follows:

SELECTIVE INFLATION, 1957

The cost of living has risen every month for the last 10 months and now stands at an alltime high. Dwight Eisenhower, who campaigned on the claim he "stopped inflation," warns of inflation controls. Members of his administration blame creeping inflation on "soft wage settlements" and argue that wage increases have forced prices upward. In fact, wage increases have fallen far behind price increases in basic industries, and the largest jumps in living costs have been in areas not affected by wage increases. Farm and small-business income is falling, while the largest corporations and banks are reporting record profits.

Following are a few of the facts that indicate the real nature of 1957's "selective" inflation:

COST OF LIVING HITS RECORD HIGH—RISING PRICES HURT ONLY SOME SECTIONS OF ECONOMY

Cost-of-living index hits alltime high in June 1957. Rises for the tenth straight month. Prices 3.4 percent higher than in June 1956. Bureau of Labor Statistics predicts still higher prices in July. The dollar is now worth almost 5 cents less than it was 18 months ago.

Farm income plummets as food prices soar

Retail food prices are up 16 percent in 10 years, while farm prices are down 14 percent.

Farmers received only 40 cents of each consumer food dollar in 1956, compared with 52 cents in 1946.

Here's what happened to items in the typical market basket between 1946 and 1956:

Bakery products and cereals, retail cost up 34 percent, farm value down 7 percent; dairy products, retail cost up 15 percent, farm value down 5 percent; meat products, retail cost down only 5 percent, farm value down 29 percent; poultry and eggs, retail cost down 13 percent, farm value down 21 percent; fruits and vegetables, retail cost up 12 percent, farm value up only 7 percent.

In 1947 farmers got 2.9 cents for the wheat in a 12.5-cent loaf; in 1955 farmers got 2.7 cents for the wheat in a 17.7-cent loaf.

In 1947 farmers got 10.3 cents for a quart of milk retailed at 18.8 cents; in 1955 farmers got 10.2 cents for a quart of milk retailed at 22.5 cents.

Food industries claim they can't absorb wage and salary increases and must pass them on to the consumer in the form of higher prices and backward to the farmer in the form of lower returns.

But wage and salary increases in the food industries account for only a fraction of the terrific drop in farm receipts.

Food-industry profits have actually been increasing. In 1952 food industries earned 7.6 percent after taxes on stockholders' equity; in 1955, they earned about 9 percent after taxes on equity; in 1956 food processors' profits rose 7 percent over 1955 and retail chainstore profits were up 29 percent.

Retail food costs remain high as farm prices keep dropping

	Retail food prices paid by consumers [1]	Prices received by farmers [2]
1950	101.2	258
1951	112.6	302
1952	114.6	288
1953	112.8	258
1954	112.6	249
1955	110.9	236
1956	111.7	235
1957—January	112.8	238
February	113.6	234
March	113.2	238
April	113.8	242
May	114.6	243
June	116.2	244
July	117.4	247

Uneven inflation in cost-of-living items: Percentage of increase, January 1955–March 1957

	Percent
All items	4
Food	2.4
Apparel	3.4
Housing, rent	3.8
Housing, total (includes rent, homeowner costs, utilities, house furnishings)	4.4
Transportation	5.9
Medical care	7.8
Personal care	8.1

(Source: Department of Labor, Consumer Price Index.)

Labor's share of national income falls

While the cost-of-living index rose steadily in the first 4 months of 1957, average weekly earnings dropped from $82.41 to $81.59.

Labor income rose only 3.2 percent from 1953 to 1956, while dividend income rose 5.5 percent and personal interest income rose 6.8 percent.

Between November 1955 and November 1956, average hourly earnings of workers in steel mills rose 6.5 percent, while wholesale iron and steel prices rose 11.2 percent. Average hourly earnings of automobile workers increased 3.8 percent, while wholesale prices of motor vehicles were up 7.4 percent.

March was the first month in more than 2½ years in which real spendable earnings of factory production workers fell below what they had been the year before. The trend continued in April and May.

The largest jumps in living costs have been in areas not affected by wage increases. Rent is up 12 percent since 1952; mortgage interest is up 30 percent; medical care is up 15 percent.

Profits up for banks and dividend holders

Commercial banks' net income after taxes increased by 11 precent between 1955 and 1956. The New York Times reported (March 26, 1957): "The largest banks * * * expanded their loan portfolios and income from loans substantially more than smaller banks."

Dividend income rose 3.3 percent between June 1956 and June 1957—was 38 percent up from 1952.

Personal interest income jumped 7 percent between June 1956 and June 1957—by 1957 was 52 percent higher than in 1952.

Small business is caught in price squeeze

There were more small-business failures in March 1957, than in any month since 1933.

In the last quarter of 1956 firms with assets under $1 million netted 1.2 cents per dollar of sales, compared with 9.3 cents for companies with assets over $1 billion.

In 1948, firms with assets of less than $1 million earned 6.4 percent of total manufatcuring profits after taxes; in 1955 these firms earned only 4.5 percent of these profits. Meanwhile, firms with assets over $100 million were increasing their share of total profits from 48.6 percent to 65.4 percent.

SELECTIVE INFLATION TRACED TO TIGHT MONEY AND PRICE BOOSTS IN BASIC INDUSTRIES

Eisenhower administration's tight money policies increase costs to consumers, profits to banks

Utilities are citing higher borrowing costs in filing applications for rate increases. "The tight-money market of the past 2 years is about to raise a little mischief with consumers' electricity, telephone, and gas bills," reported the Wall Street Journal in March after a survey of over half the Nation's public service commissions.

State and local governments must pay more to borrow money. Costs of new schools, roads, and other services are growing steadily higher for the taxpayer. Average interest charges on municipal bonds rose from 1.96 percent in April 1951 to 2.4 percent in April 1955 to 3.16 percent in April 1957.

Federal taxpayers must pay $1.5 billion more annually now than in 1952 to met inflated interest charges on the national debt with big banks, investment houses, and insurance companies profiting from administration's inflated interest payments on public debt.

Mortgage interest rates are up 25 percent since 1952. The average-income family today pays $2,500 to $3,000 more to finance a 30-year $10,000 home mortgage than it would have paid in 1952.

Interest rates climbing: February 1957 compared with 1950

National debt, interest rate up 23.6 percent.

State and local government bonds, interest rates up 69.6 percent.

Three-to-five-year United States Government obligations, interest rates up 122 percent.

Net income of leading corporations rising

	Percent increase in reported net income after taxes, 1955–56	Percent return on net assets, 1956
Iron and steel	(1)	14
Petroleum products and refining	14	13
Machinery	36	13

[1] Growth in profits affected by steel stoppage in 1956. Steel profits, 4th quarter, 1956, highest on record.

Source: First National City Bank of New York.

Large corporation profits jump as prices rise

Corporate profits in the first quarter of 1957 were 6.5 percent higher than first quarter 1956—42.9 percent higher than 1952.

Between 1955 and 1956 leading corporations in the electrical machinery and equipment industries raised their profits by more than 16 percent; in the petroleum industry by 17 percent; in retail food chains by 27 percent; in the construction industry by 52 percent.

Between first quarter 1955 and first quarter 1956, net profits after taxes of 822 leading corporations increased 9 percent. In the iron and steel group, the increase was

7 percent; in food and beverages, 8 percent; in petroleum, 18 percent; in electrical equipment, 75 percent.

In the steel industry, after tax profits gave stockholders a 12.9 percent rate of return on investment in the first half of 1955. After the mid-1955 price rise, the rate of return rose to 14.2 percent; in the first half of 1956, it rose again to 14.9 percent. Nevertheless, in June, the industry announced an average $6-a-ton across the board increase in steel prices.

Price inflation highest in giant industries

Inflation traced to selected price boosts and fast tax writeoffs

Since mid-1955 wholesale iron and steel prices have jumped 20 percent. Electrical machinery prices are up 15 percent and flat glass prices up 8 percent. Wholesale prices of motor vehicles are up 10 percent.

"Standard Oil's unpublished report must reveal that despite the fact that labor is getting most of the blame for the postwar inflation, the pricing practices of some of our basic industries have been the more important reason for the cost of living spiral."—Sylvia Porter, June 3, 1957.

"The rising price trend is helping to sustain corporate profits in the face of a flattening out of sales and cost increases."—New York Journal of Commerce, April 2, 1957.

"A good part of the inflationary tendencies that cropped up in 1956 came from the strong surge of business spending on capital equipment. By the end of this year, capital spending will probably be about 20 percent higher than in 1955."—Federal Reserve Bank of Philadelphia, Business Review, December 1956.

Treasury Secretary George M. Humphrey told a Senate committee that quick tax writeoffs for plant expansion granted business in 1956 would cost the Government roughly $3 billion in interest costs. He warned such writeoffs have the stimulating effect which can temporarily add to inflation with the possibility of a lag later."

Some price jumps brought excessive profits

	Percent increase in reported net income after taxes, 1955–56	Percent return on net assets, 1956
Food chains	27	16
Clothing and apparel	16	8
Construction	52	10
Household appliances	9	12
Building, heating, and plumbing	7	11
Total public utilities	11	10
Drugs and medicines	30	19

United States and India

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. CELLER. Mr. Speaker, to have a friend, you have to be one. At this juncture in world affairs, we certainly need friends and we especially need them in Asia. An opportunity will soon present itself whereby we can extend the hand of real friendship to India. India is seeking a loan of $1 billion from the western democracies for the next 3 years and it is contemplated that the United States Government will be asked to contribute one-half thereof, or $500 million. The remainder may come from Britain and further loans from the International Bank for Reconstruction and Development as well as from private sources. India has been receiving about $60 million a year in United States foreign aid. Fifty million of this is for economic development but mostly on a loan basis. Ten million thereof is in the nature of technical assistance.

India has inaugurated a second 5-year plan, and if this aid is not given, the same will have to be cut drastically or unfortunately abandoned. Most essential projects in its second 5-year plan of industrialization would have to be postponed for many years, or even abandoned. This second 5-year plan has already run into difficulties. The amount of outside financing needed by the Indian Government and private enterprises proved larger than the original plan's estimates. As a result of the import of capital goods required by the plan, India's foreign-exchange reserves have dwindled by some $435 million in 1956–57. It is now certain that the total balance-of-payment deficit during the 5-year plan will be much higher than the original estimate of $830 million. These loans are essential or the plan may go a-glimmering.

Premier Nehru has stressed India's economy as being fundamentally sound and that there is great potential wealth in India. He stresses that the present foreign-exchange difficulties have been brought about by heavy investments in wealth-producing goods and not by the importation of luxuries. India is most anxious to raise the standard of living of her teeming millions. For this the second 5-year plan is most necessary.

Toward the end of September, Indian Finance Minister T. T. Krishnamachari will come to Washington, to attend a board meeting of the International Monetary Fund. At that time, he will discuss the matters of loans with the Secretary of State, if not with President Eisenhower. It is interesting to note that Secretary Dulles has stated that the United States would give sympathetic consideration to any Indian request for economic assistance.

I personally cherish the hope that the Congress will not unduly interfere with efforts to effectuate a substantial loan to India.

I hope, too, that India and her representatives will not try to pressurize the administration by saying that if we do not make the loan, they will go to Moscow for it. I am quite sure that argument will not wash. Frankly, it is a baseless argument and should fall on deaf ears. I do not think that Moscow could or would make a loan of such magnitude without imposing conditions that would stultify India.

India has made considerable industrial progress latterly. There has been a minimum increase of 30 percent in production in all sections of Indian industry. Beyond that, the rate of capital formations in India have been rather rapid. When India obtained her independence, there was a notable dearth of engineering industries. This has all been changed. For example, almost 95 percent of all component parts of bicycles used in India are of native manufacture. India is making rapid strides in the production of automobiles. India mined 30 million tons of coal annually at the time she achieved independence. The figures today are around 44 million. In 1947 she produced 860,000 tons of steel. In the current year, the production is 1,340,000 tons. In 1947 she produced 1,400,000 tons of cement. Current production is 6,100,000 tons. Many more figures could be presented to indicate the great strides made in India's production.

There are many in this country who deplore the so-called nonalinement foreign policy maintained by India. They claim India must make a choice between the two power blocs. I personally would prefer to have India aline herself with the West. But there is an old adage attributed to our own Indians: "Let me not pass judgment on my brother before I have walked 6 months in his moccasins." Perhaps we should try and see this situation through Indian eyes, especially in the light of her geographical location, with her vast common border with Red China, and the other factors

which make her hesitate to come over emphatically to our side. Also, I am a bit intolerant of those who say "If you are not with us, you are against us." I am confident that India is not against us. On the contrary, I would estimate that India's attitude toward us is one of benevolent neutrality. I say this despite some intemperate remarks registered by representatives of India at the United Nations and elsewhere.

Beyond all this, remember that India asks for a loan and not a handout. India has vast resources. With hard work and increased productivity, the loan will be paid on the due dates. India might well follow the hard toil that is being put forth by the Germans. It was their industry, perseverance, and hard labor that pulled West Germany out of her economic difficulties. Be it remembered, also, that India's basic economy is capitalistic, although in many instances that economy is controlled due to local conditions.

I am well aware also that the attitude of Krishna Menon, chief delegate of India to the United Nations at the last session, was hardly to our liking, particularly when he said that the Hungarian revolt was an internal affair. It is even difficult to understand an Associated Press dispatch out of New Delhi dated as late as September 9, which reads as follows:

Prime Minister Nehru said today, "Condemnation of the Soviet Union for suppressing the Hungarian revolt would only make the situation worse."

I am in utter disaccord, and I am sure the Western democracies are in disaccord, with Mr. Nehru when he so cavalierly says that we should not condemn the Soviet Union. Also, it was a sad commentary when India abstained on the Hungarian resolution of the United Nations.

Frankly, it is expressions of this character which makes it very difficult for the well-wishers of India in the United States to be helpful to her. Both Premier Nehru and his dynamic Defense Minister and Chief Delegate to the United Nations, V. K. Krishna Menon, might well leave unsaid some of their unjustified criticisms against the United States and mute their unjustified yet favorable comments of Soviet Russia.

In any event, I do indeed hope that the administration will look with kindly eye upon the applicatoin which India may make for this loan. Without this loan, the prime targets of India's 5-year plan will not be reached. Then, the Government of India might have to resort increasingly to centralization and regimentation of her economy and a regimented economy might tend toward gradual elimination of political and individual freedom. Communism would beckon and might take hold.

It is possible, with the help of the United States and other western democracies, to participate in the underwriting and guaranteeing of the success of Indian development. We dare not allow Indian efforts to fail. If there is economic failure or—worse still—collapse in India, the failure or collapse would spread throughout south Asia. We cannot, dare not, permit such a catastrophe. If we fail to help, the day will surely and bitterly come when we will reproach ourselves.

Record of Committee on Public Works in the 85th Congress, 1st Session

EXTENSION OF REMARKS
OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. BUCKLEY. Mr. Speaker, under leave granted to extend my remarks, I include the following summary of public-works legislation reported by the Committee on Public Works during the 1st session of the 85th Congress:

LAWS ENACTED

Public Law 85–3: Extends time for report of President's Advisory Commission on Presidential Office Space.

Public Law 85–23: Gives consent of Congress to Merrimack River flood-control compact entered into between the States of Massachusetts and New Hampshire creating the Merrimack River Valley Flood Control Commission and defining its powers and functions relating to approval of flood-control projects constructed by the United States.

Public Laws 85–85, 85–93, and 85–95: Provides for remodeling the existing Senate Office Building, increases the limit of cost on the new Senate Office Building, and authorizes furnishings for the new building.

Public Law 85–106: Extends the times for commencing and completing the toll bridge over the Rainy River at or near Baudette, Minn.

Public Law 85–108: Increases the borrowing authority and clarifies the general powers of the St. Lawrence Seaway Development Corporation.

Public Law 85–113: Reenacts authorization for the highway bridge over the Pigeon River below High Falls, Minn.

Public Law 85–130: Conveys lands at McNary lock and dam project, Oregon and Washington, to the port of Walla Walla, Wash.

Public Law 85–138: Designates the lake created by the Jim Woodruff Dam, Apalachicola River, Ga., as Lake Seminole.

Public Law 85–143: Authorizes payment by Bureau of Public Roads of transportation and subsistence costs to temporary employees on direct Federal highway projects.

Public Law 85–146: Authorizes municipal water supply from Lake Texoma for the city of Sherman, Tex.

Public Law 85–148: Extends period for amortization of indebtedness of bridge over the Missouri River near Rulo, Nebr.

Public Law 85–159: Authorizes the construction of a hydroelectric power project on the Niagara River at Niagara Falls, N. Y., which would utilize all of the United States share of the amount of water in the Niagara River made available for power redevelopment under the terms of a treaty between the United States and Canada entered into in 1950. Such development is to be accomplished by authorizing and directing the Federal Power Commission to issue a license, pursuant to the provisions of the Federal Power Act, to the New York State Power Authority, an instrumentality of the State of New York. The State power authority would finance, construct, and operate the project, including the United States share, under the 1950 treaty, of the cost of remedial works without aid or assistance from the Federal Government. Provision is made for inclusion in the license of specific conditions relating to the disposition of project power. This law affords an acceptable basis for the long-delayed development of a great natural resource.

Public Law 85–169: Transfers ownership to Allegany County, Md., of a bridge loaned by the Bureau of Public Roads.

Public Law 85–178: Conveys Bunker Hill Island in Lake Cumberland near Burnside, Ky., to the Commonwealth of Kentucky.

Public Law 85–221: Authorizes an additional bridge across Bear Creek at or near Lovel Point, Baltimore County, Md., and collection of tolls.

Public Law 85–230: Increases the storage capacity of the Whitney Dam and Reservoir, Tex.

Public Law 85–242: Amends the act of June 3, 1896, to provide for construction of new terminal facilities between 17th Street on the south shore of Gowanus Creek and Fort Hamilton, N. Y.

Public Law 85–245: Returns to former owners certain mineral interests in lands acquired for Arkabutla, Sardis, Enid, and Grenada Reservoirs, Miss.

Public Law 85–294: Authorizes expenditure of Federal funds to reconstruct lock and dam No. 3 on Little Kanawha River, West Virginia.

BILLS PASSED BY THE HOUSE AND PENDING IN THE SENATE COMMITTEE

H. R. 2: Authorizes the State of Illinois and the Metropolitan Sanitary District of Greater Chicago, under the direction of the Secretary of the Army, to test, on a 3-year basis, the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway, and for other purposes.

H. R. 2548: Authorizes payment for losses sustained by owners of wells in the vicinity of the construction area of the New Cumberland Dam project by reason of the lowering of the level of water in such wells as a result of the construction of New Cumberland Dam project.

H. R. 3770: Renames the Strawn Dam and Reservoir project in the State of Kansas as the John Redmond Dam and Reservoir.

H. R. 4260: Authorizes the Chief of Engineers to publish information pamphlets, maps, brochures, and other material.

H. R. 4683: Authorizes adjustment, in the public interest, of rentals under leases entered into for the provision of commercial recreational facilities at the Lake Greeson Reservoir, Narrows Dam.

H. R. 6660: Provides that the lock and dam referred to as the Tuscaloosa lock and dam on the Black Warrior River,

Ala., shall hereafter be known and designated as the William Bacon Oliver lock and dam.

H. R. 6701: Grants the consent of Congress to the Tennessee River Basin water pollution control compact.

H. R. 8576: Authorizes the conveyance of certain lands within the Old Hickory lock and dam project, Cumberland River, Tenn., to Middle Tennessee Council, Inc., Boy Scouts of America, for recreation and camping purposes.

H. J. Res. 382: Grants the consent and approval of Congress to an amendment of the agreement between the States of Vermont and New York relating to the creation of the Lake Champlain Bridge Commission.

BILLS PASSED BY THE SENATE AND PENDING IN THE HOUSE COMMITTEE ON PUBLIC WORKS

S. 1003: Provides for adjustments in the lands or interests therein acquired for the Albeni Falls Reservoir project, Idaho, by the reconveyance of certain lands or interests therein to the former owners thereof.

S. 1587: Authorizes the construction of protective measures in the city of New Bedford and the town of Fairhaven, Mass., to afford hurricane tidal flood protection for New Bedford, Fairhaven, and Acushnet, Mass.

S. 1726: Authorizes certain construction for the protection of the Narragansett Bay area against hurricane tidal flooding.

S. 1785: Designates the reservoir located above Heart-Butte Dam in Grant County, N. Dak., as Lake Tschida.

S. 1869: Amends the Tennessee Valley Authority Act of 1933, as amended.

S. 2108: Amends the Public Buildings Act of 1949, to authorize the Administrator of General Services to name, rename, or otherwise designate any building under the custody and control of the General Services Administration.

S. 2109: Amends an act extending the authorized taking area for public building construction under the Public Buildings Act of 1926, as amended, to exclude therefrom the area within E and F Streets and 19th Street and Virginia Avenue NW., in the District of Columbia.

S. 2228: Amends section 5 of the Flood Control Act of August 18, 1941, as amended, pertaining to emergency flood-control work.

S. 2676: Authorizes the Secretary of the Army to make a survey of a water route from Albany, N. Y., into Lake Champlain, N. Y. and Vt., with ultimate connection with the St. Lawrence River.

REPORTED AND PENDING ON HOUSE CALENDARS

S. 497: Authorizes construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, beach erosion, and other purposes. This is the omnibus bill of 1957 and is divided into two parts: Title I, river and harbor projects—navigation and beach erosion control—and title II, flood-control projects. There are four general types of authorization in the bill: First, individual project authorizations or modifications of existing authorizations; second, increases in river basin monetary authorizations; third, matters of general legislation not pertaining to specific projects; and fourth, surveys.

S. 2261: Authorizes construction of Federal buildings by direct appropriation and repeal of lease-purchase program. Primary purposes of the bill, as amended by the committee, are as follows:

First. To authorize appropriations totaling $1,500 million for the 5-year period ending July 1, 1962;

Second. To authorize for construction by direct appropriation all building projects previously approved under the lease-purchase program by the Committees on Public Works of the Senate and the House of Representatives, with the exception of certain projects within the District of Columbia and one project at Rock Island, Ill.

Third. To amend the act of May 25, 1926—which is the basic authority for direct appropriation construction—to provide that before appropriations shall be made for direct construction in the future, a prospectus of each proposed project will have to be submitted and approved by the Committees on Public Works of the Senate and the House of Representatives in order to insure the equitable distribution of projects throughout the United States with due regard for the comparative urgency of need for such projects.

Fourth. To repeal those sections of Public Law 519, 83d Congress, which authorized the Administrator of General Services and the Postmaster General to enter into lease-purchase agreements for periods ranging from 10 to 25 years for acquisition of real property.

H. R. 4266: Amends the Tennessee Valley Authority Act of 1933, as amended, to authorize TVA to issue and sell revenue bonds to finance needed additions to its power system. Such bonds would not be obligations of, nor guaranteed by the United States. The principal of, and the interest on, such bonds would be payable solely from TVA's power revenues, and TVA would be directed to charge rates for power sufficient to cover debt service on the bonds as well as other expenses and payments for which provision is made under the bill. Proceeds of the bonds could be used for construction, acquisition, enlargement, improvement, or replacement of any plant or other facility used for the generation or transmission of electric power or in connection with lease-purchase transactions.

H. R. 7870: Amends the act of July 1, 1955, to authorize an additional $10 million for the completion of the Inter-American Highway.

SURVEY RESOLUTIONS

In addition to the bills considered and acted upon by the committee, a number of river and harbor and flood-control resolutions proposed by individual Members of Congress, which require only committee action, were approved. These resolutions authorized review survey studies by the Corps of Engineers, Department of the Army, that will ultimately result in project reports submitted to Congress if the projects are found feasible and are approved by the Board of Engineers for Rivers and Harbors, the Chief of Engineers, and the Secretary of the Army.

GENERAL ACTIVITIES

The committee had 447 bills for consideration during the 1st session of the 85th Congress dealing with such subjects as navigation improvements, flood control, water pollution, beach erosion, highways, public buildings, land conveyances, and water supplies. The committee gave particular study and attention to the needs of every section of the country in reporting the omnibus river and harbor and flood-control bill of 1957 and in acting upon survey resolutions pertaining to civil-works projects, especially with respect to flood-control remedial works necessary as a result of the last three major flood disasters—the hurricanes and floods of 1955, which left such a widespread path of destruction through the New England and Middle Atlantic States, the unprecedented rainfall and floods in California and adjacent States during the Christmas holidays of 1955, and the floods throughout the Southwest United States during May and early June of this year. In this last instance the committee appointed a special subcommittee which made an exhaustive, on-the-ground inspection, the results of which are contained in a report made by the subcommittee on June 29—The Southwest Flood of 1957, Committee Publication No. 85–4.

In all of these accomplishments I have had the active cooperation and valuable aid of all committee members. I pay special tribute to Representatives GEORGE H. FALLON, CLIFFORD DAVIS, JOHN A. BLATNIK, and ROBERT E. JONES, who served as chairmen of the subcommittees. I want to give credit, too, to our efficient and hard-working staff. The committee is fortunate in having capable and experienced staff members and I commend them for a job well done.

Burrus and the CCC

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Burrus and the CCC."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BURRUS AND THE CCC

A unique figure in American milling, Jack P. Burrus, president of the Burrus Mills, Inc., with headquarters in Dallas, Tex., attracted national attention in recent days through a series of advertisements in newspapers over the United States carrying open letters addressed to 170 million red-blooded, fairminded, American Joe Doaks. The letters told the story of the tragic financial experience of the Burrus organization, which has a record of successes through its 89-year history, in engaging in a tent storage venture for the Commodity Credit Corpora-

tion. The letters concluded with a plea for intercession by the 170 million Americans, who are in reality the stockholders of the CCC, either through votes to Burrus Mills, Inc., or communications to various officials and legislators to help assure a settlement between the CCC and Burrus Mills on the basis of justice, equity, morality, and commonsense.

Briefly, Mr. Burrus, in these advertisements, pointed to an accumulation of losses of $15,015,900.56 on an aggregate of 37,839,239 bushels of wheat of the Commodity Credit Corporation involved in the tent storage arrangement. The losses resulted from various unexpected causes, including a deluge of rain, 22 inches, from May through October 1954 at St. Joseph, Mo., 1 of the 2 storage points, the other having been Fort Worth, Tex., and from windstorms and attacks of thousands of starlings that literally pecked hundreds of holes through the tent coverings. The unpaid portion of these losses, which Burrus Mills, Inc., is not fully admitting, is approximately $8 million.

The CCC is demanding full payment of that sum by October 1, 1957. Its demand threatens the existence of Burrus Mills. Mr. Burrus is asking instead that the CCC give the company time to settle the debt by funding it through notes payable in 24 quarterly installments at the lowest interest rate which the CCC charges in extending credit on sales to foreign buyers of its surplus commodities or to farmers to whom it makes loans. The CCC is charging Burrus interest of 4½ percent, while its interest rate on credit to foreign buyers is 3¾ percent and its loan rate to farmers is 3½ percent.

Unfortunately, it appears that political influences have affected the negotiations for the settlement of the losses and the grant of some of the counterclaims of Burrus, which seem to be in line with established grain-trade practices.

What should be kept in mind in this extraordinary and unprecedented situation is the fact that, when the Burrus Mills originated the idea of the vast storage undertaking, the CCC, after accepting it, commended that organization and cited it as an example in service at a time of emergency storage conditions. The CCC invited other storage-space offers of a similar nature, and even suggested informally to Burrus that it undertake additional tent-storage projects. The CC has a moral obligation in this instance to a well-meaning servant that now admits a tragic mistake in entering into the tent-storage operations. Furthermore, Burrus is offering ample security, while the CCC, with authorizations of $14,500,000,000 of capital funds, of which $13,372,000,000 were last reported in use, is able financially to make the extension of payments on the unpaid losses.

We join our fellows among the 170 million redblooded, fairminded American Joe Doaks in casting our votes and in urging others to cast their ballots for the settlement for which the Burrus Mills pleads—on the basis of justice, equity, morality, and commonsense.

Tax Relief Big Issue in 1958 and 1960

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. GWINN. Mr. Speaker, the issues in the political campaigns of 1958 and 1960 will not be the party platforms or the personalities campaigning for office. The big issue will be tax relief.

Since 1930, while the personal per capita income has risen from $569 to an average of $1,940 in 1956, the percent of income taken by the Federal Government from such incomes has risen from 1.64 percent to 12.77 percent in 1956. To be more specific, where the Federal Treasury collected $9.34 per capita in personal income taxes in 1930 the collection in 1956 averaged $247.77. Meanwhile, the Federal per capita public debt was increased from $131.51 in 1930 to $1,622.64 in 1956.

To further illustrate the changing pattern in income payments to individuals and the effect of Federal income taxes for 1930 and the years between 1950 and 1956, I submit for the RECORD the following tables prepared by Paul O. Peters, editor of the Washington News Bulletin:

The Office of Business Economics in the Department of Commerce has again published in the Survey of Current Business, a detailed study of personal incomes, by State and regions for the calendar year 1956 together with revised data for the years 1954 and 1955.

From our own files, the table following has been prepared. It shows the gross personal income, the reported population, and the computed per capita income for the year 1930 as compared with the years 1950 through 1956:

Calendar year	United States average		Per capita personal income
	Midyear population	Gross persona. income	
1930	122, 775, 046	$73, 325, 000, 000	$569
1950	151, 683, 000	225, 473, 000, 000	1, 491
1951	154, 360, 000	252, 260, 000, 000	1, 649
1952	157, 028, 000	269, 050, 000, 000	1, 727
1953	159, 636, 000	283, 140, 000, 000	1, 788
1954	162, 417, 000	284, 823, 000, 000	1, 767
1955	165, 270, 000	303, 268, 000, 000	1, 846
1956	168, 174, 000	324, 281, 000, 000	1, 940

To properly evaluate the actual gain or loss to the individuals who received the incomes in the years under study, there is presented a compilation from official Government reports showing the revenues collected on personal or individual incomes and the per capita amount in current dollars with a column showing the relative purchasing power of the current dollar as reflected by the wholesale price index for the year 1926—$1.

Year	Revenue collected from incomes	Population mid-year	Revenue per capita	Value of $1
1930	$1, 146, 844, 763. 68	122, 775, 046	$9. 34	$1. 157
1950	18, 566, 957, 588. 15	151, 683, 000	122. 40	.570
1951	26, 849, 750, 916. 00	154, 360, 000	173. 94	.543
1952	33, 269, 505, 721. 00	157, 028, 000	211. 87	.528
1953	36, 783, 850, 714. 00	159, 636, 000	230. 42	.528
1954	36, 919, 986, 858. 00	162, 417, 000	226. 32	.527
1955	36, 980, 678, 132. 00	165, 270, 000	223. 81	.521
1956	41, 670, 881, 000. 00	168, 174, 000	247. 77	.494

In any study of what personal incomes mean in an economy primarily based upon the expansion of credit and debt, it is important to have for ready reference statistical tables of various kinds.

It must be understood that the whole economy depends for its operation on individuals who labor in the productive enterprises which furnish the payrolls for those engaged in the public service and the service trades. It also must be understood that the wealth of the Nation is dependent primarily upon its natural resources and the ability and willingness of the people to convert natural resources into things useful to man individually and society collectively. Thus in considering personal per capita incomes over the years, consideration should be given to the fact that after the Federal Government has taken its toll, there still remains an almost unidentifiable toll which is included in the cost of all purchases of capital, producer, and consumer goods since they are part of the purchase price.

Also, not to be overlooked, is the impact of State and local taxes of all kinds. In this study we will cover only the impact of Federal taxes on incomes and the relationship of the Federal debt to the income which apparently caused the depreciation in the purchasing power of $1.

As a part of this study there is here presented a table showing the percent of per capita incomes absorbed by Federal income and withholding taxes together with the per capita public debt:

Year	Per capita personal income	Per capita income tax and percent		Per capita Federal debt
1930	$569	$9. 34	1. 64	$131. 51
1950	1, 491	122. 40	8. 21	1, 606. 68
1951	1, 649	173. 94	10. 54	1, 653. 42
1952	1, 727	211. 87	12. 66	1, 650. 06
1953	1, 788	230. 42	12. 88	1, 666. 74
1954	1, 767	226. 32	12. 81	1, 670. 14
1955	1, 846	223. 81	12. 12	1, 660. 15
1956	1, 940	247. 77	12. 77	1, 622. 64

The Continuing Progress of REA

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. CURTIS. Mr. President, the rural electrification in our country continues to make progress. The job is being done. We must not be confused by the criticism of those who are constantly trying to put the REA into politics. This Administration is doing an outstanding job in bringing the benefits of electricity to rural America.

I wish to include as part of my remarks a table I have obtained from the Rural Electrification Administration showing a breakdown by classes of the number of REA consumers now receiving central station service for the calendar year 1955. The figures for 1956 are not yet available.

Number REA consumers and usage, 1955 calendar year

	Number	Average monthly kilowatt-hours of consumers	Average annual kilowatt-hours use (in thousands)
All consumers	4, 135, 019	312	15, 457, 623
Less, REA borrowers	49		222, 470
Total	4, 134, 970		15, 235, 153
Rural:			
Farms	2, 406, 061	246	7, 223, 129
Nonfarms	1, 061, 225	239	2, 918, 606
Seasonal cottages	72, 318	43	37, 582
Pump irrigation	20, 575	2, 467	609, 114
Total	3, 560, 179		10, 788, 431

Number REA consumers and usage, 1955 calendar year—Continued

	Number	Average monthly kilowatt-hours of consumers	Average annual kilowatt-hours use (in thousands)
Nonrural: Town residential	260,010	310	967,763
Other:			
Small commercial	216,341	558	1,449,620
Large commercial	8,527	15,529	1,589,002
Schools, utilities, street lights, etc.	89,913		440,337
Total	574,791		4,446,722

The High Cost of Living

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup of Wednesday, August 28, 1957.

There being no objection, the radio broadcast was ordered to be printed in the RECORD, as follows:

The Democratic leader of the Senate, JOHNSON of Texas, rose in the Senate the other day, and commented on what he called a "truly sad day for America." JOHNSON was referring to last Thursday, when Washington announced that the cost of living had gone up for the 11th straight month. He went on to predict that, in the months ahead, the high cost of living may become the dominant issue on the American scene.

Well, Senator JOHNSON has got a wide reputation as a political strategist. Chances are good that he knows what he's talking about. These rising costs could well become the No. 1 issue in the political battles leading up to the 1958 congressional elections. Now, 11 straight months of inflation is a long stretch. Consumers can't be blamed for hurting at the very thought of it. But, on the other hand, it could have been worse for consumers. It could have been worse, if farmers hadn't been forced to take the blow of falling farm prices on the chin. It wasn't fair, but it happened just the same.

That worries a good many of us, including McChesney Martin, Chairman of the Federal Reserve Board. He's the man at the very center of the Nation's money controls. Earlier this month, Martin was testifying before the House Banking and Currency Committee on the country's fiscal policies. Let's get Martin's statement in his own words. Here's what he told the committee: "Now, the great shame to me and the thing that worried me the most, starting in 1955, was that we kept stability in the dollar from 1953 on to the early part of 1956 by a decline in farm prices, which was being offset in the picture by a rise in manufactured prices."

In short, Martin was saying that the purchasing power of the dollar held pretty steady during that period because the drop in farm prices was offsetting the rise in prices of manufactured goods. He went on to say that this "stability was not a balanced stability; it was farm products going down and manufactured products going up, and the net result being stability." Congressman BREEDING of Kansas then put this blunt question to the money manager: "In other words, the farmer had to pay the cost there, didn't he?" Martin didn't quite meet that one head on, but he replied that the farmer "was caught in a problem, and his situation was worsening even though we could claim that we had a stable dollar."

The whole point of this part of testimony by Chairman Martin of the Federal Reserve Board is this: He's conceding that the much-vaunted economic stability in the early years of the present administration was made possible only because the farmer was the victim of falling farm prices. Those drops in farm prices hid from view the upward spiral of industrial goods.

It's important that consumers understand this fact, and why farmers, caught in a price-cost squeeze while the rest of the country has enjoyed prosperity, deserve a better break.

This is GTA, the co-op way.

ICFTU Resolution on Cyprus

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the resolution on the problem of Cyprus passed by the International Confederation of Free Trade Unions—ICFTU—at its fifth world congress held in Tunis, July 5–13, 1957. The ICFTU represents over 55 million workers throughout the world, including the AFL–CIO and the British Trade Union.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

ICFTU RESOLUTION ON CYPRUS

The Fifth World Congress of the ICFTU, meeting in Tunis, July 5–13, 1957, after having examined with grave concern the causes that led to bloodshed in Cyprus since 1955 and the present situation there, reaffirms its full support of the right of the people of Cyprus to self-determination, as resolved by the fourth world congress and subsequent executive board meetings; notes that a resolution adopted by the 11th General Assembly of the United Nations calls for the resumption of negotiations for a peaceful, democratic, and just solution of the Cyprus question, in accordance with the aims and purposes of the Charter of the United Nations; expresses its great disappointment at the fact that this resolution has not yet been implemented; notes with satisfaction that the truce offered by the Cypriote National Freedom Organization to the Cyprus Government in March 1957 has been faithfully observed and that no clashes have since then occurred; urges, in view of the new circumstances, the British Government to lift the emergency regulations and detention of persons law; to release all detainees against whom no charges have been made; to investigate publicly all complaints of ill treatment; to discuss with the Ethnarch and Archbishop Makarios the terms of a settlement in accordance with the right of self-determination; to allow the return to Cyprus of Archbishop Makarios, of the general secretary of the Cyprus Workers' Confederation, as well as of all other persons banned from the island on the ground of political activities; to restore full trade union rights and to release all detained trade unionists; and authorizes the president and general secretary of the ICFTU to send on behalf of the congress an urgent appeal, both to the Governor of Cyprus and to the Secretary of State for the Colonies, to grant a reprieve for two Cypriotes condemned to death, Michael Rossides and Nicos Sampson, in order to provide an atmosphere which would facilitate an early settlement.

Enshrine the "Enterprise"

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. MAGNUSON. Mr. President, Congress now has completed action on my resolution to preserve the aircraft carrier *Enterprise* as a shrine on the Potomac in our National Capital.

Soon the success of our "save the *Enterprise*" efforts will be measured by the response from thousands of individual citizens joining Adm. William F. Halsey and his committee in this important effort.

America's youth will play a vital role in this effort.

How important a role they are prepared to take is indicated in the article a Brooklyn schoolboy, Fred Tarter, wrote for the August 17 issue of Navy Times.

I would ask unanimous consent at this time so that Fred Tarter's article can be entered in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEEN-AGERS CALL ON AMERICANS TO SAVE "BIG E" FROM SCRAPPING

(By Fred Tarter)

(This is the letter written recently by a Brooklyn schoolboy, Fred Tarter, to urge contributions to enshrine the carrier *Enterprise* as a memorial.—EDITOR.)

BROOKLYN, N. Y.—Although this story carries my byline, it is written by the actions of the teen-agers of America.

My name is Fred Tarter and when I heard that the "Big E" was to be scrapped, I offered my services to Fleet Adm. William F. Halsey and the 1,400 men of the Enterprise Association. I was volunteering for all the teen-agers.

The American teen-ager owes a great deal to the *Enterprise* and her fine men. It is because of the combined efforts of the "Big E" and the rest of the Armed Forces during World War II that I was able to be born in a free Nation and to be free from worry and fear. The *Enterprise* didn't ask to be repaid—she did her job and received "well done" from all the men in the Navy. It would be a disgrace to let the "Big E" die in this manner. To quote Oliver Wendell Holmes' immortal Old Ironsides, "Oh, better that her battered hulk should sink beneath the waves; her thunder shook the mighty deep and there should be her grave."

To destroy her in a scrapyard is a little like burying a general in potter's field because no one cared. We care, the American teen-ager.

Many men spend all their lives to attain fame—the "Galloping Ghost" took the short-cut. She was up and down the Pacific like a yo-yo on a string, first in the north and then in the south.

Teen-agers spend millions of dollars each year on such things as gum, candy, ice

cream, comic books and all the other so-called vital items of survival. Let's all chip in and give the lucky "E" a place to spend her days for all to see and pay homage to her deeds and the deeds of her men.

A few weeks ago a cartoon appeared in one of the New York papers showing a ship destined to be destroyed, an angry sailor standing on her gangplank and two sailors on deck, one saying to the other, "He says that Hitler and Tojo couldn't do it and that he doubts that we can." I think that the cartoonist was thinking of the *Enterprise* when he wrote that. Maybe economics will do what the enemy couldn't.

Admiral Halsey has been quoted as saying, "A million dollars is a small amount in comparison to the large amount that the enemy would have paid to send the *Enterprise* to the bottom of the sea during World War II."

A million dollars is the amount needed in order to overhaul the "E" so that she will be in a fit condition because, as you know, she took some beating during the war and has many battle scars.

The *Enterprise* was the only American aircraft carrier to serve through the entire Second World War.

The Japanese sent as many as 84 planes against the *Enterprise* in a single day. Six times they had claimed their planes had destroyed her, but the elusive galloping ghost would always turn up to batter them once more.

Her sprawling hangar deck will never again echo to the roar of aircraft, her guns are silenced forever, her future is uncertain, but the glorious history and traditions of the *Enterprise* have made her a part of America's wonderful and proud heritage.

On April 23, 1957, the Secretary of the Navy halted the scrapping of the *Enterprise* until November 1, 1957, when at such time as the Enterprise Association has raised the required $1 million the Navy, in turn, would give the ship to the city that has been mutually agreed upon by both the Navy and the association.

Senator WARREN MAGNUSON, of Washington, on May 21, 1957, at the request of Admiral Halsey, introduced in the Senate Joint Resolution 96 which says in part, "The *Enterprise* is to be enshrined at the Nation's Capital as a memorial to be supported by private funds at no expense to the United States Government."

On November 1, 1945, President Harry Truman recommended that the *Enterprise* be preserved as a national shrine. Twelve years later to the day the "Big E" is due to be destroyed.

Many brave men died so that the *Enterprise* could keep on battering the Japanese forces.

The *Enterprise* has truly lived up to the line of poetry that was quoted when she was christened by Mrs. Claude Swanson, wife of the then Secretary of the Navy, in 1936, "I have done the state some service," from Othello.

The fate of the *Enterprise* is in the hands of the people of the country that she loved. The teen-agers are trying to do their share; how about you?

The Problem of Cyprus

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech by Archbishop Makarios, of Cyprus, at the luncheon of the Overseas Press Club, New York City.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, I wish to thank the Overseas Press Club for their gracious hospitality in arranging this luncheon and affording me the opportunity of a more intimate exchange of views with distinguished members of the American press on the problem of Cyprus, which has brought me once more a visitor to this great country of yours—the seat of the United Nations.

I am indeed glad to be in the United States again. During my previous visits here I came to appreciate deeply the moral background of the American people and their wholehearted dedication to freedom and democracy. The remarkable progress of the American Nation and its present-day moral leadership of the world has come from its own early achievement of independence, without which the world would have been much poorer. Since that time, America has been carrying forward the torch of liberty and civilization, that was first lit and carried by ancient Greece and later held against all adversity by modern Greece, as recent history shows.

It is in seeking to insure to the Cypriote people this great heritage of freedom that I have the privilege of being now in the States.

The Cyprus issue has become a major problem in the international field. Yet the question is simple in its essentials. It is the demand of the Cypriote people to become independent and decide their own political future. Various solutions have been suggested. None however can be a real solution without the will of the Cypriotes. The simplest way, therefore, and the fairest, would be to allow the people of Cyprus to decide for themselves on their future, in accordance with the well established principle of self-determination under the Charter of the United Nations.

I am afraid the question of Cyprus has been unduly complicated and involved by matters wholly unconnected with the island and its people. In refusing self-determination to Cyprus, the British Government has used at various times different arguments. Originally it was the strategic importance of the island to Britain that stood in the way of self-determination; emphasis was at first laid on free world defense; later it was shifted to that of Middle East oil. Both have eventually been put aside. The British Government now puts forward Turkey's opposition as the main obstacle to Cypriote freedom, seeking thereby to make the solution of the Cyprus problem dependent upon the wishes of Turkey. But Turkey has no legal or moral right to have a veto on the future of Cyprus, and in any case neither Turkey nor any other country can be entitled to frustrate the will of the Cypriote people and bar their way to independence.

As to the Turkish minority in the island, it should be given the same consideration and protection as has been accorded to the minorities in all other similar cases. We would willingly agree to minority rights and privileges being guaranteed to the Turkish Cypriotes by an international instrument, in addition to the full and equal rights of citizenship which they will enjoy in a free Cyprus. It is our sincere wish to have a satisfied and happy Turkish community in our midst as a symbol of Greco-Turkish cooperation.

The Cyprus issue is coming up before the United Nations for the fourth time. Last year a resolution calling for a peaceful, democratic, and just solution was adpoted by the General Assembly. In compliance with it the Cypriote people did all in their power to contribute toward the creation of an atmosphere of peace and freedom of expression, so that an agreed solution by negotiation might be possible. There has been no British initiative for the resumption of negotiations between the British Government and the people of Cyprus, and my offer of last May for talks to be resumed was rejected.

It seems as though there were a desire on the part of the British Government to bypass the Cypriote people's will on the question of their own future—a matter which directly concerns them and no one else. British diplomacy increasingly seeks to present to the world the question of Cyprus as a Greco-Turkish difference, and assume the role of a disinterested third in an issue in which Britain is the real party to the dispute. Hence the British moves toward a tripartite conference between Britain, Greece, and Turkey. It should be made clear, however, that the question of Cyprus is in no way a Greco-Turkish difference, nor one between the three countries. It is an issue between the people of Cyprus on the one part and the British Government on the other. No negotiations, therefore, between third parties can provide a solution, or affect the question, in the absence of the Cypriote people. Any international aspect of the problem cannot be restricted to those three countries. It is in fact a matter for the United Nations.

It is earnestly to be hoped that the United Nations will respond to their aims and purposes on an issue on which they have great responsibility, and will this year by a resolution on the substance actually contribute to a democratic and just solution of the problem in the interests of world freedom and peace.

Coal Research Subcommittee Publishes Excellent Report

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mrs. KEE. Mr. Speaker, the Coal Research Subcommittee is to be congratulated for the excellent report just published. We West Virginians have been vitally interested in activities and studies conducted by this group over the past 15 months, for we recognize that from these findings can come new opportunities and new hopes for families in mining communities. I spoke in support of the resolution to establish the Coal Research Subcommittee when Congressman SAYLOR introduced it in the 84th Congress. In the next session of Congress beginning in January I shall make every effort to bring about passage of legislation to implement these recommendations.

Meanwhile, Mr. Speaker, a number of the subcommittee's recommendations can be carried out without waiting for Congress to reconvene if the administration is willing to view the overall energy panorama with objectivity rather than to proceed with policies that are detrimental to the best interests of the Nation and to the welfare of the coal industry. In the first place, the White House should take immediate steps to correct a situation that is described thusly on page 42 of the subcommittee report: "Government agencies disregard fuels cost."

The very first case history in the report in support of this accusation relates

to the new Air Force Academy, whose boilers are scheduled to use natural gas despite an abundance of coal within the immediate area. I submit that, even if gas supplies were at the moment available at costs below those at which coal can be delivered, it is incumbent upon the Department of Defense to use the more plentiful solid fuel. This observation is inspired by figures published by the United States Bureau of Mines and the Geological Survey which show that coal accounts for well over 90 percent of our total mineral fuels resources, as compared to less than 1 percent for natural gas; furthermore, the Federal Government has repeatedly acknowledged that coal should be utilized wherever feasible in preference to our depleting supplies of oil and natural gas.

The Department of Defense itself has from time to time recommended that all military facilities choose coal over oil and natural gas not only to conserve the scarce energy resources but also to preclude shortages in an emergency.

Other Government installations listed in the Coal Research Subcommittee report as currently burning gas or oil when coal is the logical fuel include the Philadelphia Naval Shipyard, the naval ordnance plant at Louisville, Ky., Bainbridge, Md., Naval Training Center, the new Army hospital at Fort Dix, N. J., the Social Security Building at Baltimore, and a number of other Government bases within close proximity of coal-producing areas.

The administration need not wait until January to correct these abuses. If the White House is aware of the contents of the subcommittee report, then it should act quickly in implementation of the recommendations. If the report has been withheld from the President, responsible administration officials are obligated to send a copy to Newport immediately.

Elsewhere the subcommittee reviews the havoc wrought in coal communities by imports of residual oil. The administration, through a series of investigations by Cabinet members and others close to the White House, has accumulated tons of evidence in proof that excessive imports are counter to the public welfare. Again, it is the responsibility of the administration to substitute action for delay and procrastination if the coal industry is to improve its economy and at the same time get in position to accelerate its production to the levels that would be required under emergency conditions.

Gas imports is another subject covered by the subcommittee. At this very moment hearings are in progress before the Federal Power Commission on applications to pipe Canadian gas into markets now being served by bituminous coal. Unless these applications are rejected, the coal industry will be further victimized by irrational Government policies that subordinate the interests of American citizens to those of international fuel profiteers.

The following paragraphs, which appear on pages 41 and 42 of the subcommittee report, speak for themselves. A word from the administration would be sufficient to include remedial provisions in the gas legislation that is to be considered when Congress reconvenes; meanwhile, the Federal Power Commission should exercise its general authority by restraining gas transmission companies from further usurpation of coal markets through exploitation of loopholes in the Natural Gas Act.

Coal has been driven out of the market in many areas by the practice of interstate pipeline companies of selling gas to certain consumers and distributors at below cost plus a fair proportion of fixed charges. Prospective consumers are induced to turn to the use of natural gas through contract proposals calling for the delivery of interruptible gas at extremely low, unrealistic rates. Subsequently, as the demand increases for the higher priced, firm contract (uninterruptible) gas, the supply of interruptible gas is reduced. Sooner or later those who have installed gas-burning equipment on the strength of the below-cost gas rates dangled before them must either contract to purchase a firm supply of gas at higher rates or turn to the use of a lower priced fuel—which would entail considerable cost and inconvenience if the standby fuel-burning facilities are not designed for the use of the cheaper fuel. In the meantime, the pipeline companies have captured additional customers and have inflicted considerable damage on the competitive fuels industries.

The President's Advisory Committee on Energy Supplies and Resources Policy noted that sales either for resale or direct consumption below actual cost plus a fair proportion of fixed charges which drive out competing fuels constitute unfair competition and are inimical to a sound fuels economy and recommended that appropriate action be taken that will prohibit such sales. The subcommittee also notes that the Office of Defense Mobilization is on record as favoring legislation which would amend the Natural Gas Act of 1938 so as to prohibit below-cost sales of natural gas. Until such legislation is enacted, natural gas will continue to be sold at below-cost rates wherever and to the extent such practice serves the purpose of some interstate pipeline companies. The impact of such sales will continue to be felt by the coal industry already weakened by such practices.

Mr. Speaker, the case for coal will be determined when legislation to carry out the recommendations of the subcommittee is presented in January. Meanwhile, many of the inequitable policies which redound to the disadvantage of the industry can and should be corrected by the administration without delay.

Revise Military Justice Code

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include a very able, forceful statement by one of my constituents highly qualified and experienced in his field, Attorney Herbert F. Murphy, of Leominster, Mass., regarding the Uniform Code of Military Justice and the Manual for Courts-Martial.

The statement discusses some of the more important problems involved in administering military justice and also presents some excellent recommendations for amendment of the code. Inasmuch as I was a member of the subcommittee of the House Armed Services Committee that drafted the original law, I have continued to be very much interested in this subject matter, and, therefore, find this statement most helpful and worthy of thought and attention.

I think the Congress must continually have in mind the objective of improving and perfecting the code so as to conform with basic concepts of American justice, thus enabling all members of our armed services to secure justice, as we conceive it in the American sense.

It would be desirable also, I think, to amend the code so as to give the judges of the Court of Military Justice permanent tenure. This court is the supreme court of all the armed services. As such, it should be clothed with the same dignity, the same prestige, and the same prerogatives in its field that are accorded to every other high Federal court of appellate jurisdiction.

Also important is the need for divorcing the administration of military justice from the chain of command. The revision of the code demands our most earnest study and early action.

The statement follows:

DO OUR BOYS GET JUSTICE IN MILITARY COURTS?—A MASSACHUSETTS LAWYER REPORTS TO THE MOTHERS OF THE NATION

On August 3, 1954, I was drafted into the United States Army. When I boarded the bus for Fort Dix, N. J., I carried with me a red-bound volume entitled "The Manual for Courts-Martial, United States, 1951." This precious book contains most of the rights and obligations of every soldier, sailor, coast-guardsman, marine, airman, and reservist or national guardsman on active duty. This book was my "bread and butter" during the 2 years of my military service.

After I arrived in Germany, I was assigned to an infantry regiment for the purpose of reporting special courts-martial and giving legal assistance to those soldiers and their families who needed it. Before I was sent to the regiment, I was trained for approximately 1 month in the judge advocate section of an infantry division (legal and court-martial section). During that time I read the Manual for Courts-Martial thoroughly and learned the "do's and don'ts" of military court reporters. The job of court reporter involves summarizing the testimony of witnesses and recording the proceedings of special courts-martial. By the end of my Army career I had attended over 200 special courts-martial. Here is my opinion of military justice:

I think that in the vast majority of trials the defendants are given a fair shake. From my observation I believe that the officers who are the judges and jury try hard to get the true facts and come to a right verdict of guilt or innocence. Yet, 100 percent of the enlisted men with whom I have discussed military trials believe that in a military court "A man is presumed to be guilty until proved innocent." The vast majority of enlisted men feel that their chances of being acquitted by a military court are very, very slim. The statistics back them up. From my own experience with special courts-martial, only about 1 man out of every 17 defendants is acquitted of all charges against him. The percentage of defendants who are found not guilty by summary courts is even smaller. This estimate includes those defendants who plead guilty to the charges against them. Most of the convicted men are found guilty

of a. w. o. l. (absent without leave; i. e., not present at the appointed place at the appointed time). Many are found guilty of drunkenness and disorderliness in public, using false passes to get off post, assault and battery, and disobedience or disrespect toward a superior commissioned or noncommissioned officer. I think I can explain why relatively few defendants escape the gavel of military justice.

First, it is necessary to understand the function of courts-martial. Under our military system of discipline the only way a commanding officer can punish one of his men for a fairly serious offense is to have him court-martialed. The maximum punishment that the immediate commanding officer can impose without a trial is 14 days restriction to specified limits, 2 hours of extra duty each day for 14 days, or a 1-grade reduction in the case of privates and privates first class only. If he thinks a soldier deserves more punishment he must prefer charges against him and have him tried by summary, special, or general court-martial.

A summary court-martial consists of one officer, usually a captain or major, who acts as prosecutor, defense counsel, and judge. If a serviceman denies his guilt in a summary court-martial, the summary-court officer cross-examines him on his alibi and questions witnesses against him. The defendant has the right to present his own witnesses. After hearing all the evidence the summary court officer decides whether the defendant is guilty or innocent. If the serviceman is found guilty, he is given a chance to plead for a light sentence. Thereafter, the summary court officer may sentence him to as much as 1 month in the stockade or 45 days of hard labor (which can be much more than 2 hours of extra duty per day), or may demote him in grade or rank, and may also deprive him of two-thirds of his pay for 1 month.

A special court-martial must consist of at least 3 members and usually comprises from 5 to 7 ranging from the grade of second lieutenant to lieutenant colonel. Every enlisted man who is tried by special court has the right to demand that one-third of the court members be enlisted persons. Because of the fact that master sergeants with long years of service are customarily selected as enlisted, court members, it is very rare that enlisted defendant uses this right.

The maximum punishment that a special court-martial can adjudge is 6 months in the stockade, plus a bad-conduct discharge, plus a forfeiture of two-thirds pay per month for 6 months. A special court may also reduce the defendant to the grade of private. (The authorized punishments for officers are different.)

The time that a soldier spends in the stockade is "bad time" and he must remain in the service that much longer after his normal tour of duty is completed.

A general court-martial is reserved for the most serious offenses. It must consist of five or more court members and may sentence the defendant to the maximum penalty provided for each offense, including death and life imprisonment.

Most court-martial cases are thoroughly investigated before they come to trial. If the evidence against an accused serviceman is insufficient to establish his guilt, the battalion, regimental, division, or other comparable commander will order that the charges against him be vacated. So, if a serviceman is tried before a court-martial the evidence against him is usually strong.

The second, main reason why relatively few servicemen are found "not guilty" by special courts-martial is the fact that the accused serviceman is judged not by his "peers" or "equals" as in civilian trials, but rather by his "superiors." The members of a court-martial are usually career officers who have a strong interest in the enforcement of military discipline. They are less willing to allow offenses to go unpunished than are civilian jurors.

The Manual for Courts-Martial and the Uniform Code of Military Justice, which is its heart and core, give every accused serviceman many rights. The purpose of these rights is to guarantee the serviceman a fair trial. Among the most important of these are the following: The right to select his own defense counsel, civilian or military, provided that if the counsel selected is a military person, he or she must be reasonably available; the right to remain silent during the trial; the right to decline to make any statement before the trial; the right to demand that one-third of the court members be enlisted persons; the right to have any member of the court disqualified if it appears likely that the member is prejudiced or has a preconceived opinion as to the defendant's guilt, etc.; the right to have one member of the court dismissed without a reason; the right to examine all papers in the possession of the prosecutor; and the right to obtain the names of the witnesses against him.

Perhaps the worst defect in our special courts-martial is the frequent unpreparedness of the appointed defense counsel. The Manual for Courts-Martial specifically states that they should be relieved from other duties as far as is necessary for them to prepare an adequate defense. However, in actual practice, they are unwilling or afraid to ask for time off for this purpose. Court-martials are often considered an extramilitary duty and battalion commanders or comparable commanders may be unwilling to allow time-off for court-martial preparation. They are prone to feel that defense counsel should prepare their cases in the evening during off-duty time. Appointed (not requested) defense counsel are often unwilling to sacrifice their off-duty time for this purpose.

Another defect in special courts-martial is the unfamiliarity of defense counsel with military law and military procedure. Comparatively few, appointed defense counsel understand the military rules of evidence. For example, they commonly fail to object to hearsay testimony (testimony of one witness as to what another witness said about how the offense occurred). Few have any comprehension of the "best evidence rule" which forbids oral testimony concerning the contents of a written document if the written document is available as evidence).

Yet, there are thousands of enlisted lawyers in the United States Army who do understand the military rules of evidence (which are very similar to the civilian rules of evidence). They could be thoroughly trained in military law in a few weeks. These men are 2-year draftees performing jobs in the Army which may have no relation to law

Appointed defense counsel are often too timid to fight for their defendants if the president of the special court-martial is their own company, battalion, or comparable commander. These commanders write the military efficiency reports of all officers under their command. This fact certainly does not encourage a subordinate defense counsel to argue a point of law with the president of the court who is his senior commander.

Certain changes to the Uniform Code of Military Justice and the Manual for Courts-Martial are now being studied by Members of the United States Congress. After observing over 200 special courts-martial I recommend the following changes:

1. Enlisted lawyers should be eligible for appointment as defense counsel and should be appointed where possible. (At the present time they are not eligible.)

2. Defense counsel should be automatically relieved of all other military duties (except during wartime) until they have had reasonable time to prepare an adequate defense.

3. Where reasonably possible, the appointed defense counsel should not be under the direct chain of command of the president of the court.

4. The term "summary court-martial" should be eliminated from both the Uniform Code of Military Justice and the Manual for Courts-Martial because of the disgrace that is associated with trial by court-martial. Minor offenses such as traffic violations and 1 or 2 hour a. w. o. l. (absence without leave) are often tried by summary courts. Punishment for such minor offenses should not be recorded on a serviceman's record as a "court-martial." After all, an informal hearing before a single officer does not jibe with our traditional concept of "court-martial." Instead, this form of punishment should be designated as an "Article — punishment," just as punishments imposed by company commanders are designated as "Article 15 punishment." Nevertheless, I believe that the summary court-martial procedure should be preserved just as it is now. It provides a relatively impartial judge and an informal and inexpensive proceeding.

If these changes are made, I believe it will do much to improve the respect of the average serviceman for military justice.

HERBERT P. MURPHY,
Attorney at Law.

LEOMINSTER, MASS.

An Excellent Example of Expanding Trade With Africa

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. GREEN. Mr. President, the level of appropriations to be established for foreign aid has been a matter of vital and continuing concern to us for some time. It is fitting, therefore, to call attention to worthy efforts that have as their purpose the bolstering of the economies of underdeveloped countries through accelerated trade with the United States. Such activities are especially important because each dollar that a friendly country earns in trade with us is, obviously, of more significance than the dollars which we might give her in aid—this is certainly as true in international affairs as it is in one's own personal affairs.

I cite these facts because I have had occasion to note recently an outstanding job performed by an individual with limited resources in behalf of an area of the world which sorely needs the expansion of trade with this country. The area I refer to is Africa—a continent that deserves a much higher priority of our attentions and intentions in the days ahead. Africa is allocated an almost negligible portion of our foreign aid—less than $25 million or only 1.6 percent of the total. Africa, also, enjoys a relatively small amount of commerce with the United States. Thus, I am always glad to note private, nongovernmental efforts to help establish a higher level of mutually beneficial trade with Africa.

First, however, may I state that my visit to Africa some months ago made

e especially aware of the need and the gic of placing our relationships with his continent on the same footing as ith the other great area groupings of he world. To help attain this goal, I ntroduced a resolution in the Senate on March 12 calling for the creation of the ost of Assistant Secretary of State for frican Affairs. As I have stated on ore than one occasion, I am deeply oncerned that United States policies ave failed to keep pace with develop- ents in Africa and that our policies ave not anticipated the fact that the rive toward political independence in frica has been gaining momentum at an nparalleled rate.

The foregoing facts prompt me to tate that the work performed over the ast few years by Miss Ronda Robins, di- ector of International Arts and Crafts f Washington, merits mention and en- ouragement. It may be characterized uite aptly as the establishment of a iniature point 4 program in East Af- ica. The creative talent she has ex- ressed in guiding and developing the arving of new and unusual products has esulted in the expansion of operations or the skilled craftsmen in Kenya, Tan- anyika, and Uganda. Moreover, the unds they receive for their primitive and sculptures is helping a large num- er of people in this continent of the fu- ure to earn important dollars for essen- ial purchases. In this way, Miss Robins as helped improve the standard of liv- ng for many East Africans who have een existing on the edges of poverty and amine.

Since Miss Robins first saw and was ascinated by a few Kenya carvings at a rivate exhibit 7 years ago, she meticu- ously studied these crafts and began the mportation of her collection which is ow believed to include the largest as- ortment of fine quality contemporary ast African sculptures in the United tates. For the past several years she as been offering exhibitions of her su- erior hand carvings and authentic cu- ios to art galleries and museums hroughout the country where they have een displayed without charge to a wide nd enthusiastic audience. Her efforts ave been manifold, and they have been irected at bringing an awareness and ppreciation of primitive East African rtworks to those unfamiliar with them n this country; in turn, her efforts have rought some beneficial stability to the aphazard and unorganized carving in- ustry in East Africa.

I had the opportunity of seeing an ex- ibit of Miss Robins' East African won- ers in wood when I visited the United States World Trade Fair at the New York Coliseum a few months ago. I was truck by the fact that, at her own ex- ense and with the encouragement of he East African government officials, he displayed the finest handcrafts of East Africa and successfully portrayed he very purpose of the fair—tangible emonstration of our desire to work with nd help peoples in all nations, through ree and competitive enterprise, to build world trade as a keystone of world peace nd world prosperity.

During and since the World Trade Fair, I have noted with interest the press reports about Miss Robins' activity. Pertinent as it is to the current reconsideration of foreign-aid appropriations, I believe that her project may well be termed an excellent example of private enterprise and initiative at work to foster mutually beneficial trade between friendly nations. It is a symbol of the need to encourage such countries to help themselves—to rely upon trade and not aid—and I therefore request permission to place in the Appendix of the RECORD a copy of the syndicated United Press article by Vivian Sande about Miss Robins' East African wonders in wood, together with the feature stories which appeared in the Washington Star on April 7, 1957, and in the New York Herald Tribune on April 24, 1957.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

EAST AFRICAN ART SOON MAY FIT AMERICAN DECOR

(By Vivian Sande)

NEW YORK.—Ronda Robins' enthusiasm for the art of wood carving in east Africa soon may be influencing the decor of American homes. It also may open a new phase of international commerce.

Her interest in trade began with a job in a New York shipping company office when the Canadian-born Ronda was in her teens. During the days of World War II she worked with the United States Government's Economic Defense Board, the Foreign Economic Administration, and the Office of International Trade of the Department of Commerce.

Now she heads a foreign and domestic trade consulting business in Washington. She began it when the war ended, and is a one-woman enterprise to promote the import of fine carvings from east Africa.

INTEREST BEGAN

Miss Robins said that 7 years ago she saw a few carvings from Kenya at a private exhibit in Manhattan. The workmanship and wood grains fascinated her, though she never had had any special interest in wood sculpture before.

She learned more about the primitive art, and began a collection which turned into an adventure by mail. As her collection grew, she began to think in terms of importing the sculptures—for sale.

She has made contact with five tribes who have skilled craftsmen.

The paperwork was painful. Imagine what it is like to do business with people who know little of the written word, and nothing of international rules and regulations.

But the enthusiastic Miss Robins would not be discouraged by difficulty. She collected thousands of good works, with the cooperation of the east African governments interested in developing an industry and traders who saw opportunity for themselves and the carvers.

SCULPTURED JEWELRY

So far Miss Robins has exhibited the works in museums and art galleries across the country, and filled about 1,000 individual orders. Now she has designed a line of jewelry of small carvings, and introduced an animal of the month club which would make it possible for a child or adult hobbyist to collect carved animals of Africa.

Now on the threshold of introducing her east African art to the general public in the United States, Ronda Robins sees advantages to both sides of the trade

In Africa, she said, good craftsmen will be able to increase their incomes—from the average $10 to $20 a year, to about that figure per month.

In the United States, she added, purchasers will be able to have original artworks for their homes, without spending a fortune.

[From the Washington (D. C.) Sunday Star of April 7, 1957]

EAST AFRICAN CARVINGS TO BE SHOWN AT FAIR

A Washington offering to the United States World Trade Fair, April 14–27, in New York City will be an interesting exhibit of east African wood carvings sponsored by a local import firm.

Miss Ronda Robins, director of the International Arts and Crafts firm, 2000 P Street NW., is in charge of the display.

The exhibit will feature hundreds of carefully selected, distinctive, one-of-a-kind wood sculptures secured over the past few years, Miss Robins has announced.

The carvings represent the finest specimens of this contemporary primitive art carved by the skilled craftsmen of Kenya and the three other territories making up east Africa, she pointed out.

NATIVE CRAFTSMANSHIP

Included will be oil paintings, animal skins, drums, spears, shields, symbolic beadwork, carved replicas, and caricatures of the inhabitants of the jungle, as well as some items which never before have been imported into this country.

Also highlighted will be the unveiling of an exclusive and newly created line of "wonders in wood," jewelry items for men, women, and children.

Miss Robins first viewed a few Kenya carvings in a private exhibit in New York City nearly 7 years ago. Fascinated with the workmanship and grains of hardwood, she decided to learn more about these primitive art works. This study led to her importation of the many pieces of east African sculpture.

The local exhibit will be the only one of its kind at the fair for all of East Africa, with the exception of displays by those travel services that include this faraway part of the globe, Miss Robins explained.

Colorings of the carvings vary from the deep brown and reds of the acacias to the marble grains and stone colors of the Euphorbias to the fuchsian African ebony. Among the woods most preferred by the better carvers, however, are the wild and brown olive, the Kikuyu muhugu, and the ebony.

Today in East Africa—under the shady acacia trees, in cultured and antique shops, and outside the gleaming hotels—hundreds of tribesmen squat, chipping and rubbing away at their carvings. Generally, this work is performed under the most primitive conditions, with but a sharp pocketknife, sandpaper, and wax.

Their finished products on display at the fair combine painstaking workmanship, chiseled details, and classic features into some of the finest primitive carving to be found anywhere in the world.

[From the New York Herald Tribune of April 24, 1957]

KENYA CARVINGS HIGHLIGHT TRADE FAIR—"WONDERS IN WOOD" FROM EAST AFRICA

(By Joan Danforth)

When Ronda Robins first exchanged glances with a tribal mask etched in ebony, she had no inkling of its binding spell. Now, 7 years later, she and her husband share their apartment with 5,000 pieces of east African sculpture.

The family favorites reserved for home consumption are just a part of the vast collection Miss Robins has imported from

Africa as director of International Arts and Crafts in Washington. In New York this week, she is displaying her "Wonders in Wood" at the first United States World Trade Fair in their initial showing outside museums and art galleries across the country.

CARVINGS DEPICT LIVES

There's rich variety in masks, miniatures, animals and figures handcrafted of exotic native woods. Armed with just their pocketknives, the carvers of Kenya depict life around them with a keen eye for movement and detail. It may be a native woman stooped beneath her burden of kindling or a graceful gazelle poised for flight. The young warrior killing his first lion in the traditional manner of his tribe is one of many carvings that reflect a people and their ways.

No one carving is like any other. As Miss Robins puts it in her vivacious way, "every one is as distinct and personal as a fingerprint."

CARVED JEWELRY DEBUT

Her latest venture is hand-carved jewelry from east Africa, making a world debut at the Trade Fair. Animal heads and mobile African faces in miniature have been fashioned into tie bars and cuff links, earrings, and scatter pins. The carvers use midnight ebony and many fine-grained woods shading through rich reds and browns to the muted stone hues.

There's an air of easy serenity about Miss Robins, but her eyes flash an abundant store of energy. From the start, she's made a one-woman foray into international commerce and her problems grew with the collection. "Carving in east Africa just isn't an organized industry," she explains. "The carvers carve what they feel like, when they feel like it, and that's that. It's all a matter of whim."

NO HURRY FILLING ORDERS

She buys her carvings directly from the Wakamba, Kikuyu, and other east African tribes whose master carvers lead their craft. Once orders are placed, though, she may have to wait a year before the shipment arrives. "And even then I'm suprised by what I get," she adds with a rueful smile.

Transportation alone may take 2 months or more—if the shipments arrive at all. In recent years, Mau Mau terrorists in Kenya have destroyed whole carving centers, dispersing craftsmen and their families across Africa. Miss Robins lost hundreds of carvings when marauding raiders waylaid and burned an entire shipment on its way to port.

Intent in broader horizons for primitive African art, Miss Robins places orders for many items the carvers have never made or even seen before. She suggests a salad bowl, a shoehorn, or a letter opener, and sends along drawings and measurements to guide the carvers in their work. Results are seldom dull.

The collection has had its "growing pains." Miss Robins devoted years to weeding out second-rate carvings mass-produced to meet growing demands in Europe and America from the masterful pieces turned out by leading east African craftsmen. Along with artistic merit, she sought the most fascinating grains of hardwood, properly seasoned, and the satin finish that comes from careful sanding, waxing, and the oil of many hands.

The World Trade Fair is open to the public during the evenings and several afternoons through Saturday, the final day. Miss Robins' bailiwick is booth 306, where she presides as east Africa's sole representative at the fair. But as soon as the coliseum doors swing shut on the current international festivities she's off to Kenya to help unravel the problems of new carvings, shipping, and expanding the industry to match American interest.

Statement on Majority Report, Judiciary Antitrust Subcommittee No. 5, Regarding Regulated Airlines

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. HARRIS. Mr. Speaker, for years our Committee on Interstate and Foreign Commerce has given careful and constant attention to the problems of aviation. The act of 1938 was a most carefully prepared legislative program for the development of aviation to meet the needs of our country.

The act contains a declaration of congressional policy which authorizes, directs, and charges the Civil Aeronautics Board with the responsibility of (a) the enccuragement and development of an air-transportation system properly adapted to the present and future needs of the foreign and domestic commerce of the United States, of the postal service, and of the national defense; (b) the regulation of air transportation in such manner as to recognize and preserve the inherent advantages of, assure the highest degree of safety in, and foster sound economic conditions in, such transportation, and to improve the relations between, and coordinate transportation by, air carriers, as being in the public interest and in accordance with public convenience and necessity.

During these 20 years, tremendous developments in the field of aviation have resulted.

We have experienced progress in this field of transportation almost beyond comprehension. We have seen our commercial aviation program exceed the progress of most any other field in history. We have watched the dawn of a new age with jets, electronic devices, in air navigation aids, unmatched by anything in our experience. This progress and development has resulted under the act of 1938, providing regulatory procedure for commercial aviation attributing to the national defense and in cooperation with communication, advancement as a necessary entity to this program.

With the transition which our commitee has followed closely in these past few years, we have observed some highly complicated and difficult problems. Mistakes have been made and, no doubt, there have been errors of judgment. With such fantastic developments in this field, trial and error process is necessary. Millions and millions of dollars of the taxpayers have gone into this development which has provided us with the difference between victory and defeat in the recent wars and perhaps our own preservation instead of destruction.

Even so in this regulatory field, close scrutiny is necessary by the regulatory agencies and with added consideration of any legislative changes to met this fast-moving program. I would like to call attention to the recent report of our Committee on Interstate and Foreign Commerce filed with the House, House Report No. 1272, on some of these problems and the approaches being made to them. We shall continue to give the multiplicity of problems our closest and careful consideration to meet these ever-developing problems.

And, because, Mr. Speaker, of the intricacies involved in the development of this service in our transportation requirements and the monopolistic features which accompany any regulated industry, antitrust considerations cannot be overlooked if the public is to be adequately protected.

In consideration of this important problem, I am constrained to refer to the report of the Antitrust Subcommittee—Subcommittee No. 5—of the great Committee on the Judiciary, issued on April 5, 1957. This report was apparently issued to the Committee on the Judiciary by the subcommittee but was not submitted as a House report.

In view of the responsibilities of the committee on antitrust problems, and particularly the overlapping considerations of our own Committee on Interstate and Foreign Commerce, I have read the report with much interest.

This report is the result of extensive hearings of the subcommittee during the 84th Congress. It purports to be a rather full and complete inquiry, which, in my opinion, goes far beyond the monopolistic features and antitrust considerations. It is for this reason that I feel constrained to make these comments about it.

In many respects, the report contains constructive considerations, proper and appropriate within its jurisdiction. In other respects, the committe has gone, in my opinion, beyond its scope, and it is with some of these considerations which I feel constrained to take exceptions.

I cannot agree with the majority report concerning the subcommittee's investigation of commercial air transport. There is much in the voluminous report restating fundamental antitrust principles with which I am, of course, in agreement. Where I must depart from the complete report, however, is in regard to numerous conclusions and voluminous detail which I do not find fully supported by the record compiled in the subcommittee's hearing, or which are characterized by a one-sidedness failing accurately or fairly to reflect the whole record.

A comprehensive record consisting of four volumes compiled from that subcommittee's hearings was published and available for study by interested Members of the Congress for more than 6 months. From my own interest in the future welfare of this Nation's commercial air transport systems, I was not only shocked and surprised at the majority's report, purporting to be drawn from that record, but in my opinion from reading the hearings and from my personal knowledge of the facts, the report was issued in substantial disregard for the actual record, and exceeded the authorized purposes for the subcommittee's concerning itself with the aviation field.

I firmly believe in the essential policies and purposes of our antitrust laws to prevent monopoly, restraint of trade, and unfair or deceptive competitive practices to which the subcommittee should properly give its attention under its jurisdiction. Such policies and purposes should be applied to regulated industries to the maximum extent, with exceptions permissible only where other controlling public and national interest considerations are paramount. Where deficiencies in the effectiveness of antitrust policies are found to exist either in the regulatory statute or in its administration by the agency responsible, appropriate corrective measures should be taken. If the statute is deficient from an antitrust standpoint, legislation is in order. If not the statute but its administration by the agency charged with the responsibility therefor has been inadequate, remedial legislation or other guidance by the Congress are among the available remedies.

From the subcommittee's investigation of commercial air transport, apparently no major or glaring deficiencies in the regulatory statutes as such appear to have been developed. The Civil Aeronautics Act of 1938, by specific provisions in sections 2, 403, 404, 408, 409, 411, 412, 1002 (d) and (e) and 1107, among others, makes basic antitrust principles specifically applicable to commercial air transportation.

Furthermore, in view of the original developmental and promotional as well as regulatory purposes of that act, and the grant of grandfather certification by direction of the Congress to airline entities and route patterns as they existed at the time of enactment of such act, irrespective of whatever early Government policies may have accounted for their origins, development, and existence by that time, I find no record support or legitimate purpose for the subcommittee's now undertaking, retrospectively at such late date, to criticize phenomena in the early origins of this industry antedating the Civil Aeronautics Act. Much of the historic discussion seems to stem from sources foreign to this subcommittee's record. For example, alleged secret meetings and spoils conferences involving the Post Office Department during sometime prior to enactment of the Civil Aeronautics Act were not matters covered in the subcommittee's hearings. If they were to be of sufficient concern to require review by this subcommittee, appropriate hearings would first be in order. Otherwise conclusions in this report drawn in reliance upon outside sources seems to me not appropriate. I assume it to be a fair observation that all elements of the airline industry have endeavored to stimulate support for their particular interests in both the executive and legislative branches of the Government. However, I do not believe this record adequate for concluding that such efforts are an outstanding characteristic of the airline industry in comparison with other types of American businesses, even many of them which are not regulated industries.

Whether the activities permitted or countenanced by the Civil Aeronautics Board in its administration of the regulatory statute thereafter, however, have been in accord with the intent of Congress is quite another matter. It is this subject, insofar as of antitrust import, to which concern of the House Judiciary Subcommittee properly may be directed. The comparatively recent origin of the air transport industry and phenomena which have accompanied it in what is still a developmental stage are circumstances which would lead me to oppose recommendations at this time for any precipitous action. It is my belief that the report proposed from the subcommittee's inquiry has given inadequate attention to at least three important factors:

First. The report does not adequately analyze or treat the extent to which interplay of congressionally directed policies and purposes set forth in the regulatory statute properly may have required relegation of some antitrust concepts in specific instances to positions of inferior importance. As I read the Civil Aeronautics Act, and as it appears to have been interpreted by the Civil Aeronautics Board and the courts, antitrust principles are included in public interest concepts along with a variety of others, the relative importance of which in a given situation has been entrusted for determination by the Civil Aeronautics Board subject to review by higher authority. The report, however, fails to consider as I think it should, whatever weight the Civil Aeronautics Board properly may have given to other policies and purposes necessary for promotion and development of a sound air transportation industry in the interests of best serving the foreign and domestic commerce, the postal service and the national defense of the United States.

Nor does the report consider the importance of continuously decreasing cost to the American taxpayer through reduction of subsidies. For example, the proposed report implies that absence of competition, consummation of mergers, establishment of uniform standards under Civil Aeronautics Board approved machinery and other cooperative working arrangements among airlines must be condemned per se. This, to me, represents a rather superficial concern with only one criterion of public interest as defined in the Civil Aeronautics Act. From the record of the subcommittee's hearings, I am not in position to reach firm convictions as to the adequacy of the Civil Aeronautics Board's exercise of its responsibilities in all situations. However, I feel that the conclusions drawn in the report are unjust and perhaps unfounded, unless examination is undertaken of other reasons for which the Government has countenanced such activities and arrangements within the overall regulatory pattern prescribed for air transportation.

Second. The report contains characterizations in considerable detail and some conclusions which are of a derogatory nature from an antitrust standpoint. I am unable to find adequate support for many of them in the record of the subcommittee's hearings, and others I find specifically disproved by the record.

Third. Numerous items commented on in the report appear to me to constitute irrelevancies going beyond the subject of appropriate concern by the subcommittee and prejudicial to the agencies, organizations or companies to which they are related. Similarly, the report is deficient in failing to mention or properly evaluate countervailing evidence weighing upon a variety of disputed issues.

In the interests of brevity, I do not propose in this statement to deal with each detail concerning which my views of the record are in agreement with or dissent from the report.

I do not find record support in these hearings to the effect that the basic techniques of regulatory bodies are necessarily anticompetitive in nature.

As respects Government regulation of air transportation, I am in full accord with the principle that where actions taken pursuant to administrative approval receive specific exemption from prosecution under the antitrust laws, regulatory officials must still make an independent determination as to what weight is to be given to competitive standards in promulgating regulations or approving industry accords. The same is and should be true in licensing under the Civil Aeronautics Act.

The intended role of competition is, in my opinion, adequately covered in the Civil Aeronautics Act, the very terms of which clearly illustrate that Congress has combined conflicting economic policies and has required the Civil Aeronautics Board to exercise its authority so as to accommodate all such policies, determining whichever must be regarded as paramount in weighing the public interest in any given situation under the Board's jurisdiction.

It is for these reasons, together with the scope of the subcommittee's record that I regard generic criticism of other statutes and agencies administering them as irrelevant to and not a proper subject for discussion in this report.

In the subcommittee's discussion of the role of competition in air transportation over the years since enactment of the Civil Aeronautics Act, I must register firm objection to detailed reference to and quotations from those identified with only one side of a contention, and summary dismissal of extensive presentations, analyses, and record data on the other side. The weight and importance of this evidence are, in my opinion, understated merely by commenting: "These allegations were vigorously contested by the representatives from the certified air carriers who also testified at the hearing." The report, I feel, is deficient in not setting forth and weighing the reasons, argument, and data submitted in such vigorous contest. It is from such examples as this that I find a basic one-sidedness reflected throughout the entire report.

I infer from the report the definite implication that failure by the Civil Aeronautics Board earlier to authorize new competitive air services automatically must be viewed as a disservice to the public interest. I do not believe such implications sustainable in disregard of whatever other considerations and circumstances may have contributed to the

Board's various decisions. The Board's decisions are also guided by desire to avoid uneconomic duplication of or multiple service in markets of limited traffic opportunity and consequently avoiding adverse effect on Government subsidy requirements. Certainly I am not, nor do I believe the subcommittee was upon that record, in any position to reach conclusions as to overall propriety of route patterns established by the Board unless the subcommittee were to undertake more critical analysis of the stated reasons for the Board's actions and the detailed record upon which a particular decision by the Board was reached. This the report does not do. The record before the subcommittee explains, but the report does not mention, the Board's efforts to transform the operations of certain grandfather carriers from their original character of subsidized local and feeder services into self-sufficient trunk line operations. An alternate choice for the Board would have been to forever confine such pioneer grandfather carriers to their original subsidized status and open up the more lucrative long-haul markets to newcomers. Whether in retrospect the Board's choice in any such instance provided the greater protection of the public interest, I am not prepared to say, but from the record I do not believe that the subcommittee is entitled to arbitrary acceptance of the adverse view.

In my opinion the discussions devoted to the Air Transport Association, the International Air Transport Association, carrier relationships with those entrusted with dealing with the public as their authorized agents, and the extent of Civil Aeronautics Board control over such matters, are characterized by a onesidedness not representing a fair evaluation of the whole record.

Upon the basis of the record, I am unable to fully agree with the manner and detail in which the report deals with Pan American World Airways, Inc. I do not believe that the report accurately analyzes the intensely competitive atmosphere in which international air services are now operated or the competitive positions of carriers operating in those fields.

Moreover, by adopting the technique of accepting as fact a variety of accusations made in years past against Pan American by its competitors, and failing to give weight to the testimony and other evidence submitted by Pan American, the report, in my opinion, leaves misleading impressions.

No weight is given to a statement submitted by Pan American calling the subcommittee's attention to the fact that a collection of attacks against Pan American accumulated over the years, long since had been examined into and thoroughly aired in adversary proceedings before the Civil Aeronautics Board. This is borne out by the North Atlantic Route Transfer case in which the Civil Aeronautics Board's Assistant Chief Examiner weighed the full record on many of these matters in 1949, and found:

These charges lose much of their significance and color when the testimony is read * * *.

There are some incidents * * * where the acts of Pan American * * * can hardly be described as gracious to their competitors. For that matter, it is a rare matter to find any airline extending itself to welcome competition in its territory, so Pan American's attitude on that point is not unusual. However, the testimony does show that there were two sides to most of the controversies and incidents and it does not prove the charges, many of which have been made on numerous occasions * * *.

* * * there is no occasion for considering the imposition of conditions (upon the North Atlantic route transfer) unless it should be concluded that the transaction as presented will not be consistent with the public interest, but will result in creating a monopoly or monopolies and thereby restrain competition and jeopardize another air carrier not a party to the purchase. On the basis of the evidence of record and the contentions and arguments of the parties, and all the foregoing considerations, the examiner cannot so find.

I cannot find that any new evidence was presented before the subcommittee to support any reason or basis for disputing the correctness of the above findings.

It is for these reasons that I do not feel that Pan American World Airways, Inc., has received the judicious treatment in the report that it or any other responsible business enterprise or private citizen should receive.

I would assume, and the Congress should expect, that the Civil Aeronautics Board will continue to regard consideration of antitrust policies as essential to its guardianship of the public interest in the maintenance and further development of sound United States-flag air-transport systems. However, I do not believe that the character of the majority report of the Judiciary Subcommittee makes any substantial contribution toward those ends; yet, I think it has done a great disservice to the elements of the airline industry with which it chose to deal.

Magazines Get Cheap Postal Rates

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me on the postal rates for magazines.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, for many years, the publishers of Life magazine have been getting away with murder on postal rates. In 1947 and 1948 when I was chairman of the Post Office and Civil Service Committee they offered to increase their rates 10 percent for 3 consecutive years. This was refused because the record showed that they should pay a great deal more. Some of these magazines charged as much as $40,000 a page for advertising.

That they are making a terrific amount of money is shown by the following report on Time and Life magazines to the stockholders on January 16, 1957:

"The most important thing about the year is that 1956 was the best year that Time, Inc., and its magazines ever enjoyed. We estimate our net profit for the year 1956 at approximately $6.75 per share (exclusive of the capital gains on the liquidation of our Houston Oil Co. stock) as compared with $4.72 per share in 1955. * * * A historical footnote to our special letter of 19 years ago: We believe that the level of earnings attained by Life in 1956 has never ben equalled by any other magazine in the history of publishing. * * * In early December we announced jointly with Rockefeller Center, Inc., our proposed joint venture for the construction of a new 47-story building adjacent to the Center which will house our future operations and provide several of the country's largest corporations with what we believe will be the finest office space available in New York City for the coming years."

The raising of postal rates to these magazines has ben far, far, far too long delayed. The taxpayers are stuck millions of dollars a year to pay these postal rates for these magazines, and there isn't any earthly reason why they should not pay their way as does any other business.

I hope that when we meet in January it will be the first order of business on the part of the Committee on Post Office and Civil Service to get these rates adjusted and save the taxpayers some money.

Report to the Voters of the 10th Congressional District of New York

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mrs. KELLY of New York. Mr. Speaker, the 1st session of the 85th Congress is ending. The heated debates, the deliberations, and the controversies are all a picture of the true American scene. Let me remind my readers that on the other side of the world where communism rules, there are no debates, only ultimatums; no opinions, only foreordained plans; and no controversies for fear of liquidation. In controversies over legislation, I have tried to keep in mind the common good and I have voted for the kind of strong America in which my constituents want to live, where the rights of man guaranteed by our Constitution prevail.

The question of the rights of individuals and the sovereignty of nations is a basic issue both nationally and internationally. Much of the legislation considered during this session concerned itself with these principles on which the Government of the United States was founded. In a free democracy, legislation can be enacted to correct the ills and injustices that exist. The accomplishment of these social reforms needs the cooperation of all citizens, particularly in this era when the enemies of freedom use, without compunction, the weapons best known to them—propaganda, insurrection, subversion, infiltration, and intrigue. We must keep this in mind when we consider present-day

problems. For the purpose of clarifying the issues, I will separate them into categories of international and national.

With these thoughts in mind, I analyzed and voted on legislation. The bills and resolutions which were enacted are embodied in this report to the people of the 10th Congressional District of New York. Due to the strong, constructive leadership of the Speaker of the House, SAM RAYBURN, and of the majority leader in the Senate, LYNDON JOHNSON, there are accomplishments on the credit side of the ledger of history for the 1st session of the 85th Congress. Their determination to withstand the vacillating approach and the indecisions of the administration brought to a successful conclusion, issues which otherwise would have been shelved.

INTERNATIONAL

The foreign policy of the United States rests upon the foundation formulated under a Democratic administration when the United States reluctantly accepted leadership of the free world. This involves a duty to keep the free world united and to cooperate with the nations of the free world in the fight against the common enemy. This policy is known as collective defense. The free world must be alert to every situation where a gain can be scored in the fight against international communism.

As long as the Communist threat exists, the United States is interdependent with the free nations of the world. Whether the leaders of international communism call themselves Socialists, national Communists, or international Communists, their objective is the same—to destroy the United States of America, the most powerful Nation standing in the way of their avowed domination of the world. The power of the atom bomb which threatens the annihilation of civilization is held by the most diabolical enemies of freedom the world has ever known—the leaders of the Kremlin.

But, to be effective, this policy of the United States must have consistent leadership to inspire confidence in our intentions and objectives. The Eisenhower administration has not been firm enough nor sufficiently definite. Consequently, the Soviet Union has been able to obtain a propaganda advantage before world opinion. It is an admitted fact that the unity of the free world has been ruptured by the events of the past few years, particularly, the past year.

MUTUAL SECURITY ACT

The backbone of United States foreign policy is the mutual security program which embodies foreign aid. This has proved to be not only useful but also necessary. It is the bulwark against communism and it is a foundation for world stability. It represents the first line of defense of the United States and our share of the cost of collective security. As a great industrial nation, we are dependent on world markets for strategic materials. As a nation blessed with surpluses, humanity demands that we share our goods with the less fortunate.

The United States cannot afford to falter again as we did in the Suez crisis and in the Hungarian crisis last fall. The United States leadership must seek and obtain free world loyalty and cooperation among members of the entire free world. Had the United States exerted true leadership last fall, the difficulty between Great Britain, France, and Israel would not have arisen.

The Mutual Security Act is the expressed desire of Congress to bear our responsibility in authorizing and appropriating funds necessary to carry out United States responsibility toward the mutual defense of the free world. The administration of these funds is the responsibility of the President.

The fact is that the mutual security program has strengthened free Europe. For example, in 1956, when our contribution to the NATO countries amounted to $1.7 billion, our NATO partners in Europe expended for defense, $13 billion or almost 90 percent of their combined defense expenditures. In addition, the nations receiving military assistance from us have spent for defense $5.50 for every dollar that we have put into such assistance.

I question the policy of the Eisenhower administration in the vital area of the Middle East. Lack of action in halting Russian arms to Egypt and Syria in 1955 gave Russia a foothold in the Middle East. While President Eisenhower and Secretary Dulles were in Geneva seeking peace with the Soviet, the free world was stabbed in the back by the Russian deal in arms with Egypt. A strong policy by President Eisenhower at that time would have borne fruit.

The mutual security program for the fiscal year 1958 has been under congressional consideration since early last spring. Before that, it had been the target of searching legislative and executive investigations.

The executive branch originally asked for $4.4 billion, which was scaled down to $3.8 billion. The appropriation for defense support for fiscal year 1958 was reduced by $336,700,000 from the previous year. This reduction is justified by the more rigid definition of defense support and the improved economic conditions of some countries that hitherto have received such assistance. The principal shift in emphasis has been to the countries in the Near East and the Far East. More than 80 percent of the sum requested by the executive branch has been planned for use in Greece, Turkey, Iran, Pakistan, Korea, Taiwan, Vietnam, and, more recently, Jordan. New funds for military assistance for fiscal year 1958 were reduced $334,200,000 from the previous year. There is at present in the pipeline $4,380,594,000. In addition, this country holds currencies of other countries in the amount of $2.5 billion resulting from the sales of agricultural commodities. We can draw from these so-called counterpart funds to further mutual security and its objectives.

The mutual-security program makes greater emphasis on loans rather than gifts. No new funds were appropriated for fiscal year 1958, but an unobligated balance of $52 million remains. In lieu of appropriating new funds for development assistance, the development loan fund was created with an appropriation of $300 million for 1 year only. Originally the executive branch requested an appropriation of $500 million for fiscal year 1958 and borrowing authority for $7,500,000 for 1959 and 1960, respectively. I opposed this latter authorization for 1959 and 1960 because this would have been added to the national debt. The bill when passed carried the appropriation for 1 year only.

It is contemplated that the fund will operate on a revolving basis, with the payments and principal on loans being reloaned as they become available. Repayment of loans in foreign currencies will be accepted when necessary to meet the requirements of the program. Such currencies could be reloaned or they might be sold for dollars to United States Government agencies needing such currencies, thus providing dollars for use by the fund.

The details as to how the fund will be administered have not been worked out completely. Information concerning the activities of the fund will be announced soon.

I firmly believe the mutual-security appropriation and the carryover funds give the program more than can be spent in the current fiscal year.

HOUSE JOINT RESOLUTION 117 (ALSO CALLED THE EISENHOWER MIDDLE EAST DOCTRINE)

This was a joint resolution to authorize the President to undertake economic and military cooperation with nations of the Middle East to strengthen the defense of their independence.

The request by the Eisenhower administration for the adoption of this resolution was an admission that a Communist threat to the free world and the security of the United States existed in the Middle East, Secretary Dulles, in referring to this legislation, stated publicly:

> Congress would have to take responsibility for the risk that the Middle East would be lost in a great and maximum disaster unless it backs the President.

As a matter of fact, the resolution was overdue by at least 2 years. It meant little at this late hour, as events in that area of the world have proved. The time for its adoption and efficient operation was in 1955 when the U. S. S. R. slipped into the Middle East by furnishing arms to Egypt at the very time its perfidious leaders were negotiating with the administration. No policy was formulated. The wait-and-see attitude continued until the situation exploded and action was demanded.

But, what did this resolution seek to do? This can best be explained by quoting section 2:

> The United States will employ the Armed Forces of the United States if invited and the President deems it necessary, if there is an overt act by international communism.

As we well know, an overt act by international communism could well be the start of world war III. The grave defect in this resolution is that it does not deal in any way with subversion, that new look of the U. S. S. R. so well known by the leaders and governments of the Middle East and so stated by the present administration.

At a Foreign Affairs Committee hearing, Secretary of State Dulles said that, although there was Soviet influence in the area, he believed the Eisenhower program would keep international communism from taking control. Congress responded to the President's request by adopting the Eisenhower Middle East doctrine. A mission—headed by former Congressman James P. Richards—was sent to that area to explain this doctrine, but all the mission did was pledge $119 million out of the $200 million authorized to bolster the economies of the countries against the Communist threat. The countries alining with Russia refused to invite the Richards mission for consultation. At this writing, Syria has fallen into the Russian entanglement which Nasser had already embraced. Thus, the weakness of the Eisenhower doctrine has brought the free world again to the brink which was the fear I had expressed in my questioning of Secretary Dulles during the committee hearings on this doctrine. Following are my questions and the Secretary's replies:

Mrs. KELLY. Mr. Secretary, since you and the President have stated that this resolution does not deal with the peaceful solution of the critical problems in this area, for example, (1) settlement of international use and operation of the Suez Canal, (2) establishment of a just peace between Israel and the Arab nations, including settlement of a refugee program, and so forth, and since it does not deal with indirect aggression, does not this resolution almost secure the position of the U. S. S. R. in the Middle East rather than displacing her, by almost guaranteeing the status quo, which we are all against?

Secretary DULLES. In my opinion the best way to deal with these problems is for us to undertake the program here, which is not being dealt with by the United Nations at the present time and which could not effectively be dealt with by the United Nations, and support the United Nations in its dealings with the other problems of the area. It is dealing very actively with the problem of the relations between Israel and its Arab neighbors. As you know, the United Nations has an observation mission watching the borders as to these raids. There is a United Nations mission looking after the refugees. Mr. Hammarskjold, the Secretary General, went on two missions to the area last spring and summer to deal with that problem and to study it. He is dealing with it actively and we are supporting him.

There is the problem of the future of the Suez Canal. That is a problem before the Security Council of the United Nations and it is also being dealt with by the General Assembly, and Mr. Hammarskjold is dealing with that problem.

I believe the best way is for us to support the United Nations in the areas where it is acting and can act effectively, and for us, through this legislation, to deal with areas which the United Nations cannot cover adequately because of the veto power of the Soviet Union in the Security Council and its disregard of the General Assembly as evidenced in the case of Hungary.

Mrs. KELLY. Mr. Secretary, you emphasized international communism's breakthrough in this area. Since the U. S. S. R. established herself in the Middle East during these 2 years in Egypt and Syria, and so forth, and since we are not going to deal with this indirect aggression, are we not accepting the establishment of national communism by saying that if those nations accept aid from Russia we will stand by and let them and thereby perhaps establish national communism?

Secretary DULLES. The Soviet influence, of course, is in the area. It has been there for a long time in fluctuating degrees. But we do not believe international communism has yet gained control of any Middle Eastern state, and this program that we outline is designed to take all the measures which I think are available to prevent that happening; or, if it happens, to be sure it is of very brief duration.

I indicated that I do not think we should attack any country by armed force because we think it has a government controlled by communism. We are not going into the business of using armed force to accomplish that purpose. There are other ways it can be done.

KELLY RESOLUTION ON HUNGARY (H. CON. RES. 204)

One of the most important resolutions adopted in the 1st session of the 85th Congress was the Kelly resolution on Hungary which was unanimously agreed to by the House and the Senate. This measure expressed the sense of Congress that the President and the United States delegates to the United Nations General Assembly should seek adoption of the report of its Committee on the Hungarian Revolution and work for measures to bring about the freedom of captive nations.

The following recommendations are included in this resolution:

First. Consideration and adoption of the report of the United Nations Special Committee on the Problem of Hungary and other available information on the brutal action of the Soviet Union in Hungary.

Second. Join in seeking the most effective way of dealing with the report of the U. N. special committee in order to advance the objectives of the United Nations regarding the situation in Hungary.

Third. To prevent further repressive action by the Soviet Union and seek all practical redress of the wrong which has been committed in violation of the principles of the United Nations and the elemental requirements of humanity.

Fourth. Implement policies through the United Nations or in cooperation with the peoples of the free world to work toward the freedom and independence of the captive nations, and to effectively utilize the position of the United States through the proper means, to the end that the Hungarian tragedy shall not be repeated anywhere.

If the United Nations is to be more than a debating society, positive action must be taken on all these recommendations.

HOUSE JOINT RESOLUTION 16 (ON THE STATUS-OF-FORCES AGREEMENTS)

This resolution provides for a revision of the Status of Forces Agreement to remove armed services personnel from criminal jurisdiction of foreign countries.

I voted to bring this resolution to the House floor for action because I felt the rights of our military personnel overseas should be brought to the attention of the United States Senate. While the House of Representatives has no power in the ratification of treaties, it does have a grave responsibility to make known its views so that legislation will be truly representative.

My previous support of the Status of Forces Agreement was based on the assurance that servicemen were under the jurisdiction of the United States in respect to offenses committed on duty. The following is quoted from the statement of the Deputy Under Secretary of State at the hearings on this resolution before the House Committee on Foreign Affairs:

In the first place, the Status of Forces Agreement provides that the United States servicemen remain under United States jurisdiction with respect to offenses committed while on duty. In other words, foreign governments have voluntarily limited their jurisdiction to criminal offenses occurring while soldiers are off duty, on leave, or a. w. o. l. President Eisenhower once addressed himself to this important feature of the agreement. He said in effect that he believed servicemen deserved special treatment while carrying out their assignments, but that when these servicemen were on leave and were following personal interests they should be subject to the same basic responsibilities as other citizens.

Since the recent decision of the President and the Court to the effect that they have the authority to waive this jurisdiction, I feel a clarification should be made in our agreement and I therefore will support an amendment to prohibit such waiver of the "on duty" clause by our Government.

AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT EXTENSION

The Agricultural Trade Development and Assitance Act—Public Law 480 of the 83d Congress—authorized the sale of our agricultural surpluses to friendly nations. Public Law 128 of the 85th Congress, 1st session, extended the original act of June 30, 1958, and it increased from $3 billion to $4 billion the amount of surplus commodities for sale and from $500 million to $800 million the amount for relief of needy persons abroad. To date, the cost of this program has been $3 billion for moving $1 billion of agricultural surpluses to nations abroad. To me, this is not only unsound—it is morally wrong. The sale of these surpluses to needy Americans is denied. True, a small portion of our agricultural surpluses is given to school lunch programs and to welfare agencies, but this Agricultural Trade Development and Assistance Act provides for the sale of such surpluses to foreign nations.

In 1954, the Congress adopted my amendment to the original act in limiting the sale of surpluses to friendly nations and prohibiting the sale to the U. S. S. R. and those nations under Soviet domination or controlled by Communist organizations. In 1957 during the consideration of the bill to extend this law, I offered an amendment to continue to prohibit the sale of surpluses to the U. S. S. R. and to those nations under Communist control or Communist organizations unless Congress passed a resolution declaring the nation friendly. I regret to have to report that this amendment was not adopted. The Eisenhower administration believes these surpluses should be sold to nations behind the Iron Curtain.

We must not forget that we are engaged in a sinister cold war with a ruth-

less, diabolically clever enemy. It will require the full, positive force of the Congress of the United States in conjunction with the executive branch to counteract the Soviet exploitation of our kindness, humanity, decency, adherence to treaties, and adherence to the pledged word. The executive branch desires to retain absolute discretion in determining which nation is friendly. Perhaps it would like to consider Syria a friendly nation. Or North Vietnam. Or North Korea. Or Red China. Recent developments should give us pause for great fear on this score. Surplus agricultural commodities to Red China? Recognition of Red China? Admission of her representatives to represent China in the United Nations?

The issue is really not the Congress versus the executive branch of our Government. The issue here is whether it shall be the executive branch in conjunction with the Congress, or just the executive branch alone making a vital determination.

RELAXATION OF TRADE RESTRICTIONS

A further demonstration of the attitude of the Eisenhower administration toward Communist nations and the satellite countries was the announcement in 1957 that the United States had agreed to relax the curb on trade with Red China.

The Mutual Security Control Act of 1951 prohibits the shipment of strategic material to Communist-dominated countries. The United States, with the free world allies, has agreed on this principle for many years. The listing of items of trade fall into qualitative and quantitative categories. Since 1953, the Eisenhower administration has agreed to relaxation of the restrictive items on this listing. In 1957, the relaxation extended to about 160 new items for our allies while no relaxation was planned on the United States embargo.

Agreement among free nations on the easing of trade restrictions with Russia and Red China may be the new policy but the fact remains that there is grave danger in easing trade barriers with Communist nations and Communist-controlled nations. European nations have the greatest concentration of industrial production in the world. The U. S. S. R. does not want to destroy this potential. If the U. S. S. R. can achieve business agreements with European powers, it can control the economy of those nations by severing exports and imports at will. It must be remembered that Russia's support of Egypt in the seizure of the Suez Canal proved the dependence of European economy on the importance of the international control of this canal.

Easing of East-West trade could, in the long run, bring economic ruin to Europe and could outweigh the immediate relief to the economy of Europe in the increase of East-West trade at this time. Reducing the East-West trade barriers could be more helpful to the U. S. S. R. at this time by the free world's relieving the Kremlin of bearing the responsibility for their failure of their Communist economic theories. The failure of the Communist theory is proven by conditions within Russia and within Communist-controlled nations. The Polish and the Hungarian revolutions have proven this fact. The big question for the free world is: "Butter or guns?" Should the free world furnish the butter so that the U. S. S. R. can continue the buildup of her guns?

Other enactments international in scope are as follows:

Public Law 21 approves amendment of Anglo-American Financial Agreement of December 6, 1945, to permit deferment of payments on loan to the United Kingdom.

Public Law 55 extends the operating authority of the Export-Import Bank for 5 years to June 30, 1963.

Public Law 27 extends for 1 year, to June 30, 1958, the suspension of duties and import taxes on metal scrap.

Public Law 14 authorizes agreements for construction of atomic reactors in Berlin, West Germany.

Public Law 220 authorizes the sale of 4 and the loan of 45 naval vessels to friendly nations in Europe, Latin America, and the Far East, to facilitate mutual security agreements.

House Concurrent Resolution 115 declares the sense of Congress that Spain should be admitted to membership in NATO.

NATIONAL

The recommendations of the President on domestic issues were marked by the same shifting of position. This caused complete misunderstanding by Congress of what the President sought to accomplish and because of the failure of the President and his Cabinet to clarify the position of the administration. Congress was forced to sift from among the various propositions, the ones which would serve the country best.

BUDGET

It was the budget and its presentation that snarled the work of the 85th Congress. The President requested Congress to grant the authority to spend $73.3 billion. Congress responded by appropriating $67.7 billion. This cut of over $5 billion does not include the permanent authorization of $8 billion which represents interest on the national debt. When President Eisenhower took office in 1952, the national debt was $258 billion, the interest on this amount being $5.9 billion. The national debt today is $274 billion with an interest of $8 billion.

Coming hard on the heels of the much publicized economy drive by the Republicans and their cries of extravagance, waste, and mismanagement by the Democrats, the budget request was a shock. It is the largest peacetime budget in the history of our country. The Secretary of the Treasury declared it was too high and requested that Congress reduce it. The President defended the Secretary's stand, thus failing to support his own request. Congress fulfilled its responsibility and reductions were recommended by committees after months of searching study and hearings. The defense budget was reduced by $2.6 billion. Last year, the Department of Defense had available $74.7 billion, of which, $36.2 was a new appropriation by Congress. The carry over funds were for ships, aircraft, and other long lead-time items. The Department of Defense has $70.8 billion for the current fiscal year, of which, $35.9 billion is new appropriation with the exception of $590 million which represents transfers from unneeded funds. Thus, out of the available total of $70.8 billion, the Department of Defense expects to spend about $38 billion.

There have been many news reports in recent months of announcements from the Pentagon concerning cutbacks in personnel and the slowing down of many programs. The reductions in the defense budget are not responsible for these cutbacks. It became apparent to the Defense Department a few months ago that if defense spending took its natural course during this fiscal year, it would range between $40 and $42 billion. Adequate funds are in the hands of the Defense Department to finance a defense program this year in the sum of $42 billion, or more, out of a total availability of $70.8 billion.

DISARMAMENT

On this subject, the administration's attitude has not been firm enough and consequently, the Soviet Union has been able to obtain a propaganda advantage before world opinion. It is felt that basic goals and policies of the United States have been so obscured in a morass of detail, that a clear statement of fundamentals is obviously necessary.

NATIONAL DEFENSE AND INTERNAL SECURITY

Public Law 63 continues to July 1, 1959, suspension of 2,000,500 statutory limitation on personnel strength of Armed Forces.

Public Law 62 provides for induction of doctors, dentists, and allied specialist categories into the Armed Forces, as needed, with reserve commissions, and it ends the special doctor-dentist draft.

Public Law 116 extends to June 30, 1959, authority for enlistment of aliens in the Regular Army.

Public Law 269 establishes a uniform procedure for production in court of statements by Government witnesses and limits admissibility to such as the court deems relevant. This law is designed to protect the secret files of the Federal Bureau of Investigation against unlimited exploration by attorneys for defendants in criminal trials. It bans pretrial disclosure of the files. After hearing the testimony of the prosecution witnesses, the trial judges must screen the FBI documents and turn over to the defense only those relevant to the testimony.

NATIONAL ECONOMY

Public Law 4 increases the lending authority of the Small Business Administration by $80 million to the total of $455 million.

Public Law 10 increases the borrowing power of the Federal National Mortgage Association by $0.5 billion to $1.6 billion to help ease the mortgage-money market.

Public Law 12 extends to July 1, 1958, the 52 percent corporate income tax and present schedule of excise taxes on alcoholic beverages, cigarettes, automobiles, and parts and accessories.

Public Law 17 authorizes the Secretary of the Treasury to pay nterest up to 3.26 percent on savings bonds.

IMMIGRATION

Public Law 316 represents substantial progress toward a revision of our immigration laws and it exhibits a recognition by the Congress of its responsibilities in the field of legislation. The most important provision in this new law is its effect on those cases which involve family hardship. It allows the admission of about 28,000 alien members of immigrant families and it permits the admission of 2,000 orphans over a 2-year period. The new law calls for a redistribution of 18,656 visas which remained unused at the expiration of the Refugee Relief Act. Fourteen thousand of these will be allocated to refugees from persecution in Communist nations and the general area of the Middle East. It cancels all mortgages on national quotas which were incurred by the Displaced Persons Act and the Refugee Relief Act. Approximately 8,000 people from countries whose quotas were in some cases, mortgaged up to the year 2274, can now hope to migrate to America. Other features of the bill are: it will permit to stay here 15,000 people from behind the Iron Curtain who made fraudulent representations about their birthplace for fear of prosecution; it provides for the admission of 840 skilled specialists; it permits the Department of Justice to waive the requirement of fingerprints of nonofficial visitors to the United States; and it gives illegitimate children the same immigration rights as all others.

CIVIL RIGHTS

The civil-rights bill of 1957 is the first legislation of its kind that has been enacted in 82 years. This fact in itself is important although the weakness of this legislation must not be minimized. The original civil-rights bill, sponsored by my colleague, Congressman EMANUEL CELLER, of New York, survived the delaying tactics and other methods of obstruction and was passed by the House of Representatives. It became the 10th civil-rights bill passed by the House in the last 24 years. In the Senate, the main features of the Celler bill were eliminated.

The civil-rights law does not establish a new set of rights. It does create a new procedure whereby the Department of Justice may intervene and the Federal courts may act, to prevent denial of the right to vote. I supported the Celler bill and I voted for the compromise bill when it was finally agreed that we had the choice of the compromise measure or nothing. Despite its weakness, this law is a step ahead in our determination to wipe out discrimination which can have no place in our democracy. It is the first legal attempt to provide the machinery for making the 14th amendment a reality.

Briefly, the civil-rights law provides:

First. For the creation of a special Civil Rights Division within the Department of Justice.

Second. For the creation of a Federal Civil Rights Commission to investigate charges that constitutional rights are being violated. This Commission is to be a bipartisan body of six members appointed by the President and confirmed by the Senate. It will have broad powers to illuminate abuses of civil powers. Ultimately, its objective is to suggest to Congress how the civil-rights laws could be improved. Out of such study may emerge further action by Congress.

Third. For injunctions against interference with the right to vote and any defendant can demand a new trial before a jury if a judge rules him guilty in a criminal case and fines him more than $300 or sentences him to more than 45 days in jail.

VETERANS AND SERVICEMEN

Public Law 168 increases rates of compensation for service-connected disabilities and for dependency allowances.

Public Law 209 liberalizes eligibility standards for widows and veterans.

Public Law 217 makes permanent the Missing Persons Act authorizing continued pay to next of kin for personnel missing in the course of duty.

The bill to extend direct home loan and loan guaranty programs for World War II veterans to July 25, 1959, was vetoed by the President. This bill carried provisions to increase the maximum amount of loans and to encourage new construction in rural and small-town areas.

NATURAL RESOURCES

Public Law 159 authorized $600 million Niagara River power development by the New York Power Authority under Federal license, providing preference to public agencies of 50 percent power. It directs the Federal Power Commission to award a license to the New York State Power Authority to build and operate hydroelectric facilities at Niagara Falls with a capacity of 1.8 billion kilowatts. This is equal to about one-fifth of New York State's present production capacity. The State Power Authority is prepared to start work immediately and plans to finance the project by the sale of revenue bonds. Under the provision of the law, half of the power will be reserved for municipal distribution systems, cooperatives, and other public bodies.

The Niagara Power Cooperative would be guaranteed about 445 million kilowatts of the nonpreference power to replace the Schollkopf plant in Niagara. This plant was destroyed by a rock slide on June 7, 1956.

This authority has been a controversial subject between public and private power for over 6 years. Public power advocates sought priority for all the power while private power advocates fought any firm preference clause. The measure, as enacted, was a compromise acceptable to both public and private advocates, and it will benefit the consumers.

POSTAL RATE INCREASE BILL

The Eisenhower administration recommended a postal rate increase for all classes of mail, including the increase from 3 cents to 4 cents per ounce on first-class mail. I have long felt that the rates for second-, third-, and fourth-class mail should be adjusted before an increase is imposed on first-class mail rates. All of us are aware that the Post Office Department operates at a loss, but the deficit is to be found in second- and third-class mail. In 1956, the second-class mail deficit was $269,210,078 and the third-class mail deficit was $207,305,500. The Government, therefore, is in the position of subsidizing the newspaper and magazine publishers, the mail order firms, and the direct mail advertisers, all of them, profitmaking organizations. As an example, the following list shows but a few of the annual losses sustained by the Government in handling magazines and newspapers:

Publication:	Loss to Government in 1956
Life	$9,310,000
Saturday Evening Post	6,087,000
Reader's Digest	4,800,000
Chicago Tribune	1,788,000
New York Times	1,700,000

There are those, however, who contend that the post office is a service to all and that it should not be expected to base its rates entirely on its costs.

This bill was passed by the House late in the session, but action in the Senate has been deferred until the next session of the 85th Congress.

POSTAL PAY RAISE BILL

A bill to raise the salaries of 500,000 postal employees and the bill to increase the salaries of Federal employees were passed by the House and the Senate late in the 1st session of the 85th Congress. In my appeal for this legislation I said, in part:

Mr. Speaker, I submit that we are dealing with the career employees of the United States Government—the richest and most powerful Government in the world. Many of these career men and women are the principal wage earners of their families. Let us pay them a family wage and not just a living wage.

I regret that the President vetoed this bill. New bills on the subject will be presented in the next session and I feel confident that favorable action will be taken on them.

FEDERAL AID FOR SCHOOL CONSTRUCTION

This bill authorized a 5-year $1.5 billion program of Federal aid to States for school construction. It was defeated in the House of Representatives for many reasons. Many Congressmen believe that the schoolroom shortage is not nationwide and that the States and local communities are handling the problem satisfactorily and that the preservation of our States as vigorous, powerful government units is essential to permanent, individual freedom, and the growth of our national strength. The need for economy was a factor in some cases, but in many more, there was a reasonable fear that a precedent would be set which would be difficult to overrule. President Eisenhower sought to distribute Federal aid on the basis of need. Under the plan sponsored by the Democrats, funds were to be allocated on the basis of school-age population. A compromise measure for an even distribution of funds was found acceptable. The bill which was defeated was one sponsored by Representative AYERS, of Ohio. It called for a distribution of funds according to the Eisenhower formula. Congress did not have the opportunity to vote directly on the bill. The vote by which the measure

was defeated was on a motion to strike out the enacting clause. A vote in favor of striking out the enacting clause meant a vote against Federal aid for school construction and a vote against striking out the enacting clause meant a vote in favor of Federal aid for school construction. The final vote was 208 to strike the enacting clause and 205 against such action.

The White House claimed that President Eisenhower was greatly disappointed in the failure of Congress to act favorably on this legislation. Informed observers are of the opinion that it was well within the power of the President to save this issue during the session, particularly since a wire was kept open to him until the last moment.

It is hoped that a school-aid bill of the future will carry a more equitable arrangement affecting New York and that the taxpayers of our State will not have to raise $74,445,000 in order to get $18 million in Federal aid to education.

SOCIAL SECURITY, HEALTH AND WELFARE

Public Law 104 authorizes $1.9 billion for the housing program; it increases the borrowing authority to purchase mortgages; it lowers downpayments on FHA insured homes, and provides $350 million for urban redevelopment and slum clearance for 1 year.

Public Law 109 extends to July 1, 1958, the time for disabled persons to file applications to preserve their rights to old-age, survivors' and disability insurance, and permits veterans with service-connected disabilities to receive both social security and VA benefits.

Public Law 110 revises the formula for computing Federal social-security grants to States for medical and other assistance to provide for more effective distribution.

Public Law 172 provides for compulsory inspection of poultry and poultry products.

CONCLUSION

Any criticism for the lack of accomplishment on the part of the 1st session of the 85th Congress should be placed where it belongs; not upon the House of Representatives, nor upon the Senate, but on the lack of prior consultation between the administration and Congress.

What could be termed an oblique approach in government has been used instead of the strong and unquavering leadership so necessary. A statement of principle without a followup, of legislative correctives is valueless. On many occasions, President Eisenhower has reaffirmed his resolve to remake the Republican Party. The Democratic policies on social welfare and economic reform can point the way for him. I am referring to the Democratic programs of social security, custodianship of natural resources, taxation predicated on ability to pay, protection for small business, and fair employment practices, to name but a few. Under these programs, benefits have been given without concern for race or creed, based only on the need for equity and justice in our social and economic structure.

It has been my privilege and responsibility to serve you for over 7 years. If you desire to write me, may I point out that letters sent to my Washington office receive my immediate attention. My office is open 6 days a week; my address: EDNA F. KELLY, Member of Congress, Washington 25, D. C. During adjournment, I am at the Madison Club, 739 Eastern Parkway, Brooklyn, on Monday and Thursday evenings for appointments with my constituents.

Free World Divided in Its Resistance to Communism—There Is No Common Front Against It

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, until the free world can unite on basic principles in its opposition to communism, the cold war will continue for many years. It must present a common front against the common enemy.

This fact is obvious when it is recalled that the free nations as members of the United Nations have been unable to agree on a statement that would suggest the proper structure of human dignity.

The eighth session of the Commission on Human Rights which lasted for 9 weeks was the longest ever held and one of the longest held by any committee or commission of the United Nations. Yet all that the Commission was able to complete of its agenda was 3 or 4 items out of a total of 20.

The objective of the Commission was to work out an international bill of rights which now appears to have been strictly illusory. It did not take the Commission long to discover that there was a deep division between East and West on basic concepts but it was rather surprising to find that even the free nations were unable to agree on a basic statement of principle.

This became quite apparent when an effort was made to include an article on the right to own property. Mr. Speaker, this is basic so far as free men are concerned and article 17 of the Universal Declaration proclaimed this right but that is as far as it has gone to date.

At one time, the French delegation made a proposal which seemed reasonable but so many objections were raised, particularly in regard to expropriation and compensation for property, that finally the Commission tired of the apparent hopelessness of the situation and decided to adjourn debate on it.

Mr. Speaker, it has been well said that the concept of property and its ownership is at the heart of the great ideological conflict of the present day between communism and the free world. It was not only the Communists who ridiculed this concept of private property and expropriation but a goodly proportion of the non-Communist world had itself succumbed to these doubts.

An obvious deduction that can be made in light of this position by the non-Communist world is that it has been frightened and terrified by the philosophy of communism.

Mr. Speaker, it is incredible that in these economic matters which reflect much more than economic divergencies, the free world, or the West, is so divided among itself as to be incapable of presenting a common front against communism.

Mr. Speaker, we have and are spending billions of dollars in a cold war on the theory that it will stop communism. Our taxpayers' dollars have been freely advanced not only for military and economic support to counter Communist aggression but our dollars have been given to nations we call free who today seem unwilling to oppose the basic concepts of communism.

How much longer will the people of the United States continue to support other nations until all agree on a common front against the tyranny of the Kremlin?

Pacific Northwest Projects Ahead of Payout Schedule

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. MAGNUSON. Mr. President, Comptroller General Joseph Campbell has just advised me that the National Treasury has earned $137,702,337 in interest from our Federal power projects in the Pacific Northwest.

In addition, these projects are $77,145,585 ahead of schedule in repaying funds borrowed in the form of congressional appropriations for their construction.

If Mr. Campbell's figures had reflected principal and interest payments made by the projects since June 30, 1956, these totals would be even larger.

I would ask unanimous consent at this time so that the complete report, contained in a letter from Mr. Campbell, may be entered into the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

COMPTROLLER GENERAL OF THE
UNITED STATES,
Washington, August 20, 1957.

Hon. WARREN G. MAGNUSON,
United States Senate.

DEAR SENATOR MAGNUSON: In repsonse to your letter dated July 1, 1957, we are furnishing you information on the amounts returned to the Federal Treasury and the status of repayment for certain power and reclamation projects. We have selected the Columbia River Basin for coverage inasmuch as nearly all such projects in the States of Washington, Oregon, and Idaho fall within the Columbia River watershed, and the basin is a more easily defined entity than the Pacific Northwest. We are enclosing, along with two financial schedules, a map excerpted from a Bonneville Power Administration report which shows the Columbia River Basin

in relation to that agency's concept of Pacific Northwest.

Schedule 1, attached, presents a year-by-year breakdown of the amounts returned to the Federal Treasury by power and reclamation projects of the Columbia River Basin. At June 30, 1946, the accumulated funds returned amounted to $546,929,439. Of this amount, the sum of $456,596,191 has been returned by the Columbia River Power System and related activities. The Columbia River Power System consists of the Bonneville Power Administration and the generating facilities for commercial power purposes of the multiple-purpose projects for which the Administration acts as the transmitting and marketing agency. Related activities of the Columbia River Power System are irrigation, flood control, and navigation.

Schedule 1 also identifies all basin receipts deposited to the Treasury with power, irrigation, and other purposes to the extent possible. The special accounting for the Columbia River Power System makes it possible to segregate receipts for those projects, but present accounting practices for the other Basin multiple-purpose projects do not permit such analysis. All receipts deposited for single-purpose irrigation projects, however, can be attributed to irrigation. A summary of schedule 1 shows the following:

	Total	Columbia River power system	Other basin projects
Commercial power	$449,691,188	$449,691,188	
Irrigation	18,675,525	6,674,283	$12,001,242
Nonreimbursable	230,720	230,720	
Unclassified	78,332,006		78,332,006
Total	546,929,439	456,596,191	90,333,248

It should be borne in mind that, with minor exceptions, receipts from power and irrigation are not available for expenditure and must be returned to the Treasury. Accordingly, funds for operation and maintenance must generally be obtained through appropriations by the Congress and a large share of the receipts are applicable to repayment of these operation and maintenance appropriations rather than capital investment. Power receipts are also applied to interest expense before any repayment of capital investment occurs.

We are including a schedule (schedule 2) prepared by the Bonneville Power Administration, which compares the repayment of commercial power investment of the Columbia River Power System with the scheduled repayment established in accordance with law or administrative policy pursuant to law. Schedule 2 shows that the Columbia River Power System is $77,145,485 ahead of schedule insofar as repayment of commercial power investment is concerned. The factors used in setting commercial power repayment requirements are briefly explained on page 3 of schedule 2. The Bureau of Reclamation, which markets the power from other basin power projects (Minidoka and Boise), does not prepare scheduled payout requirements for comparison with realized returns.

Irrigation investment repayment is not susceptible to scheduling as is repayment of power investment. Irrigation construction costs to be repaid by basin irrigators are covered by contract and repayments are on schedule unless there is a delinquency. Repayment of irrigation construction costs to be repaid by power are on schedule to the extent that power repayment is on schedule.

We hope that the information we have been able to compile will satisfy your requirements. Should you require any additional data or amplification of that presented herewith, we are prepared to assist you.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

SCHEDULE 1

Columbia River Basin—Funds returned to the U. S. Treasury for fiscal years 1950 through 1956 and cumulative to June 30, 1956

Project	Location	Columbia River Basin total	Columbia River Power System				Other basin projects		
			Total	Commercial power	Irrigation	Nonreimbursable	Total	Single-purpose irrigation	Multiple-purpose unclassified
Cumulative to June 30, 1949		$213,249,502	$148,893,915	$148,438,535	$455,380		$64,355,587	$7,230,438	$57,125,149
Fiscal year 1950:									
Bonneville Power Administration		14,353,107	14,353,107	14,353,107					
Bonneville Dam	Washington and Oregon	5,418,000	5,418,000	5,418,000					
Columbia Basin	Washington	5,723,049	5,723,049	5,582,885	140,164				
Baker	Oregon	6,258					6,258	6,258	
Bitter Root	Montana	28,424					28,424	28,424	
Boise	Idaho and Oregon	1,280,945					1,280,945		1,280,945
Burnt River	Oregon	14,993					14,993	14,993	
Deschutes	do	279,541					279,541	279,541	
Frenchtown	Montana	7,644					7,644	7,644	
Lewiston Orchards	Idaho	122					122		122
Minidoka	Idaho and Wyoming	2,842,889					2,842,889		2,842,889
Missoula Valley	Montana	961					961	961	
Okanogan	Washington	19,107					19,107	19,107	
Owyhee	Oregon and Idaho	686,244					686,244	686,244	
Palisades	Idaho and Wyoming	3,968					3,968		3,968
Rathdrum Prairie	Idaho	4,750					4,750	4,750	
Umatilla	Oregon	35,177					35,177	35,177	
Vale	do	65,984					65,984	65,984	
Yakima	Washington	792,604					792,604		792,604
King Hill	Idaho								
CPA, region 1		377					377		377
Total, fiscal year 1950		31,564,144	25,494,156	25,353,992	140,164		6,069,988	1,149,083	4,920,905
Fiscal year 1951:									
Bonneville Power Administration		20,461,065	20,461,065	20,461,065
